Yes?

Well, this is the story which German newspapers are printing by way of American news. We learn as much by the Amsterdam correspondence of the New York "Sun."

No doubt the shy German bachelor is saying to himself:

"Sherman was right—but anyway things aren't as bad here as they are in America."

We wonder if some of our alleged news from Germany and Austria and Russia—via Amsterdam or Stockholm or some other neutral city—is of a piece with this German "news" of our bachelors' Reign of Terror?

## What's Wrong with the Post Office?

WHEN PERSHING issued his order, something over a month ago, placing the American military mails in France under the adjutant general, they were still delivering last year's Christmas packages, according to the New York "Times's" correspondent with our army. That same journalist reports getting a letter from twenty miles away which our post-office people in France had taken three weeks to deliver. Officers and men now hope for better mail service. But that doesn't just depend on the adjutant general and Lieutenant Colonel Howe—it also depends somewhat upon our end of the line. If letters written by the enlisted man get forwarded fairly well, how about letters from home? People here are urged to back up the boys in the trenches and on the high seas with personal cheer and comfort—but they can't do it unless the post office plays its part too. The Merchants' Association of New York seems to have put its finger on a real grievance in finding that, in the face of greatly increased business, over one-fourth of the railway postal cars had been taken off and that mail matter was being stacked roof-high in the terminals for delayed sorting. Postmaster General BURLISON is still trying to make a paper showing of economy (that "surplus" again!); like the old man in KIPLING's poem, "Stellenbosch," "Whatever he does he sits and twiddles his thumbs and thinks well of it; Yes, he is perfectly pleased with his work, and that is the perfectest hell of it." Short-sightedness plus self-satisfaction isn't ever an ideal combination. And war-time postal service requires spending money on the scale needed to get the results which will satisfy our soldiers and sailors and their home folks.

## In Union—

INASMUCH as Colonel REPINGTON, while military editor of the London "Times," was outspoken in opposing unity of command, interest attaches to the "Times's" dispatch from Paris, saying:

We British and we French have now one army. General Foch has accepted very heavy responsibilities at a critical moment. He is well fitted for the task, the soldiers at the front have accepted loyally the new order of things, and the success of General Foch's action must not be compromised by ill-informed, injudicious, and untimely criticism by civilians and politicians.

There has been no marked disposition in America, even on the part of "civilians and politicians," to criticize FOCH or the idea of unity of command. Later on, as American losses necessarily grow heavier, there may be hints that disadvantages as well as benefits follow from unity of command. The necessity for that unity will, however, remain perfectly clear. Unity of command is, on the western front, an essential condition of military health; and details must not, at any crisis, divert the American mind from the main principle. FRANKLIN's declaration: "We must all hang together, or assuredly we shall all hang separately!" holds good to-day of all the States which make up the alliance against the powers of Terrorism. The principle of unity of command must be extended rather than limited.

## After Four Years

AT Nancy, in the east of France, the men whose job it is to clean up a house struck by a German bomb are sorting the materials and assembling the strong beams of the old wooden building, its stone gable ends, its bricks and powdered plaster. Other piles, so arranged that hand or shovel can easily scoop them up, outline all the angles of the destroyed dwelling. With deft movements the dusty workers deposit their new loads. Balancing on the crumbling ridge of the wall to the right, five men armed with crowbars maneuver a great beam. A gang less sure in harmonizing its movements would be thrown off its balance, beam and all. Six great chunks of sandstone that made part of the staircase are hard to move by hand, and athwart them rests a forest timber that was growing more than a hundred years before the builders chose it.

The wrought-iron cocks that support Nancy's street lamps still stand in their familiar posture of fire bearers, brave in their dull gilt. Behind them the trees in the Place de la Carrière, newly trimmed, preserve their rectangular form, their black branches punctuated with white scars. This ornamentation of the center of the town with old trees schooled by the pruning shears, and with the old-time ironwork of its forges, impresses the war-time visitor. In peril of the bomb, the French townsman would, first of all, maintain his own house; next, the appearance of his street. The citizen of Nancy would be less cheerful if things did not put their best foot forward, and marks the cross of Lorraine in red on the wall of the houses with the stoutest cellars. The stone shelters erected in the city squares are as well designed as if they were permanent buildings. No hasty jumble of junk, no digging of rat holes, here; but smooth masonry, without gaps at the joints, rounded at the corners and touching the soil obliquely so that the shadows shall give nothing away to enemy airmen. The workers who have done all this know only how to do good work, and do not scamp their job just because bombs are falling. If such buildings have not the beauty of the wrought iron in the Place de la Carrière, the professional probity is the same. Here, too, is honest work. Faithfully to pick up the wreckage—speedily to bring back order out of chaos—here are acts that unmistakably express the quality of man's labor, the solidity of man's hope. In the glare of explosions you see at Nancy the two elements which save humanity from sinking to the dunghheap: Work and Hope.

In the street, barred off by piles of building materials, children (happy because no one interrupts them by passing through) clear the ground and smooth it off to spin their tops. For top time has come round again. As skillful in their performance as the house wreckers, these little ones throw the top with a sure hand. Their satisfaction comes from its landing on end and spinning fast. Amid ruin they demonstrate that one must do, in its season, that which ought to be done. In this town, beautified by the bravery of their childishness, they keep their seasonal habits, guns or no guns.

When war brings down house walls, and bread grows scarce, it is good that men should know how not to give up hope, and should go on working, and that children should play.

# Columbia Grafonola

Yankee Doodle

From Valley Forge to France, American armies have always sung their way to victory. The American soldier has always been a singing soldier—whether he wore the blue and buff of the continentals or the brown khaki of the boys “Over There.” Today in camp and cantonment, in trench and dugout, between decks on the big, gray battle-ships and in cramped quarters of swift destroyers, the Columbia Grafonola is playing our boys into action with good cheer in their hearts and a song on their lips.

Oh, Say, Can You

Tramp, Tramp

There'll Be a Hot Time

Over There

Columbia Grafonolas  
Standard models up to \$300  
Period models up to \$2500  
Prices in Canada plus duty

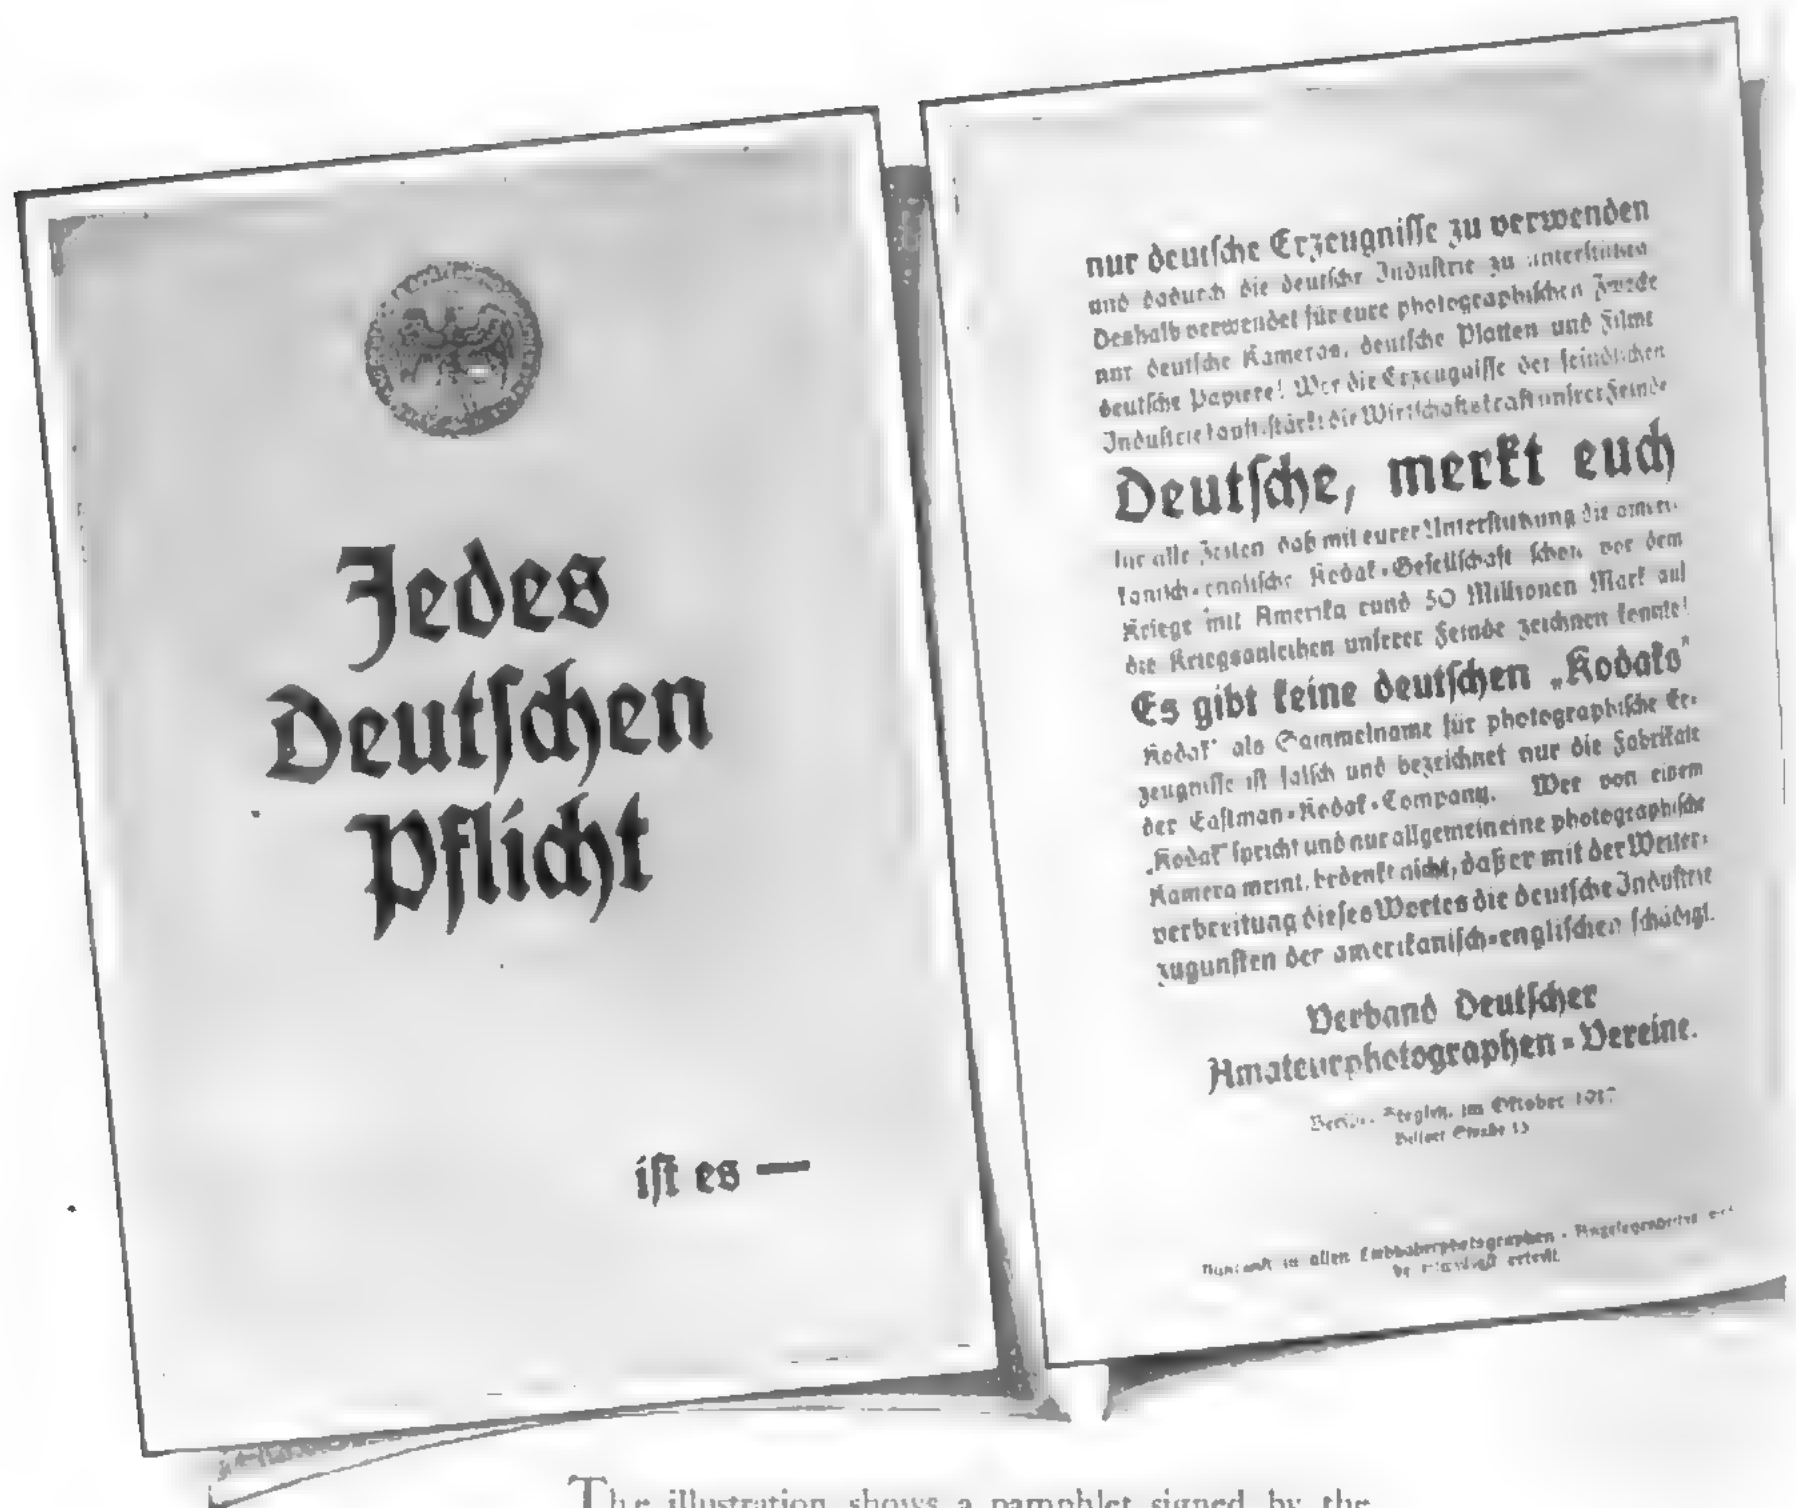

In the homes of America, no less than at the fighting front, the Columbia Grafonola is playing its part. These trying days we all need the comfort and inspiration good music gives. Let the Columbia Grafonola bring you its stirring patriotic music these historic war-time days. The songs the soldiers sing are all on Columbia Records. And of course the Grafonola plays Columbia Records best. To make a good record great, play it on the Columbia Grafonola.

# *-If it isn't an Eastman it isn't a Kodak!*

*A translation of the circular in full is as follows:*

"It is the duty of every German to use only German products and to patronize thereby German industry. Therefore, use for photographic purposes only German cameras, German Dry Plates and German papers. Whoever purchases the products of enemy industries strengthens the economic power of our enemies.

"Germans! Remember for all times to come that with the aid of your patronage the American-English Kodak Co. subscribed before the war with the United States, the round sum of 50,000,000 marks of war loans of our enemies!

"There are no German 'Kodaks'. ('Kodak' as a collective noun for photographic products is misleading and indicates only the products of the Eastman Kodak Co.) Whoever speaks of a 'Kodak' and means thereby only a photographic camera, does not bear in mind that with the spreading of this word, he does harm to the German industry in favor of the American-English."

*If it isn't an Eastman it isn't a Kodak!*

# FEAST OF EPICURUS

BY MAY EDGINTON

ILLUSTRATED BY C. R. WEED

THE man was disgorged with others from the lift at Piccadilly Tube Station, and stood leisurely on the threshold of the Haymarket. He was slightly inclined to corpulence, but brawny as well; not very tall, but tall enough to rise above mere shortness. Whatever expression usually lay on his face was swamped by an irresponsible, pervasive happiness seemingly irrelevant to time and place. The face itself was squarish; longish; heavy and red; the face of a man of strength. The eyes were small and of a fiery blue; eyes of a man who loved living. It was not remarkably early to be in evening dress; about a quarter to six. He might have been on his way to dine early with a subsequent theatre party. He stood to light a cigarette, which he fitted carefully into a gold and amber holder, and he surveyed the nearest placard good-humoredly:

## ESCAPE OF NOTORIOUS CRIMINAL

DAN ROGERS AT LARGE

Five Hundred Pounds Reward Offered

The newsboy nearest him, seeing his attention caught, thrust a paper on him. He gave the boy sixpence, not waiting for the change, and stepped on to the pavement. His dress overcoat and his opera hat sat faultlessly upon him. He glanced from his little fiery eyes curiously at the passing crowds about him, and for a moment his glance was caught and held.

A police constable was looking at him keenly.

He crossed the street leisurely, passing close to the constable, standing beside him a moment while a line of taxicabs streamed past; thus standing by, he nodded a good evening.

The policeman looked after him, then crossed to the telephone boxes in the Tube station.

The man went on down the Haymarket. As he walked he scanned the face of every woman who passed—not with an obtrusive scrutiny, but with a lightning-blue stare that took her in from top to toe and switched away again almost before she felt it. So he reached, via Charing Cross, the hustling Strand, where the business girls came by in succession like a regiment, all homing.

Turning down from Agar Street, he saw her; a girl about as tall as himself, not very slim, but slim enough, with a short, pale face with anemic lips, with great big eyes of pale brown, and the most gorgeous red hair under her battered but beautifully perched black hat. Her suit was battered too. She carried a cheap dispatch case, and hurried like the rest. She was the London business girl at her best, in flower. When he saw her he was suddenly still for a second, his fiery eyes focused, like a hound fastening unerringly upon quarry. In two seconds he was beside her, raising his hat.

She walked on a little quicker, frozen. He walked with her.

"Please!" he uttered hurriedly.

The girl cast him a look then. "No!" she said. There was much virtue in her "no," but there was something else. There was a vexed regret.

For he did not look to be a promiscuous man, and the girl who fends for herself is a judge of that. Moreover, his clothes were so good, his air of leisure and ease so comfortable, so promising. . . .

He slackened his pace, and some influence or force which spoke from him without articulation made her slacken hers too.

"Please!" he said again, "It won't hurt you to listen for five minutes, will it? I shall not say anything that you won't like to hear."

HIS voice was a little hoarse, wearier than his face. She found herself noting details; and while she noted, he took her gently by the elbow, and led her back to the quieter ways leading through Pall Mall. By the time she realized it he was talking again.

"I want to ask you, please, to have dinner with me—"

"Oh! I don't do that sort of thing!"

"—and go to a theatre after—"

"Oh! I really couldn't!"

"—If you don't, I'll have to find some other girl to be kind enough to give me her company, and I don't want to look farther than you."

"I don't know why you should think—"

"I don't think. I only hope. I know what you are—a very respectable young lady. But you are a very, very charming one. All day I've been about London, and you are the most charming girl I've seen."

The girl's anemic cheeks did not change color. She had lost any tendency to blush. But she kept that air of outrage.

He looked at his watch. "There isn't much time

to decide," he said thoughtfully.

They were standing in Trafalgar Square by now, facing the pile of the National Gallery.

"I can't go out to dinner," she said. "I'm engaged."

His face fell, and she saw what he thought.

"I mean engaged to be married," she added hastily.

"Oh!" he exclaimed, and for the first time she saw his smile. It was the jolliest smile she had ever seen, and it thawed her.

"It wouldn't do," she said more confidentially.

"On the contrary, it might do very well indeed," he replied. "Is this young chap of yours rich?"

"Rich? Of course not. No such luck!" she sighed.

"Well, I am rich enough," said the man quietly, "and I will promise you something to your mutual advantage if you'll just give me your company at dinner to-night."

"It's so strange."

"It's the most simple, human thing if you only knew."

"I've never—"

"Had a little harmless adventure? Poor girl!"

"Oh, I'll come!" said she suddenly.

He had signaled a taxi before she realized it, and they were inside. She put her back into a corner, and sat almost facing him, with space between them.

"You needn't do that," he said, knitting his brows.

"Well, one never knows."

He made an almost savage plea which startled her.

"Look here! Trust me I'd love it."

"You're a funny man."

But she sat a bit nearer, and he saw her cheek curve into an answering laugh.

After all, she was a rogue, like all girls.

"But—but you're in evening clothes!"

"You soon will be too."

"I—I haven't got—"

"Don't ask questions. Just let me arrange, will you? I promise you it's all right. You shall hear everything at dinner. But now there isn't time."

THE taxi drew up in Hanover Square. "Where are we going?" said the girl hostilely. "To buy clothes," he answered, gripping her elbow, and she was in a lift with him, ascending to the second floor.

"What's your name?" he whispered.

"It doesn't matter."

"I only want your first name. That'll do for the evening."

"Mary."

A softness ran over his face. "That's just right," he whispered. "You won't find a man who doesn't love the name Mary."

They stepped out.

"You're sure you're going to explain?" she said, salving her conscience by a puerile return to caution and frigidity.

"I swear it."

She was by this time in an apartment of quiet tones and great richness. A model gown or two hung about. Some one was folding up impalpable things. The customers were late.

"This lady," said the man to the saleswoman, "wants to be fitted out for the evening as quickly as possible." To the girl he added intimately: "Spend up to thirty pounds, Mary."

He then went and sat down on a lounge, while the women disappeared within a fitting room. From time to time the saleswoman came out and went back again with mysteries hung over her arm. When she did this he bent forward and stared ardently at

He saw under the lamps, nursing toward him, the young man, light and keen; an eager ferret

the burdens she was carrying. They were beautiful—these things which clothed women! Also women were expensive, deliciously expensive! He sat there replete with his satisfaction. Now and again he dropped a hand to feel the softness of the lounge on which he rested. And while he waited, seeing a telephone, he got up, and booked a table at the Carlton—a table for two.

THE girl came out, followed by the saleswoman smiling. The girl was staggered, astonished at herself. The blush that few situations could raise on her pale cheek had come by contemplation of her new beauty. She knew herself, for an evening, supreme. Even her anemic mouth was softly rosy. Her eyes stared unwinking like stars, and golden shoots had come into them. With her hat off, one saw the utter gorgeousness of her red hair, sleek wave upon wave.

The saleswoman had dressed her in oyster-white, with a flaming blue cloak and finished her down to her handkerchief and her small shoes.

The man rose and, trembling and fumbling very slightly, paid the account. The girl had no more hesitation about going out to dinner.

They ran down to the waiting cab.

It was an autumn night, dusky and warm. The town had thrown off her toil and was making ready for play. Thousands and thousands and thousands of people would soon be engaged in thousands and thousands and thousands of happy ways. Delights were in the air. Mary was not sitting with her back in a corner like a hostile animal withdrawn against a wall to fight.

"Do you mind if I hold your hand?" came the husky voice near her.

"Well, only my hand, mind you!"

"I won't if you don't like it. You are being kind; very kind."

But after a few moments she dropped her hand carelessly to the seat beside her. Then he took and held it in one sinewy and hard.

"You play games?" she asked, feeling his hand with a cuddling movement of her softer one.

"Many sorts."

THEY were at the Carlton. For the first time that evening she heard his name, when he gave it to the official who was allotting tables. "I rang up a while ago table for two—Mr. James Oatley."

They were piloted to their table. The girl had refused to leave her blue cloak in the dressing room; she wanted to wear all—! She could feel it sitting against the unaccustomed bareness of her shoulders. Now Oatley helped her off with it, and hung it very reverently over her chair, where it made a perfect background for her, as she knew.

She had never been in any such restaurant before, but she didn't reveal this. She looked around her unafraid while Oatley looked at her. She knew, of course, that the first thing he'd do when she had her cloak off would be to look at her. She had summed him up with her London shrewdness as reliable; and manageable. But of course he was a man. So she gave him his opportunity to stare unreprieved.

"I ought to have told you my name at once," he said, when the soup had been removed, and champagne foamed in their glasses. "You heard it just now? James Oatley. I'm from New York. This is my first visit to this country. I don't suppose you've ever heard of me. But if you came over there—" His modest but jolly smile said: "You would."

"Are you a millionaire?"

He stroked his chin, which was very long and had had a remarkably clean shave. His hair was cropped so close that he had a bullet-headed look. "Not quite," he answered, "not quite. But why?"

"Because of what you said—"

"Oh. Oh-h-h. I haven't forgotten. That's all right. I'm to hear about you. You're engaged?"

"I've been engaged for two years."

"Why? How old are you?"

"I'm twenty."

"Twenty!" he said. He laughed. "God! Fancy being twenty!" He mused. "Twenty!"

She rejoined: "I don't suppose you were working at twenty? You were rich. Were you rich at twenty? What were you doing?"

Over his face there swept a remarkable look which made her catch her breath. There was pain in it, acute.

"What wasn't I doing? Planning to buy the world one day, and the next swearing money was dirty stuff—no good to anybody. That's how we are at twenty, like the wind. North, south, east, and west. How old do you suppose I am now?"

She guessed: "Forty-five." It was nearly right.

"Forty-one," he said. "So I look a good forty-five, do I?" He mused, and for a sudden moment in thoughts he traveled far from her; his brow wrinkled painfully, and he sighed.

WHILE his attention wandered into some dim recessful place, again she looked round the restaurant to see who was looking at her. And a man was looking—one of two who had come in since her entry with Oatley, and had been given, after a brief word with the official who allotted tables, a place rather near them. His companion was glancing at James Oatley.

They were both tallish, nondescript, yet smart, she decided, for she judged men mostly by their clothes and the places at which they ate. They were men cut to a pattern, laconic, trim, one blond, the other darker. It was the darker one whose gaze, part meditative, part admiring, she had intercepted on

"Lucky fellow," he added thoughtfully. "What's his correct address?"

its straight passage across intervening tables to her face. She looked away and unconsciously preened herself, her eyes brighter, the blood flowing redder in her cheek.

Oatley was back again, his fiery blue gaze returning to her with all its former concentration, and he had caught the look she had snatched away from the two diners at the near-by table. He turned his eyes quickly in its direction.

He screwed a monocle into his eye, and gazed unbendingly. The thought that he was distinguished grew with her. Only rich men troubled about monocles.

"Anyone you know?" he questioned pleasantly.

"No." She thought: "As if anyone I knew would be dining here!" but was pleased at the impeachment.

"Why!" said he, "why! If it isn't—Old acquaintances from little old New York. Excuse me one moment, Mary."

He rose leisurely, dropping his napkin carefully on his chair. He paused to speak a word to his waiter, who was approaching for service. He nodded across to the two men, who nodded back. Then he bent slightly with one more apology to Mary, and threaded his way to their table.

"Why," he said, "Brunton! Grays! If I am to call you so at the moment?"

His eyebrows went up whimsically; he had his

hand on the blond man's shoulder. The other rested on the table, and the dark man looked down at it swiftly for an impalpable second. It was a thick hand, but bore signs of good enough keeping, with carefully trimmed nails.

"Oh, you may," said the blond man.

Oatley drew up a chair and sat down. "Well, one never knows if you fellows are on a stunt. Perhaps it's just a pleasure trip this evening, eh, Brunton?"

The dark man smiled easily. "Perhaps it is."

"Queer I should see you here to-night," said Oatley. "I only landed to-day, from the *Marcus*. I came over rather on the quiet for business reasons. However, never mind those. When I said it was queer meeting you just to-night I meant because of—Have you seen this evening's papers?"

"Yes," said Grays.

Oatley exclaimed: "Then you've seen my double is sitting about somewhere again."

"Rogers?" said Grays. "Yes. He broke jail three days ago, though it's only just been made public."

"Well," said Oatley, "you both know me. I'm in this city, and the rest of your pals at the Yard had better know too, I guess. I shan't forget that time in N'York when he posed as James B. Oatley for—how long was it?"

"Let's see," said Brunton.

"Three weeks," Grays replied.

"Three weeks," said Oatley, chuckling and nodding confirmation. "It was you caught him, Grays. I'll always remember you for that, though it's—how long again?—eight years since we met. But I knew you and Brunton directly I saw you. I'd heard you'd left N'York to give a fillip to the police work over here. Well, we could give a good many fillips over here. That's my opinion. You fellows given your order?"

The wine waiter was now standing by awaiting a rift in the talk.

"Just giving it," said Brunton.

Oatley cried: "No, you don't. You'll have a bottle with me. What you like, I must, that's all about it. I want to treat somebody straightaway. Seeing two old N'York faces my first night over, why, it's great! What shall it be?"

"Oh, look here," said Brunton.

"Pommard," said Grays without a flicker.

"Pommard!" quoth Oatley with scorn.

He took the wine list, ran his eye and finger down and chose a famous vintage. "Waiter, the gentlemen's wine is mine. I'm sitting over there. Well, so long, boys." He rose.

"You see, I can't stay," said he, smiling, with the debonair look that only a pretty girl brings to one-and-forty's face.

THEY smiled too; congratulations. Brunton again flickered a surreptitious look at a white figure of girlish yet gorgeous proportions against a flame of blue.

"Join us at the theatre after," said Oatley invitingly. "I'd like to introduce you. We've got a box, No. 6, at the *Empress*."

Grays looked at him straight. "Thanks," he replied readily.

Brunton observed:

"We're expecting a cable, as a matter of fact."

"Then you are on a stunt? Now you've let up! But it's all right, boys; it's all right. So you can't come?"

"I think we can," said Grays.

"Yes, we'll come," said Brunton; "like to."

"The cable, if it interests you to know," said Grays, looking Oatley straight and pleasantly in the face, "is about yourself."

"About me! Why, that's great!"

"We cabled over to New York to ask your whereabouts."

"Why—? Eh? Because of that devil Rogers? Ha! ha! ha! This is great! I'm tickled to death!"

"We'll get the cable while we're here, probably, won't we, Brunton?" Grays asked.

Brunton nodded noncommittally.

"Don't matter much about the cable," said Oatley. "I'm here."

"Yes," said Brunton.

"Anyway, get it sent on to the theatre after you," said Oatley. "We'll all read it together. I tell you I'm just tickled to death."

"Might do that," said Grays. "That would do very well. We'll be with you at the theatre. Follow your taxi, shall we?"

GOODYEAR  
AKRON

# *The Essentials of Truck Tire Merit*

---

**A**LTHOUGH pneumatic truck tires are opening up new fields of employment for the motor truck, the solid tire is yet essential and advantageous in slower service.

From the beginning of the truck industry Goodyear has been developing solid tires, to a result now commensurate with such effort and experience.

Out of the experiments we have made, the tests and demonstrations we have conducted, the clear fact emerges that the merit of a solid truck tire depends upon three essential qualities.

These three qualities, vital to efficient and economical service, are long tread wear, freedom from chipping and cutting, and resistance to separation from the base.

It is not a hard matter to embody one of these qualities in a truck tire,

but it is exceedingly difficult to include all three in effective proportion.

The marked superiority of the Goodyear S-V solid truck tire consists in the fact that it does embody all three qualities in extreme degree.

It wears long and persistently, it defeats ordinary abrasion and damage, tire and base are fused into an almost indissoluble unit.

Proof of the tire's goodness is best seen in its performance, a performance uniformly remarkable for efficiency and thrift.

No Goodyear truck tire is an untried quantity—a system of intensive testing establishes each type's merit before it goes on the market.

This practice affords yet another sound assurance for the public that the Goodyear tire it buys will serve ably and well.

THE GOODYEAR TIRE & RUBBER COMPANY, AKRON, OHIO

## Why Not Two Palm Beach Suits?

Wear the grey one when the "plain tan" is in the tub. For the price of the ordinary suit, you can do it.

Your two Palm Beaches will yield you a constant change in dress—a delightful coolness—an easy luxurious comfort—as well as a marked saving—and these are times when this last is of first importance.

Try your clothier. Be sure you get a good make. Be doubly sure it bears the trade-marked Palm Beach Label.

## Feast of Epicurus

Continued from page 31

They all laughed. Oatley got up and stood, one hand on his hip, the other on the table. His monocle magnified one fiery blue eye. "Well, I must be off! I say, though, what was the devil in for, here?"

"Robbed a bank. Got ten years."

"How much had he done?"

"Seven."

"Silly beggar," said Oatley, "better have stayed the course."

"They get craving, you know," said Grays.

Oatley remarked: "I see by this evening's paper that he's supposed to have just burgled a house in Maida Vale or somewhere—where's that?—and lifted a clear sixty pounds cash."

"That won't get him away," said Grays.

"It'll give the beggar a fairish run," said Oatley. "Praps that's all he wants and expects. If he's wise, he'll blue it gloriously. Well—" The wine arrived. "Cheero, boys!" said Oatley, and left.

BACK at his table he apologized again. "Am I forgiven?"

"Yes," said Mary, pouting.

"I've not been *preux chevalier*; I'm a casual bloke to take out a delightful young lady. But I'll make up. You've got to tell me all about yourself."

As he spoke he refilled their glasses. First he drank to her. Then, looking across at the two detectives, he raised his glass again and nodded. They responded. Oatley set down his glass empty, and looked into the girl's big pale-brown eyes, now dark with excitement.

"All about yourself," he repeated.

"What a thing to ask!"

"About this engagement of yours now. What sort of fellow is he?"

She missed the piercing wistfulness of his look while she looked down and played with a fork.

"Oh, he's a dear."

"What's his name?"

"Robert Morton."

"Where's he live?"

She said: "In rooms in Pimlico—Lupus Street."

She looked round the Carlton a little apologetically, adding: "Of course, he's saving. We want to start well."

"What's well?"

"With a little capital. I don't believe in putting your last penny in the furniture." He noted tiny lines, lines of the bargainer, on her London-flower face, and, looking from them to her red hair, admired her wholly for the character she had, sharp, naive, shrewish, and courageous.

"Good!" he said. "You're wise. Drink your champagne."

She drank, and saw him smile as the golden foam touched her now flushed lips.

"What are you smiling at?"

"You, Mary. What does this fellow of yours do?"

"Journalism," she said grandly.

"What kind?"

When she told him he smiled again at her description. "That tosh!" he said.

"You're not very polite!" she answered.

"How would capital help him?"

"He'd have time to strike out on a different line if he had money behind him." She talked eagerly.

"You love him?" said Oatley.

"Oh, he's not a bad old card as men go."

"You do," said Oatley. She was blushing. "Lucky fellow," he added thoughtfully. Then he asked: "What's the exact address?"

When she had given it she asked: "Why?"

"I told you," he replied, "I'm going to do something for him."

"Oh! When?"

"At once."

"But why?"

He looked at her and she blushed very prettily.

"Waiter," he said, looking round. The man came. "Bring grapes and peaches—you like them, Mary?—and nuts. And port."

While the service proceeded, he looked at her openly and proudly. "What a companion I've got!" he said in a voice of real glee.

"May I pay you compliments?" he asked, and he began to tell her beautiful things about herself; about her red hair; and the lovely velvet thickness of the kind of skin which goes with it; about her eyes; her thin white hands.

She became more radiant than ever, as he had purposed making her, and many people looked at them. As for Brunton, he could hardly keep his eyes away for two consecutive seconds. Oatley looked around and saw and thrilled.

"This is great!" he said whisperingly. "Great!"

She murmured decorously: "You've given me a lovely dinner."

"Mary," he replied, "this is a gala night."

She went on: "If Bert could see me—"

"There'll be many things in your life Bert had better not see, if you're wise. You're so pretty! So terribly pretty!"

"You think so? Really?"

She spoke breathlessly. He saw a womanly dream of power in her eye.

"Eat a peach," he begged. "Take it in your fingers and bite it; do." But she wouldn't do that. She used a knife and fork correctly.

Oatley sipped his port, while she ate fruit. He met Grays' eyes. He counted the men who were looking at the girl; his girl.

"Glad you don't undervalue money," he said suddenly.

"Does anyone? Do you?"

"Do I? No, my girl. I don't. I love it. I—love it."

He sipped port. It oiled his tongue richly.

"Do you know," he said, "that it is really the rich man who can enter the kingdom of God; but it's devilish hard for a poor one. There's a man—he's a common criminal—who happens to be exactly my double."

She exclaimed in horror: "A common criminal!"

"Ah! He's that. He was a man who liked good things; he hadn't got 'em. Now, if he had been rich he would have had them. He wouldn't have had to go out looking. And he's got a lust for sport that leads him into queer places. If he was rich, it would lead him into central Africa after big game. As it is, ah, well, ah, well— He loves wine and good food and the freedom of great hotels. He loves a gamble. But all he's got to stake is his liberty, so he stakes it with gusto, by God! But liberty's not a commodity you lay on the tables at Nice and Monte Carlo. That's where he'd be gambling with gold if he was rich, but he isn't rich. When he's staked his shirt and his boots he stakes his body, he stakes his soul; his liberty's all he's got left to play with—"

He heard her little voice saying: "People oughtn't to be dishonest. Where would we all be if—"

Running on: "Now," said he, "if this fellow was rich, if he was James B. Oatley instead of what he is, he'd have been a sport instead of a pariah. Eh? Isn't it all queer? Queer?"

He shook his head. Again he was far from her till her little voice said poutingly: "You oughtn't to be making excuses for such people."

He started. "No," said he in a jolly voice. "I won't. They get their run and they shall pay their money. Let 'em take their medicine." He looked at a watch on his wrist. "Waiter, quick! Coffee and—what's your liqueur, Mary?"

"Oh! I couldn't!"

"You could, to-night. Have a crème de menthe. Kümmel for me, waiter."

He tasted it very, very appreciately.

HE knew many men envied him when, waving away the waiter's services, he rose to hang Mary's blue cloak upon her cream-colored shoulder. He bent down to her. "There must be at least fifty fellows here—if I had time to count 'em—who'd give their ears to be in my shoes."

As they walked out the thought walked with him. "Fifty men—fifty men—are envying me."

He could not refrain, at the door, from looking back at them.

Brunton and Grays had risen too; were sauntering through the maze of tables.

The commissionaire had a taxi up quickly. Oatley put Mary in, and with his foot on the step turned to grin and wave to Brunton and Grays. They nodded. A second empty cab was rolling up as the first got away.

The girl was warm with delight, and friendly.

He took her hand again and glanced from the window. The drive was to be very short.

"Mary," he said, "there isn't a great deal of time. We shan't be alone in the theatre, and I may possibly not be able to see you home. Look here—" He

suddenly faltered. The girl knew perfectly well what was coming.

"May I kiss you?" he asked.

"You promised—"

"All right. All right, I know I promised. But let me tell you. I was going to persuade any woman who kindly came out to dinner with me to let me kiss her good night. I knew it'd have to be persuasion because I meant to have a nice woman—a girl I'd be proud to be seen with. A girl who looked like my own. God! didn't those fellows in the restaurant envy me! Do you think you understand?"

"You are an extraordinary man."

"Why?"

"Not to kiss me."

Oatley drew a quick breath and, putting his arm about her, held her to him and kissed her. She was not at all unwilling. She was laughing.

"Ah!" he said, "it's nice to kiss a laughing girl! I love laughter. This is heaven."

And he asked whisperingly: "Now will you kiss me and say 'good night'?" But she would not kiss him.

"Oh, well," he pondered. "It's been good enough—good enough—I'm very grateful." She let him hold her close in his arm till the cab stopped, though. Then, recovering herself, she fairly smiled, with that innocent virgin look which girls can reassume at will, after the attendant who led them to their box. She was seated, program in hand, chocolates before her, bright with wine and joy, when the door opened again to admit Oatley's two other guests.

Grays and Brunton had not been long behind them. They went through their introductions to the girl with an uction which flattered her. As for Oatley, he made them heartily, hospitably welcome. "I like a party," he said. "It's good to have gathered one together unexpectedly on the—first night over."

The curtain went up on the play.

Oatley went softly to the door of the box, beckoned and whispered one of the program girls who hung about the corridor. He returned with two more programs for Grays and Brunton, and sat down at Mary's elbow.

Just at the end of the second act the program girl to whom he had spoken came quietly to the door of the box, and spoke to him. He heard what she had to say, then whispered it on to Grays. "The business manager here's an old friend of mine. Jimmy Arden. Say! I'm in luck. And I didn't know till he sent that girl round! He's outside wanting a word—just in the corridor. 'Scuse me a second—"

He gave a light, a fleeting pressure to Mary's bare arm, a little loving nip; and passed out, drawing the door to behind him. The attendant whispered: "That was all right, sir?"

He answered: "All right. Smart girl!" gave her a smile and slipped a coin into her hand. Close by stood a messenger with a sealed envelope in his hand. Oatley looked at the address with the air of one who had the right.

"That's the cable Mr. Grays was expecting!" said he easily. "Mr. Grays is in the bar."

When he had seen the messenger disappear thither he went very quietly but swiftly up the corridor, hustled his things from the lounging cloakroom attendant, darted downstairs, out into the street. By luck he caught a prowling taxi immediately.

"No. 100B Lupus Street," he said amiably. "Go like hell."

He leaned back. There was a stale smell of cigarette smoke in the taxi, instead of the scent of that girl. He thought, and began to calculate: "He'll look round the bar for a minute, go back to the box; it must have given enough time for my start. I do wonder how the little girl'll get home. But something and some one always provides for little girls." The cab sought dark, cobbled streets near the Embankment, and rattled him along.

IT stopped sooner than he expected and wanted it to. He gave the driver, with a jest, a coin; half a crown. It was the last in his pocket. Knocking upon the door of an apartment house, he asked for Mr. Morton, thinking:

"And now suppose the blighter isn't in?"

But he was in.

"My luck held," said Oatley, climbing the stairs. He gave his hat a rake. "Good gambler's luck."

A knock on the indicated door brought a young man to it at once.

"Mr. Robert Morton?" Oatley asked.

"Yes," said the young man. "What do you want?" And then, seeing the

caller's prosperous appearance, he added: "Come in."

So Oatley went into the dingy room, very frowzy and very littered, and stood.

He refused a chair.

"It won't take long to state my business. I've come to do you good."

"Aren't mad, are you?" said the young man, laughing at his own wit.

Oatley saw an undersized fellow with a mean face; of great respectability, yet virtuously raffish; weak but violent, with a dignity that was incarnate temptation to more ribald spirit. An impulse seized Oatley. But no.

HE bit at a finger nail half savagely, then stopped, tickled at the smoothness of the finger tip. For two nights he had slept in cold-creamed kid gloves like a vain woman.

"You seem interested in me," said Mr. Morton, his cigarette drooping from his lip.

"I am," said Oatley. "I was wondering what a woman really likes in a man. However, I suppose a woman knows."

"Often have to take what they can get nowadays," said Mr. Morton.

Oatley rejoined: "So it seems. Well, now my explanation. I propose to give exactly three minutes to it. If I'm longer, all my benevolent plans for you may miscarry. You're engaged to a nice girl—a very nice girl. She did me a kindness this evening."

He rejoined in the jealousy on the fellow's face. "Did me a great kindness," he repeated. "Now I'm going to repay her by doing you one. See this?" From his overcoat pocket he brought out and unfolded his evening paper, and pointed to a headline. "Like to earn five hundred pounds by catching a notorious criminal?"

Morton stared at him like a wise owl without comment.

"I'm him," said the other in his slightly hoarse voice. "I broke jail three days ago. I got some cash, and I've had my fling. It's over. I haven't an earthly chance of getting away. Two of the smartest men in Scotland Yard'll have me before morning anyway. But I don't like going cheap. I rather fancy this price. And if you like to find me—"

Morton had his narrow back against the door already.

"No, you damned little amateur policeman," said the other with extreme yet quiet ferocity, "not that way. I'd have you away from that door and dead as that door with a turn of my hand if I liked. Besides, you've got to do it plausibly. And you'll do it as like a sport as you can. That is to say, you'll do it as I say. In ten minutes from now I shall be standing on Vauxhall Bridge. You, with all that wonderful boost and brilliancy which you express in your sweet face, will spot me; you will follow me. You'll bring off a capture and a newspaper story. Stand away from that door."

Morton stood away. "And open it for me politely," said the convict.

In a raised staccato voice Morton began: "But—but—but—"

"You'll have to do it as I tell you if you're to clear that five hundred."

"Come!" Morton gasped. "This is an extraordinary story—"

"It would be," said Rogers with vanity, "if I had the telling of it. If you want to see whether it's true, come to Vauxhall Bridge in ten minutes, and if you want that five hundred spot cash for any sake don't call a constable now."

Flicking a speck of dust from his coat, settling his hat, he turned for the door, but checked.

"Before I go," said he, "for the Lord's sake give me a whisky and soda, I'm cleaned out; it'll be my last for—"

"I'm a teetotaler," replied Morton.

"Oh, my crimes!" said the sinner. He cast upon the young man a look of mingled ribaldry and loathing, and walked out, the other hard on his heels.

"You fool!" he said, turning, "go back. You'll ruin it all."

So alone he walked out into the velvet night that hid the dolor of Lupus Street.

As he stood on the great bridge he lighted a cigarette, his last and a good one. It was fragrant. Minutes passed. He saw under the lamps, nosing toward him, the young man, light and keen; an eager ferret.

Something made him think of the girl's red hair, and chuckle deeply: "God!" he said to himself, "I'm glad she's ginger. She'll give him—"

He turned and walked westward, the pursuit on his heels.

## OVEN BAKED BEANS

### Save Meat, Wheat and Money

The rising cost of maintaining a good table is a problem that every woman is trying to solve.

Heinz Baked Beans is an answer. They will cut the family food bill and please the family too.

Heinz Baked Beans are a complete food in themselves—and take the place of meat and bread. They are appetizing because they are baked in dry heat in real ovens, and come to your table brown and wholesome. For variety and to please all tastes, Heinz Beans are prepared in four ways:

Heinz Baked Beans with Pork and Tomato Sauce

Heinz Baked Pork and Beans (without Tomato Sauce) Boston style

Heinz Baked Beans in Tomato Sauce without Meat (Vegetarian)

Heinz Baked Red Kidney Beans

All Heinz goods sold in Canada are packed in Canada

## Keds Make Summer Days More Enjoyable

Good-looking, restful, comfortable shoes for hot weather! Keds—the practical summer footwear!

The soles and heels are of live, springy rubber; the light, airy, canvas tops yield easily to every step—mean foot-ease and comfort.

Men and women, boys and girls, all find Keds to suit them. There are models for every Summer occasion—indoors or outdoors, town or country; styles to please every fancy; prices to fit every purse.

Serviceable from first to last, Keds not only look well but wear well. And their cost is so moderate you can afford several pairs.

Put your family in Keds and you will add to their comfort and enjoyment, besides saving shoe expense. Ask your dealer for Keds. Look for the name "Keds" stamped on the sole.

## The Elusive Front

Continued from page 7

"Right alongside the Hudson?"  
"Yep."  
"Just across from Brooklyn?"  
"Right there."  
"You know what? When I get back I'm going to kick me loose a slab o' curbstone off Broadway—an' eat it. That's me!"  
"Well, when I get back, the first thing I'm goin' to do I'm goin' to buy me a great big heavy chain, an' I'm goin' to put one end around my ankle an' the other end I'm goin' to put around the Times Building an' fasten it tight, an' then I'm goin' to say to my feet, I'll say: 'Feet, you got me into a lot o' trouble, but you ain't never goin' to fool me again. You can step up an' down in one spot if you get restless an' must move, but you ain't goin' to take me no place no more!'"  
"Want to have a look at a Heinie?" some one called from some distance down the trench.  
"Sure," I replied, and hurried after him. I followed him into an observation post and glued my eyes to the glasses.  
"Just comin' out o' that little patch o' woods you see right direct across." The soldier directed my gaze.  
"See him?"

"Why Don't They Get Him?"  
I SAW him, a German soldier. He walked slowly out into a small field between two patches of woods, looked up at the sky, and stretched. Then he leaned over to pick up something from the ground and ambled slowly on. I looked at the chaotic wilderness of wire and deadly pits out there in No Man's Land and at the crooked line of the German trenches.  
Then I looked again at the lone German walking out there in that little field behind the lines.  
"Why don't they get him?" I asked.  
The observer shrugged. "Oh, he isn't worth the price of a shell at to-day's quotations."  
I looked again at the German, and

a prickling sensation ran along my spine. No doubt some boche's eyes had watched me through a powerful glass as I came up over those rolling hills back of the lines, and he may well have said, contemptuously: "Not worth wasting a shell on!" May I always appear of little account in the eyes of a boche observer.

### "Bring Up That Paper"

I WENT back up the trench and talked with the men there again.  
"Anything much doing lately?" I asked after a little.  
"Pretty quiet. We put over a good raid night before last, though. Got some prisoners."  
"That so? Tell me about it."  
"It's all in the paper here. Hey, Jim."  
"Yes?"  
"Hey, listen: Bring up that paper with the piece in it about the raid here the other night, will you?"  
A soldier came up and handed me a daily paper. I was at the front. I sat there on a fire step in a front-line trench with that Paris edition of a daily paper on my knees and read—mind you, I read—the account of the raid that had started from the American wire from within a short distance of where I sat.  
I read it and, looking over my shoulder, eagerly reading it with me, line for line, stood men whose clothes were in tatters, torn by the wire as they had gone across on the raid we were all reading about. I sat there on that fire step and read the account of that raid in a daily paper, and if, perchance, any of the men who were with me shall read this they may understand why thereafter I laughed till the tears ran down my cheeks and my sides ached. The pen may not be mightier than the sword, but it's a good deal more explanatory!

Mr. McNutt's third article from France will appear in an early issue.

## Clay Feet

Continued from page 9

Where Patrick Brady met Naomi Schuyler, I cannot pretend to know. There are so many places where one meets girls in New York—at the Junior League; at private dances at Sherry's and the Plaza; at coming-out parties, where every decent-looking or fairly decent-looking young man with passable table manners is impressed into dancing service; at country clubs, where one is supposed to accompany them and watch their execrable attempts at golf, holding in check in the meanwhile, by the power of the human eye, the audacious neighing snicker.

In all those crops of well-groomed, expensively dressed, mainly intelligent, and very beautiful young girls which the New York mill turns out every year, and puts on the counter of the marriage market, there is none I like

half so well as I do Naomi Schuyler. She has looks, that young woman, and she has breeding. She has pride too. And she has something in her that radiates like pure white fire.

She is full of surprises, is Naomi Schuyler.

If one meets her in a ballroom, he is taken by the pure Greek outline of her face, low forehead, clean-cut nose, clean-cut lips, firmly rounded chin. Those greet you in profile. In a front view you are taken by her great fathomless gray eyes, which regard you with a calm dignity, which overshadow every other feature she has got. Her hair, heavy, burnished, copper-colored, clings to her head like an ornate casque of bronze.

"And to think that those two should have engendered that!" you're apt to

marked, looking from the visage of Cornelius Schuyler, whose plain features still had the heavy trace of his patroon ancestry, and his wife, aristocratically ugly, to the radiant loveliness of Naomi. "Every time I see her I think of Helen, and I can understand the topless towers of Troy."

To see Naomi Schuyler moving gracefully across a ballroom, or riding a horse with the poise of an attendant of Diana, erect, firm, with the keenness of a huntress of Actæon, one might be pardoned for considering her the ultimate goddess, the most desirable of desirable women. But she has a temper, has Naomi, and people class that as her greatest fault—a sharp, incisive temper that transfixes her mobile features into the rigidity of stone and makes those great gray eyes blazing searchlights of anger.

That, to my mind, is a great virtue, for docile women are the most boring of created things, but there are thousands who do not like that sort of thing. And there was one more failing, which other girls criticized her for with a mercilessness that was inquisitorial: her liking for admiration, and her ability to extract it, comparable to the ability of the worker bee at extracting honey from flowers. She took it from all and sundry, pinned it on her coat, as it were, and walked ironically away, smiling.

Perhaps it was the impossibility of extracting anything that looked like a compliment from young Patrick Brady that attracted her to him in the first place. He would discuss everything with her, from weather to politics, in the omniscient manner of the very young, but that she was wearing a gown which a Scotch peeress had designed for her at the cost of mental prostration never elicited a word from him. Or that she was looking at her best that night never occurred to him, where, in another boy, she would have called forth stammering encomiums, or extracted fulsome compliments from full-grown men.

"He's got the makings of a man," she told herself, wise in her sex even at seventeen. And so by degrees he left the name of the "Brady boy" for that of "young Patrick Brady," and the status of a sort of occasional comrade to be that of a young male to be admired.

And she wasn't the only one who admired him. Tall and slim, black hair, blue eyes, the merry laugh of his father, and his father's muscles bulging through his coat, there was no eye that did not light up at the sight of him. "He is like the King of Ireland's son," said old Marion Hunter. "Or he would look like it, of course, if his father had not carried a hod!" she qualified.

I DON'T know what his feelings toward her were in the first few years he knew her. But I do know this: only a blind man or a child below the age of reason could have been indifferent to her. Or perhaps at that time he was obsessed by the greedy ideal of boydom: an Amazonian blond woman. He did not see very much of her, for his father did not move in the old patroon ranks, and the son was only there on sufferance—because he could dance well and knew the sons of the old New Yorkers, having met them at Harvard. Calm, unruffled, unconsciously careless, he moved through the ranks as though his forbears had come to New Amsterdam with a commission from the royalty of the Netherlands. It didn't matter to him that Cornelius Schuyler's family tree had so many rings of antiquity or that Naomi's mother was a Southern Calhoun. It did not seem strange to him that he, the son of a steerage immigrant, should dance with and know this cultured bud of an aristocratic family tree. That she had been presented at court in England, that she knew the Count of Paris, whom many give fealty to as the King of France, meant nothing to him.

He would mention his father's views, his father's self often, when speaking to Cornelius Schuyler, who had been ambassador to France during a former Republican administration, who was president of the Patroons' Club and similar institutions, and he would speak of the elder Brady to Naomi's mother, who was, as said before, a Calhoun—a Calhoun of Georgia and high in the lineage of the South. But a chill, unexpected hush would fall among the hearers.

"They don't know him," he would think disappointedly. And he would

impute that to the fact that their holdings and interests were in land and realty, while his father's were in a great, pulsing industry. Their interests were passive; his dynamic. And that was the reason of the embarrassed silence, thought he.

But he might have been enlightened had he heard the description of him by Mrs. Polk-Cafferty, the enormously rich widow of very ancient lineage—her great-grandfather had been a Swiss peasant who had fled to America for "political causes"—to be exact, it was the atrocious murder of an old lady. The British ambassador, a gentle, mild man whose ancestry ran back to the Saxon thanes, peered through his glasses at Naomi and young Patrick on the links at Piping Rock.

"Who is that magnificent-looking pair?" he asked.

"That is Naomi Schuyler, Cornelius Schuyler's daughter," Mrs. Polk-Cafferty answered.

"Of course! Of course! How stupid of me!" old Sir Cyril said. "And the boy?"

"The boy," said the matron sneeringly, "is the son of some execrable nouveau riche, some wretched hod carrier, with a musical-comedy name, Phelim Brady, I think. I can't understand why Cornelius allows his daughter to mix with that lot."

"Hum! hum!" agreed the old diplomat. In his worldly wisdom and rigid conventionality he foresaw the difficulty which would arise from the intimacy. "Nouveau riche, yes! Exactly! Hum!" he nodded smilingly at the noble matron.

HOW long Patrick Brady of his own volition would have remained in Florida, once he had regained some degree of convalescence after that attack of pleurisy, it would not be hard to say. He was essentially eager and active. Now, Florida is a worthy place and perhaps necessary, but it is not the spot for active men. Old men gather there, cheating a few years from the gamester Death. Stolid matrons assemble on porches, listening placidly to their arteries hardening. And there also assemble a sect of New Yorkers, whose religion is an annual and perpetual itinerancy, the purpose of which is to avoid New York. It is no place for an active young man.

But Naomi Schuyler was there, beautiful as ever; somewhat irritated—it showed in the finely cleft line between the eyebrows; and utterly bored at the vacuous compliments of the vacuous and inactive admirers who surrounded her. Wherefore she welcomed young Patrick Brady with open arms: a metaphor, not a fact.

"Praise God!" she uttered with the sincerity of a Puritan maid, and then: "Here comes a man!"

There is something about illness that calls forth all the dormant maternal quality of a girl, though the patient be a Wlodek Zbyszko for bulk and weight, and the girl a wisp that the wind might blow away. To the admiration Naomi Schuyler entertained for the younger Brady there entered now the ingredient of sympathy; there entered also the dangerous effect of propinquity. She came to know him better than ever, and she came to like him more.

"I don't think it's quite right for Naomi to be always in the company of that young Brady lad," some one remonstrated with the Schuylers. But it had no effect. Cornelius, the emeritus diplomat, knew his daughter too well to cross her in anything she had put her heart on; the man liked peace. Mrs. Schuyler, who had been a Calhoun of Georgia, smiled at the thought of complications. Such things no more occurred between a Schuyler and a Brady than between a princess of the blood royal and a groom of the stables.

Now let us look at this matter of love in a practical, scientific way, thrusting the poets into the outer darkness, where they can howl and gnash their teeth at will. What is it, when all is said and done, but an electrochemical phenomenon, between two reagents, acting under favorable conditions? There you had your two reagents, Naomi Schuyler and young Patrick Brady, brimming with the kinetic quality of youth, all the formula of the experiment to hand; and as for conditions, there was Florida.

And so together they met in the morning, a morning golden with sunshine over green lush country. Together they swam in a blue-gray ocean, sparkling like some gigantic emerald, way past the sullen wash of the

### The "Why" of the Hood Extra "Ply"

The growth of the Hood Tire reputation is not only because of new users for Hood Arrow Tread Tires, but because old customers buy again and again.

The Hood outdoor signs protect you on the highways of America and the sign of a Hood Dealer in your town is on a store where you can learn why the Hood reputation is so much talked about.

Where you can count the plies, make comparisons and learn why the extra strength of fabric to be had cushions the heaviest loads with the greatest margin of safety.

If you can't find the sign of a Hood Dealer on a store near you, look up its location on the page opposite contents page of the 1918 Blue Book. Go to that store and the dealer will tell you the "why" of that extra "ply."

Hood Tire Co., Inc., Watertown, Mass.

## Ingersoll Radiolite

Tells Time in the Dark

**D**ARKNESS never blinds the Ingersoll Radiolite. It's the night and day watch. Glows the time in the pitch dark as clearly as it shows it at high noon.

On vacation or week-end trip, tramping or motoring, in pocket or on wrist, on your desk or under your pillow, the Ingersoll Radiolite will prove itself the most valuable, serviceable, companionable timepiece you ever carried.

Real radium in the substance on the hands and figures gives the Ingersoll Radiolite lasting luminosity. The millions of Ingersolls in use guarantee the reliability of the movement. Sleek and styled to meet all requirements.

"The only Radiolite is the Ingersoll Radiolite"

ROBT. H. INGERSOLL & BRO.

315 Fourth Avenue New York  
Boston Chicago San Francisco Montreal

breakers to where the diving gasnets dropped in a flurry of foam. Together they played over neighboring links in the afternoon, wandering down the straight fairways and rolling hillsides, over the pretty lakes and the coves, all one great oasis where the putting greens showed like patches of a conquered desert. At night the moon, monstrous, low, white like a silver coin, came up and glinted on the seashore in a myriad shining points. The trades swept in from the southeast, odorous, delicate. And along the strand the waves broke in a faint minor ululation like the potent formula of a necromancer luring Triton and Proteus from the sea!

**T**HE grammar of that atmosphere, which was like a land and time that Nostradamus might have conjured up with his secret books, or Paracelsus distilled from his potent magical retort, acted on their hearts as spring acts on the blossoming bough. Gently they budded open until each could see the secret, inviolate heart of the other, and together they discussed in awed whispers the great things of life, death, and what is beyond it; the mystery of the myriad stars; the gentle peace of age. And with those thoughts they felt each as it were they had come to the deep, unfathomable space at the world's end, and they crept toward each other nearer for companionship.

They had been together ten days there when the matter came to its inevitable conclusion. They were walking on the beach one night—a night when the moon came up late out of the east and shot a glimmering pathway of silver across the water. To the right of them, landward, the little creatures of the woods gave their faint articulate night sounds, a rustling and a moving, a cheep and a twitter. From the sea the wind came, and in the hotel the music of the band had changed from its sophisticated jazzing to a plaintive waltz measure, a moaning nostalgic thing that drew at the heart fibers as a magnet draws at steel. Unaccountably they drew closer. Unaccountably their eyes met. Unaccountably they kissed each other. Unaccountably it seemed to them, but it was merely the instant when the great spiritual reaction occurs, a phenomenon of organic chemistry—the instant the alchemist is ever on the watch for, as he bends over his alembic, waiting for the sudden change of his incongruous elements into pure red gold.

She put her head half-shamedly on his shoulder and hid her burning face.

"It's the first time," she confessed in a whisper, "that I ever kissed a man."

"O sweetheart!" he breathed into her ear. And in him a great pride rose, and a great protective sense for the delicate fluttering thing that had come trustingly into his arms.

And then, switching from the probing of the mysteries of the world, they talked of the mysterious dew-drenched places they wanted to see later—other settings for their love masque: Fayum of Egypt, a place of roses, and the queer barbaric Moorish background of Tangier; Moscow, with its jingling troikas and strange churches and slant-eyed, gorgeous Cossacks from the Dnieper and the Don; Persia, with its hammered silver and its turquoises and its nightingales. In him suddenly rose the wandering lyricism of the Gael, the need of journey to the rainbow's end.

"And of course we can see them all," she said, her eyes glowing. "You'll be in the diplomatic service."

**H**E had wanted to go to Cornelius Schuyler after that first night on the shore, but she had dissuaded him. She was wise, with the wisdom of her sophisticated circle. That she would manage herself, the overcoming of the prejudices of birth. Her father would be easily won to her side—either by blandishments or a swift display of willful temper, and then she and her father together would vanquish the Calhoun strain of Georgia.

"We have been so long apart," she told him, "that these days must be our own, our very own."

The singing spirit of the old man surged up in him—the spirit that had won the heart of Moyra Costello, who had been called the Rose of Galway.

"No matter how far apart we had been," he told her, "I would have come to you. The sun in the high heavens would not have held me. I'd have crossed the mountains and swum the ocean and been with you at the dawn of day, because—"

"Because?" She turned to him with joy-lit eyes and mouth half open, expectantly.

"Because your head is like a crown of red gold, and in the moonlight your face is a mask of silver, and your eyes, that in the daytime are gray, are at night glowing like twain stars. And you sway like a reed before the wind. My tower of ivory! My white and secret rose!"

"My King of Ireland's son!" she called him in ecstasy.

He would want to speak to her of his father at this juncture; to tell the story of that great and epic man; to give her a faint impression of what joy was in store for her in that acquaintance. He could imagine the pride the old man would take in her for a daughter-in-law.

"In-law he damned!" the old man would probably object. "Sure you're the darling of my heart and the flower of the moor!"

But she would not speak of him, turning the occasion adroitly to their travels and stay in foreign countries, or if that failed by stopping his mouth with kisses. And he saw nothing strange in that, so much did he love her. At the worst it was only the selfishness of love, which cannot support speaking of other than that one matter. He loved her for that too, as he loved everything in her, even that lightninglike temper of hers. If she had not that, she would be too perfect for this world, he reasoned rightly, and what did it show but that she had a lithe, abundant spirit within her? For him that lightning would never stab, and indeed he was right there, for it was only he who might control it. And as for her vanity, why should she exact admiration, who was most worthy of it?

**H**E never thought it strange she did not wish to speak of his father. He had little time to think, so infatuated had he become with her. It took the conversation of Stevens, the big electrical man from Detroit, and Van Duzen, the New York clubman, to show him how matters lay.

He had been standing in a dark corner of the veranda of the giant hotel, waiting for her to come down after dinner. There was to be a great dance that night, and they had arranged to slip out and walk along the beach, as usual, later, when the moon would be up. Through the semidarkness he could see the lighted tips of their cigarettes glowing and fading like occulting lights. He could hear the harsh nasal snarl of Stevens, the polished, oily voice of Van Duzen.

"Quite a little romance, eh?" Stevens was saying.

"The two were made for each other," the broker was savoring the vicarious love-making on his oily tongue. "They're head over heels in love. The only objection is old Brady."

"What are they going to do about pop?"

"They'll throw old Brady off like a worn glove. The old Schuyler crowd won't stand for him for a minute. I doubt if they'll even invite him to the wedding."

"But they can't ditch him afterward. No, sir!"

"Of course they can," Van Duzen laughed. "The boy's going in for the diplomatic service. It'll keep him away from New York all the time. The Schuylers and the Calhouns will see to it that no hod-carrying papa comes around with a cutty pipe while their daughter and son-in-law are cutting up capers in Vienna or Paris. And even if the son wants him around, the daughter will see to it that he'll keep away. Do you notice how willing she is to talk about the boy—but if the father's name is mentioned her mouth shuts up like a trap."

"Yes, I saw that." The pair had turned and walked off. "Sure, she's wise. Say, I met the old man a couple of years ago. Great figure, all right. His business goes clean to blazes now, I guess. Bit hard on him."

"It happens every day," the broker laughed. "They always ditch the old man. The New York crowd don't want any fur-peddling, or deck-swabbing fathers, or dealers in whisky for Indian real estate hanging around while they're trying to pair off with the English or continental ducal houses. Damned bad form!"

"It's sure hard on pop, though!" Stevens's voice came faintly through the darkness. "Should say he's proud of that boy!"

The hands of the pocket watch had

fallen limply by his side, and the first flush of anger which had shown on his cheeks was now supplanted by a dull white of understanding stupor. He moved over in a daze to the rail and looked unseeing out over the ocean.

"Throw off old Brady like a worn glove!" Could it be possible that they were talking of his father, the giant who had bent earth and steel to his desires with a result outrivalling the work of jinn? His father! The great figure that had moved smiling and powerful through his life, the man who had dandled the younger Brady on his knee, crooning his old ballads until the boy had screamed with delight! The man who had been more than father to him—hero and friend! "Throw him away like a worn glove!"

"Hod-carrying papa with a cutty pipe!" His hands clenched with a gust of white-hot anger. So Van Duzen had said that! Van Duzen, the putrid little parasite who was a tolerated pet among the rich, where he picked up crumbs of commissions, in return for his parlor tricks! The Calhouns and the Schuylers would not stand for it. "Damn them!" he swore out aloud, was there one of them as good a man, as clean a sportsman? And Naomi too, they had said—

"Oh, no!" he laughed confidently to himself. They were wrong there! Naomi and he loved each other too much for these quibbles of social distinction. She at least would never let a thing like that stand between—

"Patrick," he heard her whisper behind him. She laid her hand lightly on his shoulder. He turned around to her in the darkness, evading the attempted caress.

"I want to ask you something, Naomi," he said quickly. He had moved a foot from the pillar behind which he was standing, and a vagrant light struck him, as a spotlight might a dancer, and brought out the whiteness of his face; the stern lips; the new-born grim triangle about mouth and chin.

"Well?" she asked, shocked at the unexpected expression.

"What I want to ask is this": he was panting, as though after hard physical exertion. "Is it true that your people will have nothing to do with my father—that you wish, when we are married, to keep him away from us entirely?"

"I don't understand you," she spurred. A little crease came between her eyes.

"Oh, yes, you do. Is this a fact?" She swayed a little toward him. With her white fan she made a gesture as if to sweep the discussion away.

"Boy, let's not talk of it. Let's go for our walk. Come, there's a dear!" she coaxed.

"Is it true?" he demanded inexorably.

"Well, you see, it's this way," she began. "Your father's a wonderful man, I grant, but he somehow doesn't fit in to some things, you understand—"

"Then this can't go on," young Brady rasped hoarsely.

She gave a sudden, quick intake of breath, as if she had been struck. She stiffened tremblingly, like a boused halyard. She turned white.

"What do you mean?"

"This marriage," Brady's voice choked angrily, "can't go on."

"How dare you!" she blazed suddenly. "How dare you speak to me like that! Whom do you think you're talking to? Some Irish scullion! Can't you see?" she repeated, trembling with anger. Her eyes drilled into him, like gray fire. She grasped the fan until it cracked in her fingers.

"Listen to me, Naomi," he pleaded. "My father—"

"What do I care about your father?" her voice cracked at him again, like a whiplash. "What do I care about you? I thought there were some hopes of your being a gentleman, of cutting away from the rotten entourage of cooks and hod carriers, which you seem to have sprung from. And you talk to me—you dare to talk to me—as though you were discharging a cook. A gentleman, indeed!"

He was mute, stunned before this outburst of hers. He only knew she was before him, majestic in her fury, her eyes blazing, her face pallid as a death mask.

"The clay feet!" she was looking at him with frozen contempt. "The clay feet!" She moved away from him, and suddenly she began to laugh, an angry, hysterical, half-sobbing raucosity that assailed him like blows. "The clay feet!" She was gone.

He stood for a minute there, bowed against the pillar while she walked

down the veranda, laughing hysterically all the while. And every half syllable of that laughter he recognized for what it really was, a concealed broken-hearted sobbing—like the laughter of a wounded man, with the steel in his vitals, who laughs to prevent himself from breaking into sobs.

OUTSIDE the big house on Madison Avenue the wind howled like a wolf. A great March storm was in progress, and the rain beat down in solid sheets on the pavements. Inside the big drawing room a big wood fire was burning, and the elder Brady, bulky, with his face rosy as a pipkin beneath his crown of white hair, prodded the logs unceasingly, and drew clouds of blue smoke from his short brier pipe. He looked toward his son sitting opposite him across the fire.

"You're a bit peaked and white," he said solicitously. "More than you should be, and you coming up from a tropic climate, which it is, as they tell me."

"Oh, I'll be all right, dad," the boy answered. He moved about uneasily in the chair for a minute. He looked up straight at his father. "Here's something I want to tell you, dad. I'm not a bit keen on this diplomatic-service thing, now that I've thought it out. I'd rather come and work with you, if you'd let me."

The old man's mouth dropped in astonishment for an instant. His eyes widened. In another instant his face was inscrutable as before. The only sign of excitement he showed was in the fierce puffing of his pipe. Blue vapor surrounded him like a Grecian oracle.

"Well, now," he said deliberately, "I won't be saying that I'm not glad. But begor! if you start work with me, you start work at the bottom. You can begin to-morrow, if you like, but you'll begin as timekeeper with Peter Connolly's gang. Mind you, I'm letting you off with the pick and shovel. How does that suit you?"

"It suits me, sir." The boy got up. "You start working at seven. That means you must be up at six."

"If that's the case, sir, I'd better be turning in," young Patrick smiled. "So I'll say good night."

He got up and moved toward the door. "Tell me, avick," old Brady was chuckling at the fireside, "didn't you see a girl at all down South that you'd fancy?"

A quick, short spasm passed over Patrick's face. For an instant he kept his eyes glued to the painting of Lord Edward Fitzgerald on the wall, a gallant figure in white and green.

"Never a one," he replied bravely.

"When I was your age," old Brady laughed reminiscently, "begor! there wasn't a girl in the County Longford I hadn't asked to marry me, by way of politeness—"

"Look here, dad," young Patrick expostulated, "if I've got to get up in the morning—"

"I'll never be the one to keep a workman from his hours of sleep. Good night, avick!"

He mounted the stairs slowly and turned into his room. From below he could hear his father's voice raised in an old come-all-ye:

On a Monday morning early, as my wondering steps did lead me  
Down by a farmer's station through the meadows and green lawn,  
I heard great lamentations, the small birds they were making,  
Saying: "We'll have no more engagements with the Boy of Mullabawn."

"Poor old governor," he smiled. "He's happy at last."

I beg your pardon, ladies, I ask it as a favor.

I hope there is no treason in what I'm going to say:

I'm mourning late and early, my very heart is breaking  
For a noble esquire's lady that lives near Balibay.

Mechanically he set the alarm of his silver clock at six, and mechanically he turned into bed. From below the strains of the song of "The Ulster Emigrant," exiled for love's sake, floated up mellowly, and began to filter into his heart and brain, so that when he switched the light out the howling of the wind among the eaves was like the howling of it through sail and halyard. The plashing of the rain was like the rise and fall of waves. The dim violet lights on Madison Avenue were like the lights of a town where a beloved one is, seen dimly from the counter of a vessel seaward bound. . . .

## When Your Spring Breaks Put On VULCAN

IN EVERY TOWN FOR EVERY CAR

**WHAT** car do you drive? It makes no difference, for if a spring breaks there's a sturdy Vulcan ready to replace it—a Vulcan exactly like your broken one in size and type.

Wherever you happen to be—at home or on tour, the new Vulcan is waiting its place on your car. That's the kind of service given by over 3,000 dealers throughout America, most of whom carry a complete "Standard-Car" Assortment of

When the emergency arises, you will always find a Vulcan dealer within reasonable distance, and ready to serve you.

Strength-tested to trouble its normal load, each Vulcan Spring is made to stand up satisfactorily under any working strain to which it may be subjected.

**Ask Your Dealer for Vulcan Springs**

Dealers desiring representation are invited to write for catalogue, prices and discounts.

## Speeding the Ships

Continued from page 13

the greatest rapid-fire construction job ever attempted in the United States. Hog Island is another Port Newark, only much larger. From its fifty launching ways, 110 cargo vessels of 7,500 tons burden and seventy combined cargo and transport vessels of 8,000 tons burden are to come within the next year and a half. George J. Baldwin, vice president of the American International Corporation, which owns the Camden yard, and is building and operating the huge Hog Island project on a fee basis for the Government Emergency Fleet Corporation, promises fifty of the structural ships as its contribution to the 1918 output of an aroused America. They will be coming by early autumn like hot cakes in a white-front dairy lunch, dropping into the water at the rate of two ships each three days, which is close to the rate originally promised by the Camden yard.

"We have set our pace for the Hog Island yard at 1,000,000 tons a year," says Baldwin, "with our present ship-construction force of 3,000 men increased to about 19,000 men. But Mr. Schwab has asked us to speed the yard up to 1,500,000 tons, and we shall do it, even though it involves the hiring and training of 25,000 men. We find it a good deal easier all the while to get the men, and correspondingly easier to hold them. While our labor lists, both at Hog Island and at Camden, are lengthening, our turnover is steadily decreasing."

### The Giant Yard

WE have read a good deal about the Hog Island yard in the public prints within the past few months, and much of it has not been pleasant reading—and, as it now turns out, either fair or honest reading. For, despite the mistakes which were made—mistakes which, after all, were only incidental to the prosecution of a big job and under tremendously difficult conditions—one of the heroic industrial adventures of America has been carried forth here upon the Delaware, hardly a dozen miles below Philadelphia. From a mo-

And the structural ship plants, like Hog Island, with so large a percentage of their steel fabrication being conducted many miles inland, are even more dependent upon adequate railroad facilities than their old-style brethren.

"Our men working upon the ships," says Mr. Baldwin, "must know that there is sufficient steel in the great yard storage reservoirs in order to deliver their maximum efficiency. Without such knowledge their enthusiasm ebbs, their work lags, and the progress of the yard is appreciably hindered."

### Men and Morale

THE men, the human element in the shipyard! We have been talking all this while mostly of the material things by the ways—the miles of railroad, the mountainous piles of steel which they bring the ships, the greased ways themselves. We must not lose sight of the vast human factor behind these material things.

On a May afternoon I stood with Holden Evans on the deck of an unfinished tanker in the yard of the Baltimore Dry Docks and Shipbuilding Company, of which he is the president and master builder. There was a giant clock face with but a single hand on the timbers at the head of the ways that held the new ship straight aloft, and the single hand upon that clock face was pointed at nine. Translated, that meant that the laying of her keel had begun but nine days before. The dial of the clock was closed with forty numbered spaces.

"Which means," explained Holden Evans, "that this ship will take the water forty days after the laying of the keel. Not quite as fast as the *Tuckahoe* perhaps, but this is a tanker and a longitudinal ship into the bargain, which means harder work, and slower. Do you see that ship there?" His arm pointed to another unfinished tanker upon the adjoining ways. "We have done in nine days upon this ship what it has taken thirty-seven days to accomplish upon that one."

"Why?" I asked.

"We are perfecting our methods, our

Holden Evans gets the most out of men working with him

ness the world's greatest shipyard has been carved—in six brief months. Its very size is astounding. If Hog Island were laid upon Manhattan, the shipyard would extend up Broadway from the Battery to Eighth Street. The shipyard's streets are as the streets of a city, and teem with both life and orderly industry.

To the construction problem at Hog Island was added that of transportation, not merely of materials, but of men. For as Port Newark draws upon the labor reservoirs of New York, Hog Island draws upon Philadelphia. Both of these great new assembling shipyards have sought to make the conditions of their labor more attractive by running long special trains at convenient hours from various passenger stations in the metropolitan districts straight to and from the doors of their yards. Yet a larger portion of the transportation problem is the prompt carriage of the ship materials up to the very heads of the launchways. All promises for the rapid production of ships are predicated on the prompt and unhindered flow of this transportation.

materials are coming through better, and the men are falling to the job with a larger enthusiasm."

The men again!

When Evans was in the full thrust of a great group of Norwegian contracts—just before the coming of the United States Shipping Board and its huge orders—he had built up the personnel of the yard to over 2,000 men. Yet, when he had first connected himself with the plant but four years before, he had found less than a dozen working there. And he had done far more than merely raise a force—he had built up a morale. When I visited the yard in May there were more than 7,000 men employed; by the time this comes to your eyes there will be 8,000; long before September the number will be well over 10,000. The problems of morale and efficiency that such rapid increases in working forces present are hardly less than staggering. The Baltimore yard's sixty acres of plant, representing an investment of \$1,200,000, are impressive, as are its great steel and glass shops—the largest of them with a ground space of more than

## "Citizens of the World"

The patriarch Abraham and the apostle Paul, John Wycliffe and Christopher Columbus, Benjamin Franklin and Abraham Lincoln, were "citizens of the world."

They thought universally, to some extent saw every man as his brother's keeper, and were prophets of the day when a great contest would be waged to make the world one world, and that one safe for democracy.

this yard to fulfill your contracts this year?" asked the man from the North.

"About two thousand."

"And how many have you?"

"Just 450—all of them union men."

"Will your local union furnish you the 1,550 more riveters that you need?"

"They say that they have tried to, but they can't."

And the man from the North came back and made his prediction that a yard managed in that fashion would not be down to the job in eighteen months—if indeed in that time.

## Computing Progress

IN COLLIER'S for March 16, 1918, I told of the great shipyard at Newport News, how it drew upon the vast industrial resources of the South and employed black men in great numbers as riveters. I said that these black men could not have such jobs in the North, although the North prides herself on the opportunity she gives the negroes as elevator men, chauffeurs, and personal servants. Apparently they can become riveters nowhere else in the South than Newport News, although there is not a port on the Eastern coast south of that point which has not vast potential raw labor of this very sort.

There is no particular skill or science in driving rivets. Strength and endurance are the chief factors. So the other more skilled professions in shipbuilding do not enjoy the public attention that has been focused upon the riveters—the widely heralded contests between them, even the expression of ship construction in terms of rivets driven or remaining to be driven.

But riveting forms the simplest and easiest standard of computation of the progress of a ship. If it takes 850,000 rivets to fabricate a 10,000-ton steel vessel and 450,000 of them are in, we know instantly that the vessel is half done; and if the average working capacity of a yard is 300,000 rivets a week, it ought to turn out such a craft about once each three weeks. And the most rapidly trained man is the riveter. The South could bring thousands of riveters out of each of her counties. Of what use to talk double shifts until she has succeeded in filling her day shifts?

And similarly the skilled men required in the other parts of the shipyards must be brought forward before we begin to talk seriously of double shifts in each of the plants—even in these, the longest days of the year. They are beginning to come forward now—keen, sharp, hard-muscled workmen who until a few weeks ago were perhaps employed in the great automobile plants of Cleveland or Toledo or Detroit. They make good shipbuilders. And John Slausen, the boss foreman of the Harlan & Hollingsworth plant, knows that to-day he can make a 900-horsepower tubular boiler every week—which is just a little faster than the outer yard can put the ships over into the water. When there are more ways in the huge tract just purchased across the narrow Christiansa and more ships come from them, Slausen knows that he can increase his boiler-shop force and make his work keep pace—"If only they can keep the material coming for-

## SHELLS AND SHAMPOOS

BY CAREL COREY

EVEN a hair wash is exciting in Paris these days. Last Saturday morning, in a little shop on a quiet side street, just when my hair is wettest, we hear in the distance, at first very faint, but rapidly louder and louder, the weird, long-drawn-out wail of the "sirène."

In a second all is confusion. Each customer grabs hat, coat, gloves, fur, and parcels and flies to the cellar. Madame's three assistants leave her to put up the heavy wooden shutters alone. They don't even stop to turn off the gas under the little stoves where they have been heating their irons for the ubiquitous Marcel wave. But madame remembers. She also snaps out the electricity which runs the dryer she was just about to use on me. She sees that both hot and cold water are stopped, and by this time we are alone. We listen to the hurrying footsteps in the street, to the frightened cries of the children, to the honk-honk of the taxicabs filled with nervous people willing to pay any price to be taken home, and to the laughter of two soldiers who say: "It is good that Paris knows there is a war."

Madame ties a huge towel around my head, says I look like a nurse, gathers up a small box, and we too proceed to descend. On the way she tells me that her box contains a picture of her husband in the trenches and another of her dead boy. Also yesterday's receipts and her own prescription for the prevention of dandruff, and the address of a shop which sells models from the "first" houses at unbelievably low prices. There is also a bottle of her best perfume and a huge piece of chocolate. I am asked to carry a chair. I take it in one arm and in the other madame's poor little fox terrier, which, either from cold or fright, is trembling pitifully. For just here a tremendous explosion shakes the house, and we know that another "egg" has fallen from a boche bird and has struck close by. Neither of us is exactly afraid, but in spite of ourselves we hurry a little faster. Halfway down the cellar steps a friendly old lady holds a candle high over her head to light us on our way. After a minute or so I am able to make out that the long, damp, dark corridors are full of people. Some are laughing, though a bit hysterically, a very young baby is whining, and everybody is explaining to everybody else just how it all began. A small girl of three is trying very hard not to weep, while her brother of five is doing his best to comfort her. I hear him say: "Have no fear, little sister. If they come, I will hold thee close." I manage to squeeze my chair between two curiously inclined but harmless women who say that I must be one of those rich foreigners who never wash their own hair. Beside them are their knitted marketing bags. I spy the inevitable "yard" of bread, the ever-present wine bottle, and though I cannot see the cheese, I smell it.

A very sleepy girl of ten complains that she has had no breakfast. At which a large, fat woman raises her coat to show a much soiled robe de nuit. Her hair has not been combed, though it boasts three brilliant rhinestone pins. She too, it seems, is very hungry. As if by magic, slices of bread and slabs of chocolate and figs and apples appear on all sides. Our friend accepts an apple and enjoys it loudly in spite of the absence of two important front teeth.

## "They Cannot Come"

WE are glad when a man discovers a rusty nail in the wooden partition, on which he hangs a battered tin lamp. This, without a chimney, has been standing on the floor. It belongs to a

very excitable person who insists upon passing back and forth, back and forth. Each time by the slightest margin she succeeds in missing the flame with her skirts. Several sly people have demanded "if this is a time to make a promenade?" But they are not answered because the excitable one is asking in her turn if the Government is going to repay her for her petrol? She insists that with two sons in the war the least the Government can do, etc. This calls forth the French equivalent for "Shut up" from many mouths. In the ensuing excitement the little girl again begins to cry, and the brave five-year-old keeps saying: "But I assure thee they cannot come. Never will they get thee." But his voice is pretty shaky; he as well as we hear the regular boom of the anti-aircraft guns and the occasional crash of a bomb.

## Suzanne

A SIMPERING blonde remarks that during the last raid everyone in a certain cellar in a certain street was killed because the bomb which fell contained gas. She goes on: "One is safe nowhere. In the cellar one gets the gas, and higher up there is the shell. If one is near a rear wall, it will surely cave in, and if one is close to a window there is always the flying glass." When she has finished an aged man in a quivering voice asks if she is not ashamed to give so bad an example to the little ones. But the children have not waited to hear him. Her talk has been enough, and they are all in tears. However, they are soon quieted with loving words and kisses.

They display a keen interest in the conversation of a newcomer who arrives out of breath and out of humor. She announces that she was just on the point of selling an old clock—she keeps a small curio shop close by—when the alarm came. One minute more and the customer would have paid the seven francs, though said customer had insisted that five was the proper price. "If one's trade is to be interrupted like this every day in the week, would it not be better to end it all at once?" Here she begins screaming for a knife. Which is the signal for the babies to break out anew. However, we soon discover that the knife is wanted only for the cutting of bread and not for suicidal purposes. I am offered a piece in perfect camaraderie; but I decline with thanks. Even if I were hungry, the fact that the great loaf has twice fallen to the floor and been tramped upon by little feet would make me hesitate. Some one suggests that a cup of hot coffee would be good for all of us. For we are beginning to be quite chilly.

Everyone makes way for a man whose immense trousers and wide belt proclaim him to be a workman. He laboriously pushes his huge bulk between us and the wall and seems to have something most important to do. He explains finally that he is hunting for a pick and shovel. For, says he: "If one has not pick and shovel, how can one dig one's way out after the bomb has landed?" Once more there is a chorus of sobs from the youngsters. But this is changed into laughter when I, both to amuse them and to warm my freezing head, place my hat on top of the towel.

Now comes a great bass voice yelling for "Suzanne." Suzanne happens to be the one who had almost sold the clock, and the big voice belongs to her husband. He bellows that the customer has not left the shop after all and that she still wants the little clock. She is now willing to give six francs instead of the aforementioned five. But Suzanne is adamant. Seven francs or no clock. Here a voice is heard to ask if one is supposed to risk one's life for a franc? The big bass voice fades in the distance. It seems to me that I hear a chuckle toward the end. In a surprisingly short time back comes the voice and this time the chuckle is undeniable, as we are told that the clock went for six-fifty.

## "This Is Too Much"

IN great embarrassment a youngish woman is trying to quiet her soldier husband. He is holding a sleeping baby on his knees and a second tired child is standing beside him. He keeps repeating over and over: "But this is too much. This is too much." The wife, fearing rightly that people will misunderstand, explains that her man arrived only last night for his ten days' leave. For four months he has thought longingly of the modest rooms which make his home. For days she has worked to make them spotless. Now that he is here, "is it that he is to remain cooped up in a cave? No, decidedly no! And when he gets back to the front he's going to murrurrer every blankety-blank pig of a boche. For this is tooooooo much."

A venturesome boy, succeeding in escaping the vigilant eye of his mother, scampers up the stairs two steps at a time. He returns in a little while and reports that "never has the good God made so beautiful a day"; that already the streets are filling with people intent upon their own affairs; that great crowds are streaking from out the "shelters" of the underground stations; and that the little market carts, laden with cabbages and potatoes and all sorts of salads, and the others piled high with a very fairland of flowers, are again drawn up to the curb. And he thinks that, inasmuch as we have heard no guns nor bombs for some little time, we too are safe to take up the work of the day. To prove that he is right we hear from afar off the happy, typically French little melody which says so plainly that all is well. Nearer and nearer it comes, and I am sorry to miss the cunning little red fire engines and the important little firemen who so pompously blow their

horns and whose helmets of brass shine so gloriously in the morning sun.

I stand up, and stamp my right foot which is icy and my left which is asleep. I say "Bon jour" to my chance acquaintances, one of whom advises a hot drink against pneumonia. I thank her and, picking my careful, cramped way toward the stairs and the sunshine, I pass my five-year-old hero. He is saying:

"See my little well-loved sister. Again all is over."

So I too have a Marcel wave.

**WHICH WILL SUCCEED**  
—the one who occupies ALL his spare minutes with the daily paper, or the one who is mastering a little at a time the few great books of the ages, a knowledge of which is one of the essentials of true success?

What are these few great books—biographies, histories, novels, dramas, poems, books of science and travel, philosophy and religion that so delightfully “picture the progress of civilization”?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—forty years of it as President of Harvard University—has answered that question in the

## HARVARD CLASSICS

*Dr. Eliot's Five-Foot Shelf of Books*

**The Few Great Books That Make a Man Think Straight and Talk Well**

Every well-informed man or woman should at least know something about this famous library. The free book tells about it—how Dr. Eliot has put into his Five-Foot Shelf “the essentials of a liberal education” and so arranged it that even “fifteen minutes a day” is enough.

The free book contains Dr. Eliot's own plan of reading explained by himself—and all you have to do is ask for it, because we want every Collier reader to have the advantage of the inspiration and entertainment there is in this chatty little “guide book to books.”

Truly it is the most valuable little book of its kind ever written. It shows how to select a library without waste or worry, what books are worth while and what are not. Here is Dr. Eliot's best advice to you on just how and what to read. Every Collier reader—and more than a million will see this issue—is therefore invited to have free a copy of this handsome and entertaining little book. We shall be as glad to send you a copy as you will be to have read it.

## Read in the free book

those twelve vivid little essays—intimate word pictures of famous people, famous books, famous places. Perhaps you too will say: “To me the little free book opened the door of a vast new world of pleasure.”

## The First Mile Under 30 Seconds

28½ seconds, made over 12 years ago at Ormond Beach by the Stanley "Bug."

It was made on Cord Tires,

—the pioneer tires of cord construction, first of the many makes that followed.

They were developed and produced by an important unit of the United States Rubber Company.

Years of experience and ceaseless toiling for improvement have enabled us to perfect the cord tire principle.

'Royal Cords' are the final development.

And the same principle of

construction which achieved new records when speed was a sport is setting the pace on the firing line where tremendous speed is part of a day's work and lives hang on tire dependability.

Layer on layer of powerful little cords assure greatest structural strength and longest wear.

Each layer is impregnated with live rubber to give elasticity and life.

'Royal Cords' will carry you farthest at least expense for tires, repairs, gas and oil.

They are the real thrift tires of the day.

# Science vs. Guesswork

*How "hit-or-miss" lubrication gave way to the scientific use of oils*

**F**RICITION in any power plant—whether steel mill or automobile engine—is the worst enemy of economy and full power.

The practical need for something to reduce friction brought about the first use of lubricants. Fish oils and animal fats were first used.

It was later found that petroleum would yield different types of lubricating oils of marked superiority.

Development in the manufacture of different grades and classes of lubricating oils came at a fortunate time. For mechanical arts developed rapidly.

Unless the lubricating problems were properly met, mechanical development would fail in its aim. Only the properly lubricated engine could yield the efficiency aimed at.

The Vacuum Oil Company were the first manufacturers of petroleum residual lubricants; and were the pioneers in the field of scientific lubrication and demonstration of power saving by the use of proper lubricants.

In taking up automobile lubrication, the Vacuum Oil Company simply pursued its professional methods which were already well established in other fields of

power-production and transmission.

The Chart of Automobile Recommendations at the right represents our professional advice.

In using the oil specified for your car, you will use oil whose correctness was determined by very thorough and careful engineering analysis of your engine. The oil specified combines *high quality* with *correct body*.

It will give you:

- (1) *Increased power—noticeable particularly on the hills.*
- (2) *Reduced carbon deposit.*
- (3) *Reduced gasoline consumption.*
- (4) *Reduced oil consumption.*
- (5) *Freedom from unnecessary repairs.*

If you use an oil which less correctly meets your engine conditions from a scientific standpoint, you are almost surely pouring trouble into your crank case.

Write for 64-page booklet containing complete discussion of your lubrication problems, list of troubles

with remedies and complete Charts of Recommendations for Automobiles, Motorcycles, Tractors and Motor-boat Engines.

## Mobiloids

*A grade for each type of motor*

In buying Gargoyle Mobiloids from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

**VACUUM OIL COMPANY, New York, N. Y., U. S. A.**

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

**Domestic Branches:** Detroit, Boston, Kansas City, Kan., New York, Chicago, Philadelphia, Indianapolis, Minneapolis, Pittsburgh, Des Moines

### Correct Automobile Lubrication

**Explanation:** The four grades of Gargoyle Mobiloids, for engine lubrication, purified to remove free carbon, 2"

Gargoyle Mobiloid "A"  
Gargoyle Mobiloid "B"  
Gargoyle Mobiloid "E"  
Gargoyle Mobiloid "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloid that should be used. For example, "A" means Gargoyle Mobiloid "A," "Arctic" means Gargoyle Mobiloid "Arctic," etc. The recommendations cover all models of both passenger and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on Correct Automobile Lubrication.

## *Sixty Years of Borden Milk Protection*

**S**IXTY, fifty—even forty years ago—more than one-half of all the deaths in our cities were of babies under five—the nation's most precious resource.

Your children are better protected now. Their health is safeguarded; each year the dangers are reduced and their life made surer. This protection is due largely to the regulations which govern the principal food of children—milk.

The purity of milk and its protection from the source of supply to the consumer was Gail Borden's one idea. And when he formulated that idea as the Borden code it became not only the foundation for an industry but a basis for all subsequent milk sanitary regulations.

Founded upon this idea is the Borden institution. This company, amplifying and improving Gail Borden's code as only an institution of its resources and

experience can, has built up a name which, in itself, is a symbol of purity and protection.

Today, wherever milk in a safe, convenient, nutritious form is needed for the children, for the kitchen, for the table, for out-of-the-way places all over the world, there is a product, backed by the Borden name, to fill the need.

This is the fulfillment of Gail Borden's ambition.

 EAGLE BRAND EVAPORATED MILK MALTED MILK

*Woman-power!* Today she does the work of a force of men. Alone—with her typewriter and the Mimeograph—she *easily* turns out thirty or forty thousand letters a day—and more—letters exactly like her *neatest* typewriting—*nobby letters*. And if occasion demands she can quickly trace a sketch or diagram on the same sheet—all complete in *one printing*. Also she produces the office and factory forms—with a big, clean-cut saving of both *time and money*. Let us show you what remarkable war-time work *woman-power* and the Mimeograph are doing for American business—may do for yours. Send for new booklet "M" today. A. B. Dick Company, Chicago—and New York.

*Note this!* The Mimeograph, and our supplies for it, are made to work together. Upset that relationship, the work suffers, valuable time and materials are lost, and our responsibility for quality and output ceases.

NEW YORK N. Y.

THE NATIONAL WEEKLY

JULY 13, 1913  
VOLUME 61 NUMBER 12

Price: 5 cents a copy; \$2.50 a year. Entered as second-class matter, July 20, 1913, at the post office at New York, N. Y., under the Act of March 3, 1879.

## THE SPIRIT OF VICTORY

*"Give him this day our daily bread, if need be"*

# THE SOUL OF FRANCE

BY JAMES HOPPER

COLLIER'S SPECIAL CORRESPONDENT

THE first time I saw the château was on the night our batteries were going into position to relieve the French who, after a bloody struggle, at length had stopped the Germans before Montdidier. For four days we had been marching steadily toward the rising boom of the cannon, through a pretty country of soft hills and swales, lush and green, and small woods just tipped by the wand of spring. Then for two days we had been halted in a village situated on the shore of the battle area, as a fishing hamlet is on the shore of a sea—a village packed with troops, with French chasseurs, tirailleurs, zouaves, and legers among whom our own men had gained popularity by means of their football, their military band, and their joyous boyishness. There the bronze hum of airplanes was always overhead; the cannonade at times reached a volume of sound which made the heart thump in return; and we could see, to the east, the line of balloons, up in the air, which roughly gave us the line of battle along the ground.

## The Rendezvous

THAT evening, at mess, the colonel said: "The batteries are going in to-night." I stuck close to him after that, and when, at nine o'clock, his automobile slid smoothly into the court of the old farm where we were billeted, I asked him if I could go along. He said yes, and I climbed in after him. The machine went away with a buzz, and almost immediately we were in another land. The village we had just left still held a few civilians. The next through which we whirled was a deserted village; some of the houses were tightly barred and shuttered; others had doors open like black holes, eloquent of the haste of departure. Twice more we passed through evacuated hamlets like the first; then we went through one which, besides being empty, besides having lost its soul, was also being physically destroyed. There were holes in the roofs, and tiles thrown wild about, and one poor little chaumière had collapsed entirely into a heap of dust—evidences of recent shelling. The next village, though, showed more than signs of recent shelling; it was actually being shelled, and it was there we stopped, because it was there the P. C. (post of commandment) was to be established. The colonel had sent Captain F. there the day before, with the French interpreter, Lieutenant T., to reconnoiter, and now he wished to see them to get their report.

So the machine stopped right there, in the center of the very wide main street. At first I was not quite sure of the nature of the sound I heard. The machine was a limousine; we were inclosed in glass, and within that glass chamber the cr-r-r-rump of shell bursts had a sort of attenuated and almost pretty quality, as of bubbles bursting far up in the air. But the moon was coming up, and after a while I noticed that new holes, here and there, were appearing in roofs as if by enchantment; that tiles took wing as if they were swallows. There was nothing to do about it, however. For the colonel, in his corner, was sitting waiting, perfectly silent and perfectly immobile, never giving with his head the slightest bow, never acknowledging by the smallest motion or sign the turbulence about him. Looking at him out of the corner of my eye, I had to admit that his behavior was most fine and impressive, and so, as I wished also to look fine and impressive, there was nothing for me to do but pattern my atti-

tude by the colonel's. So I sat also, immobile and silent, refusing to those things that were flying through the air the courtesy of the smallest acknowledgment. But what I was thinking was: "Unless this French town is singularly different from all other French towns, there is about, or, rather, there are all about many very fine wine cellars, deep and cool and strong-vaulted, very far under ground, very fine places to be in." Finally, true to the rendezvous, Captain F. and Lieutenant T. came down the street, sliding along close to the walls, as it was perfectly proper to do. The colonel opened the door of the limousine and called them over. They came to the door, and there, right in the middle of that broad street now naked in the light of the moon, followed the longest and strangest conversation I have ever heard.

It was all about the P. C.—should the P. C. be on the right side of the street or the left side of the street? The young officers had performed their mission well. There was on the right a series of good cellars admirably qualified to serve for the P. C. Only on the left side of the street there existed also a series of cellars admirably qualified to be turned into a P. C. The cellars on the right side of the street had extra qualities which the cellars on the left side had not, but the cellars on the left side of the street, on the other hand, possessed several pleasing characteristics unknown of the cellars on the right. I heard these qualities and characteristics described, enumerated, extolled, compared, weighed, and balanced. But this was not the only thing I was hearing. Now that the limousine door was open, other sounds which had already claimed my attention came in freely. There was not a moment when something was not whistling through the air or bursting somewhere. Every once in a while the whistling became a vicious rising shriek, and both Captain F. and Lieutenant T. ducked the least bit, and placed that silly glass automobile between themselves and the sound. Then they would resume: "You see, colonel, the cellars on the right, etc., etc." I should have liked to see them, those cellars. Maybe I could have given an opinion. But no one invited me, no one at all.

## A Duel of Clamors

AT length the colonel decided on the cellars to the left. He closed the limousine door, and the machine leaped forward again, while the captain and the lieutenant seemed to disappear into the ground just where they had stood. We left the village, by a church with a nicked steeple, and were in the open country. On both sides of the road were shell holes, and some on the road itself, and now and then, its sound filtered and attenuated by the glass within which we sat—smothered too, I suppose, by the hum of our motor—a shell burst somewhere, you could not tell whether it was far or near, with a sort of queer, liquid, futile pop. Then we passed long convoys, going slowly and smoothly and imperturbably across this plain streaked with flying death, and our men, helmeted like Hermes, silhouetted blackly under the moon, sat high on their horses, or still higher on their wagons, immobile, with straight spines and never a nod. We left them behind, turned into a smaller road, then turned once more into a great park, and rolled up to the château. Never had there been such a din—at least I had

never heard such or dreamed of such. The great park, and the woods surrounding it, evidently were full of hidden batteries, and these were all going it at once in a sort of high, joyous orgy of reckless firing. One battery seemed to be right up against one of the corners of the château, though it was invisible. It rocked the old pile, and the blasts from the others in the wood seemed to hammer down upon its roaring in a duel made of huge clamors. The château, a noble pile still unmarred except from one small shell which, hitting glancingly, had merely made a scratch above the shattered glass marquise, trembled and trembled; it seemed impossible that, after its centuries of high repose and silence, it should be able to bear this odious and vast assault of vulgar noise; the stones themselves seemed ready to disintegrate. Never had there been such a din.

## Le Voilà!

YET when we came to the door, and the colonel asked of the French sentry where Major S. could be found, it was atiptoe that the sentry went off down the hall to inquire, and when he returned it was still atiptoe, and he brought with him an orderly who wore slippers with thick felt soles so that he would not make any noise. The orderly placed his head within a few inches of ours and spoke in whispers. "Who was it we wanted?" "We wanted to speak to Major S." "Ah, the commandant américain!" "Yes, we wanted the commandant américain." "Sh-sh-sh-sh," he hissed, with a finger to his lip. In pantomime he signaled that we should follow him. He took the lead, holding a poor candle and tiptoeing in his felt slippers. Every few steps he turned to us and warned: "Make no noise." He opened a door, and we went down a winding stairway, then down another, into a vast second-story cellar. The lower we went the lighter he trod and the oftener he hissed little signals enjoining silence. Meanwhile the whole subterranean place rocked and shook as if to deep blasts exploded beneath it. Once down below, he led us from cellar to cellar. By the flitting light of his candle we could see they were full of men asleep in closely packed beds. He opened curtains and closed them; he stooped over prone forms and straightened again; he flitted like a ghost, and we followed, conscious of our heavy boots, terrorized by his constant and urgent commands of silence, of this special and strange kind of silence demanded by all these men sleeping in a hideous tornado of the most violent uproar imaginable. Finally he straightened up from a cot in triumph and, obtaining his effect of glad annunciation through a further drop in the volume of his already resoundless voice, breathed: "Le voilà, le monsieur commandant américain!" And, stooping in turn, our colonel woke up his major.

While the two were conferring I stole upstairs and made a hasty survey of the château. In spite of the many soldiers now occupying it, in spite of the inevitable doom one felt hovering above it, it was still nearly intact and unsullied. The light of my electric torch, hastily introduced within door after door, revealed in sudden illuminations great apartments—a severe dining room in heavy paneled Renaissance, a sumptuous Louis Quatorze salon, a dainty little drawing room of Louis Seize, a modern billiard room. Upstairs were bedchambers, with curtains and counterpanes all carefully drawn. One big spare room was filled with a disorder of discarded things—old gowns,

silks, and satins; saddles, guns, and riding whips, a lady's side saddle—derelict reminders of gone joyous days. One door was locked. One felt irresistibly a sense of presence still here, of a presence having nothing to do with the new chance occupants brought here by the great world catastrophe, but a presence more delicate and subtle, left here enchanted from brilliant, gay days, from dignified, intimate, and quiet days of yore. This is the way I first saw the château.

### "There Goes Number Eight"

AFTER that there came a period when I saw it often, but at a distance. The P. C. by this time had been established in the cellars (the ones to the right, after all!) of the doomed little village of X., and we lived there the life of cave men, in cellars dug out of chalk, the walls of which, constantly rubbing us with a sort of diabolical persistence, whitened our clothes, our hands, and our faces till we all had the appearance of so many pale bakers. There was much of interest to be seen, through careful crawling, in the village itself, the village so expressive of the two inexorable accompaniments of old war—Fear and Pillage. First there was the layer of fear, the evidence, easily read, of the sudden alarm, of the cry: "The boches are coming!"—doors left open wide as if screaming, doors ajar, sometimes a meal all served, on the table. Then there was the layer of pillage—the wild disorder left by troops which, having fought for days, still fighting twenty-four hours each day, troops burned with powder, with sun, with wind, corroded with fatigue, had little leisure to be careful of frail things. In the mairie—the town hall—on the floor, in a litter of old documents, legal papers, everything, lay the twenty-four brilliant brass helmets of the twenty-four brave firemen of X., the chief's long plumed pathetically broken. The little schoolhouse had been hit by a 210; in an avalanche of stones, plaster, charts, broken desks, I picked up the copy books of Isabelle. Little Isabelle, on the day of the evacuation, had been at a problem in domestic arithmetic. Here were all the figures carefully aligned, written in a fine hand just slightly cramped—flour, so much; salt, so much; coffee, and so on. Also she had written a composition on the dangers of alcohol. "Alcohol," little Isabelle had written, very seriously, "is a poison which commits fearful ravages in the system of Man." On the one remaining wall of the schoolhouse one motto still hung. From the center of this scene of violence and devastation—that scene which fairly screamed: "Live while you live, for to-morrow you die" (or "Spend what you have, for to-morrow you lose it")—the little motto on the wall still persisted in sagely advising whosoever might read to "Save every day, even though it be just one cent."

There were many interesting things in X., but still it was city life, city life in its worst conditions, slum life with people crowded together without the legal amount of air space, and one longed for the country. The fashionable walk, then, was not to Bronx Park or Coney Island, but to the batteries, a mile or a mile and a half away across the pretty green land. One would start of a fine morning. By fine, I do not mean one free from the usual missiles that make an ugly day—rain and snow and pelting hail—but free from missiles still more material, though the other thing also counted. One would start out of a fine morning—and it was exactly like starting to row in a frail shell across a sheet of water which was for the moment very smooth but likely to be kicked up by a squall any moment. I mean, that is what it felt like internally. Here was the nice green land stretching out before you, all quiet and peaceful, yet you knew that any moment the weather might change, and, once started, there was no refuge till at the other end of the journey. Well, you started, and sometimes appearances were truthful, and your walk was a nice stroll all of the way; and sometimes appearances lied, just as they are always accused of doing (who wouldn't lie if constantly called a liar?). Even then, though, it was not so terrible. We knew the tricks of old Brother Boche pretty well by that time. Pelting crossroads, for instance, is one of his patient pursuits. If, nearing crossroads, we heard the well-known silken whir through the sky, and

the accompanying detonation, we simply waited—and waiting is best and most pleasantly done lying in the grass, your nose taking full the scent of the turf, your eyes following the little beasties that crawl up and down the grass blades. Waiting thus, we'd count. "One—there goes number two—three—here's the fourth—five, I guess it's going to be eight—six, seven, eight—I guess that's all." We'd then get up refreshed, and cross those crossroads. It is strange how close—with all our complexities and degeneracies—we are still to Mother Earth, and what a deep comfort there is on her bosom. For one thing, you feel so reassuringly little there. Among the grass blades, in no time you are a little gnome—it would take more than the boche, it would take God to find you. Another strange thing is how large the earth, which is so small in the alderreal system, is when compared to man's most ambitious activities. Lying down in the grass, with the plain stretching on all sides, one saw Brother Boche's pelting activities in their proper proportions: his biggest projectiles were pills and his biggest guns pea shooters.

### The Singing Birds

WELL, it was thus, sometimes with many stops, sometimes with few, sometimes with none at all, that I would arrive to our regiment's batteries. For my visit I usually chose Battery C because it was in such a pleasing place. It was in a wood, a fresh wood all young with spring. On the ground was a carpet of grass, very light green, with daisies here and there; just above were low bushes, also of that enchanting light green; then above, the boughs of the trees, also light green; and in between, the very trunks were green with a thin moss like velvet, so that between ground and tree top the atmosphere, shot through by a pale-green sun, was like a translucent and trembling liquid emerald. The officers were charming people—

young men, grave and alert as to their work, tremendously interested and eager, yet possessed of a wealth of gaiety and good humor. At night they slept in holes, but for the day they had placed a table in a space between four trees, a roof of tenting above it, chairs about—and there they sat, in this fantastically pretty place, this place made for fairies, and listened to the singing of the birds. Literally listened to the singing of the birds, for the grove was vibrant with the winged beasties, who never for an instant stopped singing—blackbirds, robins, and little wrens, reenforced at times by a skylark, which, rising from a field near by, rose high, high above us, just visible like a little mosquito up there between the branches, and sang and sang and sang, desperately, flying, flying, flying the while, till just when we were sure he was going to die of ecstasy in another moment, he folded his wings and dropped swooning to his mate and his nest again. I don't mean to say that in this grove the only sound was of the singing birds. But somehow this was the sound which held the ear. The other sound came from the guns. There were batteries all about us—in the same grove, in other groves, out in the plain, all cunningly hidden, and they were going it forever in a ceaseless and terrific clamor. You'd hear the sharp cracking detonation, the w-whhh-ee-ee-ee-ee of the departing shell, and the wood, immediately catching the echo, raised it to a noise like that of wind going through the shrouds of a ship in storm—that sound, but a million times multiplied. This for one shot—but one shot was rare: one would follow another almost instantly; there were single files of them or salvos of them; batteries would answer each other, or mingle their terrific voices; and the whole grove seemed a little rocking ship in a terrifying hurricane of iron wind. Yet always it was the song of the birds we heard, the song of the indomitable little beasties, each one pouring out, drop by drop, frail beauty upon the world, the world ravaged and deafened and all a tremble with violence.

Yet always it was the song of the birds we heard, the song of the indomitable little beasties, each one pouring out, drop by drop, frail beauty upon the world, the world ravaged and deafened and all a tremble with violence.

Nor do I mean to say that those young artillery officers did nothing but sit and listen to the birds! A telephone was upon the table, and a book. In the book was the program for the day's firing, received from headquarters at midnight, and by the telephone came orders for extra firing, or demands relayed from the infantry by the observation points. Every now and then the book or the telephone would say: Fire (so many) shells of a certain kind at 52312 (or some other number). They would look at the map to find 52312, which would be a crossroad, an ammunition dump, or some one else's battery or P. C.; there would be a quick, precise mathematical calculation; then they'd say altogether, politely: "I'll take it," and one of them, either Captain W. or the one designated by him, would take it. He would walk a few steps down a little path—and here were the guns, in their pits, covered with green boughs which had a utilitarian purpose but which looked like triumphal wreaths— (Continued on page 30)

The inevitable had happened—a 210 had hit the château: the shell had hit square

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

CHAPTER ONE: HALF A DOZEN

ILLUSTRATED BY F. B. GRUBER

"M'SIEU! M'sieu!" The waiter's voice rose. Endicott leaped forward. The man teetered back and forth in a desperate effort to retain his balance. The tray slanted perilously; backward the waiter stepped; Endicott leaped forward again, his hands outstretched. As he did so, the waiter's foot caught in the edge of the insecurely tacked runner. He went down with a crash.

Endicott's impulse was to laugh. There may be tragedy in the crash to the pavement of a fat man who has slipped upon a banana peeling, but there is also comedy, and the latter outweighs the first. And there is something not too subtly humorous in the falling and breaking of eggs. But Endicott stifled his mirth. He knew what the dropping of a bowl of milk and the breaking of half a dozen eggs upon the hall carpet might mean to the little Swiss.

But one cannot gather up spilt milk, nor broken eggs. Futilely Endicott bent over. One of the half dozen eggs was unbroken. He picked it up. The waiter fought back tears.

"But m'sieu is— M'sieu is—" He hesitated, fearful.

"Clumsy! You almost said it," grinned Endicott.

"Non, non, m'sieu, mais—"

"Perfectly all right if you had said it," said Endicott. "I should look where I go. But buck up, Emile. Stop! Look! Listen! Can you hear it speak to you? Does it call you? Or your ears—are they unheeding? No?"

Emile's ears heard and his eyes beheld. Likewise his fingers acted upon sight and metaphorical sound. He snatched the yellow bill from Endicott's hand. For a moment his eyes lighted. Then they darkened again.

"The rug, m'sieu. M'sieu will explain—to the management?"

"I am a clumsy ass, Emile. And so I will most honorably maintain against the world—and the clerk downstairs."

Emile almost forced a smile. He rose, anxiously looking down his person to ascertain whether or not egg stains adorned him. But the tray had pitched away from him—or, with the thrifty caution of the Swiss, he had thrown it away from him—as he fell.

His clothing was unharmed. And Endicott's twenty-dollar bill would go a long way toward assuaging his waiter's pride, damaged when the tray fell.

Then his face grew anxious again. "M'sieu McCord—his breakfast—"

"Breakfast!" Endicott's voice was mirthfully incredulous. "What sort of placid conscience has a man who can eat six raw eggs and a bowl of milk—" He looked down upon the egg in his hand. He lifted his palm and lowered it, staring at the egg the while. Then his hand grew still. As though a magnet drew him, his head slowly turned. In the doorway opposite his own room stood a tall, frail figure; a figure

eyes—they were vital, blazingly alive. And in them was a concentrated fury that awed Endicott. It was uncanny.

Twenty-six years old, tall, broad, vigorous, Endicott could, he supposed, have broken this old man with a movement of one hand. Yet he felt as might a schoolboy caught raiding an orchard, trapped by the owner. The egg in his hand seemed the evidence of guilt. And the schoolboy either hides his spoils or surrenders them apprehensively. Endicott did the latter.

"I—I guess this is yours," he said.

He held out the egg. The old man seized it. To himself Endicott thought that the old man must be a weak-minded glutton. Then he changed his views. Those blazing eyes were not the eyes of feeble-mindedness. They were the eyes of virility, if not of body, then of mind. And virile minds do not go with gluttonous bodies.

"My fault—entirely," stammered Endicott. "Opened my door without looking, and collided with Emile here. Sorry if—"

"Regrets are for fools, not grown men," said the old man. The hand that held the egg disappeared in the pocket of the loose dressing gown that enveloped him. "Well," he cried, "why stand around here? You have ruined my breakfast with your clumsiness."

ENDICOTT flushed angrily. The schoolboy embarrassment left him.

"If you will permit me," he said coldly, "I will instruct the clerk to replace—"

"Replace! Replace!" His blazing glance shifted from Endicott to the frightened waiter. "You will bring me more eggs and more milk," he said, "and will keep your eyes open."

He had stepped inside his room and closed the door before Endicott could speak again.

Emile shrugged his shoulders. Cautiously, with an eye upon the door through which the old man had disappeared, he tapped his forehead.

Endicott nodded. His anger at the rudeness of McCord left him. He grinned at Emile. "Cheer up," he advised. "There is more milk in the world, and more eggs."

"True, m'sieu." Emile's hand slid into his trousers pocket; his fingers caressed the bill that Endicott had given him. "True, m'sieu," he said again. "And though positions are rare, still, m'sieu has promised—"

"I'll see the clerk immediately," said Endicott.

He took the elevator just as a chambermaid approached Emile. Over his shoulder he saw them discussing the accident. He smiled. A whole world was at war; whole cities were being destroyed; whole countrysides being laid waste; the manhood of nations was being wiped out; yet people could fuss and fume and become excited over the loss of a few

eggs, over a stain upon the carpet. It was a tragic world, but it was also a most amusing place.

He approached the desk downstairs. "I'm Endicott, Room 422," he told the clerk.

"Certainly, Mr. Endicott," nodded the clerk.

"In leaving my room a moment ago I bumped against a waiter bringing a tray to 421."

"Mr. McCord."

"McCord, yes. So the waiter called him. Odd person."

The clerk shrugged his shoulders. "One meets so many people in this business, Mr. Endicott. Mr. Curzon McCord is—eccentric, yes."

"Rather," Endicott agreed dryly. "Well, anyway, I collided with the waiter, knocked the tray out of his hand, spilled milk and broken eggs all over the runner, and—put it on my bill, and don't blame the waiter. Will you see to it?"

"Very good of you, Mr. Endicott. Don't let it worry you, please."

"I won't," said Endicott. "But it worried Mr. McCord. One would think that there were no more eggs or milk in the world."

The clerk shrugged his shoulders.

"Hypochondriacs, you know, Mr. Endicott—"

"Oh, that's it? Some breakfast for one who thinks himself an invalid!"

The clerk smiled. "Well, people with lung trouble believe that diet—"

"It is the correct thing, but—"

"Oh, I assure you, Mr. Endicott, that Mr. McCord is really, allowing for his advanced years, as healthy as could be. Our own doctor—we are very particular here—hypochondriacal, that's all. We should not permit—anxiety for our other guests— But he—we cannot govern our establishment as one would govern his private home. If a man pays, and is not offensive—for the trouble incurred in looking to the express office Mr. McCord pays most liberally, sir."

"Express office?"

The clerk smiled again. "We supply our table from our own private farm, Mr. Endicott. You have dined here. You know our cuisine. But a hypochondriac! What can one do? McCord is convinced that his health is in a precarious condition. His own eggs, from some private farm—these are all that will satisfy him. And so they are expressed here, and sent up to him. One meets all sorts in a hotel, Mr. Endicott."

"Yes, an invalid who can get away with that sort of a breakfast is a queer sort. But not very profitable to your dining room, I should imagine."

The clerk laughed. "Not so unprofitable as you would imagine, sir. The breakfast that you saw is—er—medicine. It does not interfere with Mr. McCord's appetite."

"Well, God bless the dear old crank! May he live to be a million," grinned Endicott. "You'll see to it that the waiter is not blamed. Thank you."

He turned and entered the breakfast room. The head waiter led him to a table.

"Six raw eggs, a bowl of milk—"

"Very good, sir," said the head waiter.

Endicott stared at the impassive face of the servant. He shook his head.

"Lord, no," he cried. "Not for me. I was thinking—no, wondering, aloud. For me—" He eyed the menu. "Grapefruit, coffee—"

"An omelet, sir?" suggested the waiter.

Decisively Endicott shook his head. "Some chops; toast."

"Thank you, sir." The waiter withdrew.

ENDICOTT sat a moment. Then he arose, walked into the lobby, and bought a morning paper. Returning, he had digested the headlines and read half a column of war news when his grapefruit was brought to him. He dug into it with his spoon and was about to convey the first morsel to his mouth

when the paper, propped against a carafe, slid, impelled by a gentle breeze from an open window, to the ground. Bending over for it, Endicott, straightening up, saw a girl standing in the entrance to the breakfast room.

As though she had been waiting to catch his eye, her face lighted up. Smiling, she advanced down the room toward him. Endicott cast a hasty glance about him. It was an hour rather late for the average luncheon. Save for himself, and this girl so patently smiling at him, there was no other guest in the room.

And he didn't know her! Of that, as she came nearer, he was most certain. And with the certainty came instant regret. She might not be the loveliest girl that he had ever seen, but, offhand, he doubted his ability to recollect a more beautiful set of features. And when you placed below that lovely head a perfect throat, and below that a lithe, slim figure, beautiful now, and promising rarer beauty at a fuller maturity—Endicott waited for the girl to perceive her mistake. The head waiter, whose guidance she had waved aside, bustled behind her. Endicott had the opportunity to compare her walk with that of another human being. Without any appearance of haste, so smooth was her locomotion, she made it necessary for Raoul to hurry to keep up with her.

And if she was making an error, she had no knowledge of it. For she came to a stop before the awkward-looking Endicott. She extended a slim, smooth hand. It was cool to the touch.

"This is delightful, Mr. Endicott," she said. "I feared that I would have to breakfast alone, and I hate that."

IF Raoul had observed Endicott, and read his embarrassment, he now ignored it. He busied himself fetching a chair. And as his back was turned, the girl leaned forward, close enough for Endicott to note that the color in her cheeks had not been purchased with anything save the most perfect health, that her eyes were deepest violet, that her silken hair, bluish-black, waved beautifully, maddeningly, and that she had the sweetest dimple at the left corner of her mouth.

"You are Farley Endicott, aren't you?" she whispered.

He nodded. He colored as she gently disengaged her hand from his. He had not been aware that he was holding it, somehow. "Please; pretend that you know me."

Endicott awoke to life. He was furiously red as he insisted on taking the chair from Raoul and placing it himself for his unexpected vis-à-vis. He sat down opposite her. She waved aside the menu.

"What you are having looks tempting enough."

Endicott spoke to Raoul, and swiftly Raoul sped away. The girl leaned forward. As she did, the vagrant breeze, entering the open window, blew her hair about. Endicott caught himself envying the breeze. Again he colored. He hid his embarrass-

ment by rising. "Please," he said. "I like the breeze, but your hair—"

She did not argue or protest. He liked that about her. It seemed, somehow, to betoken frankness of nature. And this time, as he held her chair, he noted that her arm—a summery frock exposed it—looked firm, as though sturdy muscles could play beneath the satin skin.

AGAIN seated, this time with his back to the entrance, he waited for her to speak. And as he waited, he studied her. This was no girl of the half-world, bent on flirtation. She was a gentlewoman: that was the most obvious thing about her. And as her eyes met his he knew that she was a gentlewoman in some sort of distress. For the wonderful violet eyes that met his so fairly held in their depths something of horror.

"Mr. Endicott, could you, for an utter stranger, do a service that might entail some personal risk?"

Her voice was calm, unhurried. But it was the preciousness of her phrasing that gave Endicott intimation of the disturbance in her mind—and heart.

Endicott was no verdant youth. He was traveled, might even be termed cosmopolitan. He was most certainly sophisticated. Adventure, feminine adventure, was not unknown to him. Strikingly handsome, with an air of breeding and wealth that was unmistakable, his gray eyes and blond head and clean-cut, tanned features had found favor in the eyes of many a demimondaine. More than one charming lady had tried to scrape acquaintance with him.

But this was not that sort of girl. Unconventional—yes. But conventions are made to govern ordinary circumstances, banal situations. And nothing ordinary, nothing commonplace, had brought into these violet eyes opposite him the fear that he so easily read in them.

Endicott inclined his head slightly.

"If there is anything, Miss—"

"Kildare. Leila Kildare," she supplied for him.

The name appealed to him; he had never heard it before, though, he was positive.

"Please command me, Miss Kildare," he said.

He meant what he said. Even as he had no doubts about her, so she had no doubts about him. Bizarre though the situation was (it was out of Endicott's experience, and he would have staked his life, his eternal salvation, that it was beyond the girl's), he knew that there was nothing that this girl might ask of him, in honor, that he would not immediately do.

"It—it is perhaps, not as—dangerous as I imagine, Mr. Endicott. But"—from her bodice she drew a small envelope—"I want this kept in safety." She slid it across the table. "In your pocket, please," she said.

Endicott placed it in his pocket; he could not help noting, as he did so, that it was without address.

"You will not open it—unless you hear from me telling you to do so?"

Endicott bowed. The incident was absurd, melo-

dramatic to the last degree, but her eyes told him that this was no practical joke.

"I will drop you a line, or telephone you, at the Wanderers' Club," she told him.

Again he bowed. He was a bit surprised that she should know of his membership in the Wanderers'. Still, she knew his name, and his club affiliations were quite well known. He must not, though, in all modesty, forget that the newspapers had frequently mentioned him.

"And now, Mr. Endicott, what do you think of me?"

"Think? Miss Kildare, when I have you longer—"

"Please. You are not that sort of man," she protested. "No. I mean—for what I have done. Can you trust—I said a moment ago that perhaps I overestimate your danger in helping me. I do not know, Mr. Endicott. It may be nothing; it may be—frightful. But if you should leave me now, it would be safer, and—"

Her voice ceased. Into her violet eyes came, intensified, the fright, the horror, that had lurked in them all along. She was looking over Endicott's shoulder. He saw her lips force themselves into a mirthless smile; he saw the cords stand out in her lovely throat, as she compelled herself to nod an invitation.

"Don't turn; don't look," she breathed. "But—he so careful! My uncle—"

Straight into the long mirror behind her chair Endicott looked. It reflected the entrance to the breakfast room. And, framed in that entrance, glaring at the breakfasting couple with an air of malignity that even distance and the mirror could not hide, stood the hypochondriacal invalid of Room 421, Curzon McCord. He had doffed the dressing gown, but the morning clothes he wore hung as loosely upon his emaciated frame as the gown had. A moment he stood in the doorway; then a smile appeared upon his features. He started toward their table. The girl leaned toward Endicott.

"Your name, Mr. Endicott, is Hoban. Arnold Hoban."

"I understand," he said. He smiled as though she had uttered some light jest. The girl's eyes, despite the terror in them, held something of approval, also, as she looked at him.

## Chapter II: Mr. Curzon McCord

AS McCord stopped at the table Endicott rose.

"My uncle, Mr. McCord, Mr. Hoban," said the girl. Endicott smiled ingratiatingly.

"I am afraid, Miss Kildare, that your uncle is not made happy in meeting me. Unfortunately—"

McCord smiled. It was not a pleasant smile; it was a smile of the lips only. But his voice was less harsh than it had been, in the corridor opposite Room 421, as he interrupted Endicott.

"If there is any 'unfortunately,'" he said, "it is that my temper is not all that it should be in the morning. I was rude, Mr. Hoban, and I ask your pardon."

Youth is ever embarrassed when age craves forgiveness—generous youth. (Continued on page 24)

As though she had been waiting to catch his eye, her face lighted up. Smiling, she advanced down the room toward him

Athletics are a feature at Pelham Bay. Here's the "monkey drill," or setting-up exercise. Push ball, boxing, tug-of-war, and baseball are also widely popular.

## TRAINING MARINERS AND MAKING MEN

At Pelham Bay, N. Y., are two great naval schools—the Pelham Bay Naval Training Station, which is making reserve officers for the Navy, and the U. S. Naval Auxiliary School, which trains deck officers for our new merchant marine fleet. Both schools share the same grounds.

Insert at left shows Commander William B. Franklin, Commander Pelham Bay Training Station; below, Lieutenant W. T. Cochran, Athletic Officer; at right, Lieutenant B. O. Wills, commanding Naval Auxiliary School.

Handling cargo quickly is an important phase of the merchant skipper's work. Here is the winch class at the Naval Auxiliary School learning to unload

At the spalling board the young marksman learns to call off the distance of a toy U-boat afloat upon a miniature ocean. He gets three tries at it

The theoretical side of navigation keeps the future deck officer from mental stagnation. Here he is, working out a ship's position by the Marcq St. Hilaire method of dead reckoning. You can see how childishly simple it all is by studying the blackboard

# FROM BASEBALL TO BOCHES

BY H. C. WITWER—EIGHTH INNING

ILLUSTRATED BY F. B. GRUGER AND ARTHUR WILLIAM BROWN

VIVELA, FRANCE.

**DEAR JOE:** Well, Joe, I have gone to work and shook the hand of no less than General Pershing. No doubt you have heard of him: he's the manager of the American team which is tryin' for the pennant over here in France. Joe, he's one regular guy if they ever was one! He looks like Rockefeller's income in his uneyform too, Joe, and the French people is wild over him and do everything for him outside of pronouncin' his name right. A few days after me and Slim White brung down that German areyoplane whilst comin' back from Paris, they was rumors runnin' around wild that Gen. Pershing was comin' to visit our sector. Our captain, which same I will soon be pallin' around with, provided he's on the level with promisin' me a commission, sends for me and claims he has a surprise in store for me. He says can I guess what it is.

"I have no doubt been made deputy admiral in the aviation," I says, thinkin' a job like that would be about right for what I had did.

He gimme a laugh.

"No," he says. "But General Pershing will be here to-day and, having had a report from me of your activities since you've been in France, he has expressed a desire to see you. I am going to use my influence in an effort to have the general act favorably upon a recommendation that you be commissioned."

"Thank you, sir!" I says, with a bow I stole from Jeanne, my charmin' young bride. "If I can grab a chance, I'll put in a good word for you too!"

I figured I could be a good feller the same as him—heh, Joe?

Joe, he gets all red, prob'ly from simple embarrassment at my bein' so big-hearted, and he coughs a coupla times.

"Eh, that will not be necessary, Harmon!" he says. "Now, there is something I want to warn you about in advance, should the general speak to you. You must be most respectful in your answers, for the general might not understand that—eh—rather free-and-easy address of yours, and he is a great stickler for the strictest military etiquette at all times—do you understand?"

"That's all right, sir," I says. "If Gen. Pershing gets talkin' with me, I'll try and make him feel at ease."

Wasn't I right, Joe? Why should I put on airs

and get stuck up, simply because I massacred a couple dozen Germans—ain't that what I'm gettin' paid for?

Well, Joe, the captain must of thought of somethin' funny, because he begin to grin and waved his hands for me to leave.

About three o'clock in the afternoon I am sent for again, Joe, and this time when I get to the captain's dugout I see they is a lot of officers standin' around at attention. Also they is a couple second-hand automobiles with French soldiers in 'em, and from all signs, Joe, it looked like the Earl of Belgium or somethin' of the sort had come to look us over. I wait outside until the captain's orderly gimme the sign to enter, which same I did with firm and steady tread, as the papers always says of a guy which is on his way to get hung.

Sittin' at a table is Gen. Pershing and a couple other big leaguers, and standin' around is our captain and his staff of lieutenants. The captain salutes and says: "General, this is Sergeant Harmon, who you desired to see."

With that we had a salutin' spree all around, and I like to wore my arm out, Joe. The general looks me over till I felt as nervous as a guy awaitin' his first jail sentence and the judge known to be severe. Here I am up before the boss of the whole American army, Joe, and I ain't even got a clean collar on. Gen. Pershing is a stern-lookin' guy, and the way he's gazin' from me to a long piece of paper he's got in his hand, I can't figure out if he's friendly or is contemplatin' leapin' up and bustin' me one in the nose for luck!

Fin'ly, just when I'm ready to give way under the strain and make a crack of some kind, so's we can get the conversation goin' and be done with it, Gen. Pershing smiles.

"Sergeant," he says, "allow me to congratulate you. It appears from the report of your captain that you have done your bit with a vengeance. I wish I had a million men like you!"

Joe, with that he gets up and shakes my hand. He's a good guy, heh?

"Much obliged, sir!" I says and stands there like a boob, with my face as hot and red as a four-alarm fire.

They is another one of them pause things, Joe, and the captain hisses in my ear: "Say somethin'!"

Well, Joe, here they are lookin' at me and waitin',

and I like to bust my brains tryin' to think of somethin' to say to make the general feel at home. They is nothin' stirrin'. Fin'ly I took a chance.

"Ahumph!" I says. "I—ahh—I hear you are livin' in Paris for the time bein', general, and I know what a gloom burg that is for a American which don't know nobody and can't speak the French. I have grabbed off a lotta friends there now, and I'll give you a letter to them, tellin' 'em who you are. Any time you want you can go down there, sir, and if you mention my name they'll see that you don't yawn yourself to death, anyways!"

Well, Joe, Gen. Pershing straightens up and looks at me like he's overcome with the generosity of my offer. I thought all the other officers was gonna faint dead away, and our captain gimme a terrible look. I'll betcha they was all a bit sore because I didn't declare them in on it—heh, Joe? For almost a minute they wasn't a sound, outside of the rata doin' their daily marathon around the dugout. Gen. Pershing keeps lookin' straight at my eyes, and I must say, Joe, that I never received such a piercin' glance in my life from no man. I looked right back, grinnin' pleasantly, so's he could see I was on the level with my offer and simply wanted to do the right thing so's he wouldn't have to roam around Paris all by himself. Fin'ly, Joe, the general begins to grin and all the other officers lets down and does the same.

"Very well, sergeant," says Gen. Pershing. "I am sure I would be very glad to take advantage of your kindness—but I'm afraid I'll be too busy for quite some time yet!" He looks around, amlin' at the other guys.

"This here war sure does cut into a guy's afternoons, don't it, sir?" I says, very respectful like the captain told me and noddin' my head with sympathy.

Joe, they was two young lieutenants developed coughin' fits and a major excused himself and went outside. You oughta seen the way the rest of them birds looked at me. You'd think I was a new kind of fish or somethin', Joe.

"Are you the former ball player named Harmon?" asks the general.

Look, Joe, when a guy is famous he's knowed everywhere! I'll betcha to this day they's plenty of people which has heard about Napoleon and Columbus—heh, Joe?

"Yes, sir," I says, "I'm no less than Marvelous

Ed Harmon, form'ly knowed as the Speed King! When I was good I had more curves than a cork-screw, and when it come to control, I could hit a gnat in the right eye with a pea at forty yards. As for speed, oh, boy! Well, my fast one would make a billet lay down and quit!"

I could of told him more, Joe, like what a good pitcher I was, and the like, but I hate a guy that blows about himself! They's nothin' like a little modesty, especially before strangers—hey, Joe?

"I often saw you pitch when I was in Washington," says the general. "It's quite a change from the diamond to the trenches, eh?"

"I ain't kickin', sir," I says. "I'm gettin' well took care of at no expense to me, and I don't have to stand for a lot of abuse from a mob of boneheads in the bleachers—all I gotta duck here is bullets! And they's another thing, sir. When I go in a trench here and get busy with a machine gun, they's one thing I used to hear when I was a pitcher that nobody yells at me now!"

"What is that?" asks the general.

"Take him out!" I says.

Well, Joe, we all partook of a good laugh, and then the general asks me if I am satisfied with the way I am treated, or do I want anything.

"Well, sir," I says, "if it's all the same to you, I'd like to get a job as assistant colonel or somethin', because since comin' here I'd wed the champion girl of the world, and the dough I'm draggin' down now wouldn't keep her in nail files!"

He taps the table with his fingers for a minute and then he looks up at me.

"You have been recommended for a commission, sergeant," he says, "but it will be necessary for you to pass a rather rigid technical examination to try for it. What would you say if I appointed you an aid to the American Military Headquarters in Paris? You would be out of the trenches for a while, and perhaps your wife could take a home in Paris temporarily. The pay would be much higher than your present remuneration."

"The Germans ain't in Paris, are they?" I says.

"Certainly not!" he tells me.

"Then, sir, I'm much obliged, but it's all off!" I says. "I don't want to be nowhere's except where they's scrappin'. I could of had manys the office job before I got in the infantry, but I guess I can't stand the smell of ink, or somethin'. If that's the best I can do, I'll have to worry along as a sergeant till one of the rear admirals quits, or somethin', sir. I made up my mind to give them Germans the trimmin' of their lives after what I seen 'em do, and I can have twice as much fun with a bayonet, sir, as I can with a fountain pen!"

"But how about your wife?" he says. "Don't you think she'd prefer to have you out of danger?"

"Not this dame; no, sir!" I says. "Jeanne would never of married me if she thought I was yella, and if I produced a streak now the bonds of matrimony is twelve feet too thin to hold her to me! Believe me, sir, this Jeanne is considerable girl. If she'd of been in the Garden of Eden, Adam wouldn't of knowed Eve from a giraffe!"

The general smiles and remarks that I got the right stuff in me and he is proud of the kind of guys America is sendin' over to him. Then he picks up his gloves, which is the signal that the party is all broke up for the day. He claims he hopes to hear more of me and that I got an Al chance of bein' an officer. Before I went out I heard him tell our captain to see that I got fitted with a set of books to study to help me over the examination and to put me wise to the dope I gotta know.

The captain is as tickled as I am, because he was afraid I would get in dutch with Gen. Pershing, instead of which I turned out to be a riot.

Joe, as I was goin' back to where our outfit is they was a thing happened that gimme a laugh, so I will pass it on to you. The only thing is, Joe, I'm afraid that immediately on readin' it you'll go

to work and tell it around the cantonment where they are tryin' to make a dough out of you as one of your own jokes. You know, Joe, you always had a bad habit of forgettin' to state plainly in talkin' just where you read or heard any particular thing which broke up your usually stupid line of chatter. Not meanin' nothin' wrong, Joe, I remember they was one funny thing you said once which was no doubt original and which gimme the hystericals. Remember the time you says to me: "Ed, lend me twenty bucks for a week?"

Well, anyways, I had to go back through the trenches which is occupied by them colored troops which I told you was here. It was pretty quiet at the time, as the German artillery had laid off to get shaved, or somethin', and a bunch of these babies is shootin' crap. Joe, the air is full of: "Baby needs shoes!"—"Come on, little fever!"—"Ha, Big Dick from Boston!" and "Ten of them franc things he don't seven!" Well, Joe, they was one little sawed-off colored guy which couldn't of been five feet high, but carried a pair of shoulders on him like walkin' beams and had a chest like a barrel. He's standin' off to one side, and when he seen me he saluted and stepped aside so's I could pass.

"Why ain't you in that crap tourney?" I asks him.

"Boss," he says, "Ah been in it! Them niggers has took me for all I got but mah color! Ah not only completely and absolutely lost all this yere trick French money Ah had on me, but for the next two months mah salary has got to be split between four different men—and Ah ain't one of them!"

"Cheer up!" I says. "Them squareheads is liable to pull off a raid to-night, and maybe you won't have to pay off at all!"

"Poof!" he says. "Them Germans can't hurt nobody! I thought this yere was a real wah, instead of that Ah been in this yere little ole trench three days and it's as quiet as a cemetery on a rainy Sunday. Ah don't believe there's been four bullets breezed back and forth between us. Sergeant, Ah seen more complete excitement in a Mobile poker game than Ah seen since Ah been in France! Ah craves action, Ah does—Ah come ovah yere to fight, and, believe me, Ah'm gonna git in a muss if Ah has to go out and do a clog dance in No Man's Land to git it!"

With that, in order to show off in front of me, Joe, he starts climbin' up to the top of the trench, hand over hand. I hollered after him to come down, and a lot of other guys starts runnin' toward him, but he keeps on goin' up and talkin' all the time to himself. Fin'ly he gets to the top and stands right on the parapet of the trench, a mark for a square-head sharpshooter.

"Come on!" he hollers, wavin' his hat in the air. "Come on ovah yere, you German quitters! Come on, show me somethin'. Ah ain't afraid of nothin' or

and about forty feet of trench give way and buried him under it. It took about three minutes to dig him out, and he's almost suffocated with dirt and dust. He sits up and looks around kinda dazed, and one of the crap shooters is standin' over him, doubled up with the hystericals.

"Ha, ha!" hollers the crap shooter. "Look at this yere man eater! Bring on them bullets, Ah eats 'em, hey? Bring on them shells, hey? Ha, ha! Bring on—"

"Well, Ah must say one thing!" butts in the little guy, droppin' a tooth which was of no more use to him, "a man sure do git service ovah yere, anyways!"

Yours truly, Ed HARMON, Sergt.

(Joe, I hear a officer has got to buy his own uney-form, so now I hardly know what to do. They ain't no percentage in that, is they?)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, they ain't no travelin' salesman or advance agent in the world which has got a thing on me. Before I get through I will of seen more places and met more different kinds of people than a opium fiend ever did on the biggest night he had! That simply goes to show you what joinin' the war will do for a guy. If I hadn't enlisted, Joe, I never would of seen Paris, London, or Berlin, because the American League has got enough cities in it as it is and jumps like that would make a bum outa the profits—heh, Joe? Of course I ain't been to Berlin yet, but I'm in the American army, Joe, and I leave it to you whether I'll get there or not, hey?

I have been to London, Joe, since the last time I dashed off a billy doo to you, and, believe me, after what I went through in that burg I was glad to get back to the trenches again, where it ain't so noisy and a guy's got a chance for his life! Them German rats must of heard I was goin' over, or somethin', because what do they do but pull off a air raid on me and Jeanne, not to say the population of London.

I suppose no doubt you are wonderin' what I was doin' in London, when the last you heard the war was in France. Well, I'll tell you how it come off. You no doubt remember that our captain sent me to Paris with a letter from Gen. Pershing. Well, Joe, I turned out to be such a knockout as a postman that when they get another important letter to deliver somewheres, it's only natural that they pick me out for the job, ain't it? Of course I could of stayed right in New York if I wanted to be a letter carrier, and they would even of give me a whistle to play with, but that ain't neither here or there. It seems they has been a leak somewheres in the mail between the base camps in France and American Headquarters in London, and they is some important orders and the like that they wish delivered by hand. So our captain elects me to take 'em over.

"Harmon," he says, "I have another important mission for you which will give you an opportunity to see London. I may add that you made a very favorable impression upon General Pershing."

"He ain't a bad guy himself when you get to know him, sir, heh?" I says.

"No comment is necessary, sergeant!" he says, very sharp and coughin' for a minute. He hands me a long envelope. "You will deliver this to Colonel — at the American Headquarters in Grosvenor Gardens, London, and report back immediately. Your passage there and back will be facilitated, and you are allowed but one week for the trip."

"That ain't givin' me much of a chance for a flash at the King, is it, sir?" I says. "I ain't never seen a king, except

one time when I held a pair of aces and was lookin' for another one. However, a guy can't get everythin'. Captain, they is one favor I would like to ask before I set forth for sweet old Great Britain and Ireland."

"Well, what is it?" he says.

"I would like to take (Continued on page 32)

I had tried him with "Yes," so now I hollers at the top of my voice: "No—you little stiff!"

nobody! Ah eats bullets and Ah cleans mah teeth wiff bayonets! Come on and cut loose! Bring on them bullets, bring on them guns, bring on them shells, bring on that shrapnel, bring on—"

Zam!!!!!!

Joe, just then they was a shell hit about ten yards from where this bird is standin' yellin' for action.

# Collier's

## ON JULY FOURTEENTH

WHEN a mob sacked the Tuileries, it found in an iron chest a diary kept by the King of France from 1766 to 1792. LOUIS's journal entry for July 14, 1789, is the one word *Rien*—"Nothing."

And yet that was one of the great days in proving France's thirst for liberty. On that day men eager to destroy the outward evidences of tyranny in France marched upon the Bastille, shot down its pensioners and Swiss mercenaries, and wrecked the whole unholy monument to outgrown medievalism. Only seven prisoners were found there, so that the taking of the Bastille was not in itself important, but it was read by observers keener than LOUIS the King as a symbol of popular regeneration. Since 1789 the Fourteenth of July has been freedom's birthday—and not in France alone.

EVEN before the French Revolution, France was the light bearer among nations. In spite of the royal form of her government, in spite of periods of bigotry and reaction, French letters and French ideas were everywhere in the van. In FRANKLIN's time French was the international language, as Latin had been. Our forefathers, in writing the Declaration of Independence and the Constitution by which we have lived ever since, were in a measure only adapting to the New World principles laid down by France's "radicals" of the eighteenth century. But though long before the present war we knew something of America's debt to France for MONTESQUIEU and VOLTAIRE and ROUSSEAU no less than for LAFAYETTE and ROCHAMBEAU and DE GRASSE, it was not till the first Battle of the Marne—not till the war which wrote the name "Verdun" upon world history, that our consciousness of that debt became a glowing reality. France, under JOFFRE and PETAIN, in once more saving civilization from the barbarian as, centuries before, under CHARLES the Hammer, she had saved Europe from the African, brought home to us the full measure of her greatness, the richness of her being as a source of life, of ideas, and of world service.

This fourth July 14 since the beginning of the world struggle finds France still strong to suffer, in spite of weariness, of disillusion, of martyrdom. France has seen a whole decade of her young manhood mowed down; she has borne the maiming of men by the hundred thousand; she has mobilized her men up to the age of forty-eight. Even now graybeards of France are fighting for freedom beside the men of Britain and the Dominions, beside the champions of Portugal and Italy—and our own young men. No one in France pretends any longer that war is other than a painful, tedious, and heart-rending obligation. All the more honor to France—intelligent enough to loathe the war and to stick it out!

ON this, the 129th birthday of French liberty, and the fourth of those birthdays since Germany invaded France by overrunning the neutral soil of Belgium, one is not content merely to salute France—merely to wish the sister republic such joy as a nation in mourning can hope for. The American heart goes farther—since it feels, not only the beauty of French deeds, but the necessity that those deeds be crowned with just fruits. "No annexations, no indemnities!" Germany's Russian dupes have cried out in betraying their allies and their nationality. No, there must, indeed, be no conquests; but the return of Alsace-Lorraine to the French Republic will be no annexation. Rather, it must be viewed as an act of justice and a pledge of peace: as one of the essential "restorations, reparations, and guaranties" seen by LLOYD GEORGE and BARTHOU as the bases of the coming peace.

"I consider France as the natural ally of my country: to say the truth, I love France," wrote GOUVERNEUR MORRIS from Paris in 1789. To-day we are proving the truth of that word. And there is no better way than standing by President WILSON's solemn statement that "the wrong done France by Prussia in 1871, in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interest of all."

When, in 1913, VON JAGOW said that "We Germans are obliged in Alsace to behave ourselves as if we were in an enemy country," he expressed, not only a historical truth, but a fair commentary on Germany's capacity for government and for making friends.

July 13, 1918

Alsations chose for France at Mulhouse in the days of the Revolution, and again at Bordeaux in 1871, when the deputies of both provinces signed the solemn protest against BISMARCK's treaty and declared: "Alsace and Lorraine cannot be alienated. Before all the world they proclaim to-day that they want to remain French. Europe cannot allow or ratify the annexation of Alsace and Lorraine. Europe cannot allow its people to be seized like a flock of sheep. . . . We will eternally revindicate the right of disposing of ourselves, and of remaining French."

There is no peace in Europe or in the world till Alsace-Lorraine—"the Belgium of 1871," as Rabbi WISE has called it—is again French—openly and unafraid. Till then there is no justice. It doesn't matter that Alsace-Lorraine is a province smaller than Massachusetts and hardly larger than Connecticut. Men of Wisconsin and Michigan, fighting to-day on reconquered soil of Lorraine, must, with the men of other States, share in achieving the victory of the right.

### Machines—or Men?

WE'VE just been reading the list of names cited for gallantry in the capture and subsequent defense of Cantigny:

Private Brooks C. Bowles—He crept several hundred yards in daylight under a terrific machine-gun and rifle fire to rescue a wounded comrade lying in the open.

Private George Purcell—Cited for a similar action to that of Bowles.

Private Willard Felty—Exposed to enemy machine guns, he silenced with his automatic a German machine gun and reduced the fire of others until his own weapon was useless.

Private Fred M. Meyer—He shielded an automatic rifle firer with his body, enabling the rifleman to silence a German machine gun. Meyer was killed as the result of his action.

Private William L. Proup, machine gunner—He carried a wounded officer to safety through terrific shell fire.

Private Walter Stewart, machine gunner—He was wounded while helping to rescue a wounded officer who was lying on open ground swept by artillery and machine-gun fire.

Major Theodore Roosevelt, Jr.—Although gassed in the lungs and gassed in the eyes to blindness, he refused to be removed and retained the command of his battalion under a heavy bombardment throughout the engagement.

Private Andrew Charles, machine gunner—His corporal and another comrade killed, he manned a machine gun for three days without relief while constantly under artillery and machine-gun fire.

Captain Emil Frey—Mortally wounded by a shell, he led his company to the front line; wounded twice more by machine gun, but continued to direct the operation. Died.

Lieutenant Wesley Fremi, Jr.—Thrice wounded by artillery fire, he refused to quit and led his men in three successful counterattacks.

Corporal William Robbins—With shrapnel wound in lungs, he remained busy under a heavy fire; walked a kilometer and a half to a dressing station to help other wounded. Died.

Corporal Winslow Corbett, machine gunner—His entire gun crew wiped out, he was severely wounded by a large shell; he crawled to the company commander and asked for two men to operate the gun; crawled 200 yards to the trenches to turn in parts of guns in his pockets.

Private Frank D. Ward—He asked permission to go into action and advanced sixty yards and killed a German sniper who had caused great casualties. He was buried twice by shell fire, but not wounded.

And so on, for three columns in our morning paper. Of course it is an officer's job to show initiative under fire. But who was it said last year, when the Selective Draft Bill was under debate, that military training made the private into a machine—an unthinking mechanical entity?

### The Kaiser's Battle Song

THIS war has been rather too tragic, not to say cosmic, to admit of the writing, as yet, of much adequate war poetry or war humor—but occasionally poetry and satire get into the same package, and then we are cheered up! What follows is from the Philadelphia "Evening Ledger" and is by CHRISTOPHER MORLEY who calls it "Battle Hymn of the Kaiser":

I, I in the midst of battle	I, I in the midst of fighting.
In my motor carriage rode,	Where the field kitchen stands at bay
Where the deadly telephones rattle	And the staff their nails are biting,
And the bulletins explode,	I faced the communiqué.

This sounds to us like some of the translations of poor old HEINE and the lyrics in WAGNER's operas. Also it proves again that one doesn't have to lose one's temper to get ahead of the Kaiser, and that one can smile even in war time. We like it!

# Editorials

## American Atrocities

ONE of our special writers visited the camp of interned sailors at Atlanta last week.

"Oh, boy!" he writes, "you never saw such a husky bunch. Every one of them in the pink of condition: running, jumping, loafing, playing tennis in white flannels, excellent food and plenty of it. I've a great idea. These fellows are the only able-bodied men of military age in the country who aren't subject to draft, don't have to worry about Liberty Bond payments or excess-profits tax or the high cost of living or anything else. I am going to write 'em up as 'The Freest Men in the World.' It'll be a peach of an article."

Now it is evident that our friend had on his rose-colored spectacles. We get a quite different report of conditions at American internment camps in an article in the Cologne "Gazette," entitled "American Atrocities." This paper complains that the interned German officers are getting exactly the same food as the men, that no leave is granted even on parole, and that walks are not permitted. Most of the charges might pass unnoticed, but this last is a damning indictment. Why don't we allow our German prisoners to take "walks"? Let the Department of Justice investigate!

## The Spirit of Italy

THE magnificent spirit with which the Italian army leaped forward to meet the Austrian onset on the Piave and in the Alps was gratifying in more ways than one: for the sake of Italy herself; for the sake of the effect which Austrian defeat must have exercised on the military situation in France; and for the prospect it offers for the recovery of the British army from the heavy blow which fell upon it last March. The Kaiser's easy habit of referring to the British army as permanently out of the game has had its effect on the timid. On this side of the water it was recently stated, on the supposed authority of an eminent French general, that it would take HAIG's army a year at least to get on its feet again. Which suggests a comparison with Italy.

The disaster of last October on the Isonzo need not be rehearsed in detail. At Caporetto the Italian army went to pieces, physically and morally. The means employed by the Teutons to undermine Italian steadfastness do not matter. The battle began with panic, continued for some days as a rout, and ended only with the rush of Allied reinforcements to the Piave and the Alps. The enemy plunged forward sixty miles into Italy and harvested a quarter of a million prisoners. It was a shock under which any nation would have reeled. It carried a peculiar menace for Italy which from the beginning has sheltered a very powerful Teutophile faction in high places. Could Italy "come back" after such a trial; could the pro-German element be prevented from infecting the whole nation with defeatism? Even in the anxious days of the German offensive in France, Allied consideration turned to the Piave and the imminent Austrian offensive with profoundest anxiety. The Austrian attack came within six months, and Italy had found herself completely.

The losses of the British army in Picardy were less than half, in prisoners, the losses of the Italian army on the Isonzo. Losses in guns and material were proportionally smaller. Without derogation to Italy, British resources and the British spirit have a greater recuperative quality. If the Italian army found its regeneration in six months, the British army—well, it will be almost four months since the great stroke of March 21 when these lines appear in print; and when these lines appear in print the answer may have already been given.

## "My Name Is Ozymandias"

EDMUND GOSSE spreads in the London "Times" the grandiloquent titles assumed by a certain great potentate. What child, even, would fail to enjoy their cheek-filling rotundities?

The husband of good fortune, the God of great Provinces, King of the greatest Kings, and God of Kings, the Lord of horsemen, the Master of them who cannot speak, Emperor of Three Emperors, Conqueror of all he sees, and Keeper of all he conquers, dreadful to the eight coasts of the World, vanquisher of the Mahometans, Lord of the East, West, North, and South, and of the Sea.

The titles of WILHELM II? No—those of the Emperor of Bismarck, chronicled in "Purchas, His Pilgrimage." And in the year of our Lord 1567 Bismarck was sacked by four allied kings whose titles ran much less metrically, and became "a habitation for Tygers and wild Beasts."

## Asking Two Philosophic Questions

IN rehearsing for possible air raids, New York City actually turned down its more superfluous lights so that sleep was easy and coal was saved. Why wait for a raid to do that? And why confine the good work to New York?

## The Age of Glass

THE Y. M. C. A. reports that saloons appeal much less powerfully to youths between seventeen and twenty-four years of age than to older men. Should these tidings raise our spirits or lower them?

Among the young men reported on, young men from seventeen to twenty-four years old, 17.8 per cent patronize the saloon; of men between twenty-five and thirty-five, 32.6 per cent are customers; of men from thirty-six up to forty-five, 42 per cent use the saloon. Now, considering the unattractiveness of the ordinary American barroom, these figures are rather striking. A still more damaging criticism of our social order is, however, to be found in the Y. M. C. A. addendum, that "twice as many married men go to the saloon as single men." Our uplifters make a bad matter worse by attributing this fact to "the higher idealism of the young men"—for what cures our young men of their idealism? Happily, the Y. M. C. A. adds as an afterthought that "unmarried men spend a good deal of time in the company of their sweethearts, who naturally would not visit the saloon with them. The saloon seems to be most popular in the years between thirty-five and forty-five, the dull drab years of middle age."

If this report is worth very much, its value lies in the omitted suggestion that something is wrong about the woman whose appeal to her mate comes to be weaker than the appeal of the man in a white coat—whose ministrations Provost Marshal CROWDER refuses to classify as "useful work." It is up to the wives of these men "between thirty-five and forty-five, the dull drab years," to make home as attractive as the place on the corner, where there's sawdust on the floor and a shiny brass rail. Scolding won't help—whether editorial or conjugal—but how about good cooking (quite within Mr. HOOVER's recommendations) and good table talk to make the corn cakes even more succulent?

## Of Patriotic Hating

IS hatred essential to the waging of a war? Obviously it was not so in the olden times, when, except perhaps in civil wars, there was a knightly side to conflicts, and the French at Fontenoy could invite their enemies, "Messieurs les Anglais," to fire the first shot. NAPOLEON, who was so hated by those of his enemies who did not secretly admire or openly favor him, changed all that, not so much by parvenu disregard of certain amenities as by making war the business of the nation—not the concern of a mere class or profession. And in a national war popular passions are far more likely to be aroused than in a war partaking of the nature of sport or adventure. In our own time extreme idealists plead that we should not hate the German people, but only the German militarism of which they are the tools and victims; but, except when a Wilson speaks, the editors and mufti patriots have little patience with this "academic" view that hate harms the hater. He is a poet, not a politician, who exclaims:

Love, the magician, and the wizard Hate,  
Though one be like white fire, and one dark flame,  
Work the same miracle, and all are wrought  
Into the image that they contemplate.  
None ever hated in the world but came  
To every baseness of the foe he fought.

What is worst about war, writes Lord MORLEY, is that "it ostracizes, demoralizes, brutalizes reason. Even NELSON, our glorious and most lovable of heroes, swore that he would like to hang every Frenchman who came near him, Royalist and Republican alike. Hate takes root as a tradition, and lasts."

Possibly women are the best haters, as well as the best menders, in this, as every, war. And it has been noted by war-time travelers that the hottest hatred is expressed, and that the most cruel histories are oftenest repeated, the farther you are from the fighting front and the less actual fighting the orator has engaged in; "for PISTOL hath a killing tongue and a quiet sword." Battle furnishes the best discharge for these emotions, when all is said and done. Naturally, it is those who cannot, or do not, swing a gun who spend most energy firing the guns of verbal war.

July 1.

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

In order to eliminate any confusion in the minds of readers that Collier's is eventually planning to prove the "Business as Usual" theory, we take the liberty of stating our position frankly: Business cannot be as usual due to the shortage of Man Power. These pages will voice the simplest truths of the position advertising holds in saving man power and eliminating lost motion.

*Talk No. 2 on the Shortage of Man Power*

## The Voice of a Million Tongues

**I**N the same issue of Collier's that contained Mark Sullivan's article on the shortage of man power, there appeared an advertisement which was an excellent example of the value of advertising in these days when labor must be conserved.

The product advertised was a conveyor—a machine which superficially seemed drab and prosaic, a thing of steel and iron; but beneath the surface it revealed the most amazing and romantic possibilities.

For here was a magic apparatus which released men from the dull routine of carrying boxes, parts of machinery, all sorts of things from one point to another, and enabled them to do vital work for their country at this time when the shortage of man power amounts to a famine.

And as we studied the remarkable capabilities of this conveyor it came to us what a splendid vehicle national advertising offered the manufacturer of this product.

For it enabled him to perform a great service during these crucial days; it enabled him to spread, from one end of the country to another, wherever a wheel of industry turns and a fac-

tory whistle blows, his message of labor conservation.

And from that point we got to thinking of the way advertising is justifying itself in these days of necessity.

Advertising speaks with a million tongues! Have you ever thought of it in that way before? Have you ever considered how advertising, just like those conveyors, releases men so that they can give the strength of their bodies and the skill of their hands to making guns or airplanes or ships or any of the hundred and one things which must be sent overseas to the American Expeditionary Forces?

Understand this: advertising does not take the place of the skilled and trained salesman.

But advertising does conserve his time and supplement his efforts. Advertising eliminates the lost motion.

Advertising, as never before, works wonders in filling the gaps which exist in the salesman's ranks because their fellows in one capacity or another are serving their country.

Advertising introduces and guarantees the merits of a worthy product to a million readers so that the salesman when he follows along need not spend time in explaining and arguing. That lost motion is saved.

Advertising is active simultaneously in a thousand cities so that the salesman, traveling slowly from city to city, finds wherever he goes his goods known and recognized.

It is in these ways that advertising is supplementing the

efforts of those salesmen, fewer in number than before, who are traveling around the country—supplementing their efforts, conserving their time, eliminating the lost motion.

\*\*\*\*\*

The man who invents a device that will make a machine

part half a second faster is helping to conserve man power.

The man who originates a method of packing and wrapping oatmeal or sugar or anything of the kind at greater speed than it has been done before is helping.

And the man or woman who buys these standardized advertised goods—at a saving of his own time and the time of the clerk—is helping.

Advertising is essential, then, for two reasons:

It eliminates the lost motion in buying and selling—

And it spreads through every nook and corner of the nation the vital message of time-saving and labor conservation.

To-day marks advertising's supreme opportunity. For it speaks with the voice of a million tongues.

# SOMETHING—!

BY DONAL HAMILTON HAINES

ILLUSTRATED WITH LITHOGRAPHS BY GEORGE BELLOWES

IN a dugout of the front-line trenches, in what was called a "quiet" sector, three British officers squatted around the glowing cylinder of a stove extemporized from a petrol tin. Two of them were mud-caked to the top of their hip boots, and their lean faces were unlovely with a stubble of beard. The third, albeit his uniform showed marks that came only from long service, had yet a certain air of freshness which bespoke a more recent arrival.

Captain Heathcote bent and fed the stove with some bits of brush.

"You might tell us the whole yarn when you've done swearing," he suggested mildly.

The man whose uniform bore less mud was ramming tobacco into his pipe with a vindictive thumb.

"I'm not a fluent person," he confessed. "I have to swear where other men would think of more words. I shall probably swear all the way through, but I'll tell you the whole business fast enough. Why, you must have known the girl, Dick! She was that pink-and-white slip who used to laugh so at your French."

"Not Lucette?" Wallace asked.

"That's it."

Wallace's face fell suddenly into new lines. He must have been conscious of the change himself, for he said slowly:

"Queer what a difference just knowing people makes. Get along, Bobby!"

So Duncan, junior subaltern of B Company, told them a sorry tale, and the only interruptions were the scratching of matches and the snapping of twigs in the stove.

It was an ordinary enough business, ugly, and losing nothing of its ugliness in Duncan's bald narrative. A pretty little French girl assaulted by a Russian soldier—from one of the few Slav regiments serving in the west.

"No, she wasn't killed," Duncan said in answer to a quick question from Captain Heathcote. "Better if she had been," he added, for Robert Duncan senior was a vicar.

sailant was dressed in green, was bearded, and smelled of drink. Any one of a hundred Russians would have answered this description. There had been much show of keeping the men better in hand, some narrow escapes from clashes between the green-clad soldiers and the enraged Tommies—and that was all.

"And yet that isn't all!" Duncan said, setting his teeth hard on the stem of his pipe. "The worst of it all was that fellow Letsch." He named a Russian captain who had been a frequent visitor at the battalion mess. "He was there the night it happened."

"An evil, scented, womanish beast!" Wallace said, spacing his words.

"Rather!" Duncan agreed heartily, with a grateful look. "Sat there with his beard and his long cigarette holder, and those infernal slim, white hands that are always playing with things and making gestures, and talked. He knew and we knew. The thing was between us. You'd have thought he'd either have kept still or made a straight apology. But no! That isn't the Russian of it. He skirted around the edges, playing with the story as a cat does with a mouse, but not saying a straight word, until some bally idiot blurted out a question, and then the fat was in the fire."

"It couldn't have been pleasant," observed Heathcote.

"Pleasant!" snorted Duncan. "It was hell. It was that ass Fredericks started things, although I marked his shin with the sole of my boot trying to keep him quiet. We were all on pins and needles. It was like scratching matches in a magazine, you know. But that beast Letsch liked it. So help me God, he liked it! He can talk, you know. He can do things with the English language that we three shan't learn in a million years. He pinned Fredericks to the wall and cut him to bits with words. And then when some of the rest of us galloped in he served us the same way. It was sporting of him, in a sense, because he knew that most of us would like to get our fingers on his throat. It took nerve, but it was rotten bad taste."

"I should rather like to have heard him," Wallace said thoughtfully. "What did he say, Bobby?"

"Lord, I can't tell you!" confessed Duncan. "But the first thing we knew in some devilish fashion,

he very near had us admitting that the thing was all right, that rape wasn't anything more than an incident of war, wasn't even deplorable—not very, anyhow—and that any man who wanted to kick up a row over such a trifle was not much better than a prude. He'd have scored the lot of us but for the Old Man."

HEATHCOTE and Wallace sat up very straight, for the major of the battalion was loved by his officers and men, and depended upon in emergencies to acquit himself well.

"Ah!" they said together.

"He'd sat there smoking and saying nothing all through it," Duncan went on, "and Letsch made the mistake of trying to net him."

"Just suppose, Major Watts, that it had been one of your own men," he said.

"The Old Man knocked the ash off his cigar and sat looking at the end of it."

"I don't think there's any use discussing that utterly improbable event, Captain Letsch. Where did you get these cigars anyhow, Porlock, if I'm not too personal?" Rather neat, eh?"

"Lovely!" murmured Wallace. "And then Letsch?"

"He had the sense to shut up," admitted Duncan, then continued after a pause: "And those chaps are up here with us, only a few traverses away. I don't like the feel of their nearness. I can't make out what they're for and what goes on inside 'em. They go against my grain. They produce cattle like those privates—great staring things with no more intelligence than so many blocks of wood, and they also produce men like Letsch. And the devil of it is"—and Duncan paused to knock out his pipe against the stove—"there isn't any real difference between Letsch and the most bovine of his men!"

Captain Heathcote straightened himself with a jerk and regarded his junior subaltern wonderingly.

"Young man," he said, "do you know that you have just made an extremely profound observation?"

"The deuce I have!" Duncan exclaimed blankly. "What was it?"

The company commander drew a sigh of mock relief.

"Your unconsciousness relieves me," he said, buckling his belt. "Come on, the pair of you." And

THE thing had taken place toward evening back in the rest billets. It had created a great stir of sorts, for the girl was known to hundreds of the men. But nothing had come of the investigations. It had been almost dark. She knew only that her as-

they went out into the raw night and the unpleasant monotony of their duties.

Heathcote went his rounds that night with a shade less than his usual thoroughness. Opposite him, not more than three hundred yards away, was the Bulge, a convexity of the German line which was a sore thorn in the flesh of the battalion. For weary weeks of almost stagnant warfare they had faced the tiny salient, which was a constant offense in their sight. Half a mile beyond the Bulge was a hill which was the present goal of their ambitions. One day, they said, they would dig their own trenches on that hill, and the Bulge would be a thing of the past. They pretended a vast scorn of the little salient which faced them. The smashing of it, they held, was a thing which hung solely upon their pleasure.

But it pleased the powers which controlled their destinies and those of millions of other men along the vast front to concentrate forces elsewhere and to thin the line facing the Bulge to that minimum consistent with safety. The battalion knew that it could hold such ground as it had, it was pleased to think that it could take more at pleasure, and it was forced to spend its days in comparative inaction, while its animus against the Bulge grew with the passing hours.

**B**UT Heathcote, as he leaned against the parapet of the trench, vaguely conscious that the nearest sentry was watching him uneasily, was not thinking of the hostile trenches, their inmates, or the probable events of the morrow. He was thinking of Duncan's story, of the slip of a peasant girl he vaguely remembered about the village back of the line, the ugly tale of assault, and Letsch's white hands hovering among the salt cellars as his glib tongue played casually with matters that were deadly serious to the Britons who surrounded him.

That single sentence of Duncan's—born largely of a boyish inability to express himself—had caught in a corner of his mind and stuck fast. Here was Duncan, whose brain had lately been concerned only with such matters as cricket scores, grouse, and the tying of trout flies, running headlong into something that had shocked him to the core, burned him with a vast and incoherent anger, and set him to finding strange parallels between the uncanny intelligence of Captain Letsch and the most thick-witted and clodlike of his men.

"And it's true, you know!" Heathcote muttered beneath his breath. "It's there, in every Russian, something baffling and incomprehensible and terrible, because we Anglo-Saxons don't fathom it at all."

"What is it, Marks? See something?"

The sentry shifted uneasily.

"No, sir. Thought you were speaking to me, sir."

"Do you like Russians, Marks?" the captain asked abruptly.

"Russians?" The soldier was evidently speechless at the suddenness of the question. "Why, no, sir; can't say as I do. There's something, sir—" and he fell into depths beyond him.

"Precisely!" exclaimed Heathcote. "Good night, Marks!" and he walked thoughtfully away.

The next day, because they were busy men and because the things with which they had to do were matters of extreme objectivity, neither Heathcote nor either of his subalterns gave thought to the green uniforms farther down the zigzag line of trenches, nor to the tale which Duncan had brought back on his belated return from the rest camp at the rear. They were concerned with a sudden unexplained outpouring of water in a traverse, the repairing of certain stretches of barbed wire planned for the next night, and an uncomfortable increase of sniping on the part of the boche.

But at night, when they had a short time to themselves free from duty, they returned to the mat-

ter because Wallace, who had been down the trenches a bit during the afternoon, had come back with strange rumors.

"I didn't get the straight of it," he confessed. "It's some sort of a wild tale from Russia. The buzzers were trying to get some of it through from H. Q., but it was all garbled up with orders and some fathead's burblings about a lost consignment of bully beef, and no man could make sense of it. But Cockerill of the Hotspurs—he's down close to the first of the Russian bays, you know—says those chaps have got some inkling of something and are chattering away twenty to the dozen."

"What sort of tale?" demanded Heathcote.

"Don't know," answered Wallace, busy with a jagged tear in his trousers. "Revolution or bombs or some rot of that sort."

And then abruptly the door of their dugout was opened, and the bent figure of Captain Letsch was

the fashion of their race the Englishmen could not reply: their embarrassment kept them silent.

Finally Heathcote said: "Means a frightful amount of messing about and confusion and getting nowhere, I should think."

Letsch paid no attention to the remark. He was staring at the opposite wall of the dugout, his eyes wide, his face set.

"It means the end of seven hundred years of darkness," he said in a low voice; "the first shaft of light in seven centuries! A real parliament in Petrograd, newspapers telling the truth unafraid, school-houses in the Caucasus, three trunk lines across Siberia, all the dreams of the men who have plotted their lives away in garrets and cellars, the death of all the old, unclean things, the birth—"

His eyes, narrowing a little, caught their faces, unresponsive, self-conscious, heavy. He made a quick gesture of half-angry protest.

"Mille tonnerres, you English!" he exclaimed. "Suppose you had been on top of one of your misty cliffs when Drake's ships came back from smashing the Armada! Suppose you had stood on the bank at Runnymede and heard the shout from the barons go up from that little island in the Thames when John signed the Charter. Name of God, can't you feel?" He did not give them a chance to answer, but flung out his arms. "And I have to stay here in all this squalor while those glorious events are marching at home!" he exclaimed.

**W**ALLACE looked up from the bowl of his pipe which he had been polishing between his palms.

"Isn't this your job just the same no matter what happens in Russia?" he asked.

"This?" Letsch flung out his arm in a gesture which seemed to sweep the whole line from Switzerland to the

sea. "This? What does all this squabbling over torn treaties matter compared to that miracle behind me? I stay here in this filth because I am a soldier, not because I am a Russian. If I could make you understand!"

And then he set his elbows on his knees and tried to make them understand. He talked, as Wallace said afterward, "like Tolstoy and a soap-box arm finger rolled into one."

He talked until the candles flickered, the un-stoked stove grew cold, and the burly Duncan snored in his corner.

Then he went out as abruptly as he had come, leaving Heathcote and Wallace staring at each other and feeling as though a whirlwind had passed. For a little they said nothing, then Wallace, tugging at a refractory boot lace, said thoughtfully:

"Now which is the essential him?"

Heathcote frowned; then he nodded as he understood.

"Exactly," he said. "And the worst of it is, both of them are him. Let's turn in. My head spins."

They crawled into their bunks, but Wallace's mind would not let go, and once Heathcote heard him say:

"Round and round in circles, you know, all that talk. He'd do it: he'd leave the trenches to-morrow and go waving a flag to glory! And it doesn't get things done!"

And Heathcote, wondering if it did get things done, went to sleep and awoke in the morning with the smash of shell fire in his ears and the knowledge that more immediate concerns were at his hand.

The outburst was a mere bit of morning ill nature on the part of Fritz.

It petered out, and the day lapsed into the usual monotony familiar to the weary men who watched and waited and divided (Continued on page 29)

Under the parapet of the German trench they found Letsch, . . . in his arms was the red flag

framed in it. Had it been possible to rise, all three of the Englishmen would have done so in response to a certain tightening of the nerves and stiffening of the muscles along their spines. But the roof of the dugout was a scant five feet above the floor, and they could not yield to their common impulse. They merely stopped what they were doing and received their guest with a certain hardening of the features.

In the light from the oil-tin stove and two guttering candles, Letsch did not look precisely the figure Duncan had described. The carefully brushed clothes of the mess table had been exchanged for the soiled garments of the fighting line, beard and mustache were unkempt, the cigarette holder was missing, and the slim white hands were covered by a pair of cheap canvas gloves. Letsch paused near the door and stood looking at them, breathing hard.

"Do you know what has happened?" he demanded.

They shook their heads. The Russian squatted down and lit a cigarette with fingers which trembled, and when he spoke it was with a complete absence of the exaggerated gestures which had seemed part of him. Duncan, watching the visitor's face in the flickering light, could hardly believe him the same man he had watched two nights before.

**T**HERE has been a revolution in Petrograd," Letsch said slowly; "something more than a few haphazard bombs and the crowds flying from the Cossacks, leaving a little blood on the snow. Everything has changed in a moment. The Czar is a prisoner!" He paused and passed one hand across his forehead. "The Czar," he repeated, "is a prisoner! Do you realize what that means?"

The three Englishmen stirred uneasily in their seats. The Russian's voice was vibrant with emotion, emotion which he was not striving to hide but endeavoring to express, so powerful in its grip upon him that it stripped him of all his carefully acquired mannerisms, leaving him blunt and direct. After

### The lesson the Indian taught the Settler has had to be learned again

**W**HEN the Indian went out to destroy a settlement he had one sure master-stroke—fire. His weapon was a flaming arrow. His target an inflammable roof.

Substitute a modern, thriving city in place of the small settlement and instead of the Indian's arrow a wind-driven fire-brand. This is the flint and tinder for our modern town-wide conflagrations.

The world is just awakening to the danger of the inflammable roof. It is dawning on our national consciousness that roofs of wood, paper, tar and canvas are fuel for flames.

As the Indian arrow taught the settler the danger of a roof-communited fire, so have modern conflagrations made us see that community safety is a matter of fire-proofing the individual roof. Johns-Manville Asbestos is the ideal fire-proofing material, because it can be felt into flexible rolls, pressed into hard, unyielding shingles and forged over corrugated metal for heavy duty industrial uses.

When you realize that your property's safety from communicated fire depends on its roof,

when you realize that your building is at the mercy of every inflammable roof in your town, then Johns-Manville Asbestos Roofing will dawn on you in a new light. Not as a roofing that you would like to have some day, but as a safeguard you should invest in now—before it is too late.

Johns-Manville Asbestos Roofings: Asbestos Built-Up Roofing; Asbestos Ready Roofing; Corrugated Asbestos Roofing; Colorblende Shingles; Transite Asbestos Shingles.

H. W. Johns-Manville Co., New York City. 10 Factories—Branches in 61 Large Cities.

# READING FOR WAR TIME

BY CHARLES W. ELIOT

THIS is a year of prodigious events, military, industrial, social, and political. Every intelligent boy or girl, man or woman, ought to be trying to understand them and to appreciate their significance. To keep up with the rapid course of events every sensible reader must give part of his free time each day to newspapers and magazines, but in that reading he should exercise sharp discrimination between official documents and descriptions of accomplished facts and the multivarious speculations, vague reports, and prophecies. The frugal reader will omit every paragraph or column which begins "It is said," "It is reported," "It is expected," or "We learn from a well-informed source that," etc. As a rule, it is better to read the actual news items in the papers and magazines than to read the editorials or the comments of reporters on the news. It saves time also to give attention chiefly to the broad effects or happenings rather than to strictly local matters.

Taking it for granted, then, that some time every day must be given to the daily, weekly, and monthly press, to what sort of reading should an intelligent reader devote the greater portion of his free time each day or each week?

## Strange Countries

THE war has inevitably interested every thoughtful person in nations and countries of which few Americans previously knew anything to speak of: such, for instance, as Russia, the Balkan Peninsula, Poland, Mesopotamia, Syria, and the German colonies in Africa and the Far East. One needs to read, therefore, good books of travel in those countries, written by competent observers. All clear accounts of the soils, industries, social customs, and historical background of nations which the war has made interesting are good reading for this year.

The war has brought into strong relief the differences in the forms of government which coexist in Europe and Asia at the present day. The student of current events needs to understand these differences, to see clearly wherein a democratic government differs from an autocratic, an elected executive from a hereditary executive, a government which is a legitimate offspring of the feudal system from a government set up by people who were never affected by it. To learn these things requires much reading, partly in treatises on government, but more in histories and biographies. Among treatises on government the shortest and least detailed, if accurate, are to be preferred; among histories those which deal with short periods, like the Thirty Years' War or the French Revolution, or with special achievements, like the unification of Italy or of Germany, are to be preferred to histories which cover many centuries or are of the kind called universal.

Because of the great importance likely to be attached in any settlement of the war to the idea of nationality, special attention may well be paid in reading history to the historical grounds for the national units recognized on the map of Europe in 1914, and for the new units which are demanding recognition. Nationality is a very difficult conception to define, although it is obvious that common language, common religion, and common social customs help in the establishment and continuance of any nation. Nevertheless, the cantons of federated Switzerland have four languages, affiliations with four different neighboring nations, and two sharply divided religions. On the other hand, the Poles, who for a century and a half have been divided among three powerful neighbors, still feel strongly the ties of race and of their common religion, the Roman Catholic. So does the Scandinavian people, now divided into three separate kingdoms.

Part of the appropriate historical reading for today relates to the injustices and grievances in Europe which are in large measure responsible for the present catastrophe, and therefore need to be remedied in the settlement of the present war—such as the partition of Poland, the cutting of Alsace-Lorraine from France in 1870-71, the discords and enmities bred in the Balkan States by the long Turkish domination, the Treaty of Berlin in 1878, the First and Second Balkan Wars, and the awful sufferings of Armenia and Syria under Turkish rule.

It is indispensable to read much biography in

order to understand the various governmental situations of yesterday and to-day, especially the biographies of men who directed large public affairs in their day and generation, such as Cromwell, Frederick the Great, Franklin, Washington, Mirabeau, Napoleon, Bismarck, Gladstone, and Cavour—to mention only men whose work is still telling in the present struggles and sufferings of mankind.

To read much in such histories and biographies is by no means a hard or dull task, even during the present keen excitements. On the contrary,

under terrible stress, the armies in the field depending absolutely on the supplies this multitudinous labor yields. Certain clear results have already been produced. It has been proved that the trade-union doctrine of limited output is inapplicable when the safety of the great manufacturing nations and their success in war require a maximum productiveness in their industries. The doctrine of the closed shop is also inapplicable under such circumstances. On the other hand, wages in most trades have soared to heights never before reached.

The new conditions under which human labor is performed the world over, and the discontent and turbulence which accompany these new conditions, present to human society its gravest problems for the future. Hence the urgent need that the rising generation should read about and understand this formidable problem. There enter into it some other social problems of much significance: such, for example, as the general provision of insurance against accident, poverty, and the disabilities of old age; universal instruction in social hygiene for the defense of the community against the evils of alcoholism and venereal disease, and in general the exercise of the collective right to interfere with individual rights in the interest of the community.

Another profitable study for diligent readers this year is the development of internationalism both as a sentiment and as a practical aid toward durable peace. As a sentiment, it is an extension of the sense of brotherhood beyond the neighborhood and the nation, limits which Christian brotherhood has heretofore seldom transcended. The war has shown very plainly that the material and moral interests of mankind do, as a fact, transcend the limits of any separate race, nation, or community. The production and distribution of the food supply of the world in 1917-18 is clearly an international problem. The most desirable distribution in the future of the products of the temperate zones and the tropics is not a national but an international problem.

For minds which naturally dwell in the region of feeling, emotion, and abstract thought, rather than in the region of fact, daily work, and concrete results, the changes in the religious conceptions and practices of multitudes of men and women which the war has brought about should form the best topic for reading this year. The conduct of the soldiers in

the field testifies that multitudes of common men, who in their ordinary lives seem to pay no attention to religion in general or to any church, are nevertheless capable of self-sacrifice, of devotion to duty, and of looking far beyond their own sufferings and losses to the interest and welfare of coming generations. Soldiers by the million suffer, fight, and die for their country, or for their wives and children, or in the hope that the world may be a better and happier place for coming generations to live in than it has been for their own.

The sympathetic reader will rejoice in the many public and private evidences of this religious development, as it appears in soldiers' letters and journals, in the published sketches of dead heroes and broken families, in the immense efforts to relieve suffering and revive hope, and in some recent fiction, both French and English.

## Follow Your Bent

NO single reader should expect to deal with all these great topics. He should select two or three which interest him most. For guidance toward the books on the subjects he selects he should look to some neighboring librarian or scholar whose aid he can appropriately ask; to the lists of war reading which many public libraries are posting; to the many compilations of important documents and narratives which some newspapers and publishing houses are issuing under the title of "The Story of the War," or some similar title; and to the notices of current books which appear in the periodical press. The indicated field of reading is so vast that the individual reader will have no difficulty in following his bent in selecting his reading. That is the way to accumulate knowledge which will hold and later serve as material to strengthen the memory and develop the reasoning powers.

"A profitable study," says Dr. Eliot, "is the development of internationalism as a practical aid toward durable peace"

in the light of present events, such reading becomes so interesting that it will tempt the reader to neglect his proper work and to go without needed sleep. Thus, the opinions and character of Bismarck, and indeed his whole career, cannot but interest deeply any young American who sees to-day with his own eyes to what a fearful catastrophe Bismarck's diplomacy and political philosophy led his country and the world within a single generation.

No one can ever arrive at a real understanding of any nation, his own or another, if he is ignorant of that nation's literature. One might as well try to understand the Jewish people without reading the Old Testament and the New, as to try to understand the present Russian people without reading "Anna Karenina" or knowing anything about the Russian church and its music.

Another very instructive topic for wide reading this year is the effect of commerce on peace and good will among men. Free exchange of goods, governed only by mutual interest, surely promotes international peace and the common welfare. To appreciate this principle requires much reading on national and international economics, and this year is the fit time, because the stopping of the present shedding of blood and tears cannot be accomplished without the exercise of much economic wisdom and good will on the part, not only of rulers, but also of democratic masses.

Closely connected with these economic questions is the labor question—national and international. In the field of human productive labor the war has already wrought changes of immense importance, and promises to produce further changes. In the first place, the hasty making of war munitions and means of war transportation on land and sea has called for an unheard-of amount of labor—skilled, half-skilled, and unskilled in new directions and

## THE NEW BIG BETHLEHEM LINE

### 1 1/2 tons—

Designed and built by Bethlehem Engineers, according to the highest Bethlehem standards of advanced truck development. A Bethlehem designed and Bethlehem built Motor—Gray and Davis starting and lighting system—armored radiator—Internal Gear nickel steel rear axle—wheel-base, 136 inches. A perfect, dependable, one-and-one-half ton motor truck backed by the big Bethlehem organization

Chassis Price **\$1765**

### 2 1/2 tons—

A great motor truck that is years ahead of any competitor in modern truck design and manufacture. The powerful Bethlehem Motor—Gray and Davis starting and lighting—a Bethlehem Motor Truck that is perfectly balanced and designed for excess strain from end to end. It will carry your confidence at an extremely low cost. Chassis Price

**\$2165**

### 3 1/2 tons—

The biggest Bethlehem built—big enough for any load and stronger than any road. 7000 lbs. capacity, Gray and Davis starting and lighting—162-inch wheel-base. The big Bethlehem 3 1/2 ton truck has more strength in every dimension than it will ever be required to use. It will take your loads off your mind. Chassis Price

**\$3265**

(ALL PRICES F.O.B. ALLENTOWN, PA.)

The new, big Bethlehem line is the owners' line, the drivers' line, and the dealers' line—Take everybody's advice and examine a wormless Bethlehem

# LINKING UP THE LINCOLN HIGHWAY

BY WILLIAM ALMON WOLFF

IN the State of Utah there is a dry sea. As you come down toward it, through a mountain pass, you may think, the first time you see it, that it isn't dry at all. You see a beach, running down to what looks like water. But it isn't water; it's the Great Salt Lake Desert, and the bed of Lake Bonneville—which hasn't been a wet lake since prehistoric times, though it was about 1,000 feet deep. This desert has been as great a barrier to those seeking to travel across it as a real lake, fathoms deep, could have been. Indeed, a lake would have been much easier to dispose of. You can put boats on a lake; you can ferry motor cars across. But you can't drive across this desert.

It looks as if you could. It looks smooth and inviting; when you first see it you are likely to choke, if you are fond of fast driving, and to think of the time when all the great automobile speed records were made on the sands of Florida. But once you drive off the road you'll be lucky to go a hundred feet without being mired to the tops of your wheels! There is a surface of salt that is hard enough and smooth enough. But underneath there is a sort of volcanic mud, as sticky as wet clay. It is wet, indeed, because the seepage from the mountains that ring the lake makes it so, and keeps it so, all the year round. And the surface crust soon lets you down into the mire below. That bit of desert has a tragic history. It forced detours, always, in the old Overland Trail; it added to the hardships of the Forty-niners. You may turn up the bones of some of its victims even now. There is romance in every acre of it; romance not only of the past.

## A National Asset

TO-DAY men are at work in the fierce heat that beats down upon that desolate country. They are building and grading a road that cuts across it, straight as an arrow, from shore to shore, as one might say—remembering that old lake of prehistoric times. When their task is finished, this autumn, the Lincoln Highway—the first great transcontinental highway, running between New York and San Francisco as straight as a road may run—will have passed from the list of things of which men dream to the list of things which men have achieved.

The Lincoln Highway is a national institution of prime importance; in this time of war it is a national asset. That is because, so far as we in America are concerned, this is a transportation war. The measure of our contribution to victory over Germany will be determined by the degree to which we solve our transportation problem. Ships, guns, munitions, airplanes, all the multitudinous war products of American industry—whenever a crisis develops in connection with any of them, the thought of transportation comes up.

Inevitably thought has turned toward other means than railroads for moving freight. We have canals and navigable rivers, and these inland waterways will be used to their full capacity. Mr. McAdoo has taken over their control; they are being linked up to the railroad system of the country. There remains just one other way of diverting traffic from the railroads. Freight can be moved along the highways, in motor trucks. Trucks are available. But they require good roads; sturdy roads.

It isn't any exaggeration to say that the thousand miles of the Lincoln Highway in the eastern part of the country were worth half a dozen divisions of soldiers last winter. Motor trucks were started from the factories in the Middle West, first, to make the journey to the seaboard and the ships

that were to carry them to France under their own power. Almost at once some one thought of the next step. Why send trucks, each of which could carry three or five or ten tons of freight, unloaded?

Between New York and Philadelphia regular motor-truck lines were established. The most spectacular trucking lines were between Detroit and Baltimore and Akron and Boston.

## The Long Way Round

HENRY B. JOY, the real pioneer of the highway, who is now in the army, had always insisted that if the United States went to war the vital importance of good roads would be one of the first things to be revealed, and the Lincoln Highway has helped the cause of good roads enormously. He was one of the men responsible for the amplification of the original scheme of the Lincoln Highway into one that called for a complete network of national highways covering the entire country in a strategic way. We don't, in this land, think of military invasion as a possibility. And yet—this war has forced a good many things into the realm of the possible! However—there is enough use for national highways to meet our present needs, without suggesting even more vital reasons for having them.

The men behind the Lincoln Highway didn't have to wait for war. They saw the need of their enterprise in advance. But it took the war to make certain things possible.

In one sense, and that very real, the Lincoln Highway is, absolutely, a national institution. But control over it, in fact, is divided up among States, counties, townships, cities, villages. Although on the map a continuous line of road, it is a series of local roads, State highways, trails, paths. So, from the beginning, the task of the Lincoln Highway Association has been, primarily, to educate local road-building authorities and to persuade them of the value and the necessity of the great road.

Our entrance into the war didn't stimulate road building, as you might have thought it would. Indeed, when Judge Lovett issued the famous—or notorious!—Priority Order No. 2, one of the clauses specifically denied priority to road-making materials. The Council of National Defense saw a light early, but it is only lately that the sympathy of the Administration has been enlisted.

For the Lincoln Highway the war threatened to be disastrous, at first. It wasn't as easy as it had been to get people interested in a transcontinental automobile highway. Even people who saw what use was being made of the roads in the East refused to be impressed by the need of bridging the gap in Utah. And yet, even though the day of trains of motor trucks running on a regular schedule between San Francisco and New York may be a long way off, there is a distinct relation between the completed Lincoln Highway and railroad congestion. If you can divert even short-haul traffic, and intermountain traffic, from the transcontinental roads to the highways, you will release freight cars and engines. West of the Mississippi the railroads, of course, aren't as crowded as they are in the East. But they have been stripped of equipment and rolling stock; the less work they have to do the better it will be for the whole overworked system.

That is just one of the arguments for a completed Lincoln Highway. The men who were at the head of the Lincoln Highway Association used it: they used every other argument they knew. And, by keeping everlastingly at work, they cleared away most of the obstacles that arose last year. But the

great big one, the obstacle of the stretch between Garfield and Ibapah remained.

Any time since 1914, if you went westward along the Lincoln way, you swung from Garfield to a gap in a mountain ridge, and then turned due south, making a long detour around the desert, the bed of old Lake Bonneville, before you got on to the straight road west again through Overland Cañon, which took you into Nevada. You did more than take the long way around; you traveled over about the worst going between New York and San Francisco. What water you found, in a stretch of over 150 miles, was brackish; you couldn't get decent accommodations if you wanted to rest; the heat was terrific. You had the satisfaction of driving over historic ground; ground of which Mark Twain wrote in "Roughing It"; ground watered by the blood of the victims of Indian massacres. And that was about all. If you drove along with the thought of motor trucks in the back of your mind, as the Lincoln Highway Association officials always did, you would have been pretty thoroughly discouraged. The situation looked hopeless.

It wasn't the fault of the State of Utah. Utah has a good Highway Department; the State has built some excellent roads. But it had no money to do anything about this desert section. The engineers and field parties of the association, however, worked out a way to mend matters, even to run the road through Johnson's Pass (pass in name only!), and some one grew so enthusiastic that he planned a lighthouse for Granite Point, which is a hill that juts out into the desert now, and was once a promontory on the shores of the prehistoric lake. That lighthouse is going to be built!

Now, in a country that had to consider the possibilities of invasion, such a road would probably have been regarded as a strategic highway. The central government would have built it, without question. That stretch of road was of national importance, because it was a necessary approach to Ely, a little way across the Nevada line, which, since the days of the Argonauts, has been the point where overland traffic divided to move down the Pacific slope in two streams, northward and southward. There was no real reason why Utah should bear the whole cost of such an improvement; you might just as reasonably—more reasonably, indeed—ask New York City to pay the entire cost of keeping its harbor in condition to handle the vast volume of sea-borne traffic that comes to it.

## "We Had to Raise the Money"

A. F. BEMENT, secretary of the Lincoln Highway Association, can tell, better than anyone else, how the problem was solved.

"We had to raise the money," he says. "We went to Mr. Seiberling—F. A. Seiberling, president of the association. And we sold him the idea of bridging that last gap—whatever it might cost. He did the rest—he got the directors of his company to vote us \$75,000, which was what we thought, then, the whole project would cost.

"But there was still trouble. We couldn't even get the State of Utah, at first, to agree to handle the money we raised, and use its road-building equipment and its Highway Department. And costs were going up all the time. Mr. Seiberling and I went out there, and Mr. Seiberling spent nine hours in the desert when our car was mired. That settled him! He gave us \$25,000 more, out of his own pocket. And Carl G. Fisher, vice president of the association, gave us still another

## Who Discovered *RICORO*?

"I'll tell you who discovered Ricoro," said the commuter.  
"It was a medical examiner for life insurance.

"I offered him a cigar—a big, black, beribboned de Moneyo.

"'No, thanks,' he said, 'I smoke for pleasure,' and he handed me a fine, long, trim cigar that looked as good as a delayed dividend.

"'Here's a smoke that won't get your nerves or your pocket-book,' he said;—'it's a Ricoro, Invincible size—3 for 25c.'

"I lit the Ricoro going home that afternoon on the 5.15.

"'Why so happy?' asked a friend back of me.

"'Why, I discovered Ricoro today. That's enough to make any man happy!'"

*Sooner or later you'll discover—*

*Ricoro*  
*the "Self-Made" Cigar*

The earlier you start smoking Ricoro, the greater your smoking enjoyment, the less your smoking expense. Ricoro is *imported duty free* from Porto Rico. It has that rich flavor and smooth, mellow *mildness* only found in the finest tropic-grown cigars.

Ricoro is made in a dozen sizes and shapes, from 6c to 2-for-25c—simply the question of size. The quality is the same in all.

Sold only in United Cigar Stores—"Thank You."

## THE FLYING FISH

Continued from page 9

that is, and Endicott was generous. He forgot Leila Kildare's alarms, forgot everything but that an old man was apologizing to him. He stammered something, and himself got a chair for McCord.

As he turned back with it, though, he again glanced in the mirror. And what he saw there made him forget embarrassment. For McCord had the girl's wrist in his withered fingers, and that there was strength in them Endicott could tell by the girl's shrinking from the grip. But her eyes caught his a fleeting moment, and the warning that he read in hers made him lower his own lest McCord see his anger.

"You have met before, then?" queried the girl as Endicott resumed his seat. "But you didn't tell me so, Mr. Hoban." Endicott marvelled, considering the stress that he knew she labored under, at the playful reproach of her voice.

"But I didn't know that Mr. McCord was your uncle, Miss Kildare. And, besides, the meeting did not amount to my credit."

"Mr. Hoban encountered my waiter a while ago," said McCord. "My breakfast was scattered on the floor. But that is past," he added as Endicott would have again berated his clumsiness. "After all, there were other eggs downstairs, and for once I could try the hotel's supply. An invalid, Mr. Hoban, is upset by little things."

He turned to his niece. "You did not tell me that you had a friend in the Birmingham, Leila," he said.

**S**UBTLY Endicott was aware of threat, of menace, in the old man's voice. But if the girl felt it also, she gave no sign.

"I was not aware of it myself, uncle."

she answered, "until ten minutes ago, when I saw Mr. Hoban here. I am not altogether sure that Mr. Hoban remembered me, but a face from one's own home town—and Gallipolis is such a little town."

"You are from Gallipolis recently?" asked McCord.

Endicott stiffened. The waiter, arriving with the girl's breakfast, gave him excuse not to reply, for McCord asked for a menu. Quickly the old man gave an order—a remarkably generous order even for an elderly man in the best of health, Endicott noted. And the girl, who had lost a bit of her color at her uncle's question, answered for Endicott: "No, indeed. Not unless Mr. Hoban has paid a flying visit quite recently. For the Gallipolis paper would have mentioned his arrival, and—it's years and years since you've been there, isn't it, Mr. Hoban?"

"So long ago that I marvel at your remembering me, Miss Kildare," he replied.

Leila Kildare! Gallipolis! He could find, in memory, no link connecting the two. He had been in Gallipolis, that little Ohio town, seven—no, eight—years ago. A sophomore at college, he had visited his friend Odd McIntyre there. A brief visit, but—evidently he had met, or at least been seen there by Miss Kildare. It made him feel quite comfortable that the girl had remembered him eight years.

"It is some time," she acquiesced.

"And you live now—here in New York? You are stopping at the hotel?" queried McCord. "You have been here some time?"

"Only—only since last evening," stammered Endicott. He wondered if McCord noted his hesitation. The envelope in his pocket seemed to burn his flesh. He wished that he could get away. And, by the nervous fashion in which the girl toyed with her spoon, the half-hearted fashion in which she ate, he knew that she too would welcome his departure. If McCord began questioning him, the girl could not forever answer for him. And McCord, despite his apologies, despite his forced cordiality, radiated menace. Had Endicott been inclined to consider the girl,

if not joking, the victim of some aberration, two minutes' companionship with her uncle would have prepared him to believe any evil of McCord.

"And you are here for long?"

McCord was looking toward the entrance as he spoke. Glancing into the mirror, Endicott observed him make an almost imperceptible signal with his hand. As though in response to that signal, a man who was apparently about to enter the breakfast room turned away.

"That—that is not yet quite settled." Endicott wondered what the signal—if indeed there had been one—meant. Then he stiffened in his seat.

"Mist-ah Fah-ley En-di-cott! Mist-ah Fah-ley

He trusted that his pause would seem merely the necessary pause of one hastily departing, but pausing to pay his check. But he dared trust himself no backward glance.

All of which was quite silly, but—if that girl lied, if her eyes lied, then there was no God in His Heaven. And Endicott quite simply held a creed in which there was a God.

In the lobby he paused. He had been compelled to say that he was stopping in the hotel, for McCord had seen him on the fourth floor that morning. But if McCord was suspicious? Endicott could not forget the look of angry suspicion that had been on McCord's face when first he discovered his niece in the breakfast room.

It was essential that Endicott register again, this time as Arnold Hoban.

**H**E walked to the desk. The same clerk with whom he had conversed half an hour ago greeted him.

"Is there any room, near to mine, vacant?" asked Endicott.

"418 is unoccupied. Why, are you dissatisfied, Mr. Endicott?"

Deliberately Endicott drew out his wallet. He opened it. He drew from it a hundred-dollar bill.

"Mr. Farley Endicott left the hotel yesterday," he said quietly. "Mr. Arnold Hoban registered last night."

The clerk eyed the bill. "You know who I am," said Endicott. "I would not be asking this if it were not all right."

"But quite irregular," breathed the clerk. He was not overpaid. A hundred-dollar bill awed him.

"But an irregularity that can do no harm," insisted Endicott.

The clerk breathed heavily. "I would have to speak to

the night clerk," he suggested.

Endicott drew another bill, of the same denomination as the first, from his pocket. The clerk reached for them. He pocketed them. He whirled the register around and slipped back the pages. Endicott wrote, under yesterday's date, the name of Arnold Hoban; residence, Gallipolis.

"Transfer my things to 418," he ordered. "And—er—a page was just calling me. Find out who wanted me."

The clerk sent another page to the telephone desk. The boy returned in a moment.

"A Mr. Whitney wanted Mr. Endicott. Said to call him up when Mr. Endicott came in," he told the clerk.

Endicott listened quietly. "To any other calls," he said, "just reply that Mr. Endicott has left the hotel."

"But—have you signed any checks, Mr. Endicott?"

"Paid my dinner and breakfast with cash. Only Raoul, the head waiter, who used to know me at another hotel, knows my name, and I have attended to him."

The clerk looked down at the pocket where reposed two hundred dollars of Endicott's money. "I'll bet you have, sir," he breathed.

Endicott smiled. He sauntered away from the desk. Out in the street he walked briskly. But as he turned a corner he glanced back. There was a drug store in the middle of the block, and inside was a telephone booth. Endicott shut himself securely inside the booth and asked for a number.

"Whitney? That you, Sam? Listen. This is Earl Endicott. I'm in a drug store on Sixth Avenue—near the Hippodrome. There's a man following me; chap in a soft, gray hat, brown suit, tan shoes. Can't miss him. I'll stall around here a few minutes and give you time to get here. Don't recognize me. But interfere with him somehow when I enter the subway, or a building, or something. Then follow him. Let me know what

She would pretend not to notice. "I have not your envelope," she told him

En-di-cott!" The page, droning his name, appeared in the doorway. He came down toward their table. He repeated his call. He hesitated a second, eying Endicott doubtfully. He cried the name once again: "Mist-ah Fah-ley En-di-cott. Telephone foh Mist-ah Fah-ley En-di-cott."

**R**AOUL, the head waiter, appeared. He bore down upon the trio at the table. In another moment McCord would know that the man whom he had found breakfasting with his niece was a masquerader. Endicott, as casually as he could, looked at his watch. "George!" he ejaculated. "I'm late, and—I wonder—"

Once again there was approval in the girl's eyes. "Most certainly," she said, graciously. And as she spoke her eyes seemed to flash some message. But Endicott could not read it. That it conveyed warning was all he knew.

McCord's waiter had brought breakfast. The old man looked up from his fruit. "Let us see you again, Mr. Hoban," he said.

Endicott bowed. Out of the corner of his eye he noted that the colored page had been stopped by Raoul, and that Raoul was looking inquiringly toward him. Before Raoul could come over to the table he must get away. He managed to do so, though he felt that he had done it clumsily.

Raoul advanced to meet him. "The page was calling—"

Into Raoul's palm was crushed a bill. "My name," breathed Endicott, "is Hoban. Arnold Hoban. Not Endicott. Do you thoroughly understand?"

Raoul's eyes twinkled. "The lady is most charming, m'sieu. I understand."

"I'm afraid, Raoul"—and Endicott's eyes were hard—"that you do not understand. In fact, Raoul, you are not expected to understand anything beyond the fact that my name is Hoban."

Rebuked, Raoul fell back a step. "Yea, m'sieu." "Very well," said Endicott.

Own Film

## See Uncle Sam's own "close-ups" of the war

**W**HAT is Uncle Sam doing to help win the war? Ideas on this are apt to be more or less vague.

But Uncle Sam has prepared a motion picture—"Pershing's Crusaders"—the first of a series of war films taking you behind the scenes and visualizing for you, as nothing else can, the enormous preparations this nation is making to help blot militarism off the face of the earth.

This United States official war film, taken by U. S. Signal Corps and Navy photographers and the French General Staff, is now being shown in

motion picture theatres all over the country.

\* \* \*

You will also be interested in the Allies' Weekly War Review—a film of live current war events both here and abroad. This reel includes *exclusive* features of the British, French and Italian activities on the other side as well as our own. Shown each week at your favorite theatre.

\* \* \*

**EVERY** person in the United States should see these dramatic

war films—they make your blood tingle and your heart beat faster. See them at your local motion-picture theatre—or ask your theatre manager to get them.

\* \* \*

**W**E announce, also, the Exposition of Captured War Trophies, which opened in San Francisco, July 7th, for an indefinite run. This Exposition is the only one of its kind to be held thus far. Later on it will be shown in other important centers of the United States.

**COMMITTEE ON PUBLIC INFORMATION, George Creel, Chairman**

Through the Division of Films, Charles S. Hart, Director, Washington, D. C.

## -hence the Buda Staying Power!

"Staying power"—the quality which includes and implies all other good qualities! If a machine does its work *and endures*, there is no need for further proof that weaknesses of design, flaws in material, inaccuracies in manufacture are not of it. Machines with weaknesses may work but they do *not* endure.

Therefore the astonishing durability of the BUDA ENGINE for trucks, farm tractors and high-duty stationery work, is its proudest boast. "Performance before Price" is the BUDA manufacturing motto—hence the BUDA Staying Power.

## Your Children's Future

Success or failure—depends, in no small degree, on their heroes, their ideals—the men and women who are made to seem to them wonderful and worthy to pattern after.

If you would like your children's heroes and heroines to be the great characters, men and women, who have made history—whose lives and works they can emulate with greatest profit to themselves—

Send for the **FREE JUNIOR CLASSICS** booklet

The cartoon below will bring it.

you can find out about it to-night, at my—"

"You listen, Earl Kildare! What sort of melodrama is this anyway? I haven't heard a thing from you in four months, and you suddenly call me up, and—"

"Scold me by-and-by, Sam, will you, old top? Just now—"

"What's the matter with you, anyway, Earl? Had this war—"

"Will you do it, Sam?"

"All right. If I have to lick him, will you pay my fine?"

"Sure thing. But don't let him suspect—right."

Through the door of the booth he saw the brown-suited man making some purchases at the cigar counter. There was no question about it. He was the man who had backed away from the breakfast room at the Birmingham when McCord had signaled. And now he was following Endicott. Well, Sam Whitney would attend to him.

Pretending to be talking to some one, to gain time for Whitney to arrive, Endicott smiled at good-natured Sam's wrath. His face grew quickly sober, however. He might be asking Sam to risk his neck. Still, Sam would never forgive Endicott did he discover that there had been adventure in the wind and he had been left out. Sam loved to risk his neck. Farley Endicott had had proof enough of that. And the Croix de Guerre that Sam Whitney could wear if he chose was proof that a nation had recognized Sam's valor. No, Endicott would waste no fears on Sam. He could think, just now, of nothing save the violet-eyed Leila Kildare.

What, in the name of all improbabilities, was terrorizing the girl? And why should Curzon McCord have Endicott followed? Within the narrow confines of the booth Endicott shrugged his broad shoulders. Adventure called. For four months the voice of adventure had been silent. Now—

But Whitney's lounging figure was visible outside the drug store. Endicott hung up the receiver. He walked out of the store and headed directly for the Claridge. He entered by the Forty-fourth Street entrance. He descended a flight of stairs, passed through the grill and tap room, and found himself on Broadway. At the Knickerbocker cab stand he looked back. He could see neither the man who had been following nor Whitney. Good old Sam! Evidently in that revolving door of the Claridge—Well, he would know the details later. Meantime—

He took a taxi to the Manhattan. Dismissing the machine, he took another to his apartment on University Place.

### Chapter III: An Envelope

"A PLEASANT young man," observed McCord. "You seemed to be getting on quite famously with him."

The girl avoided his eyes. "He is pleasant," she replied in a curiously stifled voice.

"And I suppose that, after a prolonged companionship with me, youth calls to youth, eh?"

Fleeting she glanced at him. Of late, within the past week or so, she had noted little things. Each was trivial in itself, but taken together—

Now it seemed that there was a note of jealousy, of suspicious jealousy, in McCord's voice.

"One greets an acquaintance," she remarked coldly.

"And that is all he is?" insisted McCord.

"You heard us talking," was all that she vouchsafed.

McCord's eyes flashed. But he evidently thought better of the angry speech on his tongue's tip.

"Shall we go upstairs, then?" he asked. "There is much to be done."

"As you wish," she said listlessly.

She accompanied McCord to his room. From a desk McCord took a bundle of manuscript, typed, but badly typed. He placed it in the girl's hands.

"As much as you can, my dear. You must not tire yourself."

"I am paid for it, Mr. McCord," she reminded him.

"Mr. McCord," he said. "Do you know, Leila, that avuncular relationship that we decided would be best—I almost prefer your public addressing of me, 'Uncle,' to Mr. McCord."

She made no reply.

"I am old, in years, yes," went on McCord. "But in the things that count—in mind, in heart—But I ramble, my dear, I ramble." He noted the steadily mounting color in her cheeks, and the smoldering wrath in the eyes that now met his. "An old man,

dreams aloud, my dear, he dreams aloud. As little or as much as you please." He indicated the manuscript. "Recently, I wonder if, after all, work is as important as—But run along, my dear." He patted her wrist, the same wrist that he had gripped so savagely half an hour before, down stairs in the breakfast room.

THE girl turned on her heel. She entered her own room, a few doors down the corridor, and closed the door behind her. She placed the manuscript on a table that also held a typewriter. Then she entered her bathroom. Very deliberately she washed her wrist, where McCord had patted it. Looking at herself in the mirror above the washstand, she did not smile. The washing was symbolic, and so, absurd action though it was, not subject to levity.

She entered her room again. She stood in the middle of it, looking around her. Then suddenly she dropped into a chair, and her face was hidden in her hands. Not to hide tears, though; rather to shut out pictures—pictures of McCord attired in prison stripes, with shaven head that accentuated his large, dead-seeming ears. Before her closed eyes ran a group of men.

What a fool she had been! McCord was clever; more than that: he was brilliant. And a brilliant man would recognize his own limitations. No crime in the world would know, more surely than McCord, that McCord possessed the literary gift in not the slightest degree. McCord must know that the manuscript which he gave to Leila Kildare to type was puerile, absurd.

"An Economic History of Modern Times," he called it. A study of the labor problem, it was supposed to be. And the men who called upon McCord—those queer, mentally unclean persons as they seemed to her—it was from these that McCord pretended to be gaining much of his data.

Data! Ranting rot! That's what his data were! And she? A child could have known that McCord had been hastily preparing any sort of drivel that would cover space, that would give an excuse for her labors. Yet she hadn't known it. She, who thought herself clever, had been deceived. McCord undoubtedly believed that she had seen through his little scheme. But she hadn't. God in Heaven knew that she hadn't! Until this morning she had thought that McCord was, in all sincerity, a would-be writer on economics. But now there had been that in his voice, in his eyes, that told her—ugh! The nasty old old, old man!

And McCord must have thought her receptive to his advances. McCord must think that she knew that McCord had not the literary gift. And a self-respecting girl does not permit herself to become engaged on silly work. She tells her employer that she cannot continue. But it had taken something more than the work itself to open her eyes. To tell the truth, she had never digested McCord's writings. They had been meaningless lines. She had been an automaton who typed them; that was all.

Funny how things will go along, serene but vague, until suddenly some one thing illuminates, as by a lightning flash, everything. McCord had come to her; he had offered her a secretarial position; she had accepted. She had worked for several weeks; she had questioned nothing. But now—

Yesterday he had given her some manuscript. This morning, before breakfast, turning the pages to be typed this morning, she had come upon a photograph. It was patently a recent copy of an old photograph. And it was a picture of a man in prison stripes—the picture of Curzon McCord! Not Curzon McCord of to-day, but Curzon McCord of perhaps twenty years ago. But he! Of that there was no question. And on the photograph's base was written, illegibly: "This goes to the police unless you declare me in."

And she had understood everything: McCord's mysterious visitors, odd, furtive men, outside of any previous experience of hers! McCord was a criminal, planning criminality. She might have known that the "book" was a blind. Well, she saw it clearly enough now. But up to now—the old friend of her father's, who had come to Gallipoli upon her father's recent death, had offered her a position, had said that he held her father's memory so dear that he considered himself an uncle, and wished to be known as such—why shouldn't she have believed implicitly?

She had been a young girl, inexperienced. But now—

Why McCord had sought her out—that did not matter. The only important thing now was that McCord was a criminal. She might go to him, demand an explanation, but—those men who visited him! Those evil-looking, cruel-looking men! She was under no debt of gratitude to McCord. She knew now that it had not been desire to help the daughter of an old friend that had made him engage her. It had been because, in his way, he loved her. And she felt dishonored by the love of such a man.

Her first generous impulse had been to show the picture to McCord. But when clouds are blown away one sees so clearly. Leila saw clearly now that McCord was dangerous. Some one was endeavoring to blackmail him. If she could get in touch with that some one, ascertain what McCord really was, she might make McCord stop his evil. There was no compromise about Leila. She either trusted implicitly or she did not trust at all. The haze that had surrounded her since her father's sudden death, a death that left her homeless and alone, was dissipated. She saw clearly, not faces alone, but the thoughts behind the faces.

McCord had engaged her that she might be near him. He wanted her. And a man who would invent authorship that he might have her near him—She must protect herself. And this photograph afforded a measure of protection.

But McCord would miss it. She had destroyed the envelope in which it had been contained, from which it had been protruding when she discovered it. She placed it in another envelope, and left her room. But to give it to the clerk—McCord might discover that she had done so. In a panic of indecision she had entered the breakfast room. And there she had seen Farley Endicott.

There had been a garden party in the little town of Gallipolis. There had been a little girl, too young to be invited, but who had slipped away from home to peek in at the festivities. And the little girl had caught her dress upon a fence. And a great man, a man who was in college, who rowed on the crew, and played football—that man, by name Farley Endicott, had unfashioned the little girl's dress. Of course he had forgotten, but she—she read the papers; had seen his pictures many times since then. She had not forgotten. And Farley Endicott was a gentleman. She had given him the photograph of Curzon McCord.

She wished that she had told him everything. Now that McCord had spoken of his "dreams"—It was tantamount to open confession of his purpose in engaging her. She owed him nothing. If she could see Endicott now. She started for the telephone. A knock on her door made her pause.

"Come in," she called.

McCord entered. His lips were twitching. Something more than the malevolence which she now realized was always in his eyes gleamed from them now: fear, overmastering fear.

"An envelope, Leila. An envelope! Postmarked Madison Square yesterday! Have you seen it?"

She met his eyes fairly. "How should I see it?" she asked.

Evasion, but McCord had lied to her when he told her that he engaged her because he needed a secretary. He needed no secretary.

"No, of course not, but—"

"Was it important?" she asked.

"Important! My God, it would ruin—" He controlled himself. "Nothing is important, Leila, save that you should not be disturbed. No, no; it does not matter."

She turned her back upon him. There had been glances, intonations, that she had not clearly understood before this; that had made her unaccountably uncomfortable. But words, words almost direct, had come only to-day. She would pretend not to notice.

"I have not your envelope," she told him.

"Of course not, of course not! But—you will excuse me—"

HE was gone. Even the opportunity to speak to the girl who obsessed him must be foregone. For terror stalked behind McCord. In the hall he mastered himself. The photograph that had come to him yesterday, that he had locked in his desk, meant that not only was his past known, but that he had been recognized in the present, and that the things he planned to do were known to some outsider.

Fear, for many years, had been unknown to him. He had been the inspirer of fear in others. But now fear grinned at him. He did not see Emile, the waiter, until the latter was almost upon him. Then, drawing aside, he cursed the little Swiss.

"Are you blind? Would you drop the tray you carry now also?"

Emile flushed. "M'sieu was not looking. As for the other, M'sieu Endicott has said that it was his fault, m'sieu, not mine."

"Endicott?" McCord seized the waiter's shoulder. The tray that Emile bore to some later riser slanted dangerously.

"Pardon, m'sieu, but—careful. Yes, M'sieu Endicott. Pardon, m'sieu."

EMILE hurried down the hall. McCord looked after him. Endicott! But that same man had been introduced to him under the name of Hoban! Hoban had faced the mirror. McCord had looked into the mirror. Leila's hand had been stretched halfway across the table. Endicott's hand had been busied with his coat pocket. McCord had not thought of these things then. But he had not missed the photograph at that time. Could it be possible that Leila— But Leila Kildare was a young country girl. Passing through Gallipolis, he had read of her father's death, had seen her pictures in the daily paper, had been fascinated by the picture. And he had known Frank Kildare years and years before. He had made up a position for Leila on the spot. He, himself, had sought out the girl. She had not been "planted" in his employ by enemies who might— But to-day he had read aversion, horror, in her eyes. That was new to them.

He entered his own room. He opened the desk in which he had placed, yesterday, the photograph. In that desk had been a pile of manuscript, the drive—he smiled contemptuously—that he had roughly dictated to a public stenographer in order that he might have some apparent reason for Leila's employment by him. He knew that it was drive, and purposely dictated errors, in order that Leila might find them, that there might be justification, in Leila's eyes, for her accepting a salary from McCord. He smiled, contemptuously again. Women were lovely, were wonderful, but they had no brains. Had Leila a masculine brain, she would have understood his subterfuge. Ah, well, who wanted women to have brains? Not he, Curzon McCord!

But terror was too close for him to gloat over his deception of the girl. That picture had been in this desk. It might have been among the pages of manuscript that he had given her last night or this morning. And if it had been there, Leila had discovered it, and—

Endicott, Emile had said the young man's name was. And Leila had called him Hoban. And his hand—near his pocket; her hand—across the table! Even the page, calling the name of Endicott, had eyed "Hoban" closely, as though in indecision. And "Hoban" had left so suddenly, not even waiting for his waiter, but paying the head waiter as he left.

The broken eggs! McCord touched his pocket, where, oddly enough, he was carrying the egg that he had snatched from Endicott's hand. Could it be possible that the young man breakfasting with Leila had deliberately upset Emile? And that Leila too was planning?

He walked to his telephone and asked for a number.

"Stromberg? Come at once to the hotel. I shall send Miss Kildare on an errand. Follow her. And do not lose her! That is all."

Deliberately he sat down then and looked at his watch. He must give Stromberg time to reach the Birmingham. Then—if he had been deceived in Leila—well, he would search her room. But, until he was certain, not a breath of suspicion must be wafted Leila's way. He had will, had McCord. With every nerve tingling apprehensively, he schooled himself to wait. Exactly ten minutes after he had telephoned Stromberg, he entered Leila's room.

"I have a headache; a slight headache, my dear," he said. "Would you mind going to the nearest drug store and having this prescription filled?"

She managed to smile pleasantly and to inject sympathy also into the smile.

"Certainly not. Right away?"

"If you will."

She turned away to hide the sudden light in her eyes. McCord's arrival a

few moments ago had ~~presented~~ her from telephoning Endicott ~~at his club~~. And while he had been ~~gone~~ second thought had advised her ~~not~~ to telephone. McCord might come in upon her, she feared. But outside there would be no one to prevent or to listen. She put on her hat, picked up her hand bag, and, taking the prescription from McCord, left the room.

McCord waited until the elevator had returned from the street floor. Then he too descended. Straight to the desk, but quite casually, he made his way. Guests have a right to look at the hotel register. McCord looked at this one.

He found the name, Farley Endicott, Room 422. But Farley Endicott had "checked out" last night. McCord turned forward the pages. Arnold Hoban was registered in Room 418. He had arrived last night. But the handwriting of Endicott and the handwriting of Hoban were almost identical. Furthermore, Hoban had registered from Gallipoli, Ohio. Why? According to his own statement, he had not been there recently, did not live there, as McCord had understood it. Why register from there then?

Because he was not Arnold Hoban, but was Farley Endicott. And registering under a false name; the residence had been an afterthought. And the afterthought had been plain suggestion: Gallipoli had been mentioned as the place where he had known Leila—McCord understood it perfectly.

But why had Leila introduced the man under a false name? McCord smiled grimly. The name of Farley Endicott had been vaguely familiar when he had heard it called by the colored page. Now it came back to him clearly. Naturally, one as well known

as Farley Endicott, whose address could be found in any Blue Book, whose life's career must be intimately told in "Who's Who," could not pretend to be a native of a little Ohio town.

Deceit! Calculated deceit, as proved by this false registering. Only, Mr. Endicott was new at deceit. He did not disguise his handwriting; he did not think of the little things that count so much. Well, Larsen was following him, and Larsen was not easily shaken off the trail.

But if Endicott had that picture—Well, he had gambled with fate before. He must gamble again. He must search Leila's room, to find what evidence there might be of her knowledge of his affairs. Three minutes were enough. Leila's garments were not many, and her little strong box yielded to his first attack. And his search yielded him nothing. He entered his own room. He must leave the Birmingham. If Endicott went to the police, as, undoubtedly, he would do, certain things must be destroyed before the police came here. They were destroyed. McCord started for the door. His telephone rang. He answered it.

"Larsen talking, sir. I got in a mix-up with a guy, and I lost the man you had me follow. What'll I do now, sir?"

"Report to Benchley. I'll be there in ten minutes," replied McCord. He did not use strong language to Larsen. The man had failed. No matter that he might have been stupid in his failure, what counted was that he had failed, and that Arnold Hoban—or Farley Endicott—was clever; clever enough to elude a man like Larsen.

Very quietly McCord left the hotel.

(To be continued next week)

## ARTHUR ROCHE

THE distinguished Irish-American poet and journalist, James Jeffrey Roche—friend and biographer of John Boyle O'Reilly—once wrote a book entitled "The Story of the Filibusters," a thrilling narrative of the adventures of William Walker and those other dare-devil gun-runners who helped overthrow the Spanish power in Central and South America. James Jeffrey Roche's son, Arthur Somers Roche, writes about filibusters too. The only difference is that his stories are fiction and his characters, instead of operating in and around Caribbean bays and cays, brew their stratagems in Riverside Drive apartments or dark corners of hotel lobbies and cruise in taxicabs instead of rakish schooners. He brings you into a confab of blue-jawed magnates of modern business who, in the secrecy of a steel-and-stone skyscraper, plot the economic enslavement of the world. He traces the fortunes of reporters and beautiful girl detectives fighting single-handed through a net of German intrigue.

His stories seem mighty real too. In fact, when one of us editors gets hold of an Arthur Roche manuscript, he straightway becomes oblivious to jangling telephone and copy boys tugging at his sleeve for proofs and devours it through to the end, unless some other huskier member of the staff happens along. When an Arthur Roche story is coming out serially, readers phone and write and telegraph trying to bribe us into slipping them advance copies of the next installment. What with the H. C. L. and everything, it is sometimes terribly hard to hold out against these bribes. But we always do hold out. We warn our readers that they will have to take "The Flying Fish" as it comes.

THE other day when Roche was in the office we got him cornered and tried to get some information for use in this sketch.

"Where were you educated, Mr. Roche?" was the first question.

"I got the degree of I.L.B. from Boston University School of Law at the tender age of twenty-one."

"Did you practice law?"

"Yes, and I lost only one case."

"How many cases did you have?"

"One," he answered modestly.

Then, questioning further, we gained some more equally significant information.

Quitting the law (reason not given), he struck Park Row for a job. He got it, and for four or five years Roche followed the turbulent career of a New York newspaper reporter, lacking a job as often as having one, piecing out his slender salary by marketing what he calls "alleged funny stuff" with the New York "Morning Telegraph," evening "Globe," and Boston "Herald." On one historic occasion, when he hadn't any job, any money, or

any breakfast, he sat down at his typewriter and dashed off two pieces of topical verse. There was an editor on Park Row who sometimes paid spot cash. But half an hour later Roche was quitting that editor's sanctum still without prospect of breakfast. By the time he had crossed City Hall Park, however, his spirits were perking up—already some new verses ran through his head. Hustling into the old Astor House, he got them down on paper and in a nearby newspaper office borrowed a typewriter. In twenty-five minutes he was back in the same editor's office and had exchanged his new "pome" for \$7 cash. Next day he landed a new job.

IT is queer how easily reporting on a New York newspaper leads to writing fiction. Or perhaps it isn't queer. Just when Roche was beginning to be recognized as a newspaper man, he decided on impulse to become a writer of fiction. He quit Park Row and found a garret in Washington Square. For some years he had the usual struggle of the beginner, then success came with a rush.

Here are some of the things that Arthur Roche believes: That Sinclair Lewis and Ernest Poole are the two comers in American Letters; that St. John Ervine's novel, "Changing Winds," is the best book published in a decade; that Lew Fields is the greatest American actor; and that "Huckleberry Finn" is the best popular story in years. He believes and knows and does a lot of other things which this is neither the time nor place to set down. Let him tell you all about them when you see him.

## Something—!

Continued from page 18

their profanity between the Bulge and the lack of reserves which tied them to their trenches.

It was Cockerill of the Hotspurs, foraging hopelessly for his particular brand of tobacco (and making blood-curdling charges against a brother officer) who brought news of the Russians.

"Clean dotty!" he said. "Singing and that sort of thing. They don't realize how jumpy Fritz's nerves are. They'll have him heaving all sorts of things at us just as we've taught him to lie still most of the time." He glanced up from the business of filling his pipe with Heathcote's tobacco. "But they can sing!" he admitted. "That hymn of theirs, you know, is rather fine. Gets under your skin and crawls along your spine!"

That afternoon a German battery, either through Teutonic thoroughness or a piece of sheer luck, got the exact range on Heathcote's parapet and reduced some forty yards of it to heaps of rubble and twisted pieces of corrugated iron.

No attack followed—there were even no consequences graver than the wounding of four men who were late in seeking the dugouts—but B Company swore feelingly at the prospect of a night spent in labor which they would preferably have devoted to sleep.

Heathcote, Duncan, and Wallace were in the trenches with the work parties during the interminable night, and, hollow-eyed and spent, were viewing the result of their labors with surly satisfaction in the gray hours of dawn when the incredible thing happened.

The first intimation came in the sound of singing, measured, slow, compelling, which rose above the thud of picks and the rumble of some distant artillery fire. Men stopped work to listen.

"Those Russians!" exclaimed Wallace.

"Can't they let Fritz sleep?" protested Duncan. "Now they'll have him jumpy and irritable the rest of the day, and we shall pay for their music!"

Almost immediately there was a sporadic rattle of rifles, then a sudden meteor shower of star shells—and then pandemonium!

A LINE of trenches is controlled by a complex nervous system composed of wires, telephone instruments, and men who have forgotten how to sleep. Being a huge, ungainly creature, a line of trenches possesses a nervous system which must work with comparative slowness, and the vitality of trenches, like that of humans, is at its lowest in the grim hours of early morning.

Some time had to pass before battalion and regimental commanders could be roused and told that the Russians had run amuck and without orders flung themselves through the darkness against the Bulge, now edged with points of flame. More time had to pass before these hastily awakened officers could take stock of the situation and move to meet it.

They had not planned an assault upon the Bulge. They had been definitely and pungently told to be niggardly with life, to hang on, but to do no more than that—and here was the thing jerked out of their hands by some hundreds of singing, shouting madmen!

Company commanders did what they could. The men "stood to" in the faint light, waiting, helmeted, in the fire trenches for the next order. Reserves, rubbing their eyes as they staggered and stumbled, commenced trickling forward through the communication trenches. And out in the green glare of the flares the Russians shouted and died—but some of them did not die until they were inside the Bulge!

B Company got its orders and stared incredulously.

"They've gone and got themselves where nobody wanted 'em and where it isn't humanly possible to get!" protested Duncan, "and now we've got to go and keep 'em there!"

Heathcote, leading his men across in the increasing light, got his first real comprehension of what the first minutes had been like.

The green-clad dead lay thick, but they all lay like men struck down in full

course. Their heavy boots had been spurning the earth when the German storm caught them. They had swept over and engulfed the Bulge through a combination of complete surprise and the sheer power of their emotions!

Close under the parapet of the German trench they found Letsch. Clashed in his arms was the hastily made red flag of the revolution, and his face was that of an inspired child. In his breast were four bullet holes, and there were signs to prove that he had gone many yards with some of those holes pouring blood.

Two hours later Heathcote was in the Bulge again. All about him British picks and shovels were frantically busy connecting the captured salient with the British lines, striving desperately to make all ready against the counterattacks which were even now preparing.

Conspicuous among the Tommies were knots of Russians, their broad backs bent to the pick stroke. Heathcote looked at them, marveling. Their faces were wooden, their eyes dull; they worked apathetically, heavily, in silence.

THREE days passed ere there was time for any speech of what had taken place, three days strange to the life of the sector, days when the slim battalions hung on when hanging seemed no longer possible, when one German blow followed another like the inexorable thuds of a hammer, when sleep and food and rest and relaxation seemed the dreams of a previous life.

Then, at the heavy cost of disarranged plans, inevitable confusions, men and guns and stores were shifted through seas of mud, the spent regiments in the captured Bulge were stiffened by fresh troops, the attacks of the Hun grew feebler, feebler, ceased—and men in offices, poring over great maps, made the slightest of possible alterations in the long line which ran from the Swiss border to the North Sea.

"The papers," said Major Watts, "are calling us heroes. You and I know that we are merely overworked, tired, abused subjects of His Majesty—and that we wish they hadn't!"

The major took a swallow of coffee and the rest of the mess waited. It was seldom that the battalion commander spoke at length, and when he did they heard him in silence.

"Those Russians," he went on, "played the devil and all with everything. They broke every rule of the new war which Fritz has taught us to play. They made what was unquestionably one of the most brilliant charges in the history of war—and by all odds the most stupid! The public will think they succeeded hugely. We are now possessors of some meters of trench which previously belonged to Brother Boche."

"That's all the public sees or cares. You and I know that we've fallen heir to a position infinitely harder to hold than the one we had; that we've lost hundreds of men that might as well not have been lost; that plans beyond our knowing have been disarranged. Lord only knows what bigger chances lost. And yet"—he brushed back his grizzled mustache with a quick wave of the hand and glanced down the circle of his officers with a kindling eye—"and yet you know, gentlemen, those few minutes that morning were rather glorious!"

"But," came a hesitating voice from the foot of the table, "won't things in Russia go to rack and ruin?"

"They will!" the major agreed heartily. "They certainly will. They're beginning now. We shall have German troops as far into Russia as they care to go, Russian grain fattening German school children, Russian factions cutting each other's throats while Fritz marches on Petrograd. We shall have all that and worse. You and I will get so we'll swear at the very word Russia. They've knocked the props out from under everything. They've saddled us with at least two years more war. And yet—I don't know. A hundred years from now—who knows? They're hairy, impossible cattle—and yet, there's something—!"

He paused, shook his head and fingered the bare table top, while Captain Heathcote and Lieutenant Duncan and Wallace looked at each other quickly as the major paused, smiled the least bit, and were silent with him.

## Make him smile all the while

YOU left him smiling when you said "good bye"—keep him smiling by scattering sunshine in all the letters you write your soldier. You are proud of him—the fine, clean-cut, up-standing man who answered without a murmur when his country called. You want to do everything you can to honor his sacrifice for his country and you.

He has made every sacrifice—his relatives—his friends—and perhaps his life—for his country—and you. You have made sacrifices too. You have helped in many ways and will continue to, but your lot and your share are small compared to his.

But there is one thing you can do in your letter today; you can fill it with cheer, confidence, hope, optimism and honor.

Your soldier's trials and worries are a thousand fold what yours are. Never allow him to be burdened with your anxieties or fears, but fill his heart with enthusiasm.

There are "a thousand and one" little happenings in your life which mentioned by you in your letters will stimulate his enthusiasm. Stifle every thought and banish every word which might bring worry to your soldier.

Be as brave as he, and by every word you write let him know that his sacrifices shall not be in vain. Write him a letter of cheer today—and write him often. Remember the soldier who smiles is the soldier who wins—keep him smiling all the time.

## KEROSENE BURNER

Free Sample to Workers

Thomas Burner Co. 2929 Gay St. Dayton, Ohio

Diagram Showing the Action of Kor-Ker

KOR-KER is a compound, based in powder form. Mixed with water, it is readily installed through a hole in the tire. KOR-KER is forced into the puncture by the air pressure, compressed into a cement plug and becomes an integral part of the tire. Same action occurs in sealing ship leaks.

### Before Kor-Ker Punctures were unavoidable

But for over six years thousands of motorists have been free of punctures and slow leaks and have increased their tire mileage by using

**KOR-KER Tire Treatment**  
Preserves Rubber—positively beneficial. Not a filler.

Seals punctures—stops slow leaks—restores blow-outs to a minimum. Maintains normal inflation. These are absolute facts which can be verified.

For 2" tire, \$2.00 for set 4 tires. Price includes 4 or 5" tire, \$3.00 for set 4 tires. Installation \$1.00 for 5" tire, \$1.50 for set 4 tires. If there isn't a Kor-Ker dealer near you write us direct. We will send you detailed facts and figures.

Just One Easy Motion Cleans and the

### KLEAR-SIGHT WINDSHIELD CLEANER

gives you a clean dry glass. Clings firmly to the shield. Ready for instant use. Made of sturdy steel with rubber squeegee. Handsome and durable. Heavily japanned. Drawn spring steel ensures uniform contact over all. **\$2.00**

## The Soul of France

Continued from page 7

four fine slender elastic seventy-fives. He would whistle his shrill police whistle, and the gun crews would tumble out of their dugouts, where they were playing cards, or lounging, or digging (making the dugouts deeper). They would station themselves at the guns, and he, standing on a little mound behind, would call out the orders—say: "From basic deflection—left 6215; high explosive, normal charge, lot 82, long fuse; sight minus five—battery five rounds, 45300." "Piece No. 4, ready to fire," the answer would soon come, and the same from the other three pieces. "Fire!" he shouted—and immediately those redoubtable and sleeping seventy-fives shattered into action, adding their clear, terrible voices to the roaring turbulence that already filled the glade.

At lunch time the table which held the book, the telephone, and the maps became the dinner table. We picked a fresco under the trees; we relaxed entirely, even taking off our helmets. I do not wish to give the idea that all batteries can do this; I do not wish to give the idea that this battery can still do it by the time this article is read—though I devoutly hope so. The reason it could do it then was that it was a privileged battery. It was in the cup of a slight swale, and the boche had not quite found it; his mean pills passed over it—to the batteries beyond. So as we sat at lunch, or afterward at coffee, our helmets off, at ease, constantly there passed over us a pretty whirl of ripping silk—the boche shells missing us, but missing us with a boche accuracy and regularity which made of the sound (exasperating as it may be sometimes) one that placed a smile in our hearts.

### "P. D. Q."

BUT all the time I was thus visiting Bat C Battery, whatever I was seeing or doing, I was aware of the presence of the château—the château to which I had come on the night we had gone into position. It sat on a hill above us, behind the trees, its turrets just visible above the green screen, and this position, at once lofty and veiled, gave it an extraordinary character of aloofness and mystery, mixing it in my mind with a memory of childhood, of a colored picture in a book, of a castle surrounded by bramble and brier in which a princess lay enchanted, awaiting the coming of her prince. What was being said of the château was bad news. It seemed that the boche was after it with some big 210's. Every day monstrous shells fell into the beautiful park, sending old oaks and slender birches up in the air like fountains; men had been wounded, two had been killed, and hour after hour the shells were approaching nearer and nearer the château itself.

Then one day in X. I heard that the inevitable had happened. A 210 had hit the château. The man who told me was a young officer of the second battalion; he had been in the château at the time, and he could tell me about it accurately. It had happened at mess, as they all sat about the table over their after-dinner coffee. The shell had hit square, fortunately on the wing opposite to that in which they sat, and they had all lit out instantly—"P. D. Q.," as he termed it, "with shirt tails flying" (though really they were not in their shirts) "and leaving the victrola playing."

"What was it playing?" I asked. "Over There," he answered. I went to see the château next day. Right away I saw that this was the end. A tremendous hole had been made by the shell, and one fragment in particular had gone through three floors, the basement tiling, and the collar vault. Also, from the ravaged lawns and trees all about, it was clear the building was bound to be struck again soon. But there was something else—the spell was gone; with this blow the old pile had lost a certain prestige which had held all hands off it, which had made feet tread soft through its halls; the gaping hole in its flank had proclaimed it vulnerable and mortal. So now—well, everything was going out of it! Through

burst door and burst window, on the backs of our cheery khaki lads—the Renaissance furniture and the Louis Quatorze, the Louis Quinze, and the Louis Seize, the Empire, the rococo and the modern—all out to the batteries, the trenches, the dugouts and the funk holes!

The château was like a ship which, piled high on a reef, is being stripped by a crew that knows the next squall will destroy what is left—and knows it must live on a desert island till the next ship comes by.

### A Wee Voice

I WENT in and, my feet catching in a litter of curtains, hangings, and clothes, my knees bumping upset chairs or capsize tables, wandered through the apartments for a last time. Upstairs I found the room which had been locked on my first visit. It was open now—the door had been pushed in by the force of the explosion. It was open, and also it was empty—stripped of all but a dresser which stood in the center drunkenly, as though suddenly abandoned. The middle of the three drawers was open. I looked into it and stood there, petrified. A doll lay in that drawer as if in a bed—a sleeping doll. She slept, her eyes closed, her long lashes a shadow on her cheeks, her little hands folded, her tiny feet, satin-shod, pointing straight upward; she slept, and as she slept she smiled—smiled most adorably, a sort of sweet, restrained, gracious smile which came partly from her pretty lips and partly seemed to ooze out of the corners of her tight-shut eyes. Of all the rooms this one alone still had its shutters to. The light was gray. And in this gray light she seemed extraordinarily colored and alive.

I didn't know what to do. It seemed impossible to treat her just like some mere object. She had auburn hair, for one thing. She seemed to breathe. Still, of course, I couldn't stay here forever. Not for a doll! I closed the drawer softly and stole out. But I had not taken three steps down the stairs before it seemed monstrous to have closed the drawer. The drawer, which, open, had been a pretty bed.

She slept, and as she slept she smiled

was like a tomb now; she'd smother in there. I went back and opened the drawer, and there she was, sleeping just as sweetly, smiling discreetly in her dreams.

"This is better," I thought, and started away again. I went down a whole flight—but not more than one flight. A wee, immaterial voice seemed to be calling, calling desolately; I climbed the stairs once more.

This time I took her up. And as she rose opposite me in my hands she opened her eyes and looked at me very gravely. That finished me. I slipped

her under my mackintosh, and went out with her!

I know I can't adequately describe the discomfort of my journey home—back to my hole in X. First of all I had to pass all those soldiers, at the door, in the garden. Of course they were doing as I was: they were taking things out. But they were taking them out openly, honestly, on their backs, and one knew where they were going—to carpet and furnish and make possible holes in the earth which were the defense of the land. While I, with that mysterious bulge under my coat, seemed to be sneaking out some precious object of enormous value in secret and miserly greed. She was so big too, now under my coat. She had seemed so little in the drawer, and now she was so big. When I held her where were my buttons I looked like Falstaff; when I shifted her to my hip I was monstrously deformed. She was so long too; she kept slipping, and I was in an agony of fear lest her little feet peep past the hem of my mackintosh. I went by the soldiers, gazing straight ahead in a profound abstraction. Then five airplanes, passing high above, vanishing in white clouds, and reappearing again like dolphins in the sea of an inverted world, gave me my chance. Looking up very earnestly into the sky and sidling along like a crab, I got behind a curtain of trees, and thence on to the road. I was free!

### Unconquerable

BUT just then I ran into my regiment's gas officer. He had been on a tour of inspection to see that everyone had his gas mask, that no gas mask leaked, that the dugouts had their protective blankets and all that—and now he was on his way home to X., whither I was also bound. I could not refuse very well his cheery offer to accompany me, so I trotted on by his side. He had long legs and no burden, while my little lady kept slipping in spite of my tight elbow, which pressed her against my rib. She was as heavy as one of those little deceitful babies after you've carried it a hundred yards, and she grew heavier steadily. Then, to my horror, I found we were not going straight home; we were to visit two more batteries on the way. I tried to beg off, but that young gas officer was firm, and my bad conscience left me no strength, so I went to the batteries. They were in the bare plain, so that everyone we had to see was underground. What with my swollen state, I had a time screwing myself in by the narrow, tortuous entrances. Then I'd sit inside those dugouts, very still, trying to call no attention to myself, while the gas officer babbled of his trade, and resolutely refused all the invitations to take off my coat which my sweating face drew from all with hospitable insistence. By the time I reached X., at sunset, I was well out of humor with the whole adventure and with my small charge, and it was rather roughly, I think, that I threw her down on my blankets, in the deepest recesses of the chalk cellar.

And there she lay, on my blankets, in the gray light, just as I had seen her the first time—colored, gentle, and smiling; in spite of the rough journey, the rough usage, pretty, dainty, gracious, and charming. Then suddenly I knew why I had taken her, why something stronger than I had compelled me to take her. It was that she represented the soul of France, the light and shimmering soul of France. The castle over there stood for France, for France attacked, hammered, and ravaged. And she was the soul of France, pretty, dainty, gentle—indomitable and unconquerable.

Mr. Hopper's next article from France will appear in an early issue.

## What is your memory of your school-day reading?

Remember Virgil's "Aeneid"? Forty lines a day — translated slowly, painfully, word by word! Is *that* your memory of the "Aeneid"? Very probably it is; the "Aeneid" means just that to thousands of men and women — a task. The labor of translation hid all the beauties of the original.

*But—*

Do you realize that Virgil's "Aeneid" is a wonderfully thrilling and romantic

poem? A poem which expresses the spirit of the Augustan Age of Rome, its idea of Rome's origin, its conception of the ideal in human character? Do you know that this poem is necessary to an understanding of Roman civilization, even as an understanding of Roman civilization is necessary to an understanding of our civilization? Wouldn't you like to re-read the "Aeneid" in a beautifully clear English verse translation which exactly mirrors the Latin?

You can. The "Aeneid" (thus translated by John Dryden) is one of the 418 complete works that constitute

## THE HARVARD CLASSICS

*Dr. Eliot's Five-Foot Shelf of Books*

Dr. Charles W. Eliot—forty years president of Harvard—has picked out of all the writings produced by civilized man those which, in his judgment, give the clearest and most unforgettable idea of what life has meant to men in all ages — its romance, inspiration, dignity, passion, tragedy, comedy.

That's what "The Harvard Classics" mean. They contain no excerpts. Every work is *complete*.

Dr. Eliot himself says: "It is my belief that the faithful and considerate reading of these books . . . will give any man the essentials of a liberal education, even if he can devote to them but fifteen minutes a day."

Think of it! Fifteen minutes a day! Don't you think you ought to know more of this wonderful series? You may do so, absolutely without cost—

**this book FREE to all Collier readers**

The FREE book contains (1) Dr. Eliot's explanation of the series, (2) Many extracts from the chosen masterpieces, (3) Comments on them by great critics, (4) Many handsome illustrations from the books themselves.

In other words, this FREE book has a *distinct value in itself*.

## A Rude Awakening

THE Kaiser has again and again assured his people that they have nothing to fear from America—that all we will ever be able to get past his U-boats is a few divisions of troops and some shiploads of supplies—that all the tales of huge armies being formed, of mountains of munitions being manufactured, of flocks of aeroplanes and great fleets of ships, are just "American Bluff".

### What a Rude Awakening Is in Store for Him

Already our men are in the battle line by the hundred thousand; already our Navy has definitely checked the U-boat menace. Soon we will have more than a million men in France and two million more in training, and our shipbuilding alone will more than replace any future losses from submarines and mines.

But to definitely defeat the German Military Power, to win the war and make the world safe for the next hundred years, will take every bit of energy, every ounce of force that we can muster; and one of the first things necessary in order to get the most out of our enormous resources is to know all about the war—what led up to it, how it began, through it all. Where can you find all this? In

## "The Story of the Great War"

—Historic Perspective—Expert Analysis—Vivid Description

It gives you historic perspective, digging out the roots of the war over the past fifty years. Vivid description, covering in detail the thrilling events of the war; there is an outline of the plans behind the first German offensives against France and Russia, the Gallipoli affair, Verdun, the Battle of 1917, the collapse of Russia, the entry of the United States into the war, and the great German offensive of 1918.

—a vivid account of the fighting, an analysis of each campaign with the causes of its success or failure, a resume of the net results.

There is a full description of how Science has revolutionized the actual fighting; an accurate account of the industrial and social factors, the financing of the war, etc.

Our own relations to the belligerents from the very beginning are impartially described, and the stirring messages of President Wilson given in detail.

In short, the Story of the Great War is a real history written to keep pace with the conflict—a work every American should read now.

## "X" Liquid repairs 24,000 radiator leaks in 10 minutes!

If every one of the corners in your automobile radiator leaked at one time—you could repair all the leaks permanently in 10 minutes—with "X" Liquid. You don't have to lay up the car or worry about the cost of repairing!

One can of "X" Liquid poured into the water makes the radiator as good as new. If there are any leaks in the pump, gaskets, connections, etc., those, too, are repaired. Leave "X" Liquid in the water and you'll never again be bothered with leaks!

Thousands of car owners say that "X" is the most marvelous product that ever came to help them out of a difficulty.

### No More Rust or Scale!

EVERY thoughtful owner knows that Rust and Scale are constantly damaging the cooling system! So he keeps "X" Liquid in the water to loosen the Rust and Scale now present. And "X" positively prevents new Rust or Scale from forming.

In this way the water passages are kept clean, cooling is improved, oil saved—and the motor performs better.

Don't confuse "X" with cements, or flaxseed meals in liquid or solid form. These simply choke the leak—for a while. But "X" Liquid makes a scientific, permanent repair.

"X" Liquid is the only product that makes the entire cooling system LEAKPROOF—RUSTPROOF—SCALEPROOF.

Your dealer sells "X" Liquid—or we will ship direct on receipt of price.

Large size \$1.50  
Ford size .75

Try one can of "X" Liquid. It will do all we claim or your money will be returned.

"X" LABORATORIES  
642 Washington Street  
Boston, Mass.

## MOSLER VESUVIUS PLUG

To make the finest quality plug to be sold at the standard price of \$1.00 is the accomplishment of the Vesuvius.

It is designed and constructed to develop maximum power, to secure flexibility, to insure absolute certainty of operation under all conditions of use.

"The Indestructible Plug" is a product of the Mosler Plug Company, Inc., 100 West 42nd Street, New York, N. Y.

"A pound, sir," he says. "Just a pound, that's all, sir."

"I ain't got a pound of nothin' with me," I says. "How about a couple ounces and a quart, will that do?"

They is a Canadian guy standin' there, Joe, and he says a pound is English money, worth about five bucks in ours. I had forgot to change my bank roll into English, so we fixed it up in French. It was easy, Joe. I simply give him all the loose francs I had and let it go at that.

Well, we get into this stateroom, which was the same as one on the night boat to Albany, Joe, with the exception that they was no towels, soap, water, heat, lookin' glasses, air, or chairs. I am just layin' down Jeanne's suit case when a guy raps on the door. I opened it, and there's one of them boobas from the dock which has asked us all the questions. He grabs out a notebook.

"Why are you of the desire to proceed to England?" he asks me, settin' himself like that's only the first of a hundred questions he's got ready.

Joe, this here was the last straw! Jeanne grabbed my arm or I would of bounced him then and there.

"Because," I hollers, "they ain't no way I can figure of havin' it brought over here to me!"

With that I slammed the door and, after knockin' in vain for a few minutes, he beat it.

WELL, Joe, I ain't liable to forget that trip across for a long time. The boat didn't leave until eleven at night, and we had a couple hours to wait. Jeanne went to sleep, and I went up on deck to chum around with our fellow passengers, as they say on the steamship companies' folders. They was pretty near all soldiers of one kind or another, mostly wounded English Tommies which was goin' home for a vacation, and so forth. You know how I mix, Joe, and in a few minutes we was all swappin' lies and cigarettes. Fin'ly we adjourned to the smokin' room.

We are all sittin' there talkin', Joe, with one of the stewards which from his actions was violently opposed to prohibition, when a civilian comes along and joins us. He's a big fat husky, with glasses and a thick whisker, and, Joe, he don't look good to me! They is no public demand for the information, but he claims he's an American named Brown which has come over on some war contracts and he asks what part of America I come from. I says North America, Joe, but that don't faze him a bit. Then he remarks that the war is a terrible thing with everybody gettin' killed, and what's the use? The English guys get sore and beat it, and I says to him that it's the best war I ever been in and I ain't gonna stand for no noncombatant knockin' it! He laughs it off, Joe, and begins to talk to the steward, which by this time has tried out all the cracked ice in the place, givin' it the Scotch and soda test.

They get talkin' about German submarines, and the steward gives out the pleasin' information that the channel we are goin' across has got more U-boats than water in it. We gotta run all the way over in the middle of the night without lights and take a chance that they won't see us, in which event we would get slipped a torpedo. I says I don't see why we should get sunk goin' back to England, when they ain't nothin' on board but wounded soldiers and women. The steward says it don't make no difference to the Germans what's on board a ship, as long as they sink it. They get credit for every hit they make, whether it's a warship or a rowboat, because this big boob in Berlin thinks that kinda stuff if kept up long enough will scare the Alleys into makin' peace before we march into Berlin. Joe, he says they have been tryin' to get the boat we are on for a long time, and only a week before a torpedo missed 'em by three inches and dumb luck.

The big guy gets very much interested in all of this and begins buyin' more alcohol for the steward and askin' a lot of questions. I got up and grabbed a couple life preservers and went down to turn in just as the boat is pullin' out.

Well, Joe, I stood at the rail outside for one flash at the well-known Channel. Oh, boy! Joe, it was some sight! They was a heavy fog bein' had and the night is as black as ten cents' worth of stove polish—the water is blacker. I looked down at it and all along the side of the ship is little things like lightnin' bugs, flickerin' here and there among the waves. Joe, them things is

some kind of jellyfish which is like Red Huggins which used to pick for the Cuba. In other words, they ain't no good in the daytime and get all lit up at night. Joe, I ain't yellah, but as I kept lookin' down there at that deep, black water which is rollin' past with a steady swish, swish, I felt little shivers runnin' up and down my back. You know, Joe, they is plenty of sharks and the like in the Channel, and if one of them U-boats come along— Well, Joe, Jeanne was with me too, and even you can imagine my feelin's.

They ain't a light showin' outside on the ship, and I like to broke my neck gettin' down to my stateroom, and there's Jeanne sleepin' like a very little and very pretty baby, Joe. You would think she didn't have a care in the world, which naturally she wouldn't, bein' married to me. I pulled over her suit case and sat on it and, Joe, for the next hour that's all I did. Just sit there and look at her and wonder how in Heaven's name she ever come to marry a big boob like me and what an awful thing it's gonna be if them German hellhounds slip us a torpedo on the way across. Then I commence to figure what I'll do if we get hit, and I try to kid myself that they ain't no danger and, Joe, all in all, I'm havin' one terrible night, now, believe me! I wasn't so much afraid of gettin' hurled into the ocean, Joe, but I knowed what salt water would do to my unction, and here I faced the prospect of goin' into London lookin' like a bum!

Well, Joe, I must of fell asleep on that suit case, and when I woke up I figured the captain had lost control of the steerin' wheel and we had left the ocean flat and was flashin' the trip over the mountains. I had fell or been pushed off of the suit case, Joe, and I'm layin' all doubled up under the bed. I got lots of company too, Joe. Everything which wasn't nailed has fell on the floor, and the English Channel is bangin' up against the portholes till I thought we was gettin' raided by some ocean-goin' cops, and every minute I expected to see axes and the like comin' through the walls. Oh, boy! This here boat was sure doin' a piece of rollin', now believe me! Comin' across the ocean was like a nail on Central Park lake alongside of this. Joe, I looked at my watch, and I seen it was half past four a. m., so I figured they was no use turnin' in then and made up my mind to go on deck where at least a man could get some air. Jeanne was still sleepin', so I got out as quiet as possible and started upstairs, Joe, if I could only repeat the funny falls I did on the way up, I could make my fortune in vaudeville when I come home. At the top of the stairs I met a steward.

"My word, but this is rippin', sir—what?" he says.

"Oh, elegant!" I says, wishin' I had denied myself supper and be done with it. "What d'ye mean rippin'?" I think it's rotten, if you ask me!

"But don't you know, sir," he says, "the more we pitch and toss, the harder it is for a submarine to score a hit!"

"No," I says, "I didn't. But if that's on the level, I'm willin' to go out on the rudder and help rock this thing some more myself!"

Volume 61 Number 18  
JULY 13, 1918

"I'm afraid you wouldn't be permitted, sir," he says, without a grin. "It's hardly within the rules. I shall speak to the captain if you awakes, though."

"Are you tryin' to kid me?" I says. "No, sir, thank you," he says. "Do you feel like a cup of tea?"

"No," I says. "Do I look like one?" "Haw, haw!" he says. "Only fawney, now!" He starts down the stairs. "I say," he says. "We are right in the war zone now, and you had best wear your life preserver. Shall I fetch you one?"

"Not right away," I says. "I got three on now under my coat, old dear!" Well, Joe, I managed to bang open a door and get out on deck. Oh, lady! The waves is dyin' down a little, but the smallest one I seen would make the Woolworth Buildin' look like a cube of sugar and the decks is as wet as Lake Michigan. It's still pretty dark, and I'm feelin' my way along, they bein' no hurry, as unfortunately, Joe, I had no place to go. All at once I see a guy loomin' up in front of us. They is somethin' familiar about him, and in another second I know he's the bird which claimed he was an American contractor and was fillin' the steward with Red Eye. While I'm watchin' him, Joe, he takes a flashlight outa his pocket, faces the water and commences to wave it around. It was one of the biggest I ever seen, because it throwed a glow all around the deck where he was standin'. He'd hold it still for a minute and then shake it back and forth. I couldn't figure what the idea was for a minute and then it struck me so hard I liked to fell over the rail. Joe, this guy was signalin' to a submarine!

I give one jump along that deck and come down on him like a ton of bricks. He was a husky, Joe, and gimme quite a battle, even though his head hit the deck hard enough to have drove in a nail had there been one there, which unfortunately there wasn't. We rolled all over the deck with this guy tryin' hard to use a gun and a couple times I thought to myself we was sure goin' over in the deep blue. Fin'ly, just as a lot of deck hands hearin' the noise, come runnin' up, I got a left hook on his chin and he resigned.

Joe, I'm still explainin' what happened when a dark shape looms up over the rail, and a guy with a megaphone hollers over, what the so and so do we mean by flashin' lights? It was a English destroyer, Joe, and the deck hands took me and this would-be assassin up to the bridge of our ship, and I give the captain the dope. He passed it along to the destroyer, and in a minute they got a searchlight sweepin' the water all around us.

JOE, that water looked bad enough in the dark, but with that blindin' light on it, it looked worse! They throwed the beams back and forth for a minute, and then all of a sudden we hear them shoutin' and runnin' around on the destroyer, and a lot of guys around me which was crowded to the rail hollers that they have picked up the periscope of a U-boat. Joe, I looked where the captain pointed, and sure enough right up outa the water quite some distance away is a black iron post movin' slowly along. I'll betcha that was the submarine this guy had signaled to, comin' up to get us. Anyhow, the destroyer cuts loose with a six-inch shell, and that periscope disappears. Whether they hit it or not, I don't know, Joe. All I know is that we got into Southampton without no further trouble. They took this other guy aboard the destroyer after searchin' him and findin' enough stuff on him to break up a dull day for a firin' squad. I was treated like I was George W. Hero, all the way over. The people on the boat couldn't do enough for me and says I had saved their lives and a lotto bunk like that. Jeanne was as proud as a infant with a new rattle, but made out she thought it was nothin'. One of the English officers' wives asked her if she didn't think it was wonderful the way we had escaped with our lives.

"Viala!" says Jeanne, shruggin' her shoulders and pullin' that U. S. Treasury smile. "How, then, could any danger befall us—was not Edouard with us?" Joe, that's the way to stand with the wif, hey?

Still and all, the French is great kidders. Yours truly, Sergt. ED HARMON.

(In my next I will tell you all about my astoundin' adventures in dear old London, Joe.)

(To be continued in an early issue)

## Shore Leave

More than a Million Every Week

## For lively out-o'-door appetites

**A**T the close of a long summer Sunday—supper on the lawn—and a Swift's Premium Ham, baked to a tempting brownness!

The first whiff of its steaming fragrance makes everybody "hungry as a bear." How appetizingly the tender pink slices curl from the knife! How satisfying to out-o'-door appetites is the mellow flavor!

This flavor is due to the long, slow Premium cure—to the hanging in the warm, sweet smoke of smoldering wood fires until each Premium Ham has become wonderfully savory and delicate through and through.

Whenever you buy, look for the Swift's Premium brand which distinguishes this finer ham. Ask your dealer to show you the label.

Swift & Company, U. S. A.

## Mason City, Iowa, makes a Record—

In Mason City, Iowa, 22,000 population, \$4,000,000 was spent in new buildings and commercial and civic development in 1917 in spite of war conditions!

They built three public schools, a heating-plant, a handsome new eight-story office-building, two churches, and a Y.W.C.A. building, and all of them have Barrett Specification Roofs.

The public library and telephone-building, and many smaller buildings, likewise have Barrett Specification Roofs.

In fact, of the thirty-one business, industrial, and municipal-buildings started or completed during the year, twenty-seven have Barrett Specification Roofs or roofs of Barrett materials.

Practically all of these roofs have been constructed by the local contractors, the Mica Insulating Co., inspected by our inspectors, and guaranteed free of repairs for twenty years by Barrett 20-Year Guaranty Bonds.

For permanent buildings Barrett Specification Roofs are so much better, so much cheaper per year of service, and offer so much more in fire-protection, that they cover more of such structures than any other kind.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

## Guaranteed for 20 Years

We are now prepared to give a 20-Year Surety Bond Guaranty on every Barrett Specification Roof of fifty squares or over in all towns of 25,000 population and more, and in smaller places where our Inspection Service is available.

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us without charge. Our only requirements are that the roofing contractor shall be approved by us and that The Barrett Specification dated May 1, 1916, shall be strictly followed.

## SHORE LEAVE

BY EDNA FERBER

ILLUSTRATED BY W. E. HILL

TYLER KAMPS was a tired boy. He was tired from his left great toe to that topmost spot at the crown of his head where six unruly hairs always persisted in sticking straight out in defiance of patient brushing, wetting, and greasing. Tyler Kamps was as tired as only a boy can be at 9.30 p. m., who has risen at 5.30 a. m. Yet he lay wide awake in his hammock eight feet above the ground, like a giant silkworm in an incredible cocoon, and listened to the sleep sounds that came from the depths of two hundred similar cocoons suspended at regular intervals down the long, dark room—a chorus of deep, regular breathing, with an occasional grunt or sigh, denoting complete relaxation. Tyler Kamps should have been part of this chorus himself. Instead he lay staring into the darkness, thinking mad thoughts of which this is a sample:

"Gosh! Wouldn't I like to sit up in my hammock and give one yell! The kind of a yell a movie cowboy gives on a Saturday night. Wake 'em up and stop that—that darned old breathing."

Nerves. He breathed deeply himself, once or twice, because it seemed somehow to relieve his feeling of irritation. And in that unguarded moment of unconscious relaxation Sleep, that had been lying in wait for him just around the corner, pounced on him and claimed him for her own. From his hammock came the deep, regular inhalation, exhalation, with an occasional grunt or sigh, the normal sleep sounds of a very tired boy.

THE trouble with Tyler Kamps was that he missed two things he hadn't expected to miss at all. And he missed not at all the things he had been prepared to miss most hideously.

First of all he had expected to miss his mother. If you had known Stella Kamps, you could readily have understood that. Stella Kamps was the kind of mother they sing about in the sentimental ballads; mother, pul, and sweetheart. Which was where she had made her big mistake. When one mother tries to be all those things to one son that son has a very fair chance of turning out a mollycoddle. The war was probably all that saved Tyler Kamps from such a fate.

In the way she handled this son of hers Stella Kamps had been as crafty and skillful and velvet-gloved as a girl with her beau. The proof of it is that Tyler had never known he was being handled. Some folks in Marvin, Tex., said she actually flirted with him, and they were almost justified. Certainly the way she glanced up at him from beneath her lashes was excused only by the way she scolded him if he tracked up the kitchen floor. But, then, Stella

Kamps and her boy were different, anyway. Marvin folks all agreed about that: Flowers on the table at meals; sitting over the supper things talking and laughing for an hour after they'd finished eating, as if they hadn't seen each other in years; reading out loud to each other, out of books, and then going on like mad about what they'd just read, and getting all het up about it! And sometimes chasing each other around the yard, spring evenings, like a couple of fool kids! Honestly, if a body didn't know Stella Kamps so well, and what a fight she had put up to earn a living for herself and the boy after that good-for-nothing Kamps up and left her, and what a housekeeper she was, and all, a person'd think—well—

So, then, Tyler had expected to miss her first of all; the way she talked; the way she fussed around him without in the least seeming to fuss; her special way of cooking things; her laugh which drew laughter in its wake; the funny way she had of saying things, vitalizing common-places with the spark of her own electricity.

And now he missed her only as the average boy of twenty-one misses the mother he has been used to all his life. No more and no less. Which would indicate that Stella Kamps, in her protean endeavors, had overplayed the parts just a trifle.

He had expected to miss the boys at the bank. He had expected to miss the Mandolin Club. The Mandolin Club met, officially, every Thursday and spanked the Texan night with their tinkling. Five rather dreamy-eyed adolescents slumped in stoop-shouldered comfort over the instruments cradled in their arms, each right leg crossed limply over the left, each great foot that

dangled from the bony ankle keeping rhythmic time to the plunketty-plink-tinketty-plunk.

He had expected to miss the familiar faces on Main Street. He had even expected to miss the neighbors with whom he and his mother had so rarely mingled. All the hundred little, intimate, trivial, everyday things that had gone to make up his life back home in Marvin, Tex.—these he had expected to miss.

And he didn't.

AFTER ten weeks at the Great Central Naval Training Station so near Chicago, Ill., and so far from Marvin, Tex., there were two things he missed.

He wanted the decent privacy of his small quiet bedroom back home.

He wanted to talk to a girl.

He knew he wanted the first, definitely. He didn't know he wanted the second. The fact that he didn't know it was Stella Kamps's fault. She had kept his boyhood girlless, year on year, by sheer force of her own love for him, and need of him, and by the charm and magnetism that were hers. She had been deprived of a more legitimate outlet for these emotions. Concentrated on the boy, they had sufficed for him. The Marvin girls had long ago given him up as hopeless. They had fallen back, baffled, their keenest weapons dulled by the impenetrable armor of his impersonal gaze.

The room? It hadn't been much of a room, as rooms go. Bare, clean, aseptic, with a narrow, hard white bed and a maple dresser whose second drawer always stuck and came out zigzag when you pulled it; and a swimmy mirror that made one side of your face look sort of lumpy and higher than the other side. In one corner a bookshelf—he had made it himself at manual training. When he had finished it—the planing, the staining, the polishing—Chippendale himself, after he had designed and executed his first gracious, wide-seated, back-fitting chair, could have felt no finer creative glow. As for the books it held, just to run your eye over them was like watching Tyler Kamps grow up. Stella Kamps had been a Kansas school teacher in the days before she met and married Clint Kamps. And she had never quite got over it. So the bookcase contained certain things that a fond mother (with a teaching past) would think her small son ought to enjoy: things like "Tom Brown at Rugby" and "Hans Brinker; or, the 50

ver Skates." He had read them, dutifully, but they were as good as new. No thumbed pages, no ragged edges, no creases and tatters where eager boy hands had turned a page overhastily. No, the thumb-marked, dog-eared, grimy ones were, as always, "Tom Sawyer" and "Huckleberry Finn" and "Marching Against the Iroquois."

A hot enough little room in the Texas summers. A cold enough little room in the Texas winters. But his own. And quiet. He used to lie there at night, relaxed, just before sleep claimed him, and he could almost feel the soft Texas night enfold him like a great velvety, invisible blanket, soothing him, lulling him. In the morning it had been pleasant to wake up to its bare, clean whiteness, and to the tantalizing breakfast smells coming up from the kitchen below—his mother calling from the foot of the narrow wooden stairway: "Ty-ler!" rising inflection. "Ty-ler," falling inflection. "Get up, son! Breakfast'll be ready."

It was always a terrific struggle between a last delicious stolen five minutes between the covers and the scent of the coffee and bacon.

"Ty-ler! You'll be late!"

A mighty stretch. A gathering of his will forces. A swing of his long legs over the side of the bed so that they described an arc in the air.

"Been up years."

Breakfast had won.

UNTIL he came to the Great Central Naval Training Station Tyler's nearest approach to the nautical life had been when, at the age of six, he had sailed chips in the washtub in the back yard. Marvin, Tex., is five hundred miles inland. And yet he had enlisted in the navy as inevitably as though he had sprung from a long line of Vikings. In his boyhood his choice of games had always been pirate. You saw him, a red handkerchief binding his brow, one foot advanced, knee bent, scanning the horizon for the treasure island from the vantage point of the woodshed roof, while the crew, gone mad with thirst, snarled and shrieked all about him, and the dirt yard below became a hungry, roaring sea. His twelve-year-old vocabulary boasted such compound difficulties as mizzentopgail-yard and maintopgallantmast. He knew the intricate parts of a full-rigged ship from the mainsail to the deck, from the jib boom to the chart house. All this from pictures and books. It was the roving, restless spirit of his father in him, I suppose. Clint Kamps had never been meant for marriage. When the baby Tyler was one year old Clint had walked over to where his wife sat, the child in her lap, and had tilted her head back, kissed her on the lips, and had gently pinched the boy's rose-leaf cheek with a quizzical forefinger and thumb. Then, indolently, negligently, gracefully, he had strolled out of the house, down the steps, into the hot and dusty street and so on and on and out of their lives. Stella Kamps had never seen him again. Her letters back home to her folks in Kansas were triumphs of bravery and barefaced lying—the kind of bravery and the kind of lying that only a woman could understand. She managed to make out, somehow, at first; and later very well indeed. As the years went on she and the boy lived together in a sort of closed-corporation paradise of their own. At twenty-one Tyler, who had gone through grammar school, high school, and business college, had never kissed a girl or felt a love pang. Stella Kamps kept her age as a woman does whose brain and body are alert and busy. When Tyler first went to work in the Texas

might have gone on indefinitely thus if Tyler's country hadn't given him something more important to do than to change dollars into nickels and back again.

On the day he left for the far-away naval training station Stella Kamps, for the second time in her life, had a chance to show the stuff she was made of, and showed it. Not a whimper. Down at the train, standing at the car window, looking up at him and smiling, and saying futile, foolish, final things, and seeing only his blond head among the many out of the open window.

"... And, Tyler, remember what I said about your feet. You know. Dry. . . . And I'll send a box every week, only don't eat too many of the nut cookies. They're so rich. Give some to the others—yes, I know you will. I was just . . . Won't it be grand to be right there on the water all the time? My! . . . I'll write every night and then send it twice a week. . . . I don't suppose you . . . Well once a week, won't you, dear? . . . You're moving. The train's going! Good-by—" she ran along with it for a few feet, awkwardly, as a woman runs. Stumblingly.

And suddenly, as she ran, his head always just ahead of her, she thought, with a great pang:

"Oh, my God, how young he is! How young he is, and he doesn't know anything. I should have told him. Things. He doesn't know anything about. And all those other men—"

She ran on, one arm outstretched as though to hold him a moment longer while the train gathered speed. "Tyler!" she called, through the din and shouting. "Tyler, be good! Be good!" He only saw her lips moving, and could not hear, so he nodded his head, and smiled, and waved, and was gone.

So Tyler Kamps had traveled up to Chicago. Whenever they passed a sizable town they had thrown open the windows and yelled: "Youp! Who-ee! Yow!"

People had rushed to the streets and had stood

"Hello, Sweetheart," the voice said. His nickname!

But in that Tyler Kamps we are not interested. It is the boy Tyler Kamps with whom we have to do. Bewildered, lonely, and a little resentful; wondering where the sea part of it came in; learning to say "on the station" instead of "at the station," the idea being that the great stretch of land on which the station was located was not really land but water, and the long wooden barracks not really barracks at all but ships; learning to sleep in a hammock (it took him a full week); learning to pin back his sailor collar to save soiling the white braid on it (that meant scrubbing); learning—but why go into detail? One sentence covers it.

Tyler met Gunner Moran. Moran, tattooed, hairy-armed, hairy-chested as a gorilla and with something of the sadness and humor of the gorilla in his long upper lip and short forehead. But his eyes did not bear out the resemblance. An Irish blue, bright, unravaged, clear beacon lights in a rough and storm-battered countenance, Gunner Moran wasn't a gunner at all, or even a gunner's mate, but just a seaman who knew the sea from Shanghai to New Orleans; from Liverpool to Barcelona. His knowledge of knots and sails and rifles and bayonets and fists was a thing to strike you dumb. He wasn't the stuff of which officers are made. But you should have seen him with a Springfield! Or a bayonet! A bare twenty-five, Moran, but with ten years' sea experience.

Into those ten years he had jammed a lifetime of adventure. And he could do expertly all the things that Tyler Kamps did amateurishly. In a barrack, or in a company street, the man who talks the loudest is the man who has the most influence. In Tyler's barrack Gunner Moran was that man.

Because of what he knew they gave him two hundred men at a time and made him company commander, without insignia or official position. In rank, he was only a "gob" like the rest of them; in influence a captain. Moran knew how to put the weight lunge behind the bayonet. It was a matter of balance, of poise, more than of muscle.

Up in front of his men, "G'wan," he would yell. "Whaddye think you're doin'! Tickling 'em with a straw! That's a bayonet you got there, not a tennis

racket. You couldn't scratch your initials on a Fritz that way. Put a little guts into it. Now then!"

He had been used to the old Krag, with a cam that you jerked out, and threw back, and fed one shell at a time. The new Springfield, that was a gloriously functioning thing in its simplicity, he regarded with a sort of reverence and ecstasy mingled. As his fingers slid lightly, caressingly along the shining barrel they were like a man's fingers lingering on the soft curves of a woman's throat. The sight of a rookie handling this metal sweetheart clumsily filled him with fury. "Whatcha think you got there, you lubber, you!" (Continued on page 17)

"Gosh. Wouldn't I like to sit up in my hammock and give one yell!"

there gazing after the train. Tyler hadn't done much youping at first, but in the later stages of the journey he joined in to keep his spirits up. He, who had never been more than a two hours' ride from home, was flashing past villages, towns, cities—hundreds of them.

THE first few days had been unbelievably bad. What with typhoid inoculations, smallpox vaccinations, and loneliness. The very first day, when he had entered his barracks, one of the other boys, older in experience, misled by Tyler's pink and white and gold coloring, had leaned forward from among a

State Savings Bank of Marvin the girls would come in on various pretexts just for a glimpse of his charming blondeur behind the little cage at the rear. It is difficult for a small-town girl to think of reasons for going into a bank. You have to be moneyed to do it. They say that the Davies girl saved up nickels until she had a dollar's worth and then came into the bank and asked to have a bill in exchange for it. They gave her one—a crisp, new, crackly dollar bill. She reached for it, gropingly, her eyes fixed on a point at the rear of the bank. Two days later she came in and brazenly asked to have it changed into nickels again. She

# FIGHTING-FIT

BY SAMUEL HOPKINS ADAMS

but not machine-punched personal record. As to the caliber of the medical volunteers, one of the most eminent general practitioners in the country, recently home on leave and wishing a consultation upon a complicated case in his private practice, thus delivered himself:

"Where am I to find consultants? Nine-tenths of the best men in every specialty are in the service, and the other tenth are overworking, trying to clear up and get in."

And another physician of national reputation,

Nor does Uncle Sam care to have it in his back yard. Therefore a couple of hundred brisk negro soldiers of the sanitary squad, selected, as I afterward learn from the men unfitted for actual fighting by minor defects of sight or hearing, or other impediments, are at work ditching and draining it. Later on the lady mosquito, with a headful of malaria or yellow fever, when she comes that way, is going to be disappointed and indignant at finding no place to lay her eggs. That is my first glimpse of the protection thrown about the place like a seamless armor.

Across our route a company marches in rather slovenly style.

"New men from the draft," explains a medical officer of the cantonment who has joined us at the lines. "Going into company isolation camp."

"For infectious disease?"

"Yes."

"What is it?"

"We don't know yet."

This is puzzling. "How do you know it's infectious, then?"

"We don't. But we assume at least one case of communicable disease in every company. So we isolate for two weeks on suspicion."

Early in the preparations, I learn, the War Department, in its rush to get the cantonments built, neglected this matter of isolation quarters. The medical authorities protested and insisted, and several epidemics of measles followed by pneumonia gave point to their arguments. Moreover, the medical man is the army's expert on health regulations; and, as I have said, this is a professional war. The surgeon general's office carried its point. Since then the infectious-disease rate, which has been the most disturbing factor in camp hygiene, has been notably lowered.

Our car draws up before the depot brigade infirmary, which is not really an infirmary but an inspection center, the selective starting point of making men fit to fight.

Hither come the men already passed by the civilian examining boards (by no means a decisive test, as will presently appear) to go through a diagnosis unrequited for thoroughness and technique in any clinic with which I am familiar. Well or ill, every new entrant must pass through this mill. Outside waits a long, wavering double line of soldiers in their working blue. Inside is presented a multifarious study in the nude. Everywhere, in the halls, in the examination rooms, on the stairways, stand or sit or walk mother-naked men. Some are tenderly protecting their fresh vaccination marks for typhoid, paratyphoid, and smallpox. Others are hopping up and down to keep warm. One is shivering under a blanket; another is furtively feeling his own pulse. So crowded is the place that it is difficult for us to make our way

without treading on unprotected feet. More nudities are continually popping out of the various compartments where they have just been inspected for ailments of heart, lungs, and throat, eye and ear, mind, feet, and external disorders, each division as named having a room and a medical and clerical staff to itself, the chief examiner being chosen for his aptitude and experience in special diagnosis. Upstairs sit the higher courts of revision, the special boards of experts to which all doubtful and difficult cases are referred. Many of these are men whose minutes, in civil practice, are measured in gold coin.

## A DISTINGUISHED

peace promoter boasted in our ante-war days that if America were threatened a million men would spring to arms overnight to defend her. In so far as his estimate was based upon the courage and patriotism of the nation, it was doubtless right. But between willingness to fight and fitness to fight is set a gulf, broad and deep. Ten thousand army medical experts can now look back and tell the prophetic enthusiast that if his million untested, flat defenders were put to the test of ordinary camp routine—let alone full military service—without long and painful preparation, the first fortnight would find half of them in hospital, half of the remainder disqualified for duty by minor ailments, and most of the residue discharged or dead. Five per cent, perhaps, might measure up, untrained, to the purely physical demands of soldier life.

It all comes down to this: This is a professional's, not an amateur's, war. Professional soldiers are not formed by natural aptitude alone and without arduous training, any more than professional violinists or professional boxers are. Upon this rigorous theory of professionalism down to the last detail our present army system is built. It aims to scour the country for the fittest men, and then make them twice as fit as they were. Such is the all-important job of our army cantonments, perhaps the finest, best-manned, and best-equipped human repair shops ever in operation.

The technique of preparing and keeping in repair the vast human organization is in the hands of the surgeon general of the army, who has reinforced his handful of medical regulars with the highest professional talent in the country. When war came, about 25 per cent of the total medical profession of America volunteered. The surgeon general's office took its pick. It sifted, selected, tested, and rejected. It is still testing and rejecting. Now the medical reserve officers ready for active service are so thoroughly classified that they are selected for special duty literally by machine. The surgeon general sends word to the Personnel Department:

"I want twenty specialists on nose and throat; between thirty-five and forty years of age; graduates of a Class A medical college, with at least one year of hospital experience, ready for immediate service."

## The Experts Know

FROM the personnel filing cabinet are taken the cards of the available men between the ages stated, each card being perforated with holes designating his specialty, his educational history, his hospital record, etc. These go through a series of machines, somewhat on the order of a player piano, which "select" for each special requirement until, at the finish, there is a heap corresponding to the call from the surgeon general. From that lot the final selection is made on the basis of more intimate, tabulated

In ingenious hygienist devised this system of using "shelter halves" as germ barriers

both as practitioner and educator, recently said to me:

"When you hear complaints about minor faults in the military hospitals, remember this: there isn't a cantonment of the lot, where the common soldier not only can but must receive medical attention of a quality available only to a millionaire in civil life."

Not until I had visited one of the cantonments, and gone through the full detail of the medical side, did I understand that "must." It is enough, regarding this cantonment's locality, to say that it is somewhere in America. From a sanitary and hygienic point of view, it is neither the best nor the worst of the camps, but about at the average. As our motor car approaches it, and the barracks rise into view, I find myself sniffing the breeze suspiciously. Subconscious memory has reverted to the last military camp with which I was on terms of intimacy, Camp Wyckoff, the "returned men's hospital" of the Spanish-American War, and I recall the not precisely rose-scented atmosphere of that place and the classic directions for finding one particularly insanitary regiment:

"Follow your nose till you have to hold it."

In this present cantonment such a regiment would be in a condition of permanent arrest. The breeze which blows to meet us here might have come across leagues of prairie, for all the taint there is in it. As we cross a bridge I catch a glimpse of a swampy area which I should not care to have in my back yard.

Confident that the best possible thing will be done, the patient awaits the verdict with composure

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

CHAPTER FOUR: "MISS TARRANT"

ILLUSTRATED BY F. R. CRUGER

FROM the same drug store at which Endicott had phoned his friend Sam Whitney, Leila called up the Wanderers' Club.

"Who wishes to speak with Mr. Endicott, please?"

"Miss Kildare."

"Oh, Miss Kildare. Just a moment. Mr. Endicott telephoned a few minutes ago, Miss Kildare, leaving word for you to ring him up at Chelsea 90,000 if you should call here."

Leila thanked the man and hung up. In another moment she was connected with Chelsea 90,000.

"Is Mr. Endicott there?"

"No'm, he ain't yere, 'm."

As plainly as though she could see him, Leila could describe the face and figure that went with that deep voice. Gallipolis is not in the South, but the Ohioan knows his negro almost as well as does the Virginian.

"Did he leave any word for me? This is Miss Kildare speaking."

"Miss Kildare? Yes'm, he did. Mist' Endicott he come in jes' a few minutes ago, Miss Kildare. And he took one look around this apartment, and he says: 'Fabian,' he says, 'I can sleep in a trench if I has to, Fabian. I've done it, Fabian,' he says. 'But I don't do it from choice, Fabian,' he tells me. 'I does it beca'se I has to. And this yere apartment,' he says, 'looks like a battle field,' he says."

"Well, seh, Mist' Endicott, I tol' him, 'you ain't sayin' nothin' when you leave yere about racin' back yere lookin' for a place to sleep. You say until I git the apartment all reddeed up you goin' stop at the hotel. Whuffor you bawl me out thisaway, Mist' Endicott?"

"'Suhcumstances alteh cases, Fabian,' he says."

"You ain't goin' stay at the hotel, then? I asks him."

"I dunno,' he says. 'It don't look it, Fabian, so I guess I'll go out and buy me a toothbrush and some other things. And if a lady calls me up, Fabian, and says her name is Miss Kildare, you tell her to please call me up later, or leave a number for me. Yes'm, that's what he says, 'm.'"

Strain, terror, uncertainty, all combined to render Leila impatient. But she listened eagerly to Fabian's long monologue. Years ago there had been a colored butler in the Kildare home, and he had been old and grizzled and ramblingly loquacious. It was pleasant to hear this darky's voice. Somehow this colored servitor stood for solidity, and the ground had been slipping from under Leila's feet this morning. There was unforced mirth in her voice as she said: "Tell Mr. Endicott that I will call him up in half an hour."

"Yes'm, thank you, 'm."

Endicott must be as decent as he looked, thought Leila. One can tell the master, often, by the man. Fabian's voice told her that he was an old and privileged servant. Men cannot retain old and privileged servants unless there is something decent in themselves. In his private life Endicott must be the same gallant gentleman that newspaper headlines had so many times proclaimed him to be in the past year or so. Leila suddenly felt confidence. With a man

like Endicott to advise her, to—if it came to that—protect her, what had she to fear from McCord?

Out in the spring sunlight her lips curled faintly in a smile—a smile at self. Was she not, after all, making a mountain out of a molehill?

Having lived down a black chapter in his past, who would not be anxious to keep it hidden? McCord had come to her when she had no way to turn. He had given her work. Did she not owe him a debt of gratitude? Was he not entitled to an opportunity to explain?

A clock before a jeweler's caught her eye. Unconsciously she glanced down at her own wrist watch to compare the two. Her eyes rested upon a faintly red spot, the spot that McCord had seized at the table when Endicott's back had been turned. Jealousy? She shook her head. McCord was not a fool. He would not have been jealous, immediately, of a man whom he had never seen before, and whose name she had never mentioned. It was fright: fright at finding her in the company of another man.

She paused undecidedly, and as she did so a man sidled away from her and began staring intently into the jeweler's window. But he had not turned quickly enough. Leila had glimpsed enough of his face for recognition. He was one of the men who came furtively to McCord's apartment in the Birmingham. And why should he avoid her eyes unless he was following her? And following her for McCord?

A SECOND ago Leila's intentions were all toward frankness. She meant to go to McCord and ask explanation. But now! There is something about being followed that will set panicky the stoutest heart. If McCord were having her followed, it was because he distrusted and feared her. And why couldn't McCord have been as frank as she had just now purposed to be? She remembered what had been written on the base of the photograph. Unless the writer were "declared in," he would go to the police!

McCord's terror became vivid to her again. A man actuated by that terror might do anything. And he was having her followed. The instinct of the followed person is to put the follower off the track.

Holding herself calm, Leila carefully compared her watch with the clock of the jeweler. Then she walked to the subway. As she descended the stairs she glanced over her shoulder. The burly henchman of McCord, so blond that he was almost albino, was still following her. She had read often of how people eluded other people by darting in and out of subway trains. But somehow her knees were weak. She knew herself incapable of such an escape. Fear-stricken, she stared about her. A dozen feet away stood a burly special policeman. The fear left Leila. She walked over to the officer.

"That man"—and she pointed quite openly—"has been following me; annoying me."

"Sure, ma'am; I'll pinch him this—"

"No, please, officer. I would not wish—if you will—just detain him—"

"I'll do that," said the officer grimly.

He felt himself entirely rewarded by the flash that gave him from her violet eyes.

A moment later, from halfway up the opposite stairs, Leila saw a big blond man struggling futilely in the grip of a more brawny special officer. To her ears were wafted growling utterances.

"If ye want a train, a train will be along in a moment. But if it's followin' the lady ye're doin'— Listen, me bucko, I'd as soon pinch ye fer a masher as not. I'd rather, if it comes to that. Wud ye like me to fan ye wid me stick?"

Well—and Leila shrugged her shoulders—if a man is following a woman for a reason that he does not care to explain, then he must expect to be treated as a male flirt. Fear left her as she reached the street.

She had met danger and had outwitted it. She entered a taxi. "Where to, ma'am?"

She thought a moment. She had done more than elude the blond adherent of McCord. She had definitely cut herself off from all intercourse with McCord. For the man would tell McCord. Explanations would mean the frank divulging of her suspicions, and—she had the little red bruise on her wrist.

"The Charlton," she told the chauffeur.

She arrived at the Hotel Charlton within an hour. She carried a small suit case which contained absolute necessities; little more.

"Room with bath?" The clerk whirled the register around for her to sign.

There was no hesitation in Leila's action. She had thought of a new name as she did her shopping. For it might all be something akin to a nightmare; a word or two from McCord might wipe away all the horrors and doubts of the past few hours. But, until that word or two were forthcoming, it behooved Miss Leila Kildare to use caution. She registered as Miss Josephine Tarrant of St. Louis.

Once in her room, she looked at her watch. The half hour within which she had been going to telephone Endicott had long since passed. She went to the room telephone before she removed her gloves.

"Mr. Endicott? This is Miss Kildare."

She could hear him sigh with relief, and his sigh pleasantly excited her.

"I was afraid—"  
"Yes?"

The voice of Larsen! And Larsen was in the next room

"Why, my apartment was being renovated, and—I had to get some things, moving back a day or so ahead of time—and I was afraid I'd missed you. I didn't quite dare to telephone the Birmingham. You're not there now, Miss Kildare?"

"No, indeed, Mr. Endicott—that envelope I gave you. My uncle—but he isn't my uncle, Mr. Endicott. He—oh, I can't tell you over the telephone. I'm at the Charlton, Mr. Endicott. Will you ask for Miss Tarrant? And can you come right over?"

"Indeed I can," he assured her warmly.

"And you don't think I'm a silly, hysterical—Mr. Endicott, have you that envelope with you?"

"Yes."

"Open it, please."

She heard the faint rasp of torn paper. Then she heard a smothered exclamation.

"You recognize it?"

"Why—er—it's your uncle who isn't your uncle, isn't it?"

"It is," she told him. "And—and—Mr. Endicott, I'm not silly, and I don't know anyone, and I've been followed—"

"Not to where you are now?"

"No. I got rid of the man who followed me."

"So did I," he said.

"You too? Oh, then, you'll come over, please?"

"Immediately."

She hung up the receiver with a sigh. She was nervous, frightened, but she spent the next twelve minutes before her mirror, a thing that she would not have done could she have heard a conversation, one end of which was taking place downstairs in the Charlton telephone booth. For Stromberg was calling up McCord.

"The girl shook me; clever stunt," he said. "But I got on her trail again. Fat-witted policeman thought I was a masher... Yes, she's on; he told him that I was. He held me until he thought she'd had time to make a get-away. She had time too, only she didn't know how to use it. Hired a taxi right by the subway entrance, and another driver heard her give the address. She's given me some chase, but she's safe now. She's at the Charlton, registered as Miss Josephine Tarrant of St. Louis. What'll I do?" asked Stromberg anxiously.

McCord's voice came shakingly back to him. "She knows you; keep out of her sight. I'm sending Larsen over. He'll take a room as near her as can be. And he'll watch for the man she talked with this morning—Endicott. He'll be there."

"You don't think there's any danger of her spilling the beans?" queried Stromberg anxiously.

"Good God, can't you do your own thinking?" cried McCord. "I don't know how much she knows, or has told this Endicott, but keep out of sight, and wait for Larsen."

### Chapter V: Threats

THE voice was familiar. And it could not be by chance that a friend of McCord was occupying the next room to Leila Kildare, in the Hotel Charlton! The same sort of chance, then, that had made the burly blond man, another friend of McCord, trail Leila Kildare when she had left the Birmingham. It was the voice of Larsen. Larsen had the next room! It didn't matter how he happened to be there! There was no time, now, to wonder how she had been traced to the Charlton. Only one thing counted: Farley Endicott was downstairs; his name had just been sent up to her, and if she joined him—

It was not fortuitous that this man—Larsen, as McCord called him—was at the Charlton. He, or some one else, had followed her here. Girlish fears, imaginings, had played no part in the actions of Leila Kildare to-day. She had ample justification for all her suspicions, all her dread. Larsen was in the next room to hers! That meant that others of McCord's men were downstairs. Having eluded McCord's spies once—or attempted to elude them—McCord would not be so foolish as to set but one man on her trail now. And there was no knowing at what point these men would stop.

Leila could not make out what Larsen was saying. The door muffled his words, though not his tones. But it didn't matter what he was saying, nor to whom he was saying it. His being there—that was what counted!

Leila, leaving her room for the hotel parlor where Endicott was awaiting her, had stopped as she passed the door next her own. Ahead of her was the elevator, but behind her, as she had noticed on enter-

ing the room assigned to her, were stairs. They must lead, of course, to the ground floor and the street. Hastily she walked to these stairs. It would not do to reenter her room. Larsen might enter her room at any moment.

She could, of course, telephone from her room, warning Endicott. But it would take a minute or two to summon Endicott from the hotel parlor to a telephone, and—minutes might mean—She re-

waited for Endicott to be summoned to answer her call. She was on edge; her nerves were infinitely more sensitive than ever they had been in her life before. And she gasped with relief as a click told her that some one had lifted a receiver from its hook, doubtless in one of the Charlton's public booths. "Mr. Endicott?" She spoke without waiting for him to utter a word.

"No, this is not Endicott." She recognized the

"If I were to tell you that I intend marrying Miss Kildare myself, what then?" asked McCord

fused to think what they might mean. Swiftly she descended the stairs.

At the top of the first landing she hesitated. Two flights of stairs were before her. One led, as she could see, directly to a doorway that opened upon the street. The other led to the hotel offices and reception rooms. She had had time to think upon her way down three flights of stairs. Larsen could not be alone in this hotel. Doubtless there were others of McCord's followers in the hotel. Men who knew her, who had seen her with McCord. And if they should see her join Endicott, it would identify the man who was offering to aid her, who had responded so gallantly to a stranger's request.

That recognition, identification, of Endicott would mean open violence in a public place? She did not know. But it might! Anything might be credible of McCord. A man who had a small army of spies at his call, who had had her followed as closely as it was evident that she had been followed, who also had had Endicott followed, might go farther than that. McCord feared them. And McCord—She remembered the look in his eyes. She took the stairs that branched to the street.

She was not followed this time. She was certain of that. Larsen had not yet discovered her absence from her room. At least he had not discovered it in time to have her followed from the Charlton. She did not assume this. She made certain of it by doubling upon her tracks, by stopping as she rounded corners, and watching closely those who followed around the corners. But none took interest in her. Yet it was ten minutes before, certain that she was not under surveillance, she dared step into a store and telephone the Charlton.

She asked that Mr. Endicott be paged. For there had seemed no need for Endicott to pose as Hoban at the Charlton. Under his own name he had been announced, and it was for Mr. Endicott that she asked. She had no reason to suspect that McCord, or his followers, knew Endicott's real name. And unless the very man who had followed Endicott from the Birmingham was at the Charlton, there was no danger in the crying by a page of Endicott's name. So she thought. She could arrange to meet Endicott elsewhere, where they could plan against the very real danger that menaced them.

Trembling, her ear glued to the receiver, she

voice. It was Larsen speaking. "This is Miss Kildare, isn't it? Now, listen, Miss Kildare. We've got your friend Endicott—where we want him. But we want you! McCord wants you. You hear me?"

"Y-yes, I hear you," she said.

Fight for control though she did, her voice shook. Larsen noted it; she heard him chuckle.

"Beginning to find out what you're bucking, are you, Miss Kildare? Now take a friend's advice. McCord don't mean you no harm. He don't mean no one no harm. But he's mixed up in—big business, Miss Kildare, and he thinks you got a sort of wrong slant on matters, and—well, he wants a little talk with you. That's all."

"Business?" She had mastered her voice now. "Is it business that makes him have me followed, that makes him—"

"I say it's business. You let it go at that. You will, if you got sense, Miss Kildare. He's got your friend Endicott. Listen. You believe anything else you want, but believe this: if you don't come to McCord this minute, things will begin to happen to your friend Endicott that—"

"Where is Mr. McCord?"

"Never mind where he is. You just tell me where you are. I'll take you to McCord quick enough."

"And suppose that I don't choose—"

"You'd better choose. Does this Endicott guy mean anything to you? If he does, you'd better see McCord quick, or there won't be enough of Endicott left to—"

Her little cry of horror stopped him. He went on, less menacingly: "Well, you see, Miss Kildare, this is important business. I don't want to scare you, but—"

"I'll go to the police," she cried.

"What'll you tell 'em?" he jeered. "And just remember that the police won't be able to do anything for your friend Endicott. Be reasonable, now, Miss Kildare. Ain't Mr. McCord been kind to you? Ain't he been friendly and kind? Why, I want to tell you—just a minute, please."

Above his voice had sounded something like the opening of a door. Leila could guess what it meant. Some one had come to the booth to speak to Larsen. And the silence that followed meant that Larsen's hand was over the transmitter. How easy, on some specious plea, for Larsen to (Continued on page 22)

# Collier's

## The Army of Labor

OUR great war-work corporations have "Benefit Societies" and sometimes their statistics tell us something about them that doesn't appear in the dividend reports. Since 1914 one such corporation has grown, in the number of its employees, from about 8,000 to about 28,000. Capital deduces that working conditions at the company's plants must be satisfactory, or the plants couldn't have got together all those employees. But Labor counters with the charge that the labor turnover at those plants is "the largest in the United States." During a single year 55,859 employees were hired, while 49,540 were discharged or quit work (it is still Benefit Society statistics, accessible to anyone who is curious, that we're quoting); the net gain in employees was, therefore, after the hiring of nearly 56,000 new hands, only 6,319. During another year the same corporation hired 57,423 men, and lost (or fired) 56,771—a net gain of only 652! Now, we often hear the phrase used, "the army of labor," and we are told that this war must be won by two armies: the army of fighters and the army of artisans. A newspaper headline, above a report of a recent draft, tells of

741,500 ASSIGNED  
TO PLACE IN WAR  
ON PRUSSIAN FOE

Numbers Drawn from Big Glass Bowl in Presence of  
High Government Officials

Suppose that after hiring 741,500 men as fighters the corporation called the United States army lost nearly 99 per cent of those recruits within a year. That would mean there would be about 8,000 men left out of the 741,500. It would be bad business. Isn't it bad business for a war corporation to be conducting its affairs on the same lines? We don't say, please remark, that the fault is entirely with the corporation. Only it is idle to suppose that the generalship of the Army of American Labor is up to the generalship of the armies of FOCH and LUDENDORFF so long as anything like these figures can be developed out of the reports of Benefit Societies. The turnover is too big—whatever the reasons may be. We look to the War Labor Board which the President created by his proclamation of April 8—the board of which ex-President TAFT and Mr. FRANK P. WALSH are joint chairmen—to better things. There must be army leadership here no less than on the firing line—for this (as has been occasionally observed) is a national war—not just a West Point problem.

## Not Booty at All

NEWSPAPER correspondents have referred to the "booty" taken by our Italian allies in their counterattacks against the Austro-Huns. Now, we don't like that word, somehow or other. It savors too much of the ranting Kaiser. Slipping from his lips so often, it has come to be almost a synonym for looted churches, ruined villages, defiled homes, and all the Teuton brands of diabolic devastation. We find it hard to apply this befouled word to the stores of munitions and war materials which the Allied forces in Italy have taken from the baffled invaders.

## Our Town of Twenty Sieges

OPENING Dumas at random—it happened to be his "Forty-five Guardsmen"—the name of Château-Thierry flashed from the page. It seems we ought to have known all about the town on the Marne long before America made it a battle ground! In DUMAS's story the Duc D'ANJOU, favorite brother of MARGUERITE DE VALOIS and heir presumptive of HENRI III, had suffered defeat in Flanders, where the people opened the dikes and drowned his soldiers. He dreaded to return to court, and chose rather to retire to one of his castles. "It is a good distance from Paris, about twenty-eight leagues, and I can watch from thence MM. DE GUISE, who are half the year at Soissons." The duke went to his death, for it was at Château-Thierry that he was poisoned—as happened rather often in the sixteenth century.

Already the castle was very old; tradition says it was built in 720 by CHARLES MARTEL, to serve as palace and prison for THIERRY IV, the young king of the Franks. Perhaps there had once been a Roman camp there. A writer for the Société Historique et Archéologique du Château-Thierry suggests that the early town may have been destroyed by the original Huns in 451. Certainly Château-Thierry figured in nearly every important struggle in

July 29, 1918

France. It repelled the English in 1370, but in 1421 HENRY V captured it by surprise. Another conqueror, the Emperor CHARLES V, took the town in 1544. It suffered in civil wars, and in 1814 NAPOLEON defeated the Russo-Prussian forces near Château-Thierry.

When the Château-Thierry historical society meets after the war they will add a chapter to their records that will belong to New World histories too. For it was on May 30, 1918, that the Germans in their desperate offensive reached the Marne at Château-Thierry. The position is just as important to-day as it was a dozen centuries ago. So when the modern Huns seemed to be winning, American marines were rushed by motor from camps sixty miles away. They went straight into battle, and came in time to save the south bank of the Marne. We have not heard the last of Château-Thierry.

## They Cost 25 Cents

ON "War Savings Stamp Day" an editorial in Mr. HEARST's New York "Evening Journal" exhorted its readers as follows:

Buy your Thrift Stamps, show them to the family. Point out the picture of George Washington in the middle of the stamp.

If the gifted author of those lines had only stopped writing about Thrift Stamps long enough to buy one—or at least to borrow some one else's—he would have found that it might puzzle even the owner of the "Journal" to discover a portrait of GEORGE WASHINGTON in the middle, or anywhere else. It is a risky business, this describing objects we have never seen.

## "Catchup 5 Cents Extra"

SINCE we printed OCTAVUS ROY COHEN's report on restaurants and cantonment cities, we have had to read letters and newspaper editorials on the subject. For instance, the Decatur (Ill.) "Review" tells about the soldier from Decatur who wrote home he was glad to get away from Chicago, living was so high there; but "then he went to a camp in another place and discovered prices were higher than in Chicago. Naturally, he began to wonder. . . . The highest prices in the country are charged in these camp towns."

Some of our letters about Mr. COHEN's article come from representatives of the War Camp Community Service. One of them quotes an article in "The Blue and Gray," published at Anniston, Ala., one of the cantonment towns mentioned by Mr. COHEN:

The War Camp Community Service has made every effort to protect the men from overcharges. It has adjusted claims and in several instances secured cash refunds. Whenever a soldier will present his claim in writing, our Committee on Commercial Relations will promptly investigate, whether the claim be large or small.

Another letter tells about the Merchants' Association of San Diego, Cal., constituting itself a committee to investigate overcharges; and about the activity of the San Diego Chamber of Commerce. We understand that committees have been organized in nearly all of the three hundred communities where the War Camp Community Service operates, and that hundreds of claims have been adjusted.

All of which seems to bear out the fact that the abuses Mr. COHEN's article complained of have been very real abuses. After all, it is a whole lot cheaper to print a thrift-stamp advertisement at the top of your menu than to charge soldiers fair prices.

## Into the Primitive

AT the head of the inlet our hostess and driver brings the car to a stop for two purposes: first, to let us catch a last glimpse of the waters of the Sound, slate gray in the evening mist; and, second, to call upon her fisherman. He is there, in a hut behind the respectable mountain of clam shells whose emanations suggest lemons in a damp earth cellar. Our hostess returns triumphant. Her fisherman has promised her a mess of fluke for Thursday, this being Tuesday. Had we been noticing the exquisite sunset?

In spite of all the classic satire about million-dollar Newport cottages and Babylonian camps in the Adirondacks, it is literally true that for the rich—for those sufficiently rich to own and administer a flyver—the way to the heart of Nature, or at least to the simple, primitive fresh things of life, lies open; whereas we ultrademocrats who trolley to the station are chained to an artificial, urban scheme. For observe:

We, of the ultrademocratic nongasoline classes, even when we have planted ourselves for the summer close to the sea, get our fish from under a glass case on a marble counter, and pay accordingly. But our hostess of the flyver runs down three miles to the head

# Editorials

of the inlet and sends out her own fisherman to catch her own fish. (On the way she gets a sunset from which we are debarred.)

We, of the etc., get our milk from Borden's, being roused early in the morning by the clank of our two Grade A's on porch steps; but our hostess runs out three-quarters of a mile and gets her children's milk from the still warm pail.

We buy our vegetables and fruits from the corner stand, and the vender thereof is of pure Hellenic strain. But our hostess scurries over the countryside and fills her car with potatoes and peaches direct from the hand of a direct descendant of the original settler, A. D. 1690, or thereabouts. Her strawberries she does not pay for at all. She knows the places where they grow for the picking.

We, of the etc., bathe with our offspring in front of the pavilion, where you get safety, but also crowds and the odor of roasted peanuts. But our hostess knows a little cove two miles out with a perfect sand beach, and the children dress in the car.

Give me a place to stand on, said old ARCHIMEDES, and I'll move the earth, if you have a lever handy. Give the modern housewife in the country anything that goes on wheels without a horse, and she will play a game with civilization. Verily, if all the factories and mills should close down, she will jump into her car and hunt up an old spinning wheel somewhere, and somewhere else a field of flax in a clearing, and snap her fingers at the whole factory system. And her mate, if need be, will run out twenty miles to some old iron mine and bring back enough ore to smelt spoons and egg poachers for his young.

## "A Letter from France"

NOTHING in the newspapers is nearly so interesting to us just now as what's inside the brown envelope with the round cancellation stamp of the American Expeditionary Force. Very often the letter is interesting to other people too. That's why the letters from John or Jim or Joe get so frayed before they've been read by all the family and friends we show them to. The letter from France is, to-day, America's most popular short story.

Let us exchange some of those letters. Part of one letter from France is printed on this page. We should like to print a letter, or part of a letter, in every issue of COLLIER'S. Sometimes a letter to us; sometimes a home letter that one of the home folks will be generous enough to pass on to us.

Address the letter to us like this: "Letter from France" Editor, COLLIER'S, New York. That is enough. We can't return unused letters—but we'll be just as grateful, even if we don't say so. If you don't send us the original letter, but only a copy, please don't forget to give the full name and address of the writer and the transmitter. Send us the whole letter—we'll pick out the part that seems to us most worth passing on. And don't forget to say whether the person who gets the letter is father or mother or sister or wife—or what. Neither his name nor yours need appear, if you'd rather not. But you must take us into the secret.

One letter a week—or part of one letter. We look forward to this "letter from France" generally being the best thing on the editorial page. And the fact that we shall be sharing one another's letters will be one more tie uniting us all—and that's worth while.

## A LETTER FROM FRANCE

(From a New York boy who went over in July, 1917)

DEAR BILLY:

Thanks, Billy, for your good letters that are always so welcome, especially up at Evacuation Hospital Number One where I have been for seven long weeks.

Things up here have been rather quiet of late, as there is little or no activity along this front at present. Most of our excitement consists of air battles, and to-day has been one long to be remembered, as we have had three directly over us—one resulting in the death of Major Lufbery. The boche hit his plane and also him. His plane came down in flames, and he jumped from it when it was about two hundred feet from the ground and, of course, was killed. He was the idol of everyone at the aviation field, which is about a mile from us.

You have no idea how beautiful an air battle really is. When a boche plane appears and all the forts back of us open fire on it, it sounds as though hell had broken loose. It is only a moment or two before you hear the hum of our planes and they swoop down on the enemy and the forts let up and the chase begins. The results are almost always in favor of the Allies.

Must stop. Send this to Pop, please. Lots of love to Mabel and yourself.

AS EVER,

HARRY

## Passports to Bookland

THE President of the Board of Education, one of the British ministers, says that there has been an increase in printing in spite of the war; that there is a good deal of what he calls "desultory reading" in the trenches, and "some serious study" behind them. He tells of a young Canadian soldier who has read GIBBON'S "Decline and Fall of the Roman Empire" and MACAULAY'S "History of England" from cover to cover. He tells of officers reading KEATS and MILTON to calm their nerves while under hot shell fire. Reading has become pretty much a necessity to the men in dug-outs, even though they may have done very little reading at home in their civilian days. And General SMUTS says that during his raid into Cape Colony during the Boer War he took for evening reading KANT'S "Critique of Pure Reason."

From French officers and men we have the same report: there is a great deal of reading at the front and behind it. Newspapers and foreign grammars and foreign texts, the French classics, modern poetry and drama, economics and politics. And always, of course, fiction. There is a great deal of civilian reading in France also. French civilians do not go to the theatre nearly so much as they did before the war, and at Paris, what with families in mourning and air raids and the fire of the long-distance gun, there is less entertaining. Instead of spending your evening out, you read quietly till bedtime—or the *alerte*. So that the poetry of living writers like PAUL GÉRALDY, PAUL FORT, and PAUL CLAUDEL is counted to-day among the best sellers.

ROBERT BRIDGES, the British poet laureate, has something to add to this discussion of books in war time. Some weeks back there was a meeting at Oxford in behalf of the British Red Cross. Books were asked for the hospitals. "Any enforced cessation of life's routine, such as a long convalescence, is apt to produce an unusual activity of mind," said the poet laureate. "The condition seems to create a fertile soil for new and enduring impressions. It is the best seedtime that an adult mind can have."

And if the young men of our cantonments, or our men in hospital, ask for passports to Bookland, who will refuse them?

## Quiet Service

TO the soldier, the hero worship, the medals, the intoxication of the charge, and the monotony of the mire. For him councils of war chart and plan, scientists contrive, forges ring, and artisans labor, shift after shift. The whole world turns on—and round—him. But the day will come, some time, when the sweat and blood and breathlessness of battle are past, when the roar of artillery dwindles, and the gashed fields are once again at peace. And then the figure that will loom largest will be that pictured by MASEFIELD:

I've marked the May Hill plowman stay  
There on his hill, day after day  
Driving his team against the sky,  
While men and women live and die.

This figure may perch upon a tractor, instead of "driving his team"—but always he's "against the sky." His service never ends.

July 20, 1918

# SALESMANSHIP AND SUCCESS

## FIRST ARTICLE: APPROACH BY WILLIAM MAXWELL

Many salesmen smirk when they think they are smiling

"SIZING Up a Customer," which appeared in the March 2 issue of COLLIER'S, has brought me numerous interesting letters, together with all sorts of questions. I am going to quote in its entirety the letter of a New York retail salesman. First of all, this letter contributes the best tip on salesmanship that anyone can give you; second, it asks a question which every

thoughtful and ambitious salesman is continually submitting to himself: "How can I improve my approach?"

"Having read your article in this week's COLLIER'S, I take advantage of the invitation you give to write to you, in order to tell you that I've found, through my own experience, that what you say is very true.

"I've been a salesman in a retail store for the last five months. After about two months of my experience in this store I learned (using your expression) how to 'size up a customer.' Since then I practiced this 'sizing up' of customers and found that I sold to 30 per cent of the customers that I handled. At first I thought this pretty good, but I finally began to think that the increase in percentage of sales did not keep step with the experience I was gaining all the time. I gave the matter so much thought that in the end I decided my system of reading a customer's character was not as good as it possibly could be. Trying to find different systems did not help, and in the end it struck me that there were only two systems, either to 'size him up' or not to (size him up). This was about three days previous to the reading of your article. Having tried the first way for the last few months, I decided to try the other, and, coupled with the determination to sell to every customer, I've found it working splendidly. Within the last three days I've sold to eight out of the nine customers that I waited on. One of these eight admitted afterward that he had only come into the store with the intention of pricing the article, and to two of the remaining seven, not having what they asked for, I sold entirely different articles. On reading your article I thought it quite a coincidence to read about the things uppermost in my mind at the time, and I can't help expressing my admiration after reading it.

"There's one thing, though, which I don't understand, but would like to very much, and that is about developing a good approach. I would be very much obliged to you if you could in some way, so it can reach me (and I think it would interest many other readers of your articles), explain in detail exactly what you mean."

### Smile Like a Dog

THIS young man has mastered one of the most important truths of salesmanship. Speaking in an extremely broad sense, there are two systems of retail salesmanship. One is to "size up" each prospective customer and gauge your efforts accordingly; the other is to "size up" no one, but to do your utmost to sell everyone. The latter system gets the money in the long run. It took this young man only five months to discover that fact. I know of salesmen who have not learned as much in thirty years of sales experience.

He asks me to tell him how to develop a good approach. Approach is partly a salutation and partly an introduction of your goods in a way that will stimulate the interest of your prospect. As our New York friend has not told us what kind of goods he sells, it is necessary, in essaying an answer to his question, to speak chiefly of approach as a form of salutation, which, perhaps, is its most important aspect in those cases where the potential customer visits a store or sample room to look at goods.

The best approach a retail salesman can use, when an unknown visitor enters his store, consists of a pleasant smile and a courteous good morning, or good afternoon. But many salesmen smirk when

they think they are smiling, and others mistake servility for courtesy. There must be sincerity in your manner. If you are a retail salesman—or saleswoman—you are not properly tuned up to your job until you regard every visitor to your store as a welcome guest and habitually endeavor to make all shoppers realize that fact by your reception of them. You can't merely pretend to feel that way about the people who come to the store; you must actually feel it. In my opinion, one of the first things a retail salesman should do is to develop the right mental attitude toward the customers of his store. He should learn to think of them as friends, so that his greeting of each customer will instinctively be a genuinely friendly one. When you join a fraternal organization, you adopt toward its members a relationship based on the assumption of mutual tastes and interests. You feel at least a little closer to your lodge brethren than to the average member of the general public, and accordingly you put a little more friendliness into your salutation of a lodge brother. Every prospective customer who enters your store should mean more to you in a material sense than any of your fellow lodge members. Your lodge may help bury you, if necessary, but the customers of your store are helping to keep you alive and are offering you daily opportunities to improve your condition in life. The people who visit your store, even when they have no immediate intention of buying, are good friends of yours, although they may never have heard of you. Therefore you should think of them as friends, and you should greet them as friends.

Now how do you greet your friends? I know a man who has scarcely any close friends, for the simple reason that he doesn't know how to say "How do you do." The way he says it makes that friendly salutation sound almost like an insult. He appears to grudge the words and the effort of uttering them. He is entirely unconscious of this fault, and I am sure he could easily correct it. Have you a defect in the way you say "Good morning" to a prospective customer? Do you say it perfunctorily as a thing that has to be said, but doesn't mean anything? If so, your approach is bad, and it's up to you to put some real stuff into the words. I know a man who draws \$25,000 a year principally because he learned the right way to say "Good morning" and "Good afternoon." He would say it to J. P. Morgan in just the same way as he said it to Tony the bootblack. He wasn't afraid to say "Good morning" to Mr. Morgan, and he wasn't ashamed to say "Good morning" to Tony.

Do you know how to smile? Is your smile merely a muscular contortion, or do you make it mean something? Your eyes should smile. Do they? I wonder if you have a dog friend—a dog which really likes you? If you have, look at his eyes the next time he greets you, and you will know what I mean. It would seem that any one could learn to smile as well as a dog, but lots of people don't do it. A dog, however, has an advantage over human beings in that his heart is always right toward his friends. He is almost never too busy, too tired, too hungry, or too ill to smile with his eyes at his friends. If we salesmen would cultivate that attitude toward all our customers, I am sure it would improve our approach.

I may not know you, and you may not know me, but if I say "Good morning" to you as if I really mean it, and smile at you as if I am truly glad to see you and intend to place myself entirely at your disposal, I am putting the emphasis on the you, where it always belongs in salesmanship. It doesn't matter whether you are a millionaire or a chimney sweep, you will appreciate the fact that I

am interested in you and anxious to do everything that I can for you. If I am a salesman and you come to my store, it would, of course, be unpardonable for me immediately to ask you what you want, just as it would be almost unforgivable in me to ask you that question if you were my friend and called at my home to pay me a social visit. Let me emphasize that the people who come to your store are your guests, and that they should be treated as guests. Don't ask a customer what he wants or what you can do for him. Show by your greeting that you are at his service, give him a chance to tell you what he wants and then demonstrate by your cheerful alacrity that it is a real pleasure to you to get the article for him.

### Customers Are Friends

IF you know a customer's name, you naturally have an advantage when you approach him. Do you try to remember names? Probably not; likely enough you are one of those who almost boast that they "can remember faces, but can't remember names." If you don't remember names, it doesn't do you much good to remember faces. You can learn to remember names—a good many names at least. I am acquainted with a hotel clerk who became the proprietor of a large hotel because he cultivated the faculty of remembering names.

But suppose you don't know a customer's name, is there anything you should say or do except to smile and say good morning or good afternoon? That depends on you, your customer, and the kind of store in which you work. I know a small shopkeeper who, on a rainy day, will take a customer's umbrella, shake it carefully and return it in such a way that he seems to have performed a very useful service. That, of course, would not work in a large store, but always there are ways of demonstrating your desire and readiness to be of service. If you are behind a counter, you can move something on the show case with an air which implies that everything has been dismissed from your thoughts except your desire to be of service to the customer who stands before you. While you are performing this operation be sure to look at your customer, else he may think you are "tidying" up and

(Cont'd on page 21)

Traveling salesman (to clerk): Good morning; I should like to see the proprietor. Clerk: That's him over by the desk

# PACKARD TWIN SIX

## *Announcement of Policy*

THE Third Series Twin Six will be continued in response to public demand. It is essentially unchanged. Our patrons shaped this decision by their approval of the latest Packard.

Packard cars of today are identified at once by the new *fuselage* line. Some of the best critics say this design has set the standard for body styles.

The smoothness and plus-power of the Twin Six engine are even more widely known. We believe the road ability of this engine is matched by what we now offer in lines, finish and appointments.

It is true that war has

cut down the number of good cars that can be built. And yet in war-time a good car is almost indispensable to the efficient man of affairs.

Every condition of the times sets a premium on cars of character and lasting worth.

20,000 Twin Six owners know the Packard as a mode of travel—assurance of swift and safe transportation over any road.

## PACKARD MOTOR CAR COMPANY

DETROIT, MICHIGAN, U. S. A.

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

In order to eliminate any confusion in the minds of readers that Collier's is eventually planning to prove the "Business as Usual" theory, we take the liberty of stating our position frankly: Business cannot be as usual due to the shortage of Man Power. These pages will voice the simplest truths of the position advertising holds in saving man power and eliminating lost motion.

*Talk No. 3 on the Shortage of Man Power*

## The Vital Importance of a Coat Pocket

**A**T FIRST thought some of the necessary measures which must be taken to win this war of ours seem strange and trivial.

Next autumn, for instance, none of you men who read this can buy a suit with more than a certain number of pockets. And if you have a fancy for light overcoats of double-breasted style, dismiss that fancy now. Because you can't buy one.

The Government is conserving wool, conserving it so that the boys who face the winds of Flanders next winter will be amply protected against their cold. And an extra lapel saved here, a pocket there, on the clothes of civilians will count enormously.

But to appreciate this you've got to stop thinking, as we Americans are accustomed to think, in terms of the individual. You've got to think in terms of the million.

One pocket more or less doesn't mean much in conserving wool, but when you multiply that one pocket by a million, by five million, by ten million, you can begin to visualize bales and bales of wool saved.

It is a nation-wide standardization of many little economies that is going to help win the war.

\* \* \* \* \*

To focus more light on this subject, let us quote from the *Official Bulletin* -- the daily newspaper of the United States Government.

The case in question now is the very homely one of stoves and furnaces. Representatives of the manufacturers of these commodities were summoned to Washington by the War

Industries Board. A meeting was held with the purpose of curtailing the industry--curtailing without disrupting it. And what was the first method of curtailment? Standardization! Says the *Official Bulletin*:

The furnace manufacturers have already suggested action which would mean a reduction of 75 per cent. of the styles and sizes of furnaces now on the market.

This is especially important as a means of saving iron and steel, so essential to the country at the present. It will also enable the stove and furnace manufacturers to adjust their business to war conditions and to prepare for any war emergency that may come. Such action taken now may make unnecessary more drastic steps or prevent any serious situation later.

Similar lines of conservation have been worked out in shoes, clothing, paints, etc., with others planned for the near future.

Now, having proved the vital importance of standardization, let us consider the value of advertising in this connection.

Advertising is the greatest force for standardization that has ever been employed in business. Advertising has brought about the standardization of many products long before this war was ever dreamed of.

It can be shown very simply how advertising tends towards standardization. We'll take men's clothes again as an example.

A manufacturer, in pre-war days, may have been perfectly willing to put out a hundred styles for the new season. But in his advertisements he is necessarily limited in the number he can show. In a magazine page such

as Collier's, for instance, he cannot adequately show more than three or, at best, four. What is the result? A million readers see these three or four styles. They want one of these few styles. A demand for these few styles is created.

Standardization is the result.

And standardization means an infinite saving. We have seen that it means an infinite saving of cloth. But it also means a saving of labor. It takes many less men to make a thousand suits of one style than a thousand suits of a thousand styles.

And advertising standardizes women's clothes as well as men's. All sorts of clothing--shoes, hats, hosiery. Also food. And the tools of industry and transportation. And furniture. And almost any class of product of which you can think.

\* \* \* \* \*

As we said before, advertising standardized many products before this war was ever considered possible. But now that we have this war to win, the standardizing power of advertising has gained in value a hundredfold. For standardization, as the quotation from the *Official Bulletin* so clearly showed, means conservation--of both material and labor.

National advertising can influence practically every man, woman, and child in this broad land of ours--influence them toward standardization of demand. And yet standardization is only one of the reasons why national advertising is proving itself a war-time essential.

OUR BOYS GOING INTO THE TRENCHES  
Standardization of commodities will help to keep them  
well-clothed, well-fed and thoroughly equipped

# SHORE LEAVE

(Continued from page 7)

A section of lead pipe! You ought t' be back carryin' a shovel, where you belong. Here. Just a touch. Like that. See? Easy now."

He could box like a professional. They put him up against Slovatsky, the giant Russian, one day. Slovatsky put up his two huge hands, like hams, and his great arms, like iron beams, and looked down on this lithe, agile bantam that was hopping about at his feet. Suddenly the bantam crouched, sprang, and recoiled like a steel trap. Something had crashed up against Slovatsky's chin. Red rage shook him. He raised his sledge-hammer right for a slashing blow. Moran was directly in the path of it. It seemed that he could no more dodge it than he could hope to escape an onrushing locomotive, but it landed on empty air, with Moran around in back of the Russian, and peering impishly up under his arm. It was like an elephant worried by a mosquito. Then Moran's lightning right shot out again smartly and seemed just to tap the great hulk on the side of the chin. A ludicrous look of surprise on Slovatsky's face before he crumpled and crashed!

This man it was who had Tyler Kampa's admiration. It was more than admiration. It was nearer adoration. But there was nothing unnatural or unwholesome about the boy's worship of this man. It was a legitimate thing, born of all his fatherless years—years in which there had been no big man around the house who could throw farther than Tyler, and eat more, and wear larger shoes and offer more expert opinion. Moran accepted the boy's homage with a sort of surly graciousness.

IN Tyler's third week at the Naval Station mumps developed in his barracks and they were quarantined. Tyler escaped the epidemic, but he had to endure the boredom of weeks of quarantine. At first they took it as a lark, like schoolboys. Moran's hammock was just next Tyler's. On his other side was a young Kentuckian named Dabney Courtney. The barracks had dubbed him Monicker the very first day. Monicker had a rather surprising tenor voice, Moran a salty bass, and Tyler his mandolin. The trio did much to make life bearable, or unbearable, depending on one's musical knowledge and views. The boys all sang a great deal. They bawled everything they knew, from "Oh, You Beautiful Doll" and "Over There" to "The End of a Perfect Day." The latter ad nauseam. They even revived "Just Break the News to Mother" and seemed to take a sort of awful joy in singing its dreary words and mournful measures. They played everything from a saxophone to a harmonica. They read. They talked. And they grew so sick of the sight of one another that they began to snap and snarl.

Sometimes they gathered round Moran, and he told them tales they only half believed. He had been in places whose very names were exotic and Oriental, breathing of sandalwood and myrrh and spices and aloes. They were places over which a boy dreams in books of travel. Moran bared the vivid tattooing on hairy arms and chest—tattooing representing anchors and serpents and girls' heads and hearts with arrows stuck through them. Each mark had its story. A broad-swathed gentleman indeed, Gunner Moran. He had an easy way with him that made you feel provincial and ashamed. It made you ashamed of not knowing the sort of thing you used to be ashamed of knowing.

Visiting day was the worst. They grew savage, somehow, watching the mothers and sisters and cousins and sweethearts go streaming by to the various barracks. One of the boys to whom Tyler had never even spoken suddenly took a picture out of his blouse pocket and showed it to Tyler. It was a cheap little picture—one of the kind they sell two for a quarter if one sitters; two for thirty-five if two. This was a twosome: the boy and a girl—a healthy, wide-awake, wholesome-looking small-town girl who has gone through high school and cuts out her own shirt waists.

"She's vice president of the Silver Star Pleasure Club back home," the boy confided to Tyler. "I'm president. We meet every other Saturday."

Tyler looked at the picture seriously and approvingly. Suddenly he wished that he had, tucked away in his blouse, a picture of a clear-eyed, round-cheeked vice president of a pleasure club. He took out his mother's picture and showed it.

"Oh, yeh," said the boy disinterestedly.

THE dragging weeks came to an end. The night of Tyler's restlessness was the last night of quarantine. To-morrow morning they would be free. At the end of the week they were to be given shore leave. Tyler had made up his mind to go to Chicago. He had never been there.

Five-thirty. Reveille. Tyler awoke with the feel-

ing Tyler walked down to the station and waited for the train that would bring them to Chicago at about one o'clock. The other boys, in little groups, or in pairs, were smoking and talking. Tyler wanted to join them, but he did not. They seemed so sufficient unto themselves, with their plans and their glib knowledge of places and amusements and girls. On the train they all bought sweets from the train butcher—chocolate maraschinos and nut bars and molasses kisses—and ate them as greedily as children, until their hunger for sweets was surfeited.

Tyler found himself in the same car with Moran. He edged over to a seat near him, watching him narrowly. Moran was not mingling with the other boys. He kept aloof, his sea-blue eyes gazing out at the flat Illinois prairie. All about him swept and eddied the currents and counter-currents of talk.

"They say there's a swell supper in the Tower Building for fifty cents."

"Fifty nothing. Get all you want in the Library canteen for nix."

"Where's this dance, huh?"

"Search me."

"Heh, Murph! I'll shoot you a game of pool at the club."

"Naw; I gotta date."

TYLER'S glance encountered Moran's and rested there. Scorn curled the Irishman's broad upper lip. "Navy! This ain't no navy no more. It's a Sunday school, that's what! Phonographs and church suppers and pool and dances! It's enough t' turn a fella's stomach. Lot of Sunday-school kids don't know a sail from a tablecloth when they see it."

He relapsed into contemptuous silence.

Tyler, who but a moment before had been envying them their familiarity with these very things, now nodded and smiled understandingly at Moran. "That's right," he said. Moran regarded him a moment curiously. Then he resumed his staring out of the window. You would never have guessed that in that bullheaded there was bewilderment and resentment almost equaling Tyler's, but for a much different reason. Gunner Moran was of the old navy—the navy that had been despised and spat upon. In those days his uniform alone had barred him from decent theatres, decent halls, decent dances, contact with decent people. They had forced him to a knowledge of the burlesque houses, the cheap theatres, the shooting galleries, the saloons, the dives. And now, bewilderingly, the public had right-about-faced. It opened its doors to him. It closed its saloons to him. It sought him out. It offered him amusement. It invited him to its home, and sat him down at its table, and introduced him to its daughter.

"Nix!" said Gunner Moran, and spat between his teeth. "Not f'r me. I pick me own lady friends."

Gunner Moran was used to picking his own lady friends. He had picked them in wicked Port Said and in Fiume, in Yokohama and Naples. He had picked them unerringly, and to his taste, in Cardiff and Hamburg and Vladivostok.

When the train drew in at the great Northwestern station shed he was down the steps and up the long platform before the wheels had ceased revolving.

TYLER came down the steps slowly. Blue uniforms were streaming past him—a flood of them. White leggings twinkled with the haste of their wearers. Caps, white or blue, flowed like a succession of rippling waves and broke against the great doorway, and were gone.

In Tyler's town, back home in Marvin, Tex., you knew the train numbers and their schedules, and you spoke of them by name, familiarly and affectionately, as Number Eleven and Number Fifty-five. "I reckon Fifty-five'll be late to-day, on account of the storm."

Now he saw half a dozen trains lined up at once, and a dozen more tracks waiting, empty. The great train shed awoke him. The vast columned waiting room, the hurrying people, the uniformed guards gave him a feeling of personal unimportance. He felt very negligible and useless and alone. He stood a rather dazed blue figure, (Continued on page 28)

"Well, it's got so I can't sleep in anything but a hammock. Yessir!"

ing that something was going to happen—something pleasant. Then he remembered, and smiled. Dabney Courtney, in the next hammock, was leaning far over the side of his perilous perch and delivering himself of his morning speech. Tyler did not quite understand this young Southern elegant. Monicker had two moods, both of which puzzled Tyler. When he awoke feeling gay he would lean over the extreme edge of his hammock and drawl, with an affected English accent: "If this is Venice, where are the canals?"

In his less cheerful moments he would groan heavily: "There ain't no Gawd!"

This last had been his morning observation during their many weeks of durance vile. But this morning he was, for the first time in many days, inquiring about Venetian waterways.

Tyler had no pal. His years of companionship with his mother had bred in him a sort of shyness, a diffidence. He heard the other boys making plans for shore leave. They all scorned Waukegan, which was the first sizable town beyond the station. Chicago was their goal. They were like a horde of play-hungry devils after their confinement. Six weeks of restricted freedom, six weeks of stored-up energy made them restive as colts.

"Goin' to Chicago, kid?" Moran asked him carelessly. It was Saturday morning.

Yes. Are you?" eagerly.

'Kin a duck swim?"

At the Y. M. C. A. they had given him tickets to various free amusements and entertainments. They told him about free canteens, and about other places where you could get a good meal, cheap. One of the tickets was for a dance. Tyler knew nothing of dancing. This dance was to be given at some kind of women's club on Michigan Boulevard. Tyler read the card glumly. A dance meant girls. He knew that. Why hadn't he learned to dance?

## Salesmanship and Success

Continued from page 14

neglecting him. Don't prolong the operation. It should be instantaneous and preferably while you are smiling and saying good morning or good afternoon.

If you are in a department where chairs are provided for customers, you should offer a chair to your prospective customer, unless he manifests great haste. Most salesmen seem to take it for granted that people know what chairs are for and that it is not necessary to offer a particular chair when plenty are in sight. Here again we must remember that a customer is a guest and that the good host offers a particular seat to his guest and may even recommend its comfort.

It is needless for me to go on multiplying examples of how to develop effective touches of hospitable courtesy in your approach of visitors to your store. You can do the thing easily enough, if you feel real friendliness for the customers.

### "You're Just in Time"

I AM moved to touch on one very common fault of retail salesmen and saleswomen. The average salesman, if waiting on one customer, when a second approaches, seems disposed either to ignore the second customer entirely or else greet him in a way that makes the first customer feel that he is being hurried. For such situations the salesman should have a smiling but silent salutation, to be followed later—when the first customer is disposed of—by the usual spoken salutation. Girls are ordinarily better at this than men. They can put more significance into a look or a nod than a man can—unless he happens to be an actor. I think this is probably due to the fact that girls and actors use their mirrors a good deal. Perhaps it wouldn't harm salesmen if they used their mirrors to see how they look when they nod and smile.

When the customer comes to the salesman it is not always necessary that the approach be more than an effective salutation, but usually it is desirable to make some comment about the goods the very instant the shopper has told you what kind of article he desires to inspect.

This comment should make him feel that his visit has been well timed, or that his inquiry denotes discrimination, or that you have something out of the ordinary to show him. For example, such remarks as these, when truthful and appropriate, help to round out your approach:

"You're just in time; there's still a good selection, but they're going fast," or "We've just received a brand-new lot," or "Those are wonderful goods, aren't they?" or "I think I have a pleasant surprise in store for you; let us see if I haven't."

When the salesman goes to his prospective customer, as distinguished from his customer coming to him, it is absolutely necessary that his approach, in addition to embodying the essentials of a good salutation, should also intrigue the interest of the customer in the salesman's firm, or goods—or both.

This subject was covered at considerable length in the articles "Salesmanship—Rule of Thumb Science," which appeared in COLLIER'S for July, 1913, and are now available in book form. Therefore, at this time I shall not indulge in any general discussion of that interesting phase of salesmanship, but occasionally I shall undertake to make suggestions in respect to specific cases that are submitted by COLLIER'S readers.

### How Not to Do It

I AM indebted to a gentleman from Elkhart, Ind., for an excellent example of the approach a traveling salesman should not use. I quote his letter entire:

"I have never had any experience in salesmanship, but as my regular occu-

pation is likely to come to an end owing to war conditions, and as I am thinking of taking up the position of a traveling salesman, I can appreciate the importance of a good approach and think it would be very helpful if you would give me a few specimen dialogues, varied to suit different kinds of merchandise and prospective buyers. My idea of it is something like this:

**TRAVELING SALESMAN (to clerk):**—Good morning; I should like to see the proprietor.

**CLERK:**—That's him over by the desk. **T. S. (to hardware merchant, a stocky-looking fellow in shirt sleeves):**—Good morning, Mr. —, I am representing —. We carry all lines of goods of such and such nature. If you are not too busy, I should like to show you a few of the special things we have.

**H. M.:**—Well, let's see what you have got.

**T. S.:**—We have been selling a good many of these lately.

**H. M.:**—Got a gross of them on the shelf—no call for them at all.

**T. S.:**—Well, it is sometimes hard to introduce them at first. Now, here is another tool. It does—

**H. M.:**—We have very little call for anything except the regular staples.

**T. S.:**—We carry everything. We know your rating, Mr. —, and we would like to do a little business with you. You must be always wanting —. If you could give us a trial order, I am sure it won't be our fault if we can't satisfy you, etc., etc.

"I have no doubt that with your experience you could give a better line of talk than the above, and it would be interesting to have some samples of the kind of rejoinders best calculated to overcome the nothing-doing attitude which is, I suppose, the greatest difficulty to be anticipated."

### Try This

IN the first place, it is a mistake to treat a clerk as if he were an office boy. When you enter a small store, such as our Elkhart reader evidently had in mind, and you are approached by a clerk, engage him in conversation and try to make a friend of him. On your way back to the boss's desk endeavor to leave a trail of friends and, incidentally, gather some useful information as you go. In a big store, if there is no house rule or prejudice against the practice, pay your respects to the sales people in the department where your class of goods is sold before you go to the buyer's office. The information you gain from the sales people may enable you to avoid the catastrophe of offering as your attention getter a type of merchandise on which the buyer is already overstocked. Don't start in by telling him about your house. Smile, shake hands, and say something pleasant; then hand him the article you have selected to use in making your approach. Be sure to get him to take and hold the thing in his hands. Then say to him something like this: "What do you think of that? Isn't that a peach? You know how to sell a good thing; we know how to make it. Is there any reason why your sales force couldn't make a killing with that piece of goods?"

Keep after the buyer with this last question until a sense of pride makes him admit—or assert—that his sales people could sell the article if he wanted them to do so. When he has admitted that much, you have an opening. I believe that the philosophy of this character of approach will be clear to any salesman, and I am sure the Elkhart gentleman will have no difficulty in adapting it to whatever line of goods he undertakes to sell. Here's hoping that he may have much success.

Mr. Maxwell's next article will be entitled "Getting the Order."

Have you a defect in the way you say "Good morning"?

AKRON

# *Goodyear Transports Make Another Record Run*

**F**IVE heavily laden and travel-stained motor trucks, shod with Goodyear Pneumatic Cord Tires, rolled into Chicago recently on the first lap of a memorable journey.

They were part of Goodyear's Akron-to-Boston freight fleet, and thirty-six hours earlier had been dispatched from the factory in Akron loaded with materials needed by the company's Chicago branch.

Traveling night and day, over unfamiliar roads, the trucks covered the 440-mile distance in an actual running time of 22 hours, maintaining an average hourly speed of 20 miles.

Not only does this record break all standing marks for motor truck travel but it is a feat unheard of in any of the prevailing railway schedules.

Two days after their arrival in Chicago, the trucks were loaded with Red Cross supplies urgently wanted in France, and under military escort were dispatched for Baltimore.

Four days later they reached their destination, having covered the 820 miles

in 101¼ hours' elapsed time, with an actual running time of 53 hours.

The Akron-to-Chicago-to-Baltimore trip totaled 1,260 miles, made in 75 hours' actual running time, or at an average speed of nearly 17 miles an hour.

Important as it is as an indication of the possibilities of the motor truck, it is an even more important demonstration of the qualities of Goodyear Pneumatic Cord Tires.

The speed, the cushioning power and the tractive efficiency of these pneumatic tires open up to the motor truck entirely new fields of usefulness.

They allow faster travel over enormously increased areas, with greater returns from oil and fuel and less truck depreciation than otherwise is possible.

In more than 250 cities, as well as in our Akron-to-Boston highway transport service, Goodyear Cord Tires for Motor Trucks have convincingly proved their worth.

Their relation to the future of motor transportation is so immediate and vital that it cannot safely be disregarded.

## FIGHTING - FIT

Continued from page 9

shifts, and we follow it into the "heart room." Here the subjects are being handled with what appears to be an almost unseemly speed. But the experts know what they are doing. The very color and bearing and expression of a man may practically certify him free of any heart disorder; and what might seem a curiously listening to the heart will suffice. Anything abnormal is swiftly detected, and the man, often quite ignorant that there is anything wrong with him, is set aside for a thorough going over, with a little blue chalk mark crossed on his breast.

**"Put Out Your Tongue"**

ONE of the boys, certified by his draft board as sound, but set aside by the more thorough or perhaps only more expert examination of the depot brigade expert, has just found out what that little blue chalk means, and is openly "sore" over it.

"I'm husky as a wild cat," he insists. "I've been in athletics since I was a kid" (which, very likely, accounts for the little cross mark athlete's heart). "I wanta fight."

"Nobody doubts that you could fight," says the doctor. "But you couldn't stand up under the training."

The boy's anxious eyes rove the room and fall upon a classically perfect young nude, some twenty pounds heavier than himself.

"See that guy?" says the cross-marked one. "He's a lot bigger than me. Put me up against him. I'll

will make those toes over, so you can play the piano with them."

To the hospital goes the reluctant and protesting conscript, to be X-rayed and carpentered, under the supervision of a distinguished orthopedist, into a fully equipped biped. Early in the draft he would have been turned down. Not now. Having waked up to the exigencies of a professional war, your Uncle Sam is not wasting good material for want of a little patching.

The routine of inspection in this external-disorders department strongly suggests a live-stock sale. Here is seen the expert going over the subject with hand and eye, lifting the feet for examination, passing an exploratory hand over shoulders and ribs, flexing the knees in true horse-coper style; for these are the Government's man copers, concerned with securing the best possible bargain for their principal. Swift though their processes are, they lose nothing of accuracy, as I note in the instance of a fleshy but powerful fellow in his late twenties, who is mournfully protesting, under the exploratory hands of the examiner: "Aw, that ain't nothin', doctor!"

But it is a very reckonable something. In his eagerness to fight, the

experts. Their decision is unanimous and prompt. "Hospital."

"What's comin' to me now?" inquires the subject ruefully.

"You'll be fixed up as good as new under the direction of one of the best abdominal operators in the country," some one informs him.

"And do I get to fight?" he asks hopefully.

"Certainly. That's what we're fixing you up for."

In civil life that man would probably not have undergone repairs until the damage had become too great for remedy. [By a recent ruling of the surgeon general's office, however, hernia will hereafter be recognized as a cause for rejection, rather to the disappointment of many of the cantonment surgeons, who regard their repair cases in this department of surgery as showing a high ratio of success.]

What few malingerers still come through the draft boards usually try their wiles on the eye-and-ear inspection. In the early days simulating deafness or blindness was a popular pastime. Now there is a general and well-founded belief, born of sad experience and widely circulated among draft eligibles, that it doesn't pay to try tricks on the Government. For obvious reasons, I may not detail the nature of the deceptions attempted. But a case may be cited here as showing how unexpectedly enemy trails are sometimes picked up. A conscript complaining of serious and disabling eye trouble and affording the correct symptoms, nevertheless aroused the suspicions of the oculist that he had caused those symptoms by the use of

drugs under skilled direction. The examiner sent the man up to the higher court of experts with the suggestion that a certain test, psychological rather than medical, be tried. It was tried with success. After a brief examination the head of the board said to the suspect: "My man, you're in bad shape. In fact, you're going blind." Naturally the conscript was appalled. "Can't you do anything for me?" he asked. "Not one of us understands your case. It looks as if some drug had been put in the eyes and was slowly destroying the nerve. If we knew what it was—"

"I'll tell, doctor; I'll tell," wailed the fellow, quite broken down with terror. "Don't let me go blind! The doctor that gave it to me said it wouldn't hurt me."

Little pressure was required to get the name of the physician (in a Middle-Western, strongly Germanized city) who had been providing malingerers with "symptoms" at a price. The conscript, whose eyes were actually quite uninjured, was sent to duty. The Middle West physician not long after quietly vanished. He

also is in uniform now, though not of the military kind. With good-behavior allowance he may get out in about three years.

**The Court of Appeals**

A FEW steps from the eye-and-ear division the court of appeals on heart disorders is going over a subject. The man has on trousers and shoes, for his is a border-line case, and the discussion of it takes times. The moot point is whether a slight goiter, with its attendant heart irregularities, should disqualify the man. As the argument proceeds I amuse myself by computing roughly what it would cost this youth to secure the services of that particular group of specialists in consultation. I reckon that it might be done for five hundred dollars, at a minimum. But it would be only a life-and-death case which would call together such a galaxy of technical achievement; and one can imagine with what dire misgivings the patient—a rather nervous-appearing fellow—would contemplate such a court of high resort on his case were it in civil life. But this is the army. Their doctors are in the uniform of officers. An officer's first interest is to look after his men; such is the conviction—invaluable to morale—that now prevails even among the newest men. So the patient, confident that the best

Practically, typhoid is nonexistent in our present army. Vaccination has solved that problem

run him a mile or ten miles. I'll give him a handicap and beat him in the broad or high jump. Then I'll lick him. If I can't, I'll quit without a holler."

An honorable offer, but of no avail. The doctor explains to him briefly and gently. They are very considerate, these medical officers, toward the man who really wants to fight. "Keep in good condition when you get home, and later we'll find a useful job for you somewhere." Chill comfort for the scrappy applicant, but the best available for his kind of case.

For the man who prefers not to fight, the "external disorders" examination is a graveyard of blasted hopes. Bad feet, for example, if widespread rumor among men of draft age were to be believed, may be relied upon to bear the fortunate slacker down the primrose path which leads back to the peaceful pursuits of civil life. Rumor is wrong. Almost any kind of a foot that isn't wooden can be made fit to march upon, which is all that the army expects of a foot. As I enter the place, a hopeful husky is confidently exhibiting to the expert two distorted and stiff-jointed toes. "Can't walk a mile on them without liming up," he informs the examiner.

"No, I suppose not," concedes that officer.

"I told that draft-board doctor they wouldn't let me in," says the youth triumphantly.

"Oh, cheer up," returns the other. "The hospital

conscript has been deceiving himself with the hope that a small rupture high on the abdomen will pass unnoted. He is duly checked up and set aside, volubly assuaging that "it's never made me no trouble—not a bit." In the temporary discard with him are a couple of "flat-footers," a subject with a misplaced rib, and a boy with legs of unequal length. These will probably go to the repair shop, though the possessor of the mismatched legs may be destined for the "junk heap"—i. e., discharge. Meantime an apparently perfect specimen of manhood steps up: "Have you been sick?" "No, sir." "Feel all right?" "Not extra good." "Put out your tongue."

The tongue is considerably furred. The officer examines the man's eyes, goes over his body for possible rash, and dismisses him to an isolation cot.

"What's the matter with him?" I ask, "and how did you know there was anything?"

"By the feel of his skin. Fever. I can't tell what. He'll be quarantined until the trouble manifests itself. We assume that any fever means some infectious disease until it proves otherwise."

This is another phase of the barriers erected against the spread of camp infections. Now let us return to our hernia case, still muttering protests, and follow him before the special board upstairs. His case, of course, goes to the surgical

YALE

possible thing will be done for him, awaits the verdict with composure.

Not in body alone, but in mind as well, a man must measure up to the standard. There is a separate "mental examination" room, through which all the new soldiers pass. At first it might seem that the cut-and-dried queries are such as any man could answer and are of little indicative value, but the manner and bearing of the men, their eyes, their carriage, the reaction to the questions—all these have a vital significance to the expert. As the line passes through I am struck with the general alertness and briskness of the men; a certain indefinable expectancy of bearing, as if they felt that they were addressed to an enterprise of high and significant adventure. Here and there a man looks morose or melancholy, and once I deary what appears to be fear, furtive, uneasy, and helpless, in the expression of a great, overgrown country boy. Apart from the moving line, drooping upon a cot, there awaits him turn with the higher authorities one of those tragicomic cases which are caught and whirled to indeterminate fates by the current of war. He is tall, broad, thin, and bony, with a blue-black jaw and cheeks and a high, intellectual forehead. His garb might justly be described by that adjective, dear to fashion writers, "diaphanous," for he has nothing on but a pair of eyeglasses, and small ones at that. The cause of his being held up is a specification on his record of two brief terms in insane asylums. Catching my eye, he addresses himself to me in argumentative and slightly foreign accents.

"What if I was crazy? I ain't crazy now. I'm cured. I can be as good a soldier as any of 'em. But s'posen I am crazy now, I ain't. But s'posen I am, I ain't any crazier than the Kaiser, am I?"

Which appeals to me as essentially sound logic. I hope the Experts Board decided to accept him.

### "Fifty-Fifty"

EACH time I reenter the hallway from any room, I have been aware of a persistent sound of choral coughing at one end of the building. Now we follow this up and enter a large apartment full of young fellows bent over and hollowly coughing, while the doctors work on them. The first shocked suggestion is that all these fine specimens of young manhood are doomed to the ravages of tuberculosis. The fact is that they are coughing to order for the doctors. A somewhat disquieting percentage of them do show traces of the white plague; and here again the beneficent effect of thorough medical inspection is exemplified. For on the slightest suspicion of the disease the subject is sent to the X-ray clinic, equipped with complete and perfected apparatus, where any lesion in the lung larger than a pinhead can be discovered. Such cases, just because the disease is detected early, have at least twice as good a chance of recovery as if they had remained in civil life and had not shown symptoms until the wasting of the lung was well advanced. Further, it not infrequently happens that the patient under suspicion is free from consumption, but exhibits the signs of an undeveloped pneumonia, and so is hustled off to the hospital before this dreaded disease, the chief cause of mortality in our cantonments, reaches a serious stage. The "lung room" is a real life-saving station.

Occasionally there comes to this department a poor wretch who, even to the most inexperienced eye, is evidently far advanced in consumption. The question naturally arises: how did he ever get so far along in the military system? What was the draft-board physician thinking of when he passed such a wreck of humanity? And indeed some of the instances cited against the draft boards by the cantonment experts are almost incredible. Before one of the oculists there appeared, in a recent inspection, a newcomer who started in by volunteering the information that, in the words of the song, his right eye was a good little eye, but— Suspecting a malingerer, the medical man, before investigating for himself, inquired:

"What's the matter with your left eye?"

"I can't see with it."

"Why not?"

"It's glass," explained the youth bashfully.

It was. Hastily referring to the conscript's record card, the examiner discovered that some humorist had set down, under the heading of Vision, "50-

# WIRE

The nation's business is transacted over millions of miles of wire. The New Jersey Zinc Company plays its part in maintaining this wonderful equipment for it is Zinc that protects these wires from rusting and breaking and prevents a prohibitive replacement cost.

This form of Zinc, known as spelter, is but one of this company's many products. All are vitally essential to many of the nation's greatest industries.

The New Jersey Zinc Company by reason of the location of its zinc deposits, the quality of its ore, the modern equipment of its many plants, and the extent of its resources, can be depended upon for exceptional service and unvarying quality in every one of its products.

VISITORS passing through the Heinz establishment [there are over fifty thousand every year] are always interested in this scene—the bottling of pickles. The neat, white caps and uniforms of the girls, the daintiness and cleanliness of the tables, the skill and quickness displayed, and the delicious appearance of the foods—all bring forth smiles and nods of approval.

57

# HEINZ Vinegars

In bottles filled and sealed in the HEINZ establishment.

All vinegar is sour. Most vinegars are sour and nothing else. Some, however, possess an exquisite delicacy of flavor and aroma that give distinction to every dish on which they are used. Good vinegar is a matter of good materials, skill in making and proper aging. All Heinz Vinegars are made of the choicest materials and aged in wood for at least one year.

The excellence of Heinz Pickles and Sauces—recognized by everyone—is largely due to the use of Heinz Pure Vinegars. You can now buy these same vinegars in bottles filled and sealed in the Heinz establishment, which guarantees their purity and quality.

Three kinds: Malt, White, Cider, in pints, quarts and half-gallons

50," which, happy though it was as a descriptive effort, was not satisfactory to Uncle Sam.

Another classical case was discovered by a drill officer before the conscript ever got to medical inspection. As the man came to attention, the officer discerned a flagrant bulge in the breast of his coat. "Take that thing out of your pocket," he ordered.

"Haven't got anything in my pocket, sir."

"Fall out!"

Stripping for examination, the man exhibited a pyramidal bulge on the right side of his chest as big as a small fist.

"What's that?" asked the astounded officer.

"Ribs, sir."

"What happened to them?"

"Steam roller, sir."

"Didn't your draft board notice 'em?"

"Yes, sir."

"What did they say?"

"Said they'd pass me anyway, and maybe the medical cracks up here could roll me out flat again."

But the mental division claims to have the prize case. From a board not a hundred miles away from the national capital there arrived a soldier under escort of his older brother.

"We couldn't let him come alone," explained the escort.

"Why not?" demanded the officer.

"He don't know enough. He couldn't take care of himself."

This was literally true. The conscript was an imbecile. Set it down to the credit of the army that, despite its rigid regulations, place was found for the brother in camp and he was allowed to care for the helpless conscript until the necessary formalities could be completed for discharge. Almost all the complaints that I heard against the draft boards were that they err on the side of the Government, not of the individual. Which, of course, is a fault of the right kind even though it does entail unnecessary work and expense. Clearly, however, the draft boards cannot be looked to for expert selection.

## Not an Amateur's War

UP to this point we have followed the new men through the sifting process, which sends the bulk of them to drill and routine, a small percentage back to civil life, either before or after hospital treatment which is afforded in all cases that need it, and a larger number to the repair shop to be "fixed up as good as new." Now, how in this cantonment equipped and prepared to maintain the physical condition of men in training for the greatest professional fight of history?

First to suggest itself is the question of food. We stop for luncheon. Again my mind goes back to the Spanish-American War camps; the "embalmed beef," the meals served under a cloud of flies whose bacteriological opportunities in the immediate neighborhood I will considerably leave to the imagination; in particular, one breakfast at Camp Wyckoff, only 116 miles from the great supply station of New York, at which the hungry soldiers ate canned salmon and ice cream. Did they yearn for canned salmon and ice cream? Not if their remarks were a correct representation of their feelings. What they wanted was eggs, flapjacks, and coffee. They took what they could get, and if the percentage of stomach ache rose that day, nobody cared, for the Spanish-American fiasco was strictly an amateur's war. Well, canned salmon and ice cream may be had in this our present cantonment (though stomach ache therefrom may not, without an inquiry), but it is not an exclusive diet. And it is inspected, carefully inspected by real experts. Not an article of food or drink goes down a soldier's throat within camp limits that has not passed rigid muster. Furthermore, what you get at the enlisted men's mess is prepared by cooks—not by bank clerks, chiropractors, instructors in integral calculus, or steeple jacks, but by genuine cooks—and it tastes that way. As I may have mentioned before, this is a professional war. As such, it calls for professionally prepared food. As for flies, I suppose that if a fly got into mess somebody would be put on the carpet, and if enough flies got in there would be an inquiry with an unpleasant sequel for those responsible. For flies kill men. They killed more men in the Spanish-American War than did the Spaniards. Five to one, at least. Maybe ten to one. The figures, though not the details, appear in dull-looking vital statistics columns under the heading of Typhoid and Dysentery. As we leave the mess hall, I observe the evidences

of guardianship against the small but important enemy: garbage cans protected; refuse being removed before the female fly can use it for egg laying; stables and picket lines, her favorite breeding places, oiled and poisoned against her. Furthermore, if she did raise a family, they couldn't achieve much harm, for in this cantonment all indoors is screened against all outdoors. Against the fly and mosquito season, the War Department has bought a little more than 2,500 square miles of screening. An expensive investment—but it was screens that made possible the building of the Panama Canal, and the man who screened the isthmus, William C. Gorgas, is now the supreme guardian of the health of Uncle Sam's soldiers. Surgeon General Gorgas is no amateur.

Another detail of importance is noticeable as we return to the car and swing into a dirt road. There is no dust. The road has been thoroughly oiled. Uncle Sam officially disapproves of dust. He issues orders against its propagation outdoors and its dissemination indoors through dry sweeping. For dust is an ally of disability. It gets into a man's eye and sets up an inflammation, and the man goes on the non-effective list for a week, which is expensive. Or it gets into a man's throat, and predisposes him to grippe, which in turn lays him open to pneumonia.

We are bound, now, for the cantonment hospital. On all sides of us, as we go, are men being hardened to fighting conditions; men drilling, men going through their setting-up exercises, men digging or setting posts or putting up wires, men practicing the long, cricket-bowl swing of hand-grenade throwing; hard, muscle-demanding work all of it, two hours of which, back in the days of civil life, would probably have worn a quarter of these men to the point of exhaustion. On a near-by hilltop a detachment is going through some evolutions, the men moving with that easy, swinging precision which comes only of long habitude. These, I learn, are the finished troops, under orders for "over there" on the following week.

Before they can embark, however, every man must undergo rigid physical examination daily for a week. A man can take out a million-dollar life insurance policy on a less exhaustive test than that which certifies him fit to fight the boches. At a crossroad we halt to watch a special drill of stretcher bearers. This is the real "hero service." For these are the men who go into action with no chance of fighting back, and whose special path of duty is marked out for them by the messengers of death. The maximum of risk and the minimum of glory is their allotment in the Great Game. But among their fellow soldiers the "pick-me-up squad" commands a special quality of regard.

## Complete Hospital Service

CONCERNING the great hospital, far larger than any similar establishment in civil life, I must deal only in the broadest generalities. Anything like an adequate description of it would require the space of a book. From without it is a bald and unprepossessing edifice in appearance. Nor would the inexperienced eye find much to attract about its interior except the spotless cleanliness and the up-to-date sanitary appliances. It is not ornamental. But in equipment, from operating room to diet kitchen, from X-ray outfit to bacteriological laboratory, it is—I won't challenge the meticulous mind by saying perfect, but I will say—complete. And the personnel is worthy of the equipment. Every corner of the map is represented under this collection of roofs, in every department and sub-department of practice, by the highest type of medical skill. And the nurses attendants, and cooks are the best to be had anywhere. In years of medical investigation, I have visited many of the great hospitals of the world, including the largest existing public and the largest existing private institutions. Were I to require medical or surgical attention for any serious disorder (barring one or two special and rare ailments), I would take my chance in this rough-boarded cantonment hospital rather than any other establishment that I have yet seen.

On this point a word to the families and friends of the boys in the cantonments who have been disturbed by reports of bad hospital conditions. Such conditions did exist, though not in the degree claimed by certain hot-headed congressional "investigators." There has been no attempt on the part of the

## Spare your car from internal "Rough-House"

The lubrication of your passenger car or truck is as important as its make. For the finest make of car is a failure in service unless its multitude of engaging parts is completely protected by correct lubrication against destructive friction.

Havoline Oil gives you complete lubrication, never partial lubrication. Beware of the partial lubrication of an inferior lubricant that breaks down under heat and gear-pressure, causing an imperfect gas seal, loss of mileage on gas, scored cylinder walls, broken piston rings, shorter life of your car, and lower resale value.

## HAYOLINE OIL

"It makes a difference"

Don't use an inferior oil, even occasionally. Use Havoline Oil. It does everything that a first class lubricating oil should do or can do. It insures smooth, economical, and efficient development and transmission of power. It maintains a perfect, protecting film of oil between all engaging surfaces. Its proper use prevents that destructive internal "rough-house" of metal grinding against metal.

Ask for Havoline in the sealed container. Havoline greases are compounded of Havoline Oil and pure, sweet talc. Clean to handle and correct in touch.

**Indian Refining Company**  
Incorporated  
Producers and Refiners of Petroleum  
New York

army medical authorities either to evade or palliate the facts. On the contrary, the surgeon general's report on camp conditions is a document of refreshing frankness. The high death rate from certain causes, notably pneumonia and actively infectious diseases, is indicated in that report as due to overcrowding, lack of isolation camps for new arrivals, want of early sanitary and hospital facilities, and insufficient clothing. The publication of the findings brought about swift improvement and eventual reform, and to-day no such faulty conditions are reported from any cantonment. Still the total death rate of the army remains high. True, it is lower than the rate of any city in the country. But this is not a fair comparison, for the army is made up of men in the most vigorous years of life, and on the basis of age its mortality is higher than that of the nation at large. This is due to two causes, apparent in the records, and two others inherent but not apparent. The obvious causes are pneumonia and meningitis; the obscurer causes, measles and influenza. "Frank" pneumonia—that is, the type which begins and ends as pneumonia—probably represents only about 25 per cent of all pneumonias. Its spread, like that of meningitis—also a respiratory disease—has been largely due to men coming in with the infection from the new drafts and communicating it to other men. The immediate isolation of the new drafts, as indicated above, has already shown a marked effect in the diminution of both these diseases. Moreover, a system of inspection and quarantine for all men exposed to infection, as soon as a case manifests itself, has done a great deal to help.

Much is expected also from one of those simple but often highly effective hygienic devices, whose inventor is too often unknown and unrecognized. Some ingenious hygienist has devised a system of using the shelter half of the ordinary tent which every soldier carries to form a germ-proof barrier on his cot in barracks, at no expense to the Government, the only extra apparatus being a piece of stick and a nail to hold it in place. Then, if the sleeping man in the early stages of a respiratory disease coughs or sneezes, the other men in the room are protected against the bacilli by their individual semi-isolation. A general order for this use of the shelter halves has been issued.

The real scourge of the camps is measles. Probably upward of 45 per cent of the pneumonia deaths follow upon this lightly regarded disease. As all epidemiologists know, it is the most difficult of all infections to control, but the new isolation measures will undoubtedly prove to be effective against this disease and also against influenza, which is estimated to be responsible for 25 per cent of the pneumonias.

It is always to be remembered that the sick rate and death rate of the cantonments go down steadily as the men get into the swing of the life and training, but rise again when the new drafts come in, bearing disease and infection with them. But for this necessarily repeating factor the United States army in cantonment would be far and away the healthiest aggregation of young men in the nation, with much the lowest death rate.

### The Wallers

IN respect to one phase of disease, many well-meaning persons have lent themselves to the uses of German propaganda by hush-voiced talk of the dreadful immorality of our camps as reflected in the hospital figures. This is no time for the hushed voice. If these critics be not too delicate to face the facts as well as the name of venereal disease, they will discover that the "scandalous army rate" of 380 cases per 1,000 men represents the period of highest report just after the new recruits came in from the draft boards. That is, it is not, in the main, an army rate but a civil-life rate. From the time that each new draft is absorbed, the venereal figures steadily descend. On the basis of nation-wide examination of statistics and estimates, I believe that no State or municipal figures on these diseases are really trustworthy. But, accepting them at their lowest figure, I am convinced that the average rate of venereal disease in our cantonments is far below the rate for men of the same age in our cities; my own opinion is that it is less than half the civil rate. So much for the wallers over "army immorality."

Two types of disease, formerly of

major importance in camp life, have been reduced to a practically negligible status. Camp dysentery was the scandal of the Civil War. It doesn't reach the dignity of being listed among the principal causes of death and disability in our present army. Camp typhoid was the scandal of the Spanish-American War. Practically, typhoid is nonexistent in our present army. Vaccination has solved that problem. True, there have been deaths (less than a dozen total for all camps), but these have been cases contracted before the men entered the service. There is not on the records a single death traceable to any polluted water supply in the cantonments, and the amount of disease attributable to bad food is so small as to be almost negligible. Bad water in a camp would be stigmatized as unprofessional in the highest degree; tainted or infected food, only less so. Fly and mosquito-borne infections would also be regarded, by the medical authorities, as bearing with them the taint of amateurism. "Put only professionals on guard" is the rule which obtains in all these phases of protection.

But if Uncle Sam's fighting men are rigidly protected, they are by no means coddled. The camp life is exacting enough for the most Spartan standards. There is still a somewhat prevalent opinion that all an American of suitable age and physique needs to do to become a soldier is to put on a uniform and get a gun. Probably you,

Mr. Paterfamilias, believe that of your boy. Well, let us inquire into the matter a little. Could your young hopeful get up to-morrow morning and tramp fifteen miles over variegated country, and come back fit to do a stint of chores? If he could, he's an exceptional youth. But assume that he could. Could he get up on the following morning, springy and fit, and do the same thing over again? A bit doubtful about that, are you? Well, that's not all, by any means. Could he do that two days of foot slogging under the weight of a pack and equipment weighing sixty pounds? He could not; not unless he's a freak, or a trained soldier. Yet recently 10,000 men went out of the cantonment which I visited, in heavy marching order, tramped nearer twenty miles than fifteen, covered the same ground on the following day, and got back with only 1 per cent of defections, all of which rejoined the column before the end of the march. One regiment had only one man drop out in the two days. How would your young amateur measure up to that standard, Mr. Paterfamilias? And yet this was only a halfway station on the route to final condition. For later those same men may be called upon to march not fifteen, or twenty, but thirty miles a day, and to fight on top of it all.

Such is the test of a professional war. For this our men are to be made, in every detail which skill, untiring effort, and infinite care can cover, fighting-fit.

## Shore Leave

Continued from page 17

in the vastness of that shining place. A voice—the soft, cadenced voice of the negro—addressed him.

"Lookin' fo' de sailors' clubrooms?" Tyler turned. A toothy, middle-aged, kindly negro in a uniform and red cap. Tyler smiled friendly. Here was a human he could feel at ease with. Texas was full of just such faithful, friendly types of negro.

"Reckon I am, uncle. Show me the way?"

Red Cap chuckled and led the way. "Knew you was f'om de South minute Ah see you. Cain't fool me. Le's see now. You-all f'om—?"

"I'm from the finest State in the Union. The most glorious State in the—"

"H'm—Texas," grinned Red Cap.

"How did you know?"

"Ah done heah 'em talk befoh, son. Ah done heah 'em talk be-foh."

IT was a long journey through the great building to the section that had been set aside for Tyler and boys like him. Tyler wondered how anyone could ever find it alone. When the Red Cap left him, after showing him the wash rooms, the tubs for scrubbing clothes, the steam dryers, the bathtubs, the lunchroom, Tyler looked after him regretfully. Then he sped after him and touched him on the arm.

"Listen. Could I—would they—do you mean I could clean up in there—as much as I wanted? And wash my things? And take a bath in a bathtub, with all the hot water I want?"

"Yo' sho' kin. On'y things look mighty grabby now. Always is Sat'-days. Jes' wait aroun' an' grab yo' tu'n."

Tyler waited. And while he waited he watched to see how the other boys did things. He saw how they scrubbed their uniforms with scrubbing brushes and plenty of hot water and soap. He saw how they hung them carefully, so that they might not wrinkle, in the dryers. He saw them emerge, glowing, from the tub rooms. And he waited, the fever of cleanliness burning in his eye.

Now he saw his chance, and seized it. And then he went through a ceremony that was almost a ritual. Stella Kampa, could she have seen it, would have felt repaid for all her years of soap-and-water insistence.

First he washed out the stationary tub with soap and brush and scalding water. Then he scalded the brush; then the tub again. Then, deliberately, and with the utter unconcern of the male biped, he divested himself, piece by piece, of every stitch of covering where-with his body was clothed. And he scrubbed them all. His face, as he bent over the steamy tub, was very red and moist and earnest. His yellow hair curled in little damp ringlets about his brow. Then he hung his trousers and blouse in the dryer without wringing them. He rinsed and wrung and flapped the underclothes, though, and shaped

hi. cap carefully. And finally, with a deep sigh of accomplishment, he filled one of the bathtubs in the adjoining room to the slopping-over point with the luxurious hot water, and he splashed about in this gloriously until the waiting ones threatened to pull him out. Then he dried himself and issued forth all flushed and rosy. He wrapped himself in a clean coarse sheet, for his clothes would not be dry for another half hour. Swathed in the sheet like a Roman senator, he lay down on one of the green velvet couches, relics of past Pullman glories, and there, with the rumble and roar of steel trains overhead, with the smart click of the billiard balls sounding in his ears, with the phonograph and the electric piano going full blast, with the boys dancing and larking all about the big room, he fell sound asleep as only a boy can sleep.

When he awoke an hour later his clothes were folded in a neat pile by the left hand of some jacky impatient to use the drying space for his own garments. Tyler put them on. He stood before a mirror and brushed his hair until it glittered. He drew himself up with the instinctive pride and self-respect that come of fresh clean clothes against the skin. Then he placed his absurd round hat on his head at what he considered a fetching angle, though precarious, and sallied forth on the streets of Chicago in search of amusement and adventure.

He found them.

MADISON and Canal Streets, west, had little to offer him. He sensed that the center of things lay to the east, so he struck out along Madison, trying not to show the terror with which the grin, roaring, clamorous city filled him. He jingled the small coins in his pocket and strode along; on the surface a blithe and care-free jacky on shore leave; a forlorn and lonely Texas boy beneath.

It was late afternoon. His laundering, his ablutions, and his nap had taken more time than he had realized. It was a mild spring day, with just a lake Michigan evening snap in the air. Tyler, glancing about restlessly, nevertheless felt dreamy and alert and sort of melting, like a snow heap in the sun. He wished he had some one to talk to. He thought of the man on the train who had said, with such easy confidence: "I got a date." Tyler wished that he too had a date—he who had never had a rendezvous in his life. He loitered a moment on the bridge. Then he went on, looking about him interestedly, and comparing Chicago, Ill., with Marvin, Tex., and finding the former sadly lacking. He passed La Salle, Clark. The streets were packed. The noise and rush tired him and bewildered him. He came to a moving-picture theatre, one of the many that dot the district. A girl occupied the little ticket kiosk. She was rather a frowzy girl, not too

## When Your Spring Breaks Put On VULCAN

IN EVERY TOWN  
ON EVERY CAR

3,000 Dealers all over America have standard car assortments of Vulcan Springs for

### Immediate Replacement

No matter where you are when the break occurs, there should be a Vulcan Service Dealer nearby who can quickly replace the broken spring with an exact duplicate of the defective one.

Vulcan Springs are made of finest quality spring steel oil-tempered and tested to carry three times their normal load.

When the chance comes to replace springs of weaker fibre, ask your dealer for the sturdy, reliable Vulcan. It is made to do its work better; to stand up under the most intense punishment; to give you maximum service and satisfaction.

young, and with a certain look about the jaw. Tyler walked up to the window and shoved his money through the little aperture. The girl fed him a pink ticket without looking up. He stood there looking at her. Then he asked her a question: "How long does the show last?" He wanted to see the color of her eyes. He wanted her to talk to him.

"Bout a hour," said the girl, and raised wine eyes to his.

"Thanks," said Tyler fervently, and smiled. No answering smile curved the lady's lips. Tyler turned and went in. There was an alleged comic film. Tyler was not amused. It was followed by a war picture. He left before the show was over. He was very hungry by now. In his blouse pocket were the various information and entertainment tickets with which the Y. M. C. A. man had provided him. He had taken them out carefully before he had done his washing. Now he looked them over. But a dairy lunchroom invited him, with its white tiling and its pans of baked apples, its browned beans, and its coffee tank. He went in and ate a solitary supper that was heavy on pie and cake.

When he came out to the street again it was evening. He walked over to State Street (the wrong side). He took the dance card out of his pocket and looked at it again. If only he had learned to dance. There'd be girls. There'd have to be girls at a dance. He stood staring into the red and tin-foil window display of a cigar store, turning the ticket over in his fingers, and the problem over in his mind.

SUDDENLY, in his ear, a woman's voice, very soft and low: "Hello, Sweetheart," the voice said. His nickname! He whirled around eagerly.

The girl was a stranger to him. But she was smiling friendly, and she was pretty too, sort of. "Hello, Sweetheart," she said again.

"Why, how-do, ma'am?" said Tyler, Texas fashion.

"Where you going, kid?" she asked. Tyler blushed a little. "Well, nowhere in particular, ma'am. Just kind of milling around."

"Come on along with me," she said, and linked her arm in his.

"Why—why—thanks, but—"

And yet Texas people were always saying Easterners weren't friendly. He felt a little uneasy, though, as he looked down into her smiling face. Something—

"Hello, Sweetheart!" said a voice again—a man's voice this time. Out of the cigar store came Gunner Moran, the yellow string of a tobacco bag sticking out of his blouse pocket, a freshly rolled cigarette between his lips.

A queer feeling of relief and gladness swept over Tyler. And then Moran looked sharply at the girl and said: "Why, hello, Blanche!"

"Hello, yourself," answered the girl sullenly.

"Thought you was in Frisco."

"Well, I ain't."

Moran shifted his attention from the girl to Tyler. "Friend of yours?"

Before Tyler could open his lips to answer the girl put in: "Sure he is. Sure I am. We been around together all afternoon."

Tyler jerked away. "Why, ma'am, I guess you've made a mistake. I never saw you before in my life. I kind of thought when you up and spoke to me you must be taking me for somebody else. Well, now, isn't that funny—"

The smile faded from the girl's face, and it became twisted with fury. She glared at Moran, her lips drawn back in a snarl. "Who're you to go buttin' into my business! This guy's a friend of mine, I tell yuh!"

"Yeh? Well, he's a friend of mine too. Me an' him had a date to meet here right now, an' we're goin' over to a swell little dance on Michigan Avenue. So it's you who's buttin' in, Blanche, me girl."

The girl stood twisting her handkerchief savagely. She was panting a little. "I'll get you for this."

"Beat it!" said Moran. He tucked his arm through Tyler's, with a little impelling movement, and Tyler found himself walking up the street at a smart gait, leaving the girl staring after them.

TYLER KAMPS was an innocent. But he was not a fool. At what he had vaguely guessed a moment before he now knew. They walked along in silence, the most ill-assorted pair that

## Greatest Strength Where Road Strain Comes

Study of tires and tire records reveals the greater utility built into Ajax tires. See for yourself the special feature which gives Ajax tires a reinforcement where strain is most severe.

This exclusive feature known as Ajax Shoulders of Strength, is the biggest of all reasons why Ajax tires can be counted on to outwear other makes.

Shoulders of Strength reinforce the tread. They distribute road wear evenly over the entire tread, thus preventing friction from centering and wearing quickly through to the carcass. Shoulders of Strength give Ajax tires more rubber where it should be. They put more tread on the road.

### Ajax Road King

Mark the massiveness of the Road King tread. See those triangle barbs. They give perfect traction on any road.

The Ajax Road King is typical of the better value which has made Ajax tires 97% Owners' Choice. This large percentage of the annual Ajax output is chosen by individual car owners to replace other tires that came on their cars.

Ajax Inner Tubes are marked by the same inbuilt quality that makes Ajax tires superior.

Ajax tires are guaranteed in writing 5000 miles.

Your nearest Ajax Tire Supply Depot is headquarters for Ajax Tires, Ajax Tubes, and real service. Write for the free descriptive booklet—"Ajax Shoulders of Strength."

you might hope to find in all that higgledy-piggledy city. And yet with a new, strong bond between them. It was more than fraternal. It had something of the character of the feeling that exists between a father and son who understand each other.

Ma-like, they did not talk of that which they were thinking.

Tyler broke the silence. "Do you dance?"

"Me! Dance! Well, I've mixed with everything from hula dancers to geisha girls, not forgettin' the Barbary Coast in the old days, but—well, I ain't what you'd rightly call a dancer. Why you askin'?"

"Because I can't dance either. But we'll just go up and see what it's like, anyway."

"See wot's like?"

Tyler took out his card again patiently. "This dancer we're going to."

**THEY** had reached the Michigan Avenue address given on the card, and Tyler stopped to look up at the great, brightly lighted building. Moran stopped too, but for a different reason. He was staring, open-mouthed, at Tyler Kamps.

"You mean t' say you thought I was goin'—?" He choked. "Oh, my Gawd!"

Tyler smiled at him sweetly. "I'm kind of scared too. But Monicker goes to these dances, and he says they're right nice. And lots of—of pretty girls. Nice girls. I wouldn't go alone. But you—you're used to dancing and parties and—girls."

He linked his arm through the other man's. Moran allowed himself to be propelled along dazedly. Still protesting, he found himself in the elevator with a dozen red-checked, scrubbed-looking jackies. At which point Moran, game in the face of horror, accepted the inevitable. He gave a characteristic jerk from the belt.

"Me, I'll try anything once. Lead me to it."

The elevator stopped at the ninth floor. "Out here for the jackies' dance," said the elevator boy.

The two stepped out with the others—stepped out gingerly, caps in hand: A corridor full of women; a corridor affluter with girls; talk, laughter; animation. In another moment the two would have turned and fled, terrified. But in their half moment of hesitation and bewilderment they were lost.

A woman approached them, hand outstretched—a tall, slim, friendly-looking woman, low-voiced, silk-gowned, inquiring. "Good evening!" she said, as if she had been haunting the halls in the hope of their coming. "I'm glad to see you. You can check your caps right there. Do you dance?"

Two scarlet faces. Four great hands twisting at white caps in an agony of embarrassment. "Why, no, ma'am."

"That's fine. We'll teach you. Then you'll go into the ballroom and have a wonderful time."

"But—" in choked accents from Moran.

"Just a minute. Miss Hall!" She beckoned a diminutive blonde in blue. "Miss Hall, this is Mr.—ah—Mr. Moran. Thanks. And Mr.—yes—Mr. Kamps. Tyler Kamps. They want to learn to dance. I'll turn them right over to you. When does your class begin?"

Miss Hall glanced at a toy watch on the tiny wrist. Instinctively and helplessly Moran and Tyler focused their gaze on the dials that bound their red wrists. "Starting right now," said Miss Hall crisply. She eyed the two men with calm, appraising gaze. "I'm sure you'll both make wonderful dancers. Follow me."

She turned. There was something confident, dauntless, irresistible about the straight little back. The two men stared at it; then at each other. Panic was writ large on the face of each—panic and mutiny. Flight was in the mind of both. Miss Hall turned, smiled, held out a small white hand. "Come on," she said. "Follow me."

And the two, as though hypnotized, followed into a fair-sized room, with a piano in one corner and groups of fidgeting jackies in every other corner. Moran and Tyler sighed with relief at sight of them. At least they were not to be alone in their agony.

Miss Hall wasted no time. Slim ankles close together, head held high, she stood in the center of the room. "Now, then, form a circle, please!"

Twenty six-foot, well-built specimens of manhood suddenly became shambling hulks. They clumped forward, breathing hard, and smiling mirthlessly, with an assumption of ease that deceived no one, least of all themselves.

"A little lively, please. Don't look so scared. I'm not a bit vicious. Now, then, Miss Weeks, a foxtrot."

Miss Weeks, at the piano, broke into spirited strains. The first faltering steps in the social career of Gunner Moran and Tyler Kamps had begun.

To an onlooker it might have been mirth-provoking if it hadn't been, somehow, tear-compelling. The thing that little Miss Hall was doing might have seemed trivial to one who did not know that it was magnificent. It wasn't dancing merely that she was teaching these awkward, serious, frightened boys. She was handing them a key that would unlock the social graces. She was presenting them with a magic something that would later act as an open sesame to a hundred legitimate delights.

She was strictly business, was Miss Hall. No nonsense about her. "One-two-three-four! And a one-two three-four. One-two-three-four! And a turn-two, turn-four! Now, then, all together. Just four straight steps as if you were walking down the street. That's it! One-two-three-four! Don't look at me. Look at my feet. And a one-two three-four."

Red-faced, they were; very earnest; pathetically eager and docile. Weeks of drilling had taught them to obey commands. To them the little dancing teacher, whose white spats twinkled so expertly in the tangle of their own clumsy clumping boots, was more than a pretty girl. She was knowledge. She was power. She was the commanding officer. And like children they obeyed.

Moran's Barbary Coast experience stood him in good stead now, though the stern and watchful Miss Hall put a quick stop to a certain tendency toward shoulder work. Tyler possessed what is known as a rhythm sense. An expert whistler is generally a natural dancer. Stella Kamps had always waited for the sound of his cheerful whistle as he turned the corner of Vernon Street High, clear, sweet, true, he would approach his top note like a Tetrazzini, until, just when you thought he could not possibly reach that dizzy eminence, he did reach it, and held it, and trilled it, birdlike, in defiance of the laws of vocal equilibrium.

His dancing was much like that—never a half beat behind the indefatigable Miss Weeks. It was a bit labored at first, but it was true. Little Miss Hall, with the skilled eye of the specialist, picked him at a glance.

"You've danced before?"

"No, ma'am."

"Take the head of the line, please. Watch Mr. Kamps. Now, then, all together, please."

And they were off again.

**AT 9.45** Tyler Kamps and Gunner Moran were standing in the crowded doorway of the ballroom upstairs, in a panic lest some girl should ask them to dance, fearful lest they be passed by. Little Miss Hall had brought them to the very door, had left them there with a stern injunction not to move, and had sped away in search of partners for them.

Gunner Moran's great scarlet hands were knotted into fists. His Adam's apple worked convulsively.

"Let's duck," he whispered hoarsely. The jacksy band in the corner crashed into the opening bars of a foxtrot.

"Oh, it don't seem—" But it was plain that Tyler was weakening. Another moment and they would have turned and fled. But coming toward them was little Miss Hall, her blond head bobbing in and out among the swaying couples. At her right and left was a girl. Her bright eyes held her two victims in the doorway. They watched her approach, and were helpless to flee. They seemed to be gripped by a horrible fascination. Their limbs were fluid.

A sort of groan rent Moran. Miss Hall and the two girls stood before them, cool, smiling, unruffled.

"Miss Cunningham, this is Mr. Tyler Kamps. Mr. Moran, Miss Cunningham. Miss Drew—Mr. Moran, Mr. Kamps."

The boy and the man gulped, bowed, mumbled something.

"Would you like to dance?" said Miss Cunningham, and raised limpid eyes to Tyler's.

"Why—I—you see I don't know how I just started to—"

"Oh, that's all right," Miss Cunningham interrupted cheerfully. "We'll do it." She stood in position, and then seemed to radiate from her a certain friendliness, a certain assurance, at

understanding that was as calming as it was stimulating. In a sort of daze Tyler found himself moving over the floor in time to the music. He didn't know that he was being led, but he was. She didn't try to talk. He breathed a prayer of thanks for that. She seemed to know, somehow, about those four straight steps and two to the right and two to the left, and four again, and turn-two turn-four. He didn't know that he was counting aloud, desperately. He didn't even know, just then, that this was a girl he was dancing with. He seemed to move automatically, like a marionette. He never was quite clear about those first ten minutes of his ballroom experience.

THE music ceased. A spate of applause. Tyler mopped his head and his hands, and applauded too, like one in a dream. They were off again for the encore.

Five minutes later he found himself seated next Miss Cunningham in a chair against the wall. And for the first time since their meeting the mists of agony cleared before his gaze and he saw Miss Cunningham as a tall, slim, dark-haired girl, with a glint of mischief in her eye, and a mouth that looked as if she was trying to keep from smiling.

"Why don't you?" Tyler asked, and was aghast.

"Why don't I what?"

"Smile if you want to."

At which the glint in her eye and the hidden smile on her lips sort of met and sparked, and she laughed. Tyler laughed too, and then they laughed together and were friends.

Miss Cunningham's conversation was the kind of conversation that a nice girl invariably uses in putting at ease a jacky whom she has just met at a war-recreation dance. Nothing could have been more commonplace or unoriginal, but to Tyler Kamps the brilliance of a Madame de Staël would have sounded trivial and uninteresting in comparison.

They danced again. Miss Cunningham introduced him to some other girls, and he danced with them, and they in turn asked him about the station, and Texas, and when he thought the war would end. And altogether he had a beautiful time of it, and forgot completely and entirely about Gunner Moran. It was not until he gallantly escorted Miss Cunningham downstairs for refreshments that he remembered his friend. He had procured hot chocolate for himself and Miss Cunningham, and sandwiches and delectable chunks of caramel cake. And they were talking and eating and laughing and enjoying themselves hugely, and Tyler had gone back for more cake at the urgent invitation of the white-haired, pink-checked woman presiding at the great white-clothed table in the center of the charming room. And then he had remembered. A look of horror settled down over his face. He gasped.

"W-what's the matter?" demanded Miss Cunningham.

"My—my friend. I forgot all about him." He regarded her with stricken eyes.

"Oh, that's all right," Miss Cunningham assured him for the second time that evening. "We'll just go and find him. He's probably forgotten all about you too."

And for the second time she was

right. They started on their quest. It was a short one. Off the refreshment room was a great, gracious comfortable room, all deep chairs and soft rugs and hangings and pictures and shaded lights. All about sat pairs and groups of sailors and girls, talking and laughing and consuming vast quantities of cake. And in the center of just such a group sat Gunner Moran, lolled at his ease in a rosy velvet-upholstered chair. His little finger was crooked elegantly over his cup. A large and imposing square of chocolate cake in the other hand did not seem to cramp his gestures as he talked. Neither did the huge bites with which he was rapidly demolishing it seem in the least to stifle his conversation. Four particularly pretty girls and two matrons surrounded him. And as Tyler and Miss Cunningham approached him he was saying: "Well, it's got so I can't sleep in anything but a hammock. Yessir! Why, when I was fifteen years old I was—" He caught Tyler's eye. "Hello!" he called genially. "Meet me friend." This to the bevy surrounding him. "I was just tellin' these ladies here—"

And he was off again. All the tales that he told were not necessarily true. But that did not detract from their thrill. Moran's audience grew as he talked. And he talked until he and Tyler had to run all the way to the Northwestern station for the last train that would get them on the Station before shore leave expired. Moran, on leaving, shook hands like a presidential candidate.

"I never met up with a finer bunch of ladies," he assured them, again and again. "Sure I'm comin' again. Ask me. I've had a elegant time. Elegant. I never met a finer bunch of ladies."

THEY did not talk much in the train. He and Tyler. It was a sleepy lot of boys that that train carried back to the Great Central Naval Station. Tyler was undressed and in his hammock even before Moran, the expert. He would not have to woo sleep to-night. Finally Moran too had swung himself up to his precarious nest and relaxed with a tired, happy grunt.

Quiet again brooded over the great dim barracks. Tyler felt himself slipping off to sleep deliciously. She would be there next Saturday. Her first name, she had said, was Myrtle. An awful pretty name for a girl. Just about the prettiest he had ever heard. Her folks invited jackies to dinner at the house nearly every Sunday. Maybe, if they gave him thirty-six hours' leave next time—

"Heh, Sweetheart!" sounded in a hissing whisper from Moran's hammock. "What?"

"Say, was that four steps and then turn-turn, or four and two steps t' the side? I kinda forgot."

"Oh, shut up!" growled Monicker from the other side. "Let a fellow sleep, can't you? What do you think this is? A boarding school!"

"Shut up yourself!" retorted Tyler happily. "It's four steps, and two to the right and two to the left, and four again, and turn two, turn two."

"I was pretty sure," said Moran humbly, and relaxed again.

Quiet settled down upon the great room. There were only the sounds of deep regular breathing, with an occasional grunt or sigh—the normal sleep sounds of very tired boys.

## The Flying Fish

(Continued from page 11)

obtain from Central the location of the store from which she telephoned, to hold her in talk until another of McCord's henchmen arrived on the scene!

"There, Miss Kildare?" Larsen spoke again. "Well, as I was sayin'—"

She interrupted him. "I won't stay here talking to you. Tell me where Mr. McCord is—"

"I'll tell you nothing!" he snarled. "You listen to me. And mind, if you go to the police, we'll know it, and I give my word for it, Miss Kildare, Endicott will be bumped off so quick—"

She heard no more. Even now some one might be racing toward where she stood, and if she were going to rescue Endicott, it behooved her to guard her own safety. She hung up the receiver and walked swiftly into the street.

### Chapter VI: A Cigarette

"YOU are waiting for Miss Tarrant?" Endicott wheeled from the window through which he had been dreamily staring. He had not been observing the

street outside. The window had simply served as a frame for the face of Leila Kildare. As clearly as though she had been present in the flesh, Endicott had been gazing at the dimple at the left corner of her mouth, at the wavy, bluish-black hair, into the deep violet eyes. His tanned cheeks colored as he met the inquiring gaze of a bell boy.

"Miss Tarrant, yes," he stammered. "She wants you to come upstairs, sir." "Upstairs?" Endicott was puzzled. "Yes, sir."

After all, thought Endicott, conventions are merely conventions. Undoubtedly Leila had a suite of rooms, and it was no time, when some fearful danger menaced her—himself too, for that matter—to consider the petty rules of ordinary living. Leila had reconsidered her intention to meet him in this parlor; that was all. The girl was nervous, naturally enough. She would feel safer in her own rooms. Unhesitatingly Endicott followed the boy to a door on an upper floor.

"Here, sir!" The boy knocked.

# Prest-O-Lite Battery

A correct size for every car — at District Service Stations everywhere

The Major joins the Prest-O-Lite Clan.

## The Maj. Knows Batteries —He has studied the reports of many tests

AND take it from us, it's a "he" battery that stands up under all of the said tests.

For instance, note this one—devised by a noted engineer to determine whether or not certain models were built to stand the jolting of rough roads;

—the roads in mind being the auto trails of a territory where the ordinary batteries of commerce have been meeting a junk-pile finish after short-life service.

Taking a sample battery from a lot of 3000 Prest-O-Lites ordered by a well-known big purchaser, the engineer ordered it hooked up with a little trick apparatus, designed to put it through a regular 3d degree.

—at a signal this roughhouse device proceeded to business—it picked up the willing Prest-O-Lite and jolted it up and down on a hard surface—jolted it 560 times a minute for a total of over one million jolts.

At the finish of this ordeal the battery was unhooked—critically examined for "signs of weakness"—and then retested to see if it had kept its full rated power.

The result was a clean score without a single demerit—so clean that the umpire remarked, in signing the report, "I guess we'll have to score this Prest-O-Lite Battery 150 per cent perfect."

Do you wonder that the Major who watched this test is now an enthusiastic member of The Prest-O-Lite Clan?—and that he says the Prest-O-Lite is the battery for the millions of autoists who don't know and don't want to know about volts, amperes, grids, and plates?

"You can leave all that to the Prest-O-Lite Service Man around the corner," says the Major—"just stop your car at that battery wizard's shop once every few weeks—let him give it the once-over and a fresh drink of distilled water—any Prest-O-Lite battery will do the rest."

Write us for the address and front name of the nearest Prest-O-Lite Service Station Man in your District.

## SCHOOLS

### Kentucky Military Institute

With a Winter Home in Florida  
 Boys at K. M. I. are thoroughly prepared for college. The two homes afford outdoor sports all year round. Equipment excellent, including new laboratories, buildings, machine and wood-working shops. Designated "Junior School" in War Dept. Junior and Senior Divisions K. M. I. 1. Write for prospectus 1918. Fall session. Terms \$60. Address: Executive Officer, K. M. I., LONDON, KY.

### COLLEGE OF DENTISTRY UNIVERSITY OF ILLINOIS

In 1917-18, the College of Dentistry, University of Illinois, was the first dental school in the United States to be accredited by the American Dental Association. The college is equipped with the latest and most complete facilities for dental education. It is a member of the American Association of Dental Schools. For information, write to the Dean, College of Dentistry, University of Illinois, Box 72, 1836 West Harrison Street, Chicago.

### DETROIT COLLEGE OF LAW

Day Two Evening  
 Prepare for the Bar. Three years' course leads to the degree of LL.B. Students may withdraw 22 credits to study abroad. The college is located in the heart of the city. For information, write to the Dean, Detroit College of Law, 265 Adams Street, Detroit, Mich.

DETROIT COLLEGE OF LAW, 265 Adams St., Detroit, Mich.

### Electrical Engineering

Practical instruction in electrical engineering. The Blueprints and electrical engineering, in practically qualified to a condensed course in electrical engineering.

In One Year  
 54 years' reputation, with over 1000 graduates. Address: 265 Adams Street, Washington, D. C.

### CULVER MILITARY ACADEMY

For preparation and organization have a role in West Point. The academy is located in the heart of the city. For information, write to the Dean, Culver Military Academy, Culver, Ind.

### Bordentown Military Institute

For preparation and organization have a role in West Point. The institute is located in the heart of the city. For information, write to the Dean, Bordentown Military Institute, Bordentown, N. J.

### Mercersburg Academy

For preparation and organization have a role in West Point. The academy is located in the heart of the city. For information, write to the Dean, Mercersburg Academy, Mercersburg, Pa.

### Grand River Institute

For preparation and organization have a role in West Point. The institute is located in the heart of the city. For information, write to the Dean, Grand River Institute, Grand River, Mich.

### LINDENWOOD COLLEGE

For Women. St. Charles, Mo. 1884. Beautiful campus, modern equipment, excellent instruction. Write for prospectus. Address: J. L. Bomer, D. D., Pres., Box 5, St. Charles, Mo.

### Carson Long Institute

For preparation and organization have a role in West Point. The institute is located in the heart of the city. For information, write to the Dean, Carson Long Institute, Carson Long, N. Y.

### BAHNEMANN MEDICAL COLLEGE and HOSPITAL

Including TRAINING SCHOOL FOR NURSES  
 Chicago, Ill. 1884. For information, write to the Dean, Bahnemann Medical College and Hospital, Chicago, Ill.

far away, he saw grins on the faces of Larsen, Benchley, and Stromberg. The room began turning around; the floor began to heave up and down like the ground swell of the ocean. He removed the cigarette from his lips; he stared at it. By a mighty effort he concentrated upon it. It was not his usual brand. Larsen must have deftly substituted some of his own—drugged—for Endicott's pet brand. He rose to his feet. Larsen caught him and gently eased him to the floor.

"That hell boy, Stromberg—you fixed him?"

"He'd sell his soul for half what I gave him," grunted Stromberg.

"All right, then. You and Benchley take him down the back stairs, the ones the girl must have left by. Say he's drunk. Put him in the machine and take him to McCord."

Benchley's sallow face whitened. "He ain't—dead, is he?"

Larsen sneered. "Dear little Benchley, who loves to stay at home and plan! It ain't so much fun when you do the work yourself, is it?" His manner became more harsh. "No, you yellow mutt, he ain't dead. He ain't even 'out.' He's just daydreaming; that's all. Here, help me up with him."

HE had not been asleep; that Endicott knew. He remembered perfectly smoking the cigarette that he had withdrawn from his own case. He remembered being taken downstairs, assisted by Benchley and Stromberg. He remembered a ride in a machine, remembered being half carried up a half dozen steps to a door, being dragged along a corridor, and tossed unceremoniously into a barely furnished room. His eyes had not closed during all this, nor during the time that had followed, that might have been minutes and might have been hours. He only knew that he had been incapable of speech, of action, although not unconscious. But now the effects of the drug had worn off. He felt weak, a trifle nauseated, but hardly worse than he might have felt after a bad night's rest. And his courage was unimpaired as he looked at Curzon McCord.

"Able to speak?" queried McCord. In a dressing gown—not the one he had worn at the Birmingham, but a more gaudy affair—and shapeless carpet slippers, McCord had come silently into the room where Endicott was confined, and seated himself calmly upon an old-fashioned haircloth sofa.

Endicott rose to his feet. A slight dizziness made him grasp the back of a chair for support.

"Sit down; don't try to stand. You'll be all right in ten minutes. It leaves no after effect."

"Thoughtful of you to tell me that," said Endicott. His eyes hurt him a trifle, and he shut them for a moment. Reopened, the pain almost entirely left them. But he was a bit stiff from his minutes—or hours—of lying upon an uncarpeted floor. Gingerly he sank into the chair.

"May I ask, Mr. McCord, what it's all about?" he said after a moment.

"You have a certain envelope, Mr. Endicott. Not on your person, but you have it somewhere. I want it."

"Quite sure I have it, eh?"

"My niece gave it to you."

"Quite sure she's your niece too, eh?" McCord's eyes blazed. "We won't wander from our subject, Mr. Endicott. That envelope—and its contents. How long will it take you to get it for me?"

Endicott eyed the old man smilingly. "Let's see, Mr. McCord; this is 1917. Would 1947 be soon enough?"

McCord nodded his head gravely. The fire in his eyes burned less fiercely. He seemed considering, and in this calmer mood somehow he was more threatening than when outspoken wrath swayed him. "One would expect something like this from you, Mr. Endicott. It is quite in keeping with a remarkably gallant record. To look lightly, humorously, at death—you understand, of course, Mr. Endicott, that it is death which lies ahead?"

"I am not a fool, Mr. McCord," Endicott replied.

"Most certainly not."

"And neither are you, Mr. McCord."

"Eh? I don't quite understand, Mr. Endicott."

"No? Let me make myself more clear. You have made me your prisoner, Mr. McCord. But Miss Kildare is still free. Even now the police—"

"You underestimate me, Mr. Endicott," McCord's harsh features relaxed in a smile. "It so happens that— You have youth, Mr. Endicott. A wonderful

## THE THINKER

The big places in all walks of life to-day go to the men of ideas, the men who are able to think constructively because they have seen the wisdom of rounding out their technical business experience with that knowledge of literature, art, science, and history which goes to make a cultivated man.

What are the few great books—biographies, histories, novels, dramas, poems, books of science and travel, philosophy and religion—that best "picture the progress of civilization"? Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching—forty years of it as President of Harvard University—has answered that question in

## THE HARVARD CLASSICS

Dr. Eliot's Five-Foot Shelf of Books

Every well-informed man or woman should at least know something about this famous library. The descriptive booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education" and so arranged it that even "fifteen minutes a day" is enough.

### Send for the Booklet

We invite you to have a copy of the booklet describing the set. This booklet is sent without cost or obligation, yet it is one of the most valuable little guidebooks to books ever written, because in it is Dr. Eliot's best advice on just how and what to read. That alone makes it well worth sending for. And besides the advantage of having Dr. Eliot's own explanation of his plan of reading, you will find in the booklet twelve charming five-minute essays, a charming little series of informal talks on books, authors, and places. Just tear out and mail the coupon now—while you think of it.

Collier's, 416 W. 13th St., New York

## The Electrician's Friend

The electrician's labors are lightened wherever Robbins & Myers Motors speed the work and ease the work.

Time formerly spent by him in repairs is now utilized in arranging the power system for still greater efficiency. An occasional oiling and "all is well" with the motors.

Robbins & Myers performance enables him to grow with production. Not forgetting that reduction of maintenance expense follows as a direct result of maintained output through uninterrupted R&M Motor service.

Twenty-one years of quality motor building is the R&M reason for this dependability and saving. Users of motors ranging from 1-40 to 30 horsepower have long real-

ized the economy of these motors in factory, store, office and home.

Besides motors for general power services, the R&M line includes motors of special design as a built-in part of the better vacuum cleaners, washing machines, addressing and mailing machines, coffee grinders, meat choppers and other motor-driven devices.

Manufacturers of such devices prefer R&M Motors for their dependability as well as for the fact that to be Robbins & Myers equipped implies full value.

Purchasers of these devices know they are getting quality products when R&M equipped.

# Robbins & Myers Motors

thing is youth. Miss Kildare is young also. I think that she would deeply regret taking any action that would result in your—let us call it, departure—oh, no, Mr. Endicott, dismiss from your mind any thought of the police. Miss Kildare has been informed that if she goes to the police you will go to—shall we say Heaven?"

THE smile left his lips. It had never been in his eyes.

"Listen, Mr. Endicott: you have meddled in important matters. The penalty for such meddling ordinarily— But these are extraordinary circumstances. Procure that envelope for me, give me your promise that you will forget the events of the past few hours, and— you will be at liberty, Mr. Endicott."

"And Miss Kildare?"

"What about her?"

"She will be at liberty too?"

"You take a deep interest in my niece."

"A very deep interest in Miss Kildare—who is not your niece," retorted Endicott.

"Miss Kildare is in my charge. Her affairs need in no way concern you, Mr. Endicott."

"But suppose that they do concern me—vitality?"

"In that case you will have to forget, Mr. Endicott. And, as I remarked a moment ago, you are young. Youth forgets quickly. Miss Kildare is not for you."

"Still, I am—one hesitates to relate his good qualities, Mr. McCord, but—"

"If I were to tell you that I intend marrying Miss Kildare myself, what then?" asked McCord.

"I should be very frank, Mr. McCord. I should reply that you are a silly, presumptuous old man."

Beneath his dressing gown McCord's thin limbs shook. He rose. "It is quite unnecessary to tell you, Mr. Endicott, that I have sufficient men in this house to prevent your making your escape."

Endicott nodded. "I've been aware of that."

"And I know that it is quite useless to talk further with you, Mr. Endicott. It is only a matter of a few hours before we find Miss Kildare. After that, Mr. Endicott— Do you believe in God, Mr. Endicott?"

Endicott bowed assent.

"I should advise you to make your peace with Him, Mr. Endicott."

He moved to the door. "Oh, Mr. McCord," said Endicott.

The gray old man turned. "Well?"

"These cigarettes. Could I have some fresh ones?"

McCord's answer was to slam the door. But even as the key turned in the lock Endicott's lips lost their impertinent, somewhat quizzical smile. Supposing that Leila Kildare was afraid to go to the police. McCord was insane, yes, but—many a murder has been committed by an insane person. McCord's insanity rendered him, if anything, the more dangerous. Endicott paced thoughtfully up and down the shabby room.

(To be continued next week)

## Quality Automobiles, An Investment

TWO years ago automobile dealers faced what seemed likely to become a serious affair—that of disposing of Used Cars, taken in exchange on sales of new cars.

Manufacturers, also, were concerned. Some felt we even were approaching the "saturation point."

Today, used cars of high quality are eagerly welcomed by automobile dealers. The used car has become as necessary to the conduct of the automobile business as the new car—provided that the car is of high quality backed by reliable manufacture.

There are some 1916 models which—after two years of service—are selling for higher prices today than they sold for originally.

These cars are Delco equipped. A careful study of the re-sale value of cars, and the increase in re-sale

values during the past year, shows that those carrying Delco electrical equipment are selling for higher prices than many others.

We do not claim that the increased re-sale value is due to the fact that these cars have Delco equipment. But we do know that the manufacturer who is willing to spend the increased amount of money necessary for Delco equipment has also been willing to put into his cars a quality of workmanship and materials that makes for a good, durable performance.

THE plain facts reiterate that the first cost is not the most important thing, and that "Quality is remembered long after price is forgotten."

The man who buys a Delco-equipped car is not spending money, but making an investment—and the *interest* on his investment is represented by the increased re-sale value of his car.

# How a Great Company Protects You Against Higher Prices for a Standard Product

By Burton Wynne

How, after two decades of selling at \$100, the price of the Oliver Typewriter, latest model, was reduced to \$49. How hundreds of thousands of dollars were saved for the public. If war-time economies and efficiencies interest you, this account claims your attention.

This is the story—simply told—of a new idea, how it was conceived, how it was executed.

It tells how The Oliver Typewriter Company resisted an increase in its price to \$110 or \$125—how this resistance marked a revolutionary step in selling. And a distinct achievement in business annals.

## Heralding Lower Prices

It heralds lower prices, instead of higher. And an unusual saving. It tells how economies were attained. And how you profit.

It is about the \$100 Oliver, which, with the Declaration of War, was reduced to \$49.

What other article do you know that is now half price?

## New Thrift Ideas

The \$49 Oliver is not a substitute, nor a cheaper, war-time model. It is the identical \$100 machine, with the same materials and the same precise workmanship.

It is a machine such as all would expect to rise in price, considering the tendencies of the times, the higher cost of metals and labor.

Here is how the price was cut in two: The \$51 which you now save used to go towards selling you a typewriter. This extravagance is no longer necessary.

There are no longer 15,000 Oliver salesmen and agents. Nor costly branch houses in 50 cities. In dozens of daring ways the Oliver executives gain new economies. Every selling waste is taboo.

This is the new-day way of distribution. Only the sales plan is changed. Not the machine. You get a brand new Oliver, latest model, yet save \$51. All by avoiding wasteful ways.

All the further details are told, all the facts exposed in an amazing document entitled "The High Cost of Typewriters—The Reason and the Remedy," which the coupon below brings.

Was \$100 Now \$49

Half Price in Double Price Times

## The Plan Today

The new Oliver Plan has been a great success. The Oliver goes direct from the makers to you. You are your own salesman and thus save \$51.

Here is the idea. Note its simplicity.

You mail the coupon and the Oliver comes for Five Days' Free Trial. No money down.

If you keep it, pay at the rate of \$3 per month. If you return it, even the transportation charges are refunded.

NOTE—We hope to be able to maintain the \$49 price. But if the cost of labor and materials continues to go up, we may be forced to increase this price. We do not wish to. But we advise you to act now to be certain of getting your Oliver Nine at \$49.

## \$2,000,000 Guarantee

Remember, a \$2,000,000 concern guarantees this \$49 Oliver to be the identical \$100 Oliver—not the slightest change has taken place. It is the No. 9, the latest and best Oliver, used by many of the greatest businesses.

The Oliver has a standard keyboard, so that all may turn to it and use it without the slightest hesitation. It is easy to operate and famed for fine workmanship and durability.

Over 600,000 Olivers have been sold.

## Save \$51 This Easy Way

At any price, you cannot buy a finer typewriter than The Oliver. If any machine should cost \$100, it is this splendid No. 9.

At \$49, you save \$51 without the slightest sacrifice. In fact, you get the utmost for your money.

And you are encouraging a great movement. You are recognizing and practicing the fundamental principles of Thrift and Efficiency.

Cut out the coupon now and send for either The Oliver or for further information.

Canadian Price, \$62.65.

## The Oliver Typewriter Company

102A Oliver Typewriter Bldg., Chicago, Ill.

NOTE CAREFULLY—This coupon will bring you either the Oliver Nine for free trial or further information. Check carefully which you wish.

# OUR BATTLE PLANES ARE COMING

BY LUCIAN CARY

COLLIER'S once printed an article by Arthur Ruhl that he called "Up in the Air with Orville." It was the story of his first flight in an airplane, a flight conducted by Mr. Orville Wright. This article ought, in all justice, to be called "On Solid Earth with Orville."

This is the story of an attempt to get down to the facts about battleplanes. And though Mr. Wright did not conduct the expedition, he was the first island of fact I struck in all the wild seas of rumor and suspicion, of charges and of investigations, of mysterious tips and far-flung boasts, of first-page-or-die committees, and sculptors run amuck.

Orville Wright is one of those rare men for whom the late William James invented his famous phrase: tough-minded. Most of us are tender-minded—creatures who run with the crowd, think what everybody else thinks, and subsist on illusions. Orville Wright thinks his own thoughts and thrives on facts. Other men like to believe that the bass they caught weighed five pounds, that the car they are selling will do twenty miles to the gallon, that they're going to build twenty thousand airplanes in six months. They like to believe and so they do believe. Imagine how hard it is for a true-hearted Englishman to admit that the Liberty motor is as good as a Rolls-Royce. Why, your Englishman speaks the word "Rolls" in the tone of reverence. He speaks it as we Americans sometimes speak the name of Lincoln. The name "Rolls" is a symbol of national achievement; it is almost like the flag. Aren't we all like that?

Orville Wright isn't like that. He doesn't ask of facts that they be pleasant facts. He is queer. He likes to weigh his fish—on tested scales. He would rather know he has failed than guess he has succeeded.

One reason the Wright brothers solved the problem of mechanical flight was that they had an enthusiasm for the task. Another reason was that they were ingenious men, with imaginations equal to mechanical difficulties. But other men have been enthusiastic; and other men have been ingenious. The reason the Wrights succeeded where others had failed lies in their immense devotion to facts. The Wrights based their first gliders on the accepted tables of lift and thrust. The gliders refused to work. So the Wrights wanted to find out why. They built a wind tunnel—a wooden tube in which they artificially produced a blast of air—devised a scheme for measurement and proceeded to discover the facts. When they designed a new wing shape they made a miniature of it, placed it in the wind tunnel, and turned on their blast. The inexorable dial recorded the result and the Wrights accepted that result. Whether it was pleasing or not did not affect their judgment. They wanted nothing more than the truth. It is a rare quality among men: proverbially rare among fishermen; and apparently almost unknown among men who design, fly, and criticize airplanes. . . .

Everybody knows now that the original program of the Aircraft Production Board—that program of flying twenty thousand airplanes over the German lines within our first year—was a boy's dream. It was based on desire. It had no relation to facts; no foundation in possibilities. If we could have built fifty thousand airplanes in the year that has just passed—and it would have required more than fifty thousand to put twenty thousand in the German sky—we couldn't have shipped them. And if we could have shipped them we couldn't have flown them. And if we could have flown them we couldn't have landed them. Three squadrons of flyers—and there are eighteen machines to a squadron—require a field nearly a mile long in which to land safely. Allow sixty machines to a field, which is a good many, and a third of a square mile to a field. It would require more than three hundred fields to land twenty thousand machines—more than a hundred square miles of level space just behind the front lines. Perhaps you know something about leveling land by the square mile. Perhaps you can imagine the size of this job—the job of finding places for more than three hundred new landing fields in addition to those the Allies are now using in France, and leveling them off. But even if you don't know much about leveling land or the available terrain you can guess the truth. The truth is there is an ultimate check on darkening the sky with airplanes which is not the tonnage of our ships or the capacity of our shops or the supply of spruce but landing fields.

If it weren't for landing fields, we could eventually drop a bomb to every square yard of Germany. If it weren't for that, we could joyfully adopt the grandiose scheme presented to the extent of a column and a half in this morning's New York "Times," the scheme of W. H. Workman, American representative of the Handley-Page Company. The scheme is to build 10,000 giant Handley-Page bombing machines, each equipped with four Liberty motors, fly them across the Atlantic by way of the Azores, and blow the Germans out of Germany next spring. It is theoretically feasible to fly across the Atlantic—although producing, say, 20,000 pilots capable of making the trip is a large order. It is theoretically possible by spring to

© Kael &amp; Horner

A Spad flown by an American in France

build 10,000 Handley-Page dread-noughts and 20,000 Liberty motors to drive them—although we are pretty

full up now in the shops. And the cost—well, suppose it did cost another \$640,000,000, what does money matter? But after that it would be necessary to level off landing places in France for 10,000 giant four-motor, six-man machines, in addition to all the leveling we are now doing. And that's not possible—not this winter. It is a mean little fact to present in the face of so handsome a theory. But it is a fact. And it is facts we're after.

The trail of facts leads straight to Dayton, Ohio, where our first battle plane was built, where the experimenting is done, where Orville Wright has his laboratory, with a new wind tunnel in which he has got an air speed higher than anybody ever got before, a blast of 158 miles an hour.

## Speaking of the Liberty Motor

MR. WRIGHT took me out to the army training field named after his brother, Wilbur. We watched the cadets taking their afternoon flights in the usual ninety-horse Curtiss training machines, which is not very exciting when one has seen a great deal of it. And then we found two new De Havillands, American De Havillands, built in this country, with machine guns mounted—battle planes—battle planes with Liberty motors!

M. Justin Godart, until recently the assistant minister of war to the French, was there. M. Godart was not familiar with the American Civil War of 1917-18; he knew nothing of the great charge on our airplane experts by the famous sculptor, Gutzon Borglum; he had not heard, as you and I have, that the ignition system is all wrong, that the carburetor is a failure, that the cooling system boils, that the power melts away at an altitude of 1,000 feet. . . . M. Godart wanted a ride behind the Liberty motor.

They took the machine away from the mechanics; the pilot took his seat; M. Godart was strapped in. Three men in a chain—it takes three men to turn that motor over—caught the propeller and the pilot reached for the switch; the three men pulled; the engine started. In another minute it was singing. And a moment later it roared down the field and jumped into the air. To me it seemed as if it were going up at a forty-five degree angle. But I had been looking at the slow gradual rise of training planes.

We all watched the De Havilland as long as we could see it. It went so fast, the motor roared so irresistibly. And when it disappeared in the blue we all smiled at each other. Really nothing had happened; the plane had not distinguished itself; no test had taken place. But one felt that the spectacle had a touch of magnificence even while one knew that it was only the expected performance. It was a battle plane—our battle plane, with our motor—and you know

what they've said about that motor. And then a Frenchman, young, but an old and famous flyer, spoke up. "Lots of power there," he said. "But it's a bit expensive, don't you think? That motor uses thirty-seven gallons of gas an hour."

"Thirty-seven gallons an hour!" I thought. "So this is the real secret. The Liberty motor has power. But thirty-seven gallons an hour!"

I looked to Mr. Wright for some comment, but he said nothing. Everybody talked about something else.

On the way back Mr. Wright did some figuring with a pencil and paper.

"Well," he said slowly, when he had checked his calculations, "that isn't so bad. Thirty-seven gallons an hour comes to a little more than half a pound per horsepower hour. That is a great deal better than they get with automobile motors and about as good as anybody gets with airplane motors."

"How about speed?" I asked. I had read in two ably conducted metropolitan dailies that the De Haviland equipped with the Liberty motor does more than 130 miles an hour; and I had been confidentially informed by a man who had been flying one that it did 130 miles an hour.

"The De Haviland is doing 123 to 125 miles an hour," Mr. Wright said.

I expressed my disappointment. I had read that week an article by a young American ace about a machine the French were using that did 145 miles an hour. I had heard that

the standard speed for Spads was 135 miles an hour. Why were we building a battle plane that did only 123 or 125 miles an hour? Wasn't that awfully slow?

Wright didn't think it was slow; he thought it was fast. And gradually it dawned on me that Wright did not credit the 145-mile story.

"Well," I said, "you mean that it's difficult for proud young men to tell the truth about how fast they've flown."

"Yes," he said. "It's so difficult to find out the truth about speed. It isn't easy to measure it accurately from the ground."

Later, Wright showed me his apparatus for testing the air-speed indicators the Government has been buying. He has found them from 10 to 40 per cent off. Which may explain why thoroughly honest newspaper men give the De Haviland battle plane eight or ten more miles an hour than Orville Wright does.

The machine ought to go a good deal faster than it does now. The model they are turning out in quantity at Dayton is equipped with wire cable between the struts. This crisscross of cable looks slim enough to the eye—it is the thickness of your little finger—but it is too thick for speed. An attempt is now being made to roll streamline wire in this country—wire, that is, so shaped that it offers the least resistance to the air in proportion to its strength. America has not manufactured this wire hitherto and it has been impossible to secure a supply from abroad. Wright has calculated that the difference between a machine equipped with the round wire cable and a machine equipped with streamline wire will be between six and eight miles an hour. If this calculation proves out, our De Havilands may eventually fly as fast as they are now currently reported to fly.

This matter of flying speed is a delicate one, but it's bound to come up again. One will do well to cut 10 per cent off any air-speed figures he hears unless he has excellent reason for thinking that the person speaking is talking actual accomplishment rather than wishes.

The De Haviland machine represents our final choice—or let us err on the side of safety—our present final choice—of a battle plane. It is the only fighting machine in quantity production at the present time.

### Choosing a Battle Plane

THE military commission which went abroad a year ago to study foreign planes landed in England. The members were promptly captured by the extraordinary merits of the Handley-Page bombing machine. The model then in use had two motors, developing nearly a thousand horsepower. It carried a ton or so of bombs in addition to its crew and a supply of gasoline sufficient for a long flight. The commission listened, observed, and cabled home that Handley-Page was the answer.

And having settled the matter beyond peradven-

ture they went to France. There they discovered the Spad. It was about the time the Spad succeeded the Nieuport as the avion de chasse, among such flyers as the famous Cygne squadron with whom Guynemer flew. The Spad was at the opposite extreme from the Handley-Page. The Spad was small, fast, quick to maneuver. It carried two fixed machine guns above the motor, synchronized to shoot through the propeller, and was flown and fought by a single man. Our military commission cabled home that Spads were the answer.

And having again settled the vexed question, they went to Italy. There they discovered the Caproni. The Caproni was even bigger than the Handley-Page. It also had records for long-distance flying. It could carry two tons of bombs—or anyway a ton. The commission wavered and was lost. They cabled home that Capronis were the answer.

The situation thus created required some little resolving. Three thousand Spads were ordered built at the Curtiss plant in Buffalo. One John J. Pershing afterward canceled the order. No Spads were built.

It was discovered that, however effective Spads might be in single combat with the German Albatros, Spads alone couldn't win the war. A Spad is perfectly good in combat with another machine of its own type, but very little good for anything else. It cannot carry bombs. It is unsuitable for observation or photography.

It was discovered, further, that big bombing machines like the Handley-Page and the Caproni were too slow to use in broad daylight. Except at night they were an easy prey to faster machines and to anti-aircraft guns. They were built for night bombing and they were good for nothing else.

The De Haviland four, a two-seater general-purpose fighting machine, developed in England, was finally chosen as a compromise.

This machine can be used for fighting, for bombing, for reconnaissance. It carries four machine guns—two fixed guns in front of the pilot, geared to shoot through the propeller, and two mounted on a circular track which surrounds the ob-

to which it can fly.) Raring one or two experimental machines, the De Haviland four, with a Rolls-Royce motor of 375 horsepower, beat them all.

On an average of the three significant items of speed, climb, and ceiling the De Haviland was supreme. There is no reason why our version of the De Haviland with a Liberty motor, turning up at least fifty more horsepower than the Rolls-Royce, should not eventually surpass the English De Haviland in some slight degree. Indeed, I heard a tale of an Englishman, a member of the Royal Flying Corps, now in this country with a Rolls-motored De Haviland, who has so far avoided anything like a scratch race with the Liberty-motored De Haviland. On one occasion, the story goes, he started up alone. Eager American mechanics immediately rolled out the Liberty engine. It left the ground two minutes behind the Englishman and caught him at 10,000 feet.

They tell you at Dayton that the De Haviland with our motor will climb to 10,000 feet in seven and a half minutes. They will tell you that they have done it in seven minutes flat. But seven and a half minutes is nearly four times as fast as a German Rumpeler the British recently tested will climb.

Not that the Germans have no machines capable of 10,000 feet in less than half an hour. But in general they have gone in for slower machines than the Allies. They prefer the sturdy six-cylinder Mercedes motor, relatively moderate in power, but wonderfully reliable, and depend on getting up very high before they fight and then diving to get speed.

### How Fast Can We Turn Them Out?

JUST what account of themselves our De Havilands will give in single fights with smaller, quicker-turning machines may perhaps be left to trial. Orville Wright, who learned to fly in machines that would turn in a smaller circle than anything now in use on the western front, told me he would rather fight in a Spad than in a De Haviland on this account. But our present theory is that there will not be very much single-handed fighting for the De Havilands to do. That work is already pretty well taken care of by the Allies, who have been building and fighting single-seaters these four years.

We are buying some single-seaters abroad, and an order for some British S. E. 5 speed scouts, single-seaters, was recently given the Curtiss plant.

In addition, we have ordered 1,000 Handley-Page bombing machines and 1,000 Capronis. And there

How fast is he going? Your guess is as good as his

The ultimate check on our campaign in the air is space for landing fields

server's seat. Its one apparent weakness as a fighting machine is that it cannot maneuver as quickly as a single-seater of less wing spread.

It carries 250 pounds in its bomb racks. That sounds like very little after the figures for the Handley-Page and the Caproni. But these big machines require three or four motors to drive them and large crews to operate them. We can build three or four De Havilands to one Handley-Page or Caproni. It is probable that hour for hour, dollar for dollar, and man for man the De Havilands will do as much damage with bombs as either of the big machines.

The De Haviland is better suited to reconnaissance than any other type. It is big enough to photograph from. It carries a wireless set. And finally—it is fast.

I examined with a great deal of interest the tabulated information about airplanes furnished our Government by the Allies. There on a single sheet were the records of more than twenty machines—records, among others, of their speed at three air levels, their carrying capacity, their rate of climb, their ceiling. (The ceiling of an airplane is the altitude

are a number of experiments with other types under way, including the two-seater Bristol.

And it is the De Haviland which looks best of them all. But it is the De Haviland on which we are banking. How many are we going to build in the next ten months?

There are now four large factories equipped to build them: the Dayton-Wright Company, the Fisher Body Corporation at Detroit, the Curtiss Company at Buffalo, and the Standard at Elizabeth, N. J. There are other plants building airplanes, and numerous shops turning out parts, but the four plants mentioned are the ones counted on for quantity production of De Havilands. The Dayton-Wright Company, being at the fountainhead of information, achieved quantity production more than two months ago. On June 15 they were turning out twelve a day. Their schedule calls eventually for twenty-five or thirty a day.

The Fisher Brothers at Detroit were later in getting started, through no fault of their own. The Five Fishers build about 30 per cent of all the automobile bodies used in the (Continued on page 30)

# THE BRIBER

BY SAMUEL HOPKINS ADAMS

ILLUSTRATED BY ERNEST FINE

PEACE and the balm of tobacco smoke had descended gratefully upon the troubled atmosphere of Draft Board No. 5. A hard day's work was over. Every shirker, alinker, and dodger in the district, I was ready to believe, had chosen that particular day to come and present a plea for exemption, which we had no power to grant even had we the will. Our confidence in the human race had sunk to its lowest ebb. Even Roberts, our secretary, gentlest and most charitable of men, was embittered.

"It's a rotten world!" he sighed.

Martindale, our chairman, stooped to pick up a crumpled questionnaire upon which a disappointed lady with a borrowed infant had wrought her resentment, and, rising, threw open the window to the night air.

"There is a smell of brimstone in here," said he.

"Human anger is said to have a poisonous exhalation," I suggested. Half of our visitors to-day went away yearning to kill us."

"Unfeeling brutes, prejudiced idiots, crooked political tools," murmured Roberts retrospectively.

"Is that what they call you?" smiled Kelsey. Kelsey, as our medical examiner, did most of his work in his own office, but liked to drop in after hours and talk over the day's experiences. We always felt the better for his coming. Kelsey had that quality.

"Part, only part," the chairman answered him. "They think the rest."

"Oh, well, it might be worse. It might be true—as it is of our neighbors across the canal."

"The Ellen Street board?" queried Martindale. "I've heard rumors. Have they got the proof?"

The young physician nodded. "Graft thoroughly systematized. Slackers certified unfit for as low as fifty dollars. The whole political underworld is in it, on commission. It'll be in the newspapers to-morrow or next day."

"We'll be involved in the scandal, then," prophesied Roberts. "We're the Allen Street board; they're the Ellen Street board. Sure to be confused."

"That'll help Baynes's political ambitions," observed the chairman, smiling maliciously at me. "By the way, Ned, why maintain the attitude and expression of a fox terrier at the mouth of a phonograph?"

"I've been thinking I heard some one outside."

"Spy fever. Take his temperature, doctor." Nevertheless, all listened—and heard nothing.

"Why isn't it possible to handle crooked draft boards as spies?" inquired the usually mild Roberts savagely. "Stand 'em up against a wall and shoot 'em. Shooting's too good for that Ellen Street gang."

"How do we know?" said Kelsey. "Perhaps there are mitigating circumstances. I understand the first case they let off as a favor. It was easy. So when a case with money came along they took that on. And pretty soon it was a system. That type of man, the Ellen Street appointees, can't stand against temptation. How can you expect it? It's just a question of how strong the temptation is, as with all of us."

"Walpole talks of a man and his price," quoted Martindale lightly. "What's your price, Dick?"

This was a safe joke. The young physician was an idealist who carried his idealism in his face for all to see. It was the face of a young Savonarola, humanized by profound brooding, deep-set eyes, a face at which women wondered. Kelsey moved across the window, and leaned against the high sill, facing the door.

"How do I know?" he said thoughtfully. "Money wouldn't touch me. But, then, I don't need money. If I needed anything or craved anything very bitterly, as that poor devil of a doctor on the other board craved heroin—yes, he was a drug fiend—I suppose I'd adjust my conscience little by little, under the proper pressure. Better men than I have done it."

"But not your kind of man," said Roberts. "Every kind of man," insisted the other. "Look at it scientifically. Properly it's a problem in the theory of statics. Take the resistant tensile strength of a conscience as one element—"

"He's off," murmured the chairman, settling back comfortably. "Dr. Kelsey has the floor."

We all listened contentedly. For Kelsey, in his moments of philosophizing, is a bewildering thinker, but an inspired talker. And so he went on to prove (to his own intellectual satisfaction) the limits of honor, faith, and loyalty—he, to whom any man in that room would have intrusted his dearest possession without a qualm. All through it I had the uneasy sense of a presence outside, something unheard or heard only by the inner ear, waiting and imminent. It got too strong for me. I made a noiseless progress to the door and threw it open.

HE stood there, a splendid and pitiable figure. He was very tall, very fair, and of a powerful and athletic spareness. The face was boyish, clean-cut, and pleasant, but beneath the eyes, which twitched, were the gray hollows of sleeplessness. His long, powerful fingers were closed on the lapels of his coat for something to clutch. As the flood of light illumined him he jerked his head back like a man hard hit. His eyes blinked in the dazzle. I saw his throat work, his shoulders quiver, and thought he would have turned and run. Instead he marched into the room. Not walked, you understand, but marched as a man might march, at word of command, to a supreme test.

"How long have you been there?" I asked.

"Five minutes."

"Listening?"

"I couldn't hear much," he muttered.

"What do you want?"

He struggled for command over his voice against a sort of hysteria of panic and some other emotion which I should have guessed to be disgust if I could have accounted for it in him. "Is this the—" he began, and put his hand to his throat. In a moment he had better command of himself, and I interpreted what he said as: "Is this the Allen Street draft office?"

Of course what he had said was not "Allen" but "Ellen." In my startled astonishment at the

intrusion I had forgotten the likelihood of confusion. I said: "Yes."

"But we are not open for business," added the chairman.

"N-n-no. I sup—I understand," stammered the visitor. "Not regular business. But my—that the business that—that I came on. It—ian't regular business. It's—special."

"Who sent you here?" The question came from Dr. Kelsey in a curious tone.

"It was—I was to say that Big Ben recommended me."

Big Ben Kelleher was one of the more notorious of our petty bosses. The thing became clear to me instantly. Our visitor had been sent to the Ellen Street board to buy an exemption. True, he didn't look to be of that type, but his hollow eyes, his twitching hands, his quivering lips gave the dismal clue of cowardice. The man's spirit was out of control, his body hardly less so. I pushed a chair behind him, and he lapsed into it, dropped his head in his hands, and sat there, slouched and shaking.

Kelsey signaled to us, one after another: "Leave this to me," and, lest we should mistake the situation, he said to the boy: "You were to come to the Ellen Street [with a slight emphasis on the name] board and give Big Ben's name?"

"Yes."

"Is that all?"

The young giant rose slowly, thrust his right hand into his trousers pocket, clutched something there, hesitated, and looked up distrustfully at the physician. The query in his eyes changed as he studied the face before him, to astonishment, bewilderment, unbelief. His hand came out of his pocket empty.

"Who are you?" he asked shakenly.

"The medical examiner."

Still the boy—he was hardly more—eyed him doubtfully. "You don't look like the kind—"

"Neither do you."

"I'm not." The retort was swift and passionate.

"Could I speak to you alone? Isn't that an inner room?"

"Oh, we're all in this together," Kelsey assured him.

The tremulous visitor took courage. "I suppose so." His hand went back to his pocket and transferred a roll of yellow-lined bills to his waistcoat, slowly and with intention.

"I see that Big Ben has advised you," remarked the doctor quietly.

Up to the moment of the shameful and convincing revelation of the money I had hardly been able to believe in his errand. It was irreconcilable with his face; with that type of face. Cowardice may be the merest accident, but corruption! Hope had persisted within me that there was some redeeming error somewhere. But now—well, I couldn't look at him. My eyes were abashed as before some outrageous exposure. I experienced a sort of sickness when he proceeded to lay out his plan of escape.

"It's—it's my heart. I've got a weak heart."

"Naturally," assented the doctor.

"I suppose you have to make an examination."

"Quite superfluous."

"Then—?" He paused, uncertain, questioning.

"Go on."

"I don't know what—what more there is to say."

I made a noiseless progress to the door and threw it open

"Nothing further to say, certainly," replied Kelsey with significance.

There was a long, sick silence through which I could hear the boy's labored breathing. I felt rather than saw the blighting flame of dishonor on his face. Tense as was the moment, my mind was only half enlisted. An impalpable something outside claimed the other half. The hall was haunted again, but this time it was something more fervid, more vital, than the boy's fear which, a few moments earlier, had projected itself through what we fondly term a solid door. And this time Kelsey, too, felt the pulsation of it. I saw his stern gaze waver and grow vague and troubled, then return with an effort to our visitor.

Once more that prey to inner torments sought to explain, to palliate. "The insurance people said—I can show you—that is, if—"

"You're wasting time."

How he could have failed to be warned

by the depth of quiet contempt in the medical examiner's voice, I cannot conceive, except that his own terror and agony of spirit wholly obscured his perceptions. He plunged his hand into his pocket, brought it out clasping the rolled money, advanced to the table, and flattened out the roll.

"How much?" he asked.

"How much were you told to bring?"

"All I could afford."

"You're the one that's buying."

At the word an accession of spiritual nausea wrung him. "Buying!" he echoed. "Buying—that's what I am doing." He struggled with himself for a moment. "My God, I can't bargain over a thing like this!" he cried, his voice strained to a breaking edge. "Take it all. Only get through with me."

"Count it, Mr. Chairman," said the physician. Through Martindale's measured counting—"Fifty; a hundred; hundred and fifty-two," and up to the thousand—I felt and subtly knew that Kelsey was feeling even more intensely the potent urgency of that influence outside in the black hallway: a spirit, infinitely anxious, tender, and protective, striving, striving to obtrude itself into our grim council. To what end? To withhold the boy? To encourage him? To save him? I could not tell. I felt only wings impalpably beating upon the air in which our purposes met and closed.

"Twelve hundred dollars," said the chairman. "Is that right?"

"Right," gulped the boy.

"Right," repeated the physician briskly. "For and in consideration of one thousand two hundred dollars cash to be equally divided among the members of this board, we agree to falsify—ahem—doctor certain documents in the case of— What name, please?"

The boy strangled on the name. It was as pitiful as it was shameful.

"For a briber you have a curiously sensitive temperament," observed Kelsey.

At this he burst out: "You may be used to this damnable kind of thing. I suppose you are. But I can't—" He broke off into childlike appeal. "It isn't really bribery, gentlemen. Is it? At least if it is—what difference? It's only one case. One case can't do any harm. Can it? Particularly with a heart like mine. And—and I'm sure they'll never find out."

I COULD see Kelsey and the chairman and even gentle-hearted Roberts quickening to a deadly distrust, a wrenching desire to fall on him and drag him out and cleanse the room of his taint; and all the time that tormented, yearning thing outside was pleading in wordless agony: "Help him! Be kind to him! He's mine." Against it Kelsey was holding himself in a bewildered restraint. His voice shook a little as he said to the boy: "We must have the name, you know, to do business."

"Acton Boyd Severance."

"Age?"

"Twenty-one."

The catechism proceeded remorselessly. Between

answers he gaspingly sought to explain and exculpate. Broken fragments of it came to me while I struggled with the desire and against the profound and inexplicable dread of opening that door into the hallway—beyond which the spirit wrestled. He had made former attempts. Once in Pennsylvania he had thought it was all fixed. But a doctor had interfered at the last moment. So he babbled on, ashamed and shameful: "I heard of Big Ben. People said he could fix it. So I got a transfer out here. I didn't

She dropped a hand on his shoulder. "Why did you do it, Buddy?"

want to do it this way, God knows. But—well, what else could I do? If it hadn't been—heart—no use." And more that I didn't make out.

Then Kelsey's voice, after the confused, thickened utterance: "What was that about your brothers?"

"Both dead. Killed in the first six weeks. I'm the only one left."

So that explained, even palliated, his terror. Perhaps there was in it a sense of fatalism, the most difficult of all fear to conquer.

"You might almost make out a case—legitimately," observed Kelsey contemptuously. He took up the telephone receiver. "Hello. Main 2,181. Yes. Thank you. Hello. Endly there? Tell him to send a man up to the Allen Street draft board. Yes. Right away. Wait a minute. Might as well have him bring up a signed warrant: the name is A. B. Severance." He set the receiver down and faced Severance. "Now!" said he.

THE boy fell back a step, gasped, then straightened up. When he spoke it was in a different voice. "So you've trapped me."

"You've trapped yourself."

Severance nodded slowly and thoughtfully. "I see. At least I think I see. The graft game is played out. You want to make a showing, and you think I'm a good subject. You're wrong."

It was all very quiet. So is dynamite—until the action begins.

"No, I don't think I'm wrong," retorted Kelsey.

"You're wrong," the other repeated in that curiously still, obstinate voice, "because I'm going to kill you."

It was said with such calm that nobody moved except Kelsey, and his sole gesture was to raise his arm and point a long, unwavering finger at the young giant.

"No," he denied. "No. You will do nothing, because"—and here his voice rang clear and brutal—"because you are a slacker and a coward!"

I was conscious of an impulse to cry out in protest: not in behalf of the youth—he deserved it all—but because of that haunting, yearning presence in the darkness outside. Even at that moment, as I saw the Berserker rage twist and distort the young giant's features and knew that we might instantly be plunged in a deadly struggle—for his groping

hand had closed on a formidable oak chair behind him—my deeper senses were concerned with the other struggle and crisis; that one going on in the hallway. I half turned to the door. It opened.

She walked in, and the grim room was flooded with glory.

"Gwen!" cried the boy. "Go away. You promised—"

"Hush!" she said. She reached up and set a hand on his breast, pushing him back with a touch infinitely tender, infinitely maternal, setting her splendid and lovely presence between him and his judges.

"Who called my brother a coward?"

It was less a query than a challenge. I felt the imperious sweetness of her eyes on me; then saw her put first Roberts, then the chairman to the question. Last she turned to Kelsey. "It was you," she accused.

He made no reply in words. The color had left his cheeks. He stared at her like one dazed, and as he stared wonder and worship grew in his eyes. Under that look she flushed, but her regard never wavered. Her gaze held and absorbed his and was absorbed by it, as the currents of the wireless interweave and respond in the upper ether. So we saw the miracle born, between these two splendid and beautiful human creatures, he with the stern beauty of the medieval saint, she with the flam-

ing loveliness of a young goddess.

"You," she repeated, but now there was a catch in the clear voice. "Why?"

"Do you know why he came here?"

"Yes."

"You were a party to it?"

"Yes."

"I can't believe it!" he cried passionately.

"It's true, and I would do it again. A thousand times."

"But, my dear young lady," put in Roberts, fluttering like a scandalized sparrow. "The law!"

"I care nothing for the law," she retorted with the sovereign contempt of loveliness which is a law unto itself. "It's my brother I'm thinking of. Nothing else matters."

"Bribery matters," said the chairman weightily.

"Oh, bribery," she deprecated. Her forehead puckered. The chairman contemplated the roll of bills with a reprobating glance. She now noticed them for the first time. They appeared to give her a shock. "Money," she exclaimed. She turned to her brother for explanation. But Severance was like a stunned man. After that one threatening flash, he had succumbed and now sat huddled, his head in his hands, oblivious to his surroundings.

"Cash is the usual medium, I believe, in these negotiations," I explained politely.

"You say that you were a party to this," said the chairman. "Surely you knew that money was to be offered."

"If necessary," she admitted negligently.

ALL her attention, all her soul one might have said, was centered on the medical examiner. The rest of us might as well have been in another world. Indeed, I think we were in another world from that wherein those two breathed and moved—moved inevitably to each other! "But to you?" she queried with a quaint and lovely lift of the eyebrows. "He offered money to you?"

"He did."

"Oh, stupid!" With the words there flashed a dimpling smile. To gain any just notion of the effect of that smile in our surcharged atmosphere, you may try to imagine a thunderous sky opening wide to discharge, not a lightning bolt, but a rosebud. Instantly, by the potent charm (Continued on page 25)

#### "GEFANGENE"

Above is a remarkable photograph of the interior of a German prison camp, taken by one of the guards and given by him to a French prisoner. Later the prisoner escaped, taking the picture with him. In the foreground are French prisoners, while at the back is a double row of captured British soldiers.

#### FORE!

Many of England's golf courses have been converted into training grounds for British and American aviators. Here is a student airplane machine gunner "shooting from the first tee." On the fence in the distance two German airplanes are painted, and the gunner's task is to pepper them in vital spots.

# UNDER FIRE WITH THE YANKS

BY WILLIAM SLAVENS McNUTT

COLLIER'S SPECIAL CORRESPONDENT

"WE'RE about two-thirds of the way across now," the line lieutenant guiding us informed me casually.

I wasn't interested. I didn't know what he was talking about and I was occupied otherwise than in paying attention to his idle words. We had been trailing about after him for some time along a front-line position in the woods, through a bewildering confusion of underbrush, barbed-wire entanglements, pits, trenches, shell holes, dugouts, fallen timber, and more underbrush. If you want an approximate miniature of that particular front position, fill a big box half full of slag and mud. Add one alley tomcat and one strange bulldog, both well snarled up in several balls of yarn. Cram and brush on top of the ensuing activity a quantity of blackberry bramble. Pat on lid and let nature take its course for about fifteen minutes. At the end of that time add three or four small bombs properly to mess things up. After the smoke has cleared away have a look. You'll have a fair miniature of the ground plan of that front-line position. After some time we had come out into more open country where the going was easier.

It was much easier to go forward, also down, side-

one plays duckboard is a mixed-breed contrivance, by Washboard out of Corduroy Road, to use the racing vernacular. It is made up of narrow, slippery strips of rounded wood laid crosswise about two inches apart, and is supposed to keep one's feet out of the mud. It does! While playing duckboard one's feet are usually in the air. It is called duckboard, I suppose, because of some silly belief that a duck could walk it without falling. Even airplanes flying at a height of less than five thousand feet have been seen to wiggle and dip drunkenly while passing above trench lines floored with duckboard. And when it is laid upon the surface of the earth and there are no handy trench walls to help out—Well, it's lucky for Charlie Chaplin that the wide world didn't see me operate. Nothing could ever again be funny to a man who saw me play duckboard out there in the comparative open of that wood!

So I wasn't interested when the lieutenant informed us that we were about two-thirds of the way across. I knew that I was going to rack and ruin, but I didn't know where else and didn't care. I took it for granted that he meant we were two-thirds of the way across to some other front-line position or back toward a poste de secours. But a medical officer on his first trip up to that sector was more curious.

"No Man's Land," the lieutenant explained, stooping to pluck a flower growing at the edge of a shell hole.

Even an unexpected down-sitting upon a tangle of barbed wire failed to divert my interest from the lieutenant's statement.

"What?" said the medical officer. He just bent me to it. There must have been some telepathic force at work, for that's just what I meant to say.

"What?"

"You can get a good look at the German trenches from here," the lieutenant said, stepping up on a little hillock and standing with his head and shoul-

Starting across No Man's Land—life in one hand and grenades in the other

"Step right up here," the lieutenant invited us hospitably. "You can get a splendid view of the German trenches from here."

We stepped right up, and there, about, oh—well, I won't commit myself as to the distance, but plenty close enough—was the line of clay and sandbags marking the German trenches. I never was much interested in German products. Always, in fact, I have preferred the thing made in America. I took one peek at the German line and then looked elsewhere—eagerly. Believe me, I was patriotic right then. I didn't want to waste any eyesight in the German trenches; I wanted to see the American line.

"Where are, ah—now—our trenches?" I inquired. "Back over there."

## A Snappy Little Scrap

I LOOKED, off right and to the rear in the direction the lieutenant was pointing, and there about, oh—well, again I won't commit myself, but plenty far enough—were our front-line positions. Beautiful works of architecture! I wondered that I hadn't appreciated their loveliness when I was in them. I looked again at the lieutenant. He was a nice-looking boy, and I hoped fervently that nothing had happened seriously to embitter him. I would have been glad to be sure that no unfortunate love affair, say, had sent him to France, contemptuously careless of consequences.

"This wandering around in No Man's Land in daytime is a new one on me," declared the recently arrived medical officer, who had been serving with the British up the line where the country is flat and timberless.

"Can't they see us from the German lines?" I inquired—just casually. Being a correspondent, I wanted to get the straight of things.

"Oh," he replied, "I suppose they can—if they should happen to be looking this way."

"Well, er—what about snipers?"

I just wanted to know. A man can't get an intelligent idea of a situation unless he asks questions.

"Ah, they can't shoot!" the lieutenant assured me scornfully. "You're safe in giving them half a dozen cracks before you duck. It takes 'em that many to get the range."

He was a nice boy, that lieutenant. I wish him all the luck in the world. I think he'll probably need it.

Of course it was reasonably quiet along there just then. Only an occasional shell whined overhead. A considerable distance

off to the right a German sniper was pecking away, doing his day's work of attempting to dispatch some rash American. A couple of days later a German sniper started in to earn his salary almost opposite to where we then were. The Americans knew about where he was, but

(Continued on page 22)

If he saw his chum picked off by a sniper, he might understand it's a life-and-death matter

wise, and backward. There were shell holes to the left of me, shell holes to the right of me, barbed wire everywhere, and duckboard underfoot. That is, it was under my feet whenever my feet were under me. At other times the duckboard was under various other portions of my anatomy, while my feet waved erratically about in the spring breeze or fluttered from an entangling strand of viciously toothed wire, muddy signals of distress. Do you know what duckboard is? It's a kind of a game first played in a primitive and mild sort of fashion by the Rocky Mountain goats and since modernized and made difficult by the American army. The apparatus on which

When the German charge comes, "Bingo" goes this warning rocket

ders above a sheet of thin iron affixed there. I noticed—oh, just casually—that that sheet of iron was full of bullet holes. I also noticed that the underbrush, which had up to then seemed to be very, very dense, had suddenly thinned out. There was so little underbrush that I felt indecently naked.

"Oh! So you're the girl that I seen with McCord, eh? Well, what did he send you here for?"

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

CHAPTER SEVEN

THE BIGGEST GUN IN THE GAME

ILLUSTRATED BY F. R. GRUGER

SAM WHITNEY listened in amazement. "You say that your name is Kildare, Leila Kildare? You're at Earl Endicott's apartment? And you want me to come right over? Well, I'll do that little thing, Miss Kildare, this very minute. Right away."

He hung up the receiver, and started for his hat. He hesitated and turned back. Of course, a girl in Earl's apartment—well, she must be pretty chummy with Endicott to be there; and Endicott was a deuce of a good looking, and had a way with him; and the girl must be a nice girl, for Earl was a clean sort of chap, but still—a fresh collar and a neater tie doesn't mean that a man is trying to steal his friend's girl, does it? He grinned at his own round, pleasant face, and it grinned back at him from the mirror. Then he rushed out of his room and hailed a taxicab.

Fabian answered his ring at Endicott's University Place apartment.

"Somethin' gone wrong heah, Mist' Whitney," grumbled the old colored man. "Lawd, I neveh knows de like. Mist' Endicott comes rushin' home, aft' sayin' he's goneter stay at a hotel, and then he goes out, and a lady phones him, and then he comes back and the lady phones again, and then he goes out, and the lady comes—"

"Perhaps I can explain to Mr. Whitney," Leila's voice cut in quietly.

Abashed, Fabian withdrew, shuffling down the little hall, grumbling, though not ill-naturedly, to himself. A pampered servitor was Fabian.

Leila led Sam Whitney into the main room of Endicott's apartment, a room that was to be combination den, living room, and—if sundry boxes of chips and packs of cards were to be believed—poker room. "It seems quite odd, my being here, doesn't it?" she asked.

Whitney blushed. Leila liked him immensely at once.

"May I smoke, Miss Kildare?"

She nodded assent. Whitney did not get his eiga-

rette alight until the third match. Then he answered her question: "Well, you see, Miss Kildare, what with Earl getting me to ball up a man who'd been following him—first word I'd had with him in four months, too—and then when I phone here to have you answer the call—what's it all about, Miss Kildare?"

"You're a friend of Mr. Endicott?"

He eyed her. Suddenly he seemed more than the round-faced boy he looked.

"We've been in the Lafayette Escadrille together, Miss Kildare," he said simply. "Earl landed behind the German lines once to pick me up, after settling with the German plane that had brought me down. We came home together four months ago. I went to my home in Montana, and we haven't seen each other. Wrote him that I'd be in town, and—friends? I think so, Miss Kildare."

"And you'll help him—and me?"

"Of course."

She much preferred the terse answer to any prostration of friendship that he might have offered.

"What's it all about, Miss Kildare?"

It was the second time he had put the question, but once again she countered with another query. "You say he telephoned to have you stop some one following him?"

"Exactly. Told me where he was and described the man. Wouldn't explain any more. And I did it. He got away, and now—you're here."

This time he looked the question, and this time she answered it. Swiftly she told him all that had happened, and quietly Whitney listened.

"And he has a police record—this McCord? But, of course, that's proved by this photograph. It seems to me that the police—"

"And risk Mr. Endicott's life? But, don't you see, we can't do that. If he's to be helped, we must help him without the police knowing anything about it."

"What do you propose for us to do?" asked Whitney.

"They don't know you. I thought that you might go to the Charlton. You might, in some way, learn if Mr. Endicott is still there. Or if they have taken him away."

"And you?"

"I'm going to find out who sent this photograph to McCord."

"How?"

She shook her head despairingly. "I can only try various photographers, to see who made the copy. But we must do something."

"But this place—won't McCord know of it? Are you safe here?"

Leila rang the bell, summoning Fabian.

"Is this a new apartment or has Mr. Endicott lived here a long time, Fabian?" she asked.

The old colored man shook his head. "Ain't neveh lived yere at all, ma'am. He done give up his old place when he went to France, Miss Kildare. And him and Mist' Whitney too, I reckon, was pretty sick when they come home a few months ago. Both of 'em got kinda shot up, I reckon, Miss Kildare."

Leila looked at Whitney, who blushed.

"Anyway," Fabian went on, "Mist' Endicott went into the mountains with me, and a couple of weeks ago he sent me on to look up a place for him, and to git his things outa storage. I guess Mist' Whitney yere and the servants at his club are the only ones what knows this place."

"All right, Fabian, thank you," said the girl. She turned to Whitney. "McCord can hardly trace us here."

"Right enough," agreed Whitney. "And you—you'll stay here, Miss Kildare?"

"Why, I—" she paused, coloring.

"It's hardly the time to think of little conventions, Miss Kildare," Whitney reminded her.

"Of course not," she admitted. "I—if Fabian—"

But Whitney called in Fabian again. "You do whatever Miss Kildare asks you to do, Fabian," he commanded. "Mr. Endicott is in serious trouble, and—"

"I ain't deaf," said Fabian tartly. "I been hearin' a whole lot of what you two's been sayin'. And I'm askin' you, Mist' Whitney, are you goin' leave me outa all this? Wheah do I come in? I reckon, when you come right down to it, I been 'quainted with Mist' Endicott longer'n anyone else yere, and if you don't give me somethin' to do, I'm tellin' you, I'll go straight to the police station."

Even in the tensy of the moment, Leila smiled. Fabian saw the smile and walked over to her. His face was beseeching.

"I'm just an ol' niggeh, Miss Kildare, but I done love dat Mist' Earl like he was my own boy, and I'm askin' you, does you let me help?"

"Most certainly," said Leila. She was right about Endicott. Only a true man, a gentleman, could have won a servant's heart so completely. "You go to the Birmingham, Fabian. You pretend that you're looking for work. You want to be body servant to an elderly invalid. Inquire among the porters."

"I know, Miss Kildare. That McCord man you speak of is sick and old—I gotcha, Miss Kildare."

"Find out where his trunks were sent—if they were sent anywhere. Get his address."

"And if I does, I got a old army gun that—"

But Leila quelled his rising enthusiasm. "Never mind that, Fabian. Come back and report to Mr. Whitney or myself."

"Yes'm, Miss Kildare. And I'll go right now."

He shuffled out. Whitney hesitated a moment.

"You're quite certain, Miss Kildare, about what they'd do to Earl if they thought the police knew?"

"Do you think I'd take any risk at all—for Mr. Endicott—that was not justified?" she demanded.

"Oh, Lord," breathed Whitney to himself. "If I could get a girl to look like that when she mentioned me! But she'd have to look like *that*!" Ambiguous, but Whitney knew what he meant. Aloud he said: "I'm trusting you, Miss Kildare. Do we go together?"

She assented. But at Fourteenth Street they parted, he to board the subway uptown, and she to take a surface car to Madison Square.

THE envelope containing the photograph of Curzon McCord had been postmarked Madison Square. The person who had mailed it might live in Brooklyn, but it was her only chance.

She began on Fourth Avenue. She ended on

Thirty-first Street, between Lexington and Third Avenues, just as the photographer, whose name was Lowell, was closing for the evening. She was really in despair. At least twenty photographers, shown the picture of Curzon McCord in prison garb, had professed no knowledge of the matter. But this man, the twenty-first, recognized, Leila could tell by his manner, the picture.

"What's the idea?" was his first question.

"I wanted to find out who engaged you to make this copy," said Leila.

"I ain't said I made it, have I?" rejoined the man surlily.

"No, but—" All the money she possessed in the world was in Leila's pocketbook now. She showed the photographer a yellow bill. His manner became less surlily.

"What's the idea?" he asked again, but more gently.

"Does it matter? Did it matter to you when you were asked to make the copy?" she inquired.

"Fair enough," he grinned.

"And I'm offering you more than you received for making it," she told him.

"Do I get that twenty?"

She nodded.

"Man by the name of Breen. Lives on Third Avenue." He went to a desk and in a book looked up the exact address, which he gave to her. "Mind, this ain't regular, but—" He eyed greedily the twenty-dollar bill in her hand. He was not a very successful man. Twenty dollars was a lot of money.

But never had twenty dollars purchased so much for Leila, she felt. It might lead to nothing. The man who had sent the message to McCord might refuse to talk, but she was on the right road, anyway.

A NARROW, steep, dirty flight of stairs, wedged in between a shabby tobacconist's and a pool room, confronted Leila as she reached the address given her by the photographer. She cast a glance up and down the street. To be sure, a policeman was standing on the nearest corner, but there was no certainty that he would hear her cry, if cry she did. But she shrugged her shoulders and stepped through the door. The police could not help her, anyway.

There were letter boxes in the hall. Over one of them was the name of Samuel Breen. Leila mounted the stairs. A slatternly woman, a baby in her arms, was just emerging from a door on the first landing.

"Mr. Breen?" she echoed Leila's request. She looked curiously at the daintily dressed girl. "Next floor, in back."

Leila could feel the woman's eyes following her up the stairs. It was a strange place for her to be; a far cry from Gallipolia, this dingy tenement that seemed to speak aloud of poverty, of vice even. It took courage for her to knock upon the door that was Breen's, but—and she smiled to herself—what she had been risking all this day had needed courage too. She knocked, and a hoarse voice bade her enter. There was no hall. She found herself in a dirty kitchen. A stove, on which a kettle simmered, was on one side of the room, and on the other was a cot. On it, fully clothed, lay a man.

"Mr. Breen?" queried Leila.

The man sat up. He rose and turned higher the lamp that had been low. He bent over, peering at the girl.

"Oh! So you're the girl that I seen with McCord, eh? Well, what did he send you here for? And how did he find out I was here? Did he send any money? Or did he send you to beg him off? Fine chance he has. Me here, half dead with T. B., and him livin' like a lord at the Birmingham!"

Suddenly Leila was unafraid. Consumptive, the man said he was. His figure shook, not with anger, but with physical weakness, as he stood. She, a girl, could overpower him with ease.

"Sit down, Mr. Breen," she said. "I want to talk to you."

"McCord sent you, did he? Well, did he send money? Am I declared in?"

"Declared in on what?"

"He knows, all right."

"Do you?" she asked innocently.

"What difference does it make whether I do or not? No; I don't know just what he's planning now."

The girl's heart seemed to stop beating. She had been so near, it seemed, to discovery of McCord's plans. And that would have meant discovery of McCord's hiding place—that he must have. But this—this man had meant merely blackmail based on McCord's record, and that—But anything might help.

"Listen, Mr. Breen," she said. "I'm not a friend of Mr. McCord, as you think, I don't come from him. But if you can tell me anything about him, I'll pay you."

"What?" he sneered. "Ten dollars? I want a lot of money. And I can make McCord give it to me."

"Can you? Do you know where he is?"

"At his hotel, isn't he?"

She shook her head. "I doubt it very much, Mr. Breen. Listen: There is a policeman at the corner. Unless you tell me all that you know about McCord, I'm going to fetch that policeman here."

Bold in his written threats Breen might have been, but facing anyone, even a girl, he was a broken-down, feeble old man, without courage, either moral or physical.

"You got me where you want me, miss," he said.

"But don't I get nothin' at all?"

"I'll pay you what your information is worth," she promised. "What do you know?"

Breen drew a long breath. His rat's brain urged him to leap at the girl, strike her down, but his rat's heart failed him.

"Me and McCord done time together twenty years ago," he said. "I was a trusty, and just when I was discharged I managed to cop me own photo. I didn't want it hangin' round to identify me, maybe, years later. And next to mine was McCord's. He was a slick guy. Not a yeggman like me, but a con man. And I take his too, thinkin' maybe it'll come in handy some day."

"Well, I ain't been very lucky these last twenty years. I come out, about a year ago, from 'stir.' I've lost me health and everything, and I'm just panhandlin' for enough to eat. And then, one day, I brace a swell gent in front of the Birmingham. So help me, if it ain't me old pal McCord. Though he wasn't known as McCord, then. He turns me down, and pretendin' I'm bawlin' him out, I follows him into the hotel. They throw me out, but I learn what they call him—McCord."

"So I gives Mister McCord a ring on the phone. I tells him I'm hep, and want to be declared in for a chunk of change. He gives me the laugh, and says I'm crazy. So I am—like a fox. Twenty years I'd carried his photo around, like I was his sweetheart. Well, I'd had a straight bunch years ago. I always knew this guy, McCord, would amount to something, and might come in handy for an old pal to know. So I has his photo copied, and I send it to him, thinkin' to ring him up in a day or so—and you say he's gone from the Birmingham!"

She nodded, intent on his story. "Go on," she said. "Why were you so sure that he'd give you money just because you knew his old record? If he had reformed—"

"Reformed? Say, ain't I seen you with him? Reformed? Quit your kiddin'. As if you didn't

know who he really is: the guy that the police of six countries has been lookin' for, the biggest gun in the game, Harmon Rayde!"

She stared at the wizened face of the tubercular old ex-convict. Harmon Rayde! The fabulous personage that very few people believed had any existence! The international crook who had been mentioned as go-between in the recent exposures of Teuton plotting in this country! And she had lived with this man, had called him uncle, had heard his voice say endearing things to her!

"But the police—the Secret Service—" Her own voice was far away as she spoke.

"Them guy's don't know nothin'. They know there's a guy named Harmon Rayde. That's all they know. But us guns, what stick together, we follow people's careers, even if they don't ever mix with us no more. They know Harmon Rayde has a record, but they ain't a photo of him nowhere, except the one I got. How can they pinch him if they don't know what he looks like? The crook! He's worse than that. He's been sellin' out his own country."

"And yet you wanted money from him?"

Beneath her scorn the ex-convict lowered his eyes.

"Lady, it ain't pleasant starvin'—and ailing too. If I had a chance—"

"I'll give it to you if you'll help me find Rayde."

Breen looked about his dingy quarters. For all his cowardice, his rottenness, he had a streak of humor.

"Well, let's be movin', then, lady. He ain't here."

### Chapter VIII: Woolgathering

FABIAN'S parents had been slaves. They had been two generations removed from the jungle. Fabian, then, should have been but ninety years, morally and mentally, from the mid-African swamps. In reality he was nine hundred years removed from his great-great-grandfather. For he was able to take orders, to obey, and that is the great secret of civilization.

His impulse was to go to the nearest policeman. But Miss Kildare had given him his orders, and those orders were not to be questioned by him. Deeply as he loved his master, galling as it was to his loyal old soul to do anything but the direct thing, he did the indirect thing. He went to the Hotel Birmingham.

At the hotel office he was brusquely directed to a steward, who informed him that the Birmingham was in no need of help at the moment, and that the hotel never recommended (Continued on page 27)

"Somethin' gone wrong heah, Mist' Whitney," grumbled the old colored man. "Lawd, I nereh knows de like!"

## The Fifth Year

**M**ERELY to sum up the strategic record of four years of a world war would call for the contents of several times the present page. And if we take strategy in the new sense enforced upon us by the experiences of four years, the strategy of nations rather than of armies, the strategy of endurance rather than of accomplishment, any adequate summation must be in terms of volumes rather than of pages.

Yet the temptation to put a cosmos into a nutshell is not to be resisted. If there must be an answer to the question, How does the war stand after four years of titanic effort on both sides? then the answer, in the very broadest generalization, would be that the military situation at the beginning of the fifth August is very much what it was at the beginning of the first August. Another BERNHARDI, writing of coming events as the original BERNHARDI wrote of the war which began in 1914, would recognize the similarity.

How did the German military leaders visualize their task when they forced the great conflict upon humanity? They prepared for a war upon two fronts—west against France, east against Russia, with a swift decision against the former followed by an automatic reckoning with the Slavs. And even when the schedule was upset the fundamental problem was the same, except that the first decision was to come against the Slavs—it has been attained—and then a slower but automatically certain reckoning with the enemy on the western front. This certain victory, the German people are now being told, is about to be liquidated.

But actually the war to-day is for Germany still a war upon two fronts. The Kaiser, to attain his ends, must still look to the west and to the east, only under a much more extensive horizon. For the western front has now stretched out to America, and the eastern front, if the necessity arises for the Allies, will stretch out to Japan. This is to leave out of account, for the sake of the picture, several million Franco-British in the west and possibilities in Russia: possibilities of to-day, formidable probabilities of six months from now.

Germany has pleaded as justification for her murderous assault upon humanity her isolation within a circle of enemies. Whether that circle of enemies was a real one four years ago, history will show. To-day the circle is real enough on a greater radius. Germany has still a Far West and a Far East to conquer. But with this difference as against four years ago: Then Germany faced west and east as fresh as her enemies, and much better prepared. To-day a Germany thin-drawn by four years of war must face a west and an east, America and Japan, whom the hand of war has as yet only brushed.

## From One of the Kaiser's Reporters

**G**EORG BARTHELME used to represent the "Cologne Gazette" at Washington. He was, we believe, shipped home at the same time as BERNSTORFF. Nowadays he is writing his reminiscences about America for the home paper, and has got as far as the seventeenth article. Here is a sample:

Will it still be possible to make the United States into a really independent American state? I do not know. Many of my German friends thought it possible; . . . one can only draw conclusions of which the premises lie in history and experience. These premises display Germanism in America not as hammer, but as anvil; they show that Germanism has been, not a bringer of Kultur, but a fertilizer; they say that Germanism may have a past, but has no future.

Never were truer words. There are some things in Herr BARTHELME'S articles that we do not find equally true, but we believe in giving him credit when he does hit the nail on the head. This sturdy German ex-propagandist in America ought to be capable of giving the German Emperor excellent private advice if he can report the facts so clearly in a newspaper article intended for mere burghers of Köln.

## Why?

**W**HAT'S the justification for the 20 per cent tax on all new works of art, proposed in the revenue bill? We see that the moving-picture people have been declared to be engaged in a "productive industry." Why has Congress a grudge against our painters and sculptors—who never were overpaid and who have certainly "come across" in propaganda art and in actual fighting, since April, 1917? We wish some one better informed than we would answer these questions—for certainly a 20 per cent tax on art is not going to help much toward winning the world war.

July 27, 1918

## One of Our Best

**JOHN PURROY MITCHEL** was grandson of the exiled Irish editor-revolutionist of the same first and last names, and son of a captain of the Confederacy. He won his spurs by uncovering and fighting bad city government. He succeeded GAYNOR—most picturesque of all New York's burgomasters and the supreme letter writer among all mayors anywhere—and at thirty-five himself became the best as well as the youngest of that city's chief executives. MITCHEL was defeated for reelection last fall in spite of all his services; not partisan prejudice alone, and soiled spoilsmanship, and organized little-mindedness defeated him, but also the hatred and untruth of that section of the New York press which seemed disloyal to the nation. Without the cant and pretenses of the "typical reformer," MITCHEL enjoyed life; was a liberal interpreter of the city's pettier laws; frankly enjoyed ice skating and the one-step, and rifle shooting at his camp in the hills. MITCHEL gave the greatest city in America a businesslike administration wherein experts (i. e., the best men he could find) played a prominent rôle; but to expertness was added common sense; nothing grimly academic about MITCHEL, in spite of Columbia University! JOHN MITCHEL believed in the justice and necessity of our war against Germany; he fitted himself at Plattsburg for an officership even while he was still mayor; later he made his convictions good by going into the most dangerous and most attractive branch of the army—service in the air. It was a soldier's death that MITCHEL died, early this month, on a flying field in Louisiana, and who shall say that that death does not crown a career which every American, and especially every American of the Irish breed, may envy him? MITCHEL rose to real heights; and now he is above the sneers of cynics and copperheads. The fall of the aviator in his country's service crushed his machine and broke the body of the man who administered his city wisely through years of crisis; but the inspiration of the public servant whose patriotism was of the act no less than of the word is proved to-day. Our world should be worthier of such a man.

## The A. E. F.

**T**HAT first million of Americans whose presence in France is now announced constitutes a small army as armies go nowadays. But it should prove one of the finest armies of its size the world has ever known. The average physique of its members is very high—much higher than any other nation could now produce. The officers who command it are new, but they have nothing to unlearn; and, chosen from our best, as they were, they should make up for their newness by their capacity for learning and doing. Finally, this army's equipment is as good as the best. We were slow about getting that equipment together. We stopped to debate the precise details of adapting the British rifle to our cartridge. We decided to wait for the Browning machine guns rather than manufacture immediately something inferior. And, of course, we spent money as no nation ever spent money before. We rushed our cantonments to completion under cost plus; we paid four prices for artillery bridles, and three prices for many another item. But we got the cantonments; we got the vast stores we needed, and we got the rifles. No soldiers in Europe have better guns or gas masks or grub.

## Battle Planes

**A**ND speaking of equipment—it begins to look as if the De Havilland battle planes with the Liberty motors were the equal of any machine on the western front. Much ink has been spilled over the Liberty motor—as if a motor were the only question up. We know now that we had no real choice between copying a foreign motor and developing one of our own. There was no foreign motor adapted to American quantity production. We had to trust to Yankee ingenuity to design a machine that would do the work and that could be manufactured of our materials in our shops. It is gratifying to know that we did not trust in vain. But if it took courage to go in for the Liberty motor, it took something more to decide on a plane. The experience of the military commission that went abroad to learn which plane we ought to build—see Mr. CARY'S article on battle planes in this issue—is amusing proof that salesmanship is not an American monopoly. Our allies sold that commission three different kinds of airplane in less than three months. But the commission came home, and out of the argument that followed emerged the De Havilland.

# Editorials

## Dead Men's Shoes

THE newspapers say that one Justizrat OTTO FEIG, a leading lawyer of Berlin (near Potsdam), is urging the immediate passage of a law by which all garments of deceased persons will be turned over to the Government for distribution among those who need them more. Now, as Admiral DEWEY used to say, clothing is but the outward and visible indication of an inward and spiritual state, and OTTO ought to consider whether the kaiserites are capable of administering the trust which his act would repose in them. Every State, being the inheritor and guardian of the nation's best achievement, has a task of the sort described, and it concerns commodities much more important than clothing. Honor, justice, liberty, and enlightenment are all from the past. Ordered civilization inherits these blessings from dead men and transmits them through the living to generations yet to come. The vice of the German Government for over thirty years has consisted in its skillful and wicked foisting of shoddy substitutes upon the German people. The world vision of GOETHE became a myopic fanaticism for Deutschtum; the love of Fatherland which LIST and his comrades taught was turned to a servile adoration of the HOHENZOLLERNS; the search for truth in which German science played a noble part was degraded to an eager scavenging for whatever villainy would serve the Kaiser's program of conquest; the patriotism of STEIN and HARDENBERG lives again as the Crown Prince's pinchbeck imitation of the Napoleonism which these men fought to overthrow. Germany's present rulers are in no way fitted to distribute the goods which the past confers.

## Rimes and Men

IN war days it is the part of the poet to glorify reality. We Americans have had much to say over here as to how we feel about France and the French, but the more important thing is the feeling that our men in France have on that subject. Any failure of soldierly comradeship because of differences in habit and language might have serious consequences. So we were rejoiced recently to get a copy of "The Spiker," a rampant journal published by the Eighteenth Railway Engineers, an aggregation of imperfectly domesticated citizens from Oregon, Washington, and California, which has been in France the better part of a year. "The Spiker" printed some prophetic verses a month or so before our boys began helping blunt that German wedge along the Marne. And this is how "The Spiker" addressed his French confrère:

If I could talk your lingo, I would tell you how I feel  
As regards this little mix-up over here.  
I would say I'm at your service from my hat cord to my heel,  
And I'll prove it ere the finish of the year.

Now, I don't know how to "parlez," but the folks all say I'm game  
When I'm called to face the music in the fight;  
And my trigger finger's limber and my spade arm is the same—  
I can pitch the slag and gravel out of sight.

If it's fighting or plain mucking, I will do my level best,  
For I'm doin' it for Texas, Maine, and Cal.,  
And France and Jersey City, San Francisco and the rest.  
So here's my hand; Kid Poilu, you're some pal!

July 27

## When France Fought All Europe

A SPY in the British service under the Reign of Terror rashly kept a diary. A century later it was published, and we are struck by the likeness of many of the facts noted of Paris in 1794 by this man who signed himself "RAOUL HESDIN," and contemporary facts about the war countries: bread tickets, meat shortage, hymns of hate, etc., etc. These times are not so different from our great-great-grandfathers', after all. Visiting Meudon, in the suburbs of Paris, "V—— had heard," notes the spy, "that there is maintained there a laboratory for all sorts of experiments in the manufacture of munitions of war; there are to be flying machines to cast shells into besieged towns, and the like. I neither accept nor reject such stories entirely." The difficulty in war science is, obviously, less to imagine a device than to conquer its technical difficulties. In 1794 there was talk of the airman COUTELLE crossing the Channel in his big balloon and doing dire things to the island enemy—no novelty, the air raiders of 1918! It was these same wars of France's first republic which saw the initial application of the "signal telegraph"—what HESDIN quaintly calls the "Aerial Telegraphes of the Messieurs Chapp." Is it chiefly in the more liberal application of war's cruelties to civilians that this conflict transcends its forerunners?

## Because We're Right

THE righteousness of the cause in which America is enlisted finds confirmation in the unlikely places. Thus the Socialist party's perpetual candidate for president gets up and declares, in effect: "Now I'm violating the Sedition Act. Just watch me and pinch me!" and, when prosecuted for just that, pleads "Not guilty!" Professional "radicals" naturally resent the rampant intolerance which goes with the war spirit of a country as big and unwieldy as ours—but when they think it over soberly, they find it pretty hard to line up definitely on the wrong side in this

war, in spite of little-mindedness. That's why the war is so slow in developing bona-fide martyrs. Our war is such a just one that it will be the fault of the Propagandists and the Prosecutors almost as much as that of the congenital hotheads if any real martyrs to pacifism are developed.

## The Gleam

PHILIP GIBBS, whose war dispatches seem to many of us the best now appearing in any daily newspapers, wrote a book about the war, back in 1915, and in it the sentence:

If, as some students of life hold, war will always happen because life itself is a continual warfare, then there is no hope—all the dreams of poets and the sacrifices of scientists are utterly vain and foolish, and pious men should pray God to touch this planet with a star and end the folly of it.

A cynic might say, isn't He, perhaps, doing just that? But the rest of us know that there must be a world after the war too. And for the sake of that New World we must keep untarnished some of the ideals we are fighting for; we must not lose sight of all the contrasts we used to note between the German mentality and method and the mind and method of France, or Britain, or our own country. If, as French citizens proudly proclaimed in its opening year, this is a war against war, let us not forget it.

July 27, 1918

## A LETTER FROM FRANCE

(From a La Grange, Illinois, boy, to his mother back home)

DEAR MOTHER: Gosh! I sure was glad to get the batch of mail that's just come. It makes me feel so darned glad that I'm over here that I wouldn't trade my place for anything.

And let me tell you right here, mother dear, that you or anybody else at home doesn't know what real patriotism, real love of country, is. You haven't any idea. Why, you can't imagine what a great, wonderful country the old United States is. You can't realize what she stands for and means to the human race until you get a good perspective.

When I am standing retreat at night and hear "The Star-Spangled Banner" played the first thing that comes to my mind is the Statue of Liberty; then our wonderful cities, New York, Chicago, San Francisco; then Washington and President Wilson and the wonderful cause that all our millions of Americans are willing to give up everything for. Mother, we're lucky merely to have been born Americans. Talk about waves up your spine! It's enough just to get over here in Europe and look back over miles of water at the biggest type of nation, based on liberty and justice, that can be conceived. Why, mother, that Statue of Liberty and the American flag stand for EVERYTHING that is worth while in life.

Since I've got over here I feel more pty than anything else for the birds that are still at home sporting silk shirts. I'd rather be hanged for murder than be in their shoes. I figure that I'm the luckiest fellow in the world to be able to stand up as a soldier here in France and be a part of the greatest country engaged in the most honorable thing a country ever undertook. We have all waked up to what the words "United States of America" mean.

End of speech for tonight!

Lots of love,

DICK

**WHOA, FAN!**

*The life of a cavalry horse trainer is just one round of pleasure*

# FROM BASEBALL TO BOCHES

BY H. C. WITWER—NINTH INNING

ILLUSTRATED BY F. R. GRUGER AND ARTHUR WILLIAM BROWN

## VIVELA, FRANCE.

DEAR JOE: Well, Joe, you perfectly priceless old thing, as we remark in Piccadilly Circus, I have been to sweet old London and, believe me, Joe, it is some burg! For one thing, it's the first flag station I ever been in where I didn't feel like I was the original Stephen X. Wiseguy and everybody else was hicks, on account of me comin' from New York. They is more people in this London place than they is pennies in the U. S. Mint, and, speakin' of hustle, up to five o'clock in the afternoon London would make Manhattan look like Succotash Crossing, Iowa, in the midst of a rainy Sunday. From five o'clock on, Joe, it works the other way. Don't get the idea from this that I have gone to work and tossed my Broadway citizenship to the winds and turned English, Joe, because such is not the case. I would rather be a ash can, especially one of them trick new ones, on Broadway, than be undisputed emperor of any country in the world!

We got off this here boat which brung us across the Channel at a certain well-known English port. I can't tell you the name of it, Joe, on account of them censors, which crosses out every seventh word in a guy's letter on general principles and then throws stove polish over the rest of it for luck. I will say, though, that the place we landed at wasn't either Denver or Memphis, if that'll help you to guess it. Me and my charmin' bride, Jeanne, had no more trouble gettin' off this boat and through the English customs guys, spy hounds, and passport pests than a German band would have gettin' booked in Paris. Everybody on the dock looked over our papers once except the porter which carried our baggage to the train. He looked at 'em twice.

We fin'ly got on the train and arrived in London without bein' torpedoed or nothin', landin' at a place called Waterloo Station. Joe, you don't get no check for your baggage in England, and when the train pulls into the station a guy has got to hop off, pry open the door of the baggage car, and dig out his own trunks and the like. They is generally a hundred or more trunks all piled on top of each other, and I have found out they is one sure system of tellin' at a glance which is yours. It's always the one on the bottom, Joe.

Well, Joe, I fin'ly got out our trunks and, leavin' Jeanne in charge of the same, I went outside to try my luck at grabbin' a cab. Joe, the taxis here has all been drafted from the toy department of Wana-maker's, or the like, and they look like somethin'

little Jimmy made with his trick buildin' blocks which was give him for Xmas. The bodies is smaller than a cent's worth of gold dust, and the wheels look like a set of washers for the sink. They was two of them standin' together at the curb. One of them was drove by a dame that would make Jess Willard jump outa the ring, and the other was in charge of a old guy which had sworn a oath at birth never to darken a barber's door or lay hands on a razor, come what may. I tossed up a coin and fortune gimme the old guy.

"What's the best hotel in London, for all you know?" I says to him.

"Well," he says, takin' a squint at the sergeant's stripes on my sleeve and salutin'—"Well, major, I should sigh it was a matter of taste, thank you! Neither the Savoy or the Carlton 'as been 'it yet and—"

"Wait!" I butts in. "What d'ye mean they ain't been 'it yet?"

"Why, sir, thank you!" he says, "The 'Uns 'ave been a bit active of late. We 'ave our air raids quite regular now, sir, quite regular—thank you!"

With that, Joe, he rubs his hands together and grins, like gettin' bombed by a flock of German areyoplanes was London's idea of havin' a good time!

"How much are you gonna try and get to take me and my wife to this Savoy place?" I says.

"Two and six, colonel," he says. "Thank you!"

"What d'ye mean?" I asks. "Two bucks for me and six for the wife?"

He give a laugh like a maniac, Joe.

"Ow, no, sir!" he says. "Two shillings and sixpence for both, captain. Shall I fetch your luggage—thank you?"

"Yeh," I says. "You're welcome."

"Thank you!" he says.

I quit, Joe.

Well, we fin'ly get in this taxi, and we're off for the Savoy Hotel. We went through Piccadilly Circus, Joe, and I must say that Barnum & Bailey's got a better one. But I never seen so much traffic in my life and without nobody regulatin' it. Instead of turnin' to the right all the time, you turn to the left, and if you get tired of drivin' on one side of the street you simply cross over to the other, no matter how crowded it is or which way traffic is movin'. The sidewalks is so jammed with people, Joe, that they is enough walkin' along in the middle of the streets to elect Billy Sunday president of the bartenders' union, if they all voted the one way. The speed limit is higher than the price of ice-cream sodas in Hades, and the motors in these cars is all built so's they got to run about ninety-four miles a hour before they get turnin' over properly. With all of this, Joe, they is hardly anybody gets run over here, particularly if they stay indoors.

JOE, naturally on account of the war, they is a few things in London and Paris which they are shy of right now. But they is one necessity which has failed to become exhausted to date over here. That is—girls! I thought they was more in Paris than they is water in the Atlantic Ocean, but London's got Paris tied to the flagpole when it comes to dames! These here English queens is knock-outs too, Joe, and they ain't none of them would have to starve to death on account of not knowin' bookkeepin', or nothin', believe me! All I seen could make the front row of any chorus on Broadway the day they got off the boat. They all got complexions like the dames on the massage cream cans would like to have and more curves than a scenic railway. Joe, nearly every one of them is as big as a dollar's worth of boiled rice, not fat but husky, and they have pitched in and took all the jobs over here while the men is away assassinatin' the Germans. They do everything in Eng-

land from tendin' bar to runnin' munition plants, and them lords and dukes which didn't want to give them the vote before this brawl started is willin' to give them anything they want now, outside of livin' wages.

Well, Joe, we fin'ly arrived at the Savoy Hotel, which is a swell-lookin' joint at that, bein' a cross between Rector's and the Fifth Avenue Library from the outside. I paid off our darin' chauffeur, slippin' him a shillin' for himself and family, and he wished me all the luck in the world. He didn't say good or bad, Joe.

IMMEDIATELY on gettin' out of the cab a gang of Iguys which had ducked the draft comes runnin' outa the hotel and swoops down on us. They was all dressed like the ambassador from Flatbush or somethin', Joe, with enough gold lace and gewgaws on 'em to outfit the Knights of Pythias or Sousa's Band for a year. They turned out to be nothin' less than bell boys, the youngest of which was a gay old dog when Adam and Eve left the Garden of Eden for a elevator apartment house. I seen right away they was a lot of tip hounds, and I beat 'em to it by carryin' in my own baggage. Not that I'm tight across the chest, Joe; you know I always been as loose as ashes with my dough. But on this here trip I'm carryin' a set of nonrefillable pockets as far as money is concerned, and once they was empty I was through.

The minute I get to the desk the clerk gimme a thing to fill out that looked like a application for a job as chauffeur on a submarine. About the only thing this paper didn't want to know was how my mother first come to meet my father. It might have asked this bit of information at that—I didn't look at the back of it, Joe. Then the clerk says I gotta report to the police station the first chance I get.

"What for?" I says. "Is the Queen's necklace missin' or has somebody been knockin' me?"

"I 'aven't 'eard, I'm suah," says this guy, with a deliberate yawn. "All aliens must register with the authorities. It's the law, thank you."

"I ain't no alien; I'm an American, you boob!" I says.

"Quite so, thank you," he says. "Therefore you're an alien."

Joe, I'm all set to let him have one on the chin when the head clerk butts in and tells him that a soldier don't have to register with the police and to lay off of me. Then he says what do I wish for.

"I come in this hotel to get fitted for a pair of ice skates," I says, very sarcastical, Joe, because I'm gettin' sore. "You didn't think I wanted a room, did you?"

"Quite so, thank you!" he says. "You require a bath, I fancy?"

"Do I look as dirty as that?" I says.

"Beg pawdon?" he says.

"How do you know whether I need a bath or not, hey?" I hollers. Joe, I was enraged. "They ain't a mornin' goes by that I don't frolic under the cold shower, you big stiff!"

Joe, just then they was somebody gimme a wallop on the back, and I swung around to face no less than Shorty Nevins, which used to hang out with the rest of them pinorhile hounds in McGregor's in Lenox Avenue. He's a corporal in the artillery now, Joe; can you imagine that?

"Well, well, well!" I yells. "What are you doin' over here, Shorty?"

"You heard tell of the draft, didn't you?" he says. "Who's that swell-lookin' dame standin' there lookin' at you?"

"That's my wife," I says, throwin' out my chest a couple of yards.

Shorty grins and lays his hand on my shoulder. "Ed," he says, "you wanna cut out the booze! You know you never could handle it and—"

"D'ye think I'm lyin' to you?" I butts in.

"You could make a fortune as a mind reader," he says, "if only you tried your hand at it."

With that I called over Jeanne and introduced 'em. "I am verree glad to meet you of a certain!" purs Jeanne, pullin' her million-dollar smile.

"You ain't got nothin' on me!" says Shorty, lookin' like he was in a trance and turnin' the national colors. "I'm tickled silly myself. How did you come to fall for this guy?"

"What do you care?" I says.

"Lemme alone!" says Shorty. "I got a right to

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

In order to eliminate any confusion in the minds of readers that Collier's is eventually planning to prove the "Business as Usual" theory, we take the liberty of stating our position frankly: Business cannot be as usual due to the shortage of Man Power. These pages will voice the simplest truths of the position advertising holds in saving man power and eliminating lost motion.

## The Psychology of a Clean Shave

**T**HERE are many things that enter so intimately into the routine of our daily lives that we never give them a passing thought. Their significance, no matter how vital, is overlooked. Shaving, for instance.

And yet shaving as it is practiced in America to-day marks a step forward in civilization.

This statement may sound ridiculous, but it isn't. Here's proof: Each of our soldiers who goes abroad now takes as part of his regular equipment, and by order of his government, a safety razor.

There are two reasons, the military authorities say, why a soldier must be clean shaven. First, it enables the gas mask, which must be worn almost constantly at the front, to fit more tightly over the face. Second, a clean shave keeps up the morale of a soldier and of an army.

You know how it is yourself. You know the direct bearing a clean shave has on your personal morale. Compare the way you feel in making an important call or attending a special meeting when you are freshly shaved with the way you feel with a day's growth of stubble on your chin. There's all the difference in the world. It seems a trivial thing to have such an effect upon you, but for some psychological reason, it

does have that effect—and you know it.

\* \* \* \* \*

What has brought about this change in the habits of American men? It's not so long ago but that we can remember the beard in all its varying degrees of opulence. Every family album shows how prevalent it was.

There are two reasons—just two: the safety razor—and advertising.

The safety razor made shaving easy. It transformed shaving from a fairly long, decidedly unpleasant and slightly dangerous operation to one that was finished before the bath water had ceased running.

It saved time. Compared with the old style razor it saved several minutes. While individually these minutes may seem unimportant taken in the aggregate, multiplied by the number of days in the year, and again by the millions of men won over to the use of the safety razor, the amount of time saved is enormous.

And during these days of war, when the man-power shortage, as Mark Sullivan says, amounts to a famine, those millions and millions of minutes saved for productive work are extremely valuable.

\* \* \* \* \*

Now you ask, what has adver-

tising to do with all this? A very great deal.

Ever since its invention advertising has been preaching to millions of men the merits of the safety razor and the psychology of the clean shave.

Advertising has popularized the safety razor. If it were not for advertising, safety razors would still be prohibitive in cost; they would still be a fad for the few instead of a necessity for the nation.

And what is true of safety razors is true of many other articles. Innumerable other articles—things you wear, and drink, and eat, and work with.

Advertising has popularized them, has enabled them to be made on a large-production scale so that not only a few rich people, but millions of people can take advantage of their use.

Advertising is a form of education. And it teaches quickly; it is a direct method of communication between the manufacturer of an article and the whole nation. And advertising in performing its function saves immensely in man power. It not only educates people in saving time, as in the case of the safety razor, but in itself it is a time-saving device. And because of these things it qualifies as a war-time essential.

find out how you done it. If you could get a girl like that to fall for you, think what I can grab when I get to France!"

"I thought you was gonna wed Annie McGuire," I says—"that there dame which claimed her old man was one of the biggest men in Wall Street."

"I thought so too," he says. "The only thing was I couldn't get her to think it! That's what beat me. She was on the level, though, Ed, about her father bein' one of the biggest men in Wall Street."

"Yeh?" I says. "What is he—one of them brokers?"

"Not quite," says Shorty. "He's a special policeman at the Equitable Buildin' and he stands six feet four without a hat on. That's big enough, ain't it?"

"Listen," I says. "Forget that Loew-time comedy and tell me somethin'. I'm only gonna be in London for a short time, and you might as well say I'm on my honeymoon. That bein' the case, I wanna do everything first cabin regardless of the cost, if it ain't too high. Is this the swellest hotel in London or ain't it?"

"What are you askin' me?" says Shorty. "I'm detailed to the American Headquarters here, and I gotta go where they send me. The only choice I get is, I can have two kinds of soup—hot or cold! The hotel I'm livin' in is a outright steal from a livery stable. They is five beds in my room alone."

"That ain't no hotel," I says. "It must be a hospital. Let's ask the clerk where all the wealthy millionaires from America and Pittsburgh goes when they come to London."

WITH that, Joe, we went up to the desk. "How much is a room and bath here for a American doughboy and wife?" I says, "and before answerin' remember that Rockefeller is a much older man than me and the only resemblance is that we both got two legs."

"Quite so, thank you!" he says, with what he prob'ly thought was a winnin' smile. "I have somethin' very nice left for a guinea."

"Do I look like a wop?" I says. "Where d'ye get that ginny stuff?"

"A ginny is English money, you boob!" husses Shorty in my ear. "Don't make this here guy think that all Americans is ig'rant."

"That will be twenty-one shillings a day, sir, thank you," butts in the clerk. "Would you like to look at your quarters?"

"You said somethin'!" I says. "I'll take a good long look at my quarters before I slip you guys twenty-one of 'em a day. I think you must of got the price of the room and the telephone number balled up. What's the best you can do for a Alley of yours?"

"Well, sir," he says, bendin' over and talkin' low like look out for spies, "I might reduce it to an even pound as a special favor to our American brothers in arms. But, I say, you'll keep it quiet, will you?"

"You can bet the hotel on that part of it," I tells him. "D'ye think I want anybody to know I been sucker enough to give you guys five bucks a day for a place to sleep?"

"This ain't gettin' us nowhere!" butts in Shorty. "Lemme talk to this guy." He turns to the clerk. "Hey!" he says. "This guy here's a friend of mine from the U. S. He used to be a big-league ball player and was knowed throughout the country as the Hetty Green of baseball. When he was makin' it, he wouldn't give a thin dime to see Custer's Last Stand from a box seat! That bein' the case, he's got \$1.65 for every private in the German army, and what we want to know is where a guy can get a quick flash for his dough. What hotel does the King hang out in, for instance?"

Joe, this here clerk blinks his eyes and looks from me to Shorty for a minute without speakin'.

"His Majesty resides at Buckingham Palace," he says, very cold, Joe.

"Yeh?" says Shorty. "Buckin'ham Palace, hey? They used to be a apartment house on Seventh Avenue, near 110th Street, called that." He turns

back to the clerk. "What kind of a joint is that?" he says. "Maybe we can get fixed up there, hey?"

Joe, I thought the clerk was gonna become a victim of apoplexy, and a Canadian officer standin' near us busts out laughin'.

"I'm afraid," says the clerk, his face no redder than a fifteen-cent bottle of catchup—"I'm afraid His Majesty is not receiving at Buckingham Palace guests who—"

"Yeh?" butts in Shorty. "Say! Don't tell me nothin' about this here George V Gulp. He's a good guy and as level as they make 'em! We passed in review before him and the Missus when we first come over here, and he wasn't a bit upstage or nothin', simply on account of him bein' a king. Why, he even come over and talked to us and says he was glad to greet us, and a lotta stuff like that. I bet he'd know me again in a minute. Yes, sir, George V is a good guy!"

Well, Joe, Jeanne is gettin' impatient, so I called off the argyment and took the room. Joe, it was some room at that. In fact I can say without lyin' that it was the swellest room I ever been in, and it made a big hit with the wife.

All the furnishin's in it was big-league stuff, and beside the bed they was a little marble slab with buttons on it marked "Porter," "Maid," "Valet," and "Waiter."

When you want anything, Joe, all you gotta do is push one of them buttons, telephone down to the office, go out in the hall, and yell for service, and then go and get whatever you want yourself.

We went down and had dinner that night at a joint called Simpson's, which is on the Strand. All the Americans eat there because the guys which writes them high-society novels always claims that the hero dropped in Simpson's for a bite. Joe, they got the last part right, anyways, because a bite is about all a guy can grab over here now. They seems to be plenty of food, but they are dealin' it out very slow and careful because the bulk of it's goin' to feed the soldiers, and why not?

Joe, I hope you guys over in the U. S. is not wastin' the eats on us whilst we are over here fightin' for the Democrats. Remember, us doughboys is doin' without a lotta things, some of us goin' so far as to do without our faces, Joe, so you guys can live

"Kamerad!" and we brung back six Germans. Three of them was alive. But to get back to London: Me and Jeanne was so tired out with the journey from France, etc., that we went right to bed the first night we was there almost as soon as we eat. I ain't had the light lit in our room a minute before they's a knockin' at the door. I opened up, and there's a guy all dressed up like a Turkish admiral or a Fifth Avenue carriage caller. He claims he's the head porter.

"I'm sorry, sir," he says, "but it's against the regulations to show a light from your room, thank you!"

"Why?" I says. "It ain't shinin' in nobody's eye, is it?"

"It's on account of the beastly 'Uns, sir," he says. "Since they been coming over with their bloomin' baby killers we cawn't show no lights, sir. It might 'elp them to locate the 'otel and bomb it. We look for a raid to-night, sir, it bein' so bright and all."

"Oh, you look for a raid to-night, hey?" I says. "Well, don't stage none on my account; I'd just as soon do without it." However, I goes on, slippin' him a piece of silver which was either a sixpence, a shillin', a half-crown, or a florin, for all I knowed—"however, if them guys does come over, keep it quiet, will you? Don't come runnin' up here with no alarms or nothin'—I don't want my wife to know we're bein' raided. It might scare her."

"Quite so, thank you," he says, goin' south with the coin. "But I'm afraid, sir, if the 'Uns comes over it'll be 'ard to keep the fact from the lidy. They usually drop about twenty tons of 'igh explosives and then there's our antiaircraft guns. I assure you, sir, the din is terrific. Yes, sir, thank you!"

Twenty tons of 'igh explosives, Joe. Oh, boy! "Well?" says Jeanne when he had beat it. "What now, chéri?"

"Nothin'," I says. "That guy told me to-day was the King's favorite birthday, and naturally enough they're gonna shoot off a lotta Roman candles and the like to celebrate it to-night. He says if they is

undue noise not to pay no attention to it—that's all!"

"But, chéri!" says Jeanne, jumpin' up with her eyes dancin' like a kid's; "I will then not retire. I would be delight to see these Roman candle!"

"Listen!" I says. "Let's let it go at Aearin' 'em to-night, heh? You don't wanna see no fireworks; wait till we get back to the dear old *Etats Unis*, and I'll show you Coney Island."

Joe, just then they is a lotta whistles begin blowin' in the streets, and we can hear guys yellin': "Take cover!" I put out the lights in the room, and we both looked out the window down into the Strand. Well, Joe, it was some sight! Taxis and busses is dashin' along, most of 'em drove by girls, and people is scurryin' in all directions. The streets is as black as pitch. They is a swell-lookin' dame in evenin' clothes talkin' to a English officer outside the hotel, and they is both about as much disturbed by the excitement all around them as a elephant would be if a moth lit on its back. "Stick to it!" hollers this dame to a girl drivin' a bus, and "Cheero!" the girl hollers back.

Pretty soon, Joe, they is hardly anybody in the street below except them which has crowded into doorways to watch the show. Joe, I didn't have to be no Sherlock Holmes to know what was comin', and I drawed Jeanne away from the window because shrapnel cuts and tears like Hades. We had hardly sit down when they is a terrible crash that rocks the room, and all the glass in the windows comes tinklin' in on the floor. Then— Oh, boy!!! Joe, the front ain't got a thing on London, believe me! They was crash after crash and boom after boom, and in between that come the sharp, cracklin' hiss of machine guns. The explosions was so

(Continued on page 28)

"Yeh?" I says. "We win! Look what I got!" I held up the iron plate

in peace and quiet. Don't kick either, Joe, if you have to eat black bread—they're feedin' us bullets over here!

Yours truly,

Sergeant ED. HARMON.

(Where does the Giants stand now, Joe?)

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I had to break my last letter off kinda short on account of bein' ordered to patrol duty. Me and ten other guys went out to do a piece of scoutin', and right off the reel we run into a bunch of squareheads doin' the same thing. In a minute the air was full of bullets and cries of

# THE FLYING SQUADRON

BY CLEVELAND MOFFETT

A FINE idea for building up patriotism and national unity has been worked out and put into practice by the National Security League in its corps of Flying Squadron speakers, several hundred of them, organized to combat seditious teachings of socialists, pacifists, pro-Germans of every description. The importance of this movement will be understood when it is remembered that millions of our foreign population never read loyal American newspapers or hear loyal American speakers. Yet these millions make up our army of soldiers and voters, and upon their acts and decisions, upon their loyalty to sound Americanism, will depend the issue of this war and the consequences that are to follow the war.

## Kaiserism Must Be Killed

IT must not be supposed that these more or less submerged millions of foreigners or near-foreigners are disloyal to the American flag. Not at all. They are simply ignorant of what the flag really stands for; they have no conception of the privileges and opportunities United States citizenship has given them. Therefore they are easy victims of the disloyal propaganda that is spread among them ceaselessly and insidiously by thousands of Teutonic agents, who constitute an actively hostile element in our population.

It is the purpose of the Flying Squadron to fight this enemy propaganda of lies and disunion with a propaganda of truth and patriotism.

"For a long time the soap-box orator has spread

million dollars to beat the Kaiser," shouts one of the speakers, a pale-faced Greek, "and that means more in sacrifice and self-denial than a billion dollars from Wall Street."

This is true. The East Side has discovered America since this war began! And it has shown its willingness to fight for—if need be, die for—the principles of liberty.

In these street talks there is neither grandiloquence nor condescension, but a sincere effort to tell the story of America and preach the gospel of Americanism truthfully and helpfully.

Here are sober-minded citizens who are familiar

"Why do we have to suffer in winter from a shortage of coal?" interrupts a fat, blond citizen, who says that his grandfather fought in the Civil War. "Isn't that a sign of inefficiency?"

"Possibly. These inevitable inefficiencies and delays will be relieved as the war goes on."

"Why is it that all the soft jobs at Washington are given to rich men or to dubs like Garfield?"

"That is not true," replies the Flying Squadron man, and proves it by a long list.

"Why is it that only the sons of rich men get military promotions?"

This is easily disproved. Finally the fat man shows the cloven hoof of his real Teuton allegiance.

"Isn't it true, sir," he asks smoothly, "that if our boys at the front ever really break loose, they will do about the same things in Germany that the German soldiers did in Belgium and France?"

The speaker's eyes flash and his voice rings out angrily: "If you say that, sir, you're a damned liar!" A stocky American soldier pushes forward and shouts: "Say that again and I'll knock your — yellow mustache off and make you eat it."

At which the crowd yells its approval, and the seditious fades away.

One evening I had a talk with one of the Flying Squadron woman speakers, an actress who has starred in big successes.

"But I've made my biggest hit since I've worn this," she said, with shining eyes, and pointed to a little pin at her throat bearing four stars—her husband and her three brothers are at the front!

"I wrote to Washington that I too was going to fight for the flag somehow, and when they wouldn't let me drive a motor car at the front, as I wanted to, I resolved to use my voice, if I could, in rousing these East Side crowds to patriotism. And I've done it! One night I held five hundred men and women on Second Avenue in the rain while I talked patriotism. I was a prouder woman that night than if I had received a dozen curtain calls on Broadway!"

So much appreciated is the inspirational value of the Flying Squadron propaganda that many large New York business establishments have set apart regular periods in the day (paid for by employers) when the Flying Squadron speakers may address their employees on patriotic subjects. And all over New York City boys' clubs, girls' clubs, Y. M. C. A. branches, open forums, workmen's clubs, labor unions and other organizations are sending in their appeals to the National Security League for these speakers.

## The Squadron Signals You

ALL kinds of people, rich and poor, have volunteered for this Flying Squadron service, business men, lawyers, taxicab drivers, political campaigners, interior decorators, teachers, real-estate brokers, newspaper men, high-school boys (there is a Junior Flying Squadron of boys and girls rendering splendid service), and women from all walks of life. Once a week these volunteers are trained for their work by lectures from prominent public speakers and by observers of conditions overseas. This is a volunteer democratic citizens' movement to unify the heart and mind of America in support of the war through a campaign of persuasion and education. It is a pervasive national vigilance committee which will turn the light on Germany's underground propaganda. It will see that the work of the Hun in Italy and Russia is not repeated here.

I may say in conclusion that the Flying Squadron has immediate need of several hundred additional speakers in New York City, and that the organization will be copied by the National Security League in many other cities throughout the country. Men and women who are willing to receive instruction from experts that will fit them to do effectively this important patriotic work should communicate with the secretary of the Flying Squadron, National Security League, at headquarters, 19 West Forty-fourth Street, New York City.

Photographs from Edwin Levick

Making the best pulpit in the world—the soap box—loyal to the flag

disloyal propaganda through our cities," said Charles Alfred Bill, the organizer of the Flying Squadron, to me. "The Salvation Army says: 'Why should the devil have all the good tunes?' and the Army makes a religious hymn out of ja-ra-ra-boom-de-ay. We say why should the traitors have the best pulpit in the world—the soap box? We are going to make the soap box loyal to the flag. It is the quickest, straightest way to meet the people who have been poisoned with disloyal and radical talk. It is an emergency measure of Americanization. The first thing we drive home is that Kaiserism must be destroyed, and for that end the whole world must be united. After that we can preach loyalty, and our speakers are instructed to familiarize themselves with socialist and pacifist arguments, so that they may discuss these intelligently, admitting what is true and just, while exposing what is false and unjust. But, like the Roman orator, who in every speech on every topic cried 'Carthage must be destroyed,' so do we always begin with 'Kaiserism must be killed.'

"And it works. The mind of the Russian immigrant does not respond to Paul Revere and Bunker Hill as his traditional symbols of revolution and freedom, but his heart is devoted to liberty, and from the axiom that 'Kaiserism must be killed' we can lead him to loyalty to the American Government."

I recommend an evening stroll along Second Avenue from Tenth Street down, with pauses at various open-air meetings where Flying Squadron crowds gather and listen. This is the swarming East Side, once disloyal, hostile to war, bitterly socialistic, but now wonderfully changed, tingling with patriotism, unbelievably generous in support of the Liberty Loan.

"Out of its poverty the East Side has given ten

with socialists' and pacifists' arguments, and are now glad to hear the other side, but they insist that issues be met honestly without shams or evasions.

Flying Squadron speakers talk about everything that bears on patriotism: American history; our great wars; what the American flag stands for; what the American idea is—freedom, opportunity, education, happiness. And against this they present the German idea—tyranny, ruthlessness, treachery! And the tragic lesson of Russia's downfall!

"Isn't it true that Germany has done more to relieve poverty and to improve labor conditions than America?" asks a man in the crowd who seems sincere, and the speaker meets his question in a friendly spirit, but overwhelms him with facts and statistics. "If life in Germany is so superior to life in America, why do so many millions of Germans leave Germany and live in America?" the Flying Squadron speaker concludes, while the crowd applauds.

After him a young Jewish orator, wearing eyeglasses, takes the soap box (really a well-constructed folding pulpit). "What are the motives of those who oppose the military policy of the United States?" he asks. "Why do some socialists attack the Liberty Loan? Why do pacifists try to thwart the President? There are only two possible reasons: either their intelligence has been destroyed by cranks, or they are paid German agents."

Farther down the avenue another speaker flings forth this challenge to the Friends of Irish Freedom: "I ask these people who are attacking our ally Great Britain, what kind of freedom Ireland would get if Germany won this war?"

How the crowd applauds! Presently occurs a lively incident that illustrates the clever way in which pro-Germans, masquerading as loyal Americans, try to lead the speakers into damaging admissions.

# A Symbol of Accomplishment

Perfection is a state of the infinite.

Human mind cannot conceive nor hand achieve it.

The most man may do is earnestly to strive to go farthest toward that visionary goal.

In so far as he accomplishes this his work shall live, be it bronzes, books, paintings, operas or—spark plugs.

AC glazed in the porcelain of a spark plug is a symbol of constant striving for perfection; it is a symbol of years of research by the man who pioneered this industry; it is a symbol of a lifetime devoted to the sciences of ceramics and ignition.

AC's are not perfect spark plugs. They never will be perfect.

Yet the true criterion has always judged them the best obtainable. And this much is true: from year to year AC Spark Plugs will be better and better spark plugs. For constantly in his

experimental laboratories their sponsor is striving to outdo that which is now deemed best.

Today AC has the concerted endorsement of the automotive industry. In all, 94 manufacturers plant-equip with AC Spark Plugs.

When you purchase AC Spark Plugs, you know you have purchased wisely. For your selection is supported by the exacting research of the nation's leading manufacturers.

There are AC Spark Plugs in various types, especially designed for every make and style of motor.

Look for the letters AC. They are the initials of the originator—glazed in the porcelain of every spark plug he manufactures.

*Write for booklet, "The Unsuspected Source of Most Motor Ills," by Albert Champion—also for information on new AC Carbon Proof Plugs especially designed for Ford, Overland and Studebaker cars.*

# UNDER FIRE WITH THE YANKS

Continued from page 11

they couldn't locate him definitely. So they went out over No Man's Land to look him up. In broad daylight, mind you! Three of them made their way across to within about sixty yards of the sniper and spotted a German officer. Another now has his command. Other Germans appeared, and the three Americans retreated. They retreated safely to their own lines, got fifteen more men, and went back again. They managed to stir up a snappy little scrap, and after a lively period of fighting found themselves surrounded on three sides. When they started to retreat one of their number dropped into a shell hole and held the enveloping Germans off while his comrades got away. The man who stayed in the shell hole? Ah, well, the boches will pay for him, many to one. His company will see to that.

## "Putting on a Party"

THE American in the line is keen for action—not only the occasional naturally adventurous man, but the lot of them. They are, almost without exception, keen for active, dangerous work. I suppose, of course, that statement will be misunderstood—misinterpreted. "Oh, do they like war?" some one will say in a shocked voice. "Is it possible that our boys can like war? Enjoy bloodshed?"

Only a fool or a savage likes war or enjoys bloodshed. The American in the line is neither a fool nor a savage. He hates war and bloodshed as nice, sensitive people who have never seen either can ever possibly hate the horrors they but sniff from afar. He hates war, but temporarily war is his proper business, and he attends to that business with a nationally characteristic whole-heartedness. He gave up his civilian identity, his home, the comforts and safety of peace, to come over here and fight. Having come for that specific purpose, he is keen to do that specific thing just as often as opportunity offers. He is keen to fight and ever ready with a courageous flippancy to camouflage the suffering and horrors attendant upon action. Not long ago I was speaking with an estimable gentleman over here investigating something or other—there seems to be about one investigator in France to every ten soldiers—who was much disturbed because the Y. M. C. A. was putting on light amusement in its huts.

"Our boys should be made to realize the seriousness of their situation," he declared ponderously. "They have no conception of it. They're facing death every minute of the time they are in the trenches, and they speak lightly of a terrible battle as 'a show' and talk of an attack in which many of them may be killed as 'putting on a party.' They should be made to realize that this is a life-and-death matter!"

I believe if that man went scouting about out in No Man's Land every night, his life in one hand and a grenade in the other, he'd get a crawful of realization of the seriousness of the situation. If he saw his chum pecked off by a sniper or blown to nothingness by a shell, he might understand—even more thoroughly than he now does—that it's a life-and-death matter. I can't help wondering if, under those circumstances, he'd have the grit to grin and carry on, as do the men he worries about. If the men of the American army refuse to gloom and groan and burden the air with doleful cries expressive of their

realization of the obvious—let the boche fret. He has cause!

And some critics say that the American soldier is reckless. To a certain extent he is. His motto is: "Let's go!" When things get hot he'd much rather go over the top and get 'em than go down in a dugout and wait for 'em. He wants to take a chance. A few nights previous a raiding party had started out from the American trenches just behind where I stood that morning. The lieutenant leading the party selected twenty men to accompany him. They were to go across No Man's Land, establish contact with the boche, and bring back prisoners. On a trip like that it's better than an even bet that

Man's Land, we played duckboard back to the American front-line position. It is absolutely impossible for a man to make that trip in the dark. The woods are laced thick with barbed wire. Even if that were gone, the ground is made impassable by shell holes filled with water and cunningly placed pits. A series of barbed-wire gates guards the duckboard path over which one may pass with difficulty in the daytime. I know that no man can come through there at night and also I know that they do come through. The lieutenant showed me where a sentry had flushed a German patrol of three men the night before. This war has made physical impossibilities a commonplace part of the routine daily—and nightly

—work. We parted with the lieutenant at the door of his dugout.

"Nothing interesting out here just now," he explained apologetically. "We've tried every way to get the boche to come out and play, but he won't do it. I think maybe he's mad at us, or something. If you have a chance, get out some night when we're pullin' off a little party and I'll try to show you some fun."

With a captain and the visiting medical officer I started back. A few hundred yards to the rear we came upon a soldier sitting on a stump. From the waist up he was as naked as a skinned rabbit. In his hand he held his shirt turned inside out, and he was studying the surface of the garment as intently as a young son of one of the best families stealing a chapter of forbidden dime novel. But his expression was more that of a man digesting bad news.

"What are you doing, son?" the captain called out.

The soldier on the stump slowly raised his eyes and looked us over. His expression

was that of a detached and world-weary man breaking under the burden of a secret sorrow. We didn't seem to ease his mind much, for he sighed deeply and returned to his intent inspection.

"I'm readin' over the personal column o' my shirt to see if there were any new arrivals las' night," he answered the captain's question finally. "I think I must be a convention, the way they're flockin' in on me. If I'd been a small town a week ago, I'd be a big city by now."

"Are you finding any?"

"Findin' any? I ain't lost any yet!"

He raised his tired eyes and studied me carefully.

"You're a newspaper reporter, ain't you?"

"Yes."

"You lookin' for news to print?"

"Sure."

"Well, listen. Did old General Misfortune ever billet a whole army corps o' starvin' covies on your personality an' leave 'em there to fatten up an' multiply an' replenish your shirt?"

"I've had 'em."

The soldier immediately lost all interest in me and took up his duties anew.

"Goo'-hy," he mumbled. "If you've had 'em, you know all the news there is to know around here."

In war as in peace it's the little things that count!

## "It's Up to You, Captain!"

WE went on back through the woods past a post de secours and down an excellent road toward the open country in the rear. It had been foggy early in the morning when we came out, but the mist had cleared and the hot spring sun was shining from a cloudless sky. A little way in the rear of the wood we turned off to our left on a road that led down a valley and up over a low hill to a front skirting a shell-wrecked village. The captain in front of me stopped and swore.

"I thought there'd be something in the air when this — sun came out," he said disgustedly.

I followed the direction of his gaze and saw it. It was an observation balloon off on our left behind the German lines. It reminded me of a great gray sow up there in the sky, peering down with a mean, gluttonous eagerness, scanning the face of the land in search of food for its hungry brood of guns below. There was a thin fringe of camouflage along the left of the road, but the watching beast up there could easily see us over the top of it if we stood in the road. We hid ourselves, stooping near the camouflage, and considered the matter of going on. A hun-

Most popular man on our front—the postman

He is ever ready to camouflage the suffering

some of the party are not coming back. Don't imagine that the men who go out on those trips don't know that. They know it better than anyone else. The lieutenant led his men over the top and out through the wire. It was inky black. A man couldn't see his hand held before his face. They crept through the wire single file, each man with one hand touching the foot of the man crawling in front of him. Outside the wire they stopped to take tally and make sure that all were present.

"One," whispered the lieutenant. "Two," said the man immediately behind him. The whispered count went down the line and then back again to the lieutenant, starting with number one at the rear of the line. "Twenty-

three," said the man in back of the lieutenant when the count came back. "Twenty-four," whispered the lieutenant. "What's wrong back there? There's only twenty-one of us. Try that count over again."

They tried it over, with the same result. Three men who might have stayed safely behind in the trench had surreptitiously added themselves to the raiding party. It was too late to go back, so they advanced. A few minutes later they took the count again, and the lieutenant was number twenty-six.

"We're doin' fine, sir," the man behind the lieutenant whispered, stifling a giggle. "We got five prisoners a'ready."

It means something—that spirit. It is a small thing as applied to that particular little raiding party, but it is typical of the American army. Being typical, it is important. The ultimate purpose of the American army is offense. And when that offensive begins the men will go eagerly, hunting for trouble, not because they are driven forward by merciless officers, but because trouble is temporarily their only business and they are rarin' to be about it!

After about fifteen minutes out there in No

dred yards away the camouflage ended altogether, and from there on to the top of the hill—a matter of perhaps four or five hundred yards—we would be in plain view of the watching eyes above us.

"They've absolutely got the range on this road," the captain said. "If they took a notion to pick us off while we were going over there, it's a ten to one bet they'd get us. Of course if we went across fifty or a hundred yards apart they'd probably let us by—but then again they might not. I don't know. It's a long, long trek to go back and go way around. What do you think?"

"It's up to you, captain," I said.

What I meant was this: If you insist on taking a chance and going across there, I'll trail after you as a matter of pride, but I'd a darn sight rather go a long, long way around!

The captain thought the matter over. "I'd hate to get knocked off without a chance to hit back," he mused. "It's a long hard walk the other way around, but—I don't know. How do you feel? Pretty tired?"

"Not a particle," I lied eagerly. "I'm good for any distance."

"Well, I expect we'd better have a little sense and go around," the captain said regretfully. "It's a lot shorter this way, and we might get across all right, but—"

"I'd just as soon go around," I confessed.

The captain looked at me and smiled. "So would I," he admitted. "And a little bit rather. Come on."

I'm strong for that captain. He's my idea of a gentleman.

A soldier on a motorcycle came down the hill toward us.

The captain halted him. "Seen what's in the air?"

"What, sir?"

"Balloon's up. Better go some if you're going to try to get across that open place."

"Thank you for telling me, sir," the soldier said as he turned his motorcycle around. "Hadn't noticed that balloon. I'm going to go some all right: some other direction."

He whirled away, and we walked after him. We walked and walked and walked.

"You're over a third of the way there now," the captain said in a tone evidently meant to be encouraging. Encouraging! I didn't suppose there was any place two-thirds as far away as the distance we had come.

"If you're feeling fresh, let's hit it up a little. We'll be late getting back."

I began to lose my taste for the captain. He seemed to be falling short of my idea of a gentleman.

We came at last to a narrow-gauge road running up a shallow open valley to the front-line position in the wrecked village which was our objective. The Germans were shelling that light railway line industriously. There were shell holes every few feet on either side of it.

"Better not walk the track," the captain advised me. "That's what they're shooting at."

"But it's not what they're hitting," I argued. "Shells have lit everywhere in the neighborhood except on this track."

"Precisely," the captain agreed. "But they've been missing it so long that by the law of averages they're due to hit it now. Better walk here on the path."

"The track for mine," I insisted.

The captain shook his head sadly and sighed as he started along the path parallel to the track.

And so we went our chosen separate though parallel ways, each predicting a speedy finish for the other, and so we came unharmed to the edge of the devastated village through the opposite side of which our front line runs.

### "It Only Takes One"

A MEDICAL lieutenant and a number of men were lounging about a table in the open beside a shell-wrecked house near which was the entrance to their dugout. The table was piled high with old and dilapidated magazines. Scattered about were a number of chairs in various stages of decrepitude and a large, red-plush sofa. They were a nice bunch of fellows, and I have no doubt that they would have invited me to occupy that sofa had I given them the opportunity. But I saw my friend, the captain, eyeing it covetously, and I dived into full-length possession.

"Tired?" the captain asked maliciously.

## B&B Adhesive Plaster Tape

Strong—Rubber Coated  
Almost Waterproof

Sticks Instantly  
to Anything Dry  
and Stays Stuck

## The Every Day First Aid

Every druggist sells a strong and clinging rubber-coated tape, called B&B Adhesive Plaster Tape. It sticks instantly to anything that's dry. And it forms a firm and lasting binding which is practically waterproof.

Attach it Beneath a Tear

On rubber, metal, wood, cloth, glass or anything, it becomes a part of the article itself.

Every home has uses for it. Every home without it wastes things which could easily be mended.

Get it and see how often you require it. A hundred times you'll wonder what you ever did without it.

Grips for Golf Clubs and Tennis Rackets

## Some of the Countless Uses

Mends lawn hose.

Mends umbrellas.

Mends broken handles.

Makes temporary repairs to inner tubes and tires.

Mends leaky pipes.

Mends rubber articles of any sort.

Makes firm grips for golf clubs and tennis rackets.

Mends torn cloth. Attach on the under side.

Insulates electric wires.

Seals fruit jars.

Prevents chafing of the hands and heels.

Mends Rubber

B&B Adhesive is a strong, firm tape, with an ever-sticky rubber coating on one side. So it is always ready to apply, and it needs no wetting.

It is made by experts who have spent 25 years in perfecting Adhesive Plasters. It is made for surgeons, largely. You will find it perfect for home uses if you get the B&B.

Get it today. You can probably count a dozen needs you have for it tonight. And nearly every day brings new ones. Have an extra spool to carry when you go away from home.

Mends Wood

Sold by Druggists  
On Spools of All Sizes

## How much serious reading do you do a week?

The author of that interesting series of articles in Collier's entitled "If I Were Twenty-One" says that six hours a week given to serious reading is moderate. So it is.

But Dr. Eliot—40 years the President of Harvard and now its President Emeritus—states his belief that *fifteen minutes a day* devoted to the

# HARVARD CLASSICS

will give any man the essentials of that liberal education which prepares a young man or woman for real success. That is, the education which means a broad outlook, clear thinking, a tolerant attitude toward other beliefs, and a grasp of the fundamental facts of science, politics, history, literature, biography and religion.

The remarkably high efficiency of Dr. Eliot's Five-Foot Shelf of Books is due to (1) its scholarly selection and (2) its equipment of masterly introductions and notes and comprehensive indexes. We urge everyone interested in his or her own development and success to

"Not a bit," I lied feebly, sitting up perforce to back my false words with action.

"Then we'd better be getting along. The lieutenant's going to take us up to the G. C. Of course, if you're tired, why—"

Painfully I restored the responsibility of my weight to my trembling legs.

And then it came. There was the sound of the blue sky above us being viciously ripped apart and an explosion that shook the buildings about us. S-i-e-e-z-z-Bong! A little cloud of dust floated up over the tops of the gutted buildings on our left.

"There they go again!" the lieutenant sighed wearily. "They'll keep that up for twenty minutes or a half hour now. Wait a minute. Here comes another one. Hear it?"

"Sure, I hear it," I said. "What good does that do me?"

"Oh, you can tell pretty well where they're coming and duck," the lieutenant said as the second shell exploded in the village. "That one was off to our left."

"I know all about where it was going to light after it lit," I explained to him. "But how do you tell beforehand where they're going to light?"

"Oh, you learn to gauge 'em," I said. "I see. And what do you do while you're learning?"

The lieutenant grinned. "Wear some kind of a luck piece and stay out of range on Fridays, I reckon. Listen! All right. That's off to the left too. Come on."

We went on down the pitted street of that ruined village, down the street lined on either side with the indescribably desolate-looking irregular shells of gutted houses, toward the front line at the far end of the town. There were a number of soldiers to be seen. Some were standing in the doors of dugouts smoking. Others were walking along the street, keeping close to the walls. The shells were screaming into the village several to the minute. It was not furious fire—nothing faintly approaching a barrage, for example—but, as the gang at the Polo Grounds used to shout at Benny Kauff up at the plate with two strikes called: "It only takes one, old boy."

No man is normal under fire, no matter how calm he may be. I watched the soldiers in sight. Those walking alone were walking slowly, slouching a little, glancing briefly up at the sky in swift appraisal of the flight of some shell that whined near. One and all, they were definitely deliberate in their movements and contemptuously sullen. Those who stood in groups laughed loudly at sallies that would ordinarily not have elicited a grin.

It was my first time under fire, and I transferred my attention from the men about me to myself. How did I feel about it? Was I scared? I didn't know. I examined my emotions carefully and failed of a certain analysis. There was a tingling sensation along my lower spine. Was it fear? It didn't seem so. There was a powerful emotion growing in me that was familiar, and yet I couldn't place it. We came to a gap in the row of houses, and the lieutenant stopped.

"Cross here one at a time," he said. "This space is swept by indirect machine-gun fire, and they're liable to cut loose most any time."

I was the last one to cross. As I went I looked off across the green meadow to the woods where the German machine guns were hidden. The emotion possessing me grew suddenly stronger, and I identified it. It was the most elemental form of anger. I was just plain, ordinary mad! I was as sore as a chained bull pup in a yardful of cats. At the whine and bang of each new shell dropping my anger grew. That anger—the anger that was aroused in me by the threat of those rumbling, booming shells—multiplied millions upon millions of times and strengthened by every offensive effort the Hun makes, is the world's instinctive answer to the German assertion that German force can conquer and rule the world. The boche cannot put it over! He can't make it stick! He's in the pan, and the fire's getting hot. There's a lot of fuel on the way and more where it came from! Plenty! He may flop around in the pan and do a lot of damage spattering people with the grease of his own frying. He's a tough old bullhead, and he's a long way from done, but he's cooking. He's on the stove. He can't get off, and he can't put out the fire. The worse he acts the hotter it gets.

We came at last to the far edge of

the town where a number of soldiers were loitering about sleepily under a wooden lean-to alongside a partially demolished building. It was an eating place to which the cans of hot food from the rear are brought. It was not clean. There were bits of bread and other refuse strewn about the ground, and there was a faint, nauseous odor unpleasantly in evidence.

I have said that men do not act normally under shell fire. I amend the statement. They do not act normally unless they have work to occupy them. The captain frowned at the sight of the refuse and the evil-smelling, soggy low spots.

"Looks bad, lieutenant."

"I know," admitted the medical lieutenant. "I've been trying to get this place cleaned up, but there's a lot of work to be done. You know we've just taken over the line here, and those guys ducked out and left this place in rotten shape."

A sleep-frowzy line lieutenant clambered up out of a near-by dugout. He passed the word to a sergeant. The men fell to work with broom and shovel.

The shells were still falling around us. To the death that the boche was throwing at them they paid no attention. They were busy guarding themselves from the death that fifth might bring. They were busy and, being busy, they were normal—even under shell fire.

After a time we crawled cautiously over some debris, pulled back a burlap curtain, and stood crouching in the last American outpost. A loud word, a certain movement might bring a hurricane of shell fire.

A slender blue-eyed boy peering through glasses thrust in a tiny slit rose and greeted us, whispering.

"See anything?" the line lieutenant asked.

"Not a thing moving, sir."

"Sure?"

"You know my eyes, sir," the boy replied simply.

"He's got the best pair of eyes in the regiment," the lieutenant explained to us. "A toad couldn't hop over there in the woods without him seeing it."

I took the boy's place and searched the German line. Through the glasses it appeared right in front of me. It looked like a long-abandoned ditch having to do with some forgotten piece of construction work.

The captain was watching the young soldier curiously.

"How old are you?" he asked.

"I'm nineteen, sir."

"I don't mean how old are you on your service record. I mean really."

The boy blushed like a schoolgirl, but those wonderfully clear blue eyes of his were steady and steel-hard.

"Just old enough to fight like hell, sir."

### "That's Talking to 'Im"

WE went back another way along a white road and through a wrecked and deserted village. The German guns had been silent for some time, and our artillery had subsided to an occasional growl. Then a gun spoke in a voice that was strange to me. It wasn't the sharp, vicious bark of a near-by 75, nor yet the stunning roar of a heavy. It was a crumpled, far-distant sort of threatening growl. The far, faint hum of a motor gave me a clue. A boche airplane was sailing high over the lines behind us, and the sullen growls I heard came from the throats of the antiaircraft dogs. The boche was winging directly toward us, and behind him there floated a tail of feathery smoke puffs, the bursts of shrapnel reaching out to help old man Gravity bring him down. There was only one dog growling at first, but others rapidly joined the chorus. From the shelter of wood and pit for miles around they rumbled their threatening chorus at the alien invading their domain. The hubbub reminded me of the action of a number of familiar small town dogs united in warning off a stranger. When all the big fellows were going strong and in good voice, the rapid-yipping terriers joined in. Ruppity-pup-pup-pup-pup-pup-pup ruppity-pup-pup-pup. The slim machine guns were in the racket.

The white puffs of shrapnel smoke burst all about Mr. Boche, some seemingly very close, but he apparently paid them not even the compliment of attention. He sat up there in the clear afternoon sky taking our pictures as calmly as an idler reading in a comfortable hammock on a lazy afternoon under his own shade trees. He sailed directly overhead, and we lamed our necks gawking up at him. By then we

were rooting for our guns, rooting whole-heartedly, unconsciously. Our rooting was a composite of the method of a baseball fan and a crap shooter. "Come on, get that guy!" (Business of snapping fingers.) "That's talking to 'im. That's got him! He's coming down. No! Missed him again. There they got him. No! That's coming close though! Ow, boy! Baby mine! That's it! That does it! Well, what do you know about that bird? Don't bullets bother him? They busted that one right in his ear! A little more to the right. Little bit higher. 'At's puttin' 'em over! Come on now—right on him!"

In the midst of my excitement it occurred to me to wonder what became of all the shells that went up. My unuttered question was answered from above. There was a whistling shriek, a flare of air on my face, and a thud near by that was sufficiently dull and sickening to justify the use of those poor old frazzled adjectives in describing it.

"Ouch!" the captain exclaimed. "Close! That was a dud—a shell that didn't explode. What's the matter with you?"

I took an inventory of myself and discovered the difficulty. My right shoulder is a coward. I must have leaned against some fresh yellow paint at some time in my life and got some on that right shoulder. When anything whistles unpleasantly close that right shoulder of mine betrays itself by a sudden, instinctive, and very pronounced dip. I mumbled some lying explanation to the captain and pulled myself erect just in time to have that accursed right shoulder pull me over again as some more messages from the blue came screaming down.

"I'm going to get under something besides six feet of France!" the captain declared. "That son of a gun's hanked, and he's coming right back overhead again. Come on."

#### A Gentleman

I WISH I could describe how they finally got that boche, but I can't—because they didn't get him. When he had taken pictures of enough of us he sailed back over the lines, and the captain and I walked some more. We

walked and walked past groups of soldiers with their mess kits standing around savory, smoking kitchens, cussing and discussing army cooks and their ways; past weary fatigue details marching in after a hard day with pick and shovel; past lounging men lying about smoking and beginning to tune up their vocal chords for the rendition of the sad, sentimental ballads to which the American on camping trip or battle field must inevitably give voice at the approach of dusk. Frogs were croaking around the edges of the marsh and men were croaking around the edges of the kitchens, and I—I'd look at a spot ten yards in front of me and say: "Bill, you've got enough left in you to go that far, and right there's where they can erect the cross that marks the spot." When I got there I'd decide to wait and die ten yards farther on.

A shrapnel shell burst over a field just a little behind us and to our right.

"That was close," said the captain. "Hear 'em?"

I heard 'em! They were shrapnel bullets, and they sounded like bees buzzing. I didn't care. I knew the Germans wouldn't hit me then. If they'd hit me I'd had to be put on a stretcher and carried, and I was perfectly sure that no such luck was coming to me via Germany. Some more shrapnel burst near by. I didn't even look around to see the smoke puffs. Fatigue is an anesthetic that is as effective on a battle field as elsewhere. One attains a certain degree of weariness, and after that nothing matters.

At last we reached the motor car that was waiting for us. Feebly I opened the door and sort of poured myself shapelessly in on to the seat.

"Are you tired?" the captain asked.

"I'm so doggone tired I wouldn't walk across the street to see 'em hang the Kaiser!" I admitted. Even pride had left me.

"So am I," the captain admitted frankly. "I couldn't have walked another quarter of a mile to get a shot at Hindenburg! We had some day!"

I began to like that captain after all. He's my idea of a gentleman.

Mr. McNutt's fourth article from France will appear in an early issue.

## The Briber

Continued from page 8

of it, we were transported from the gloom of impending tragedy to the gleam of high comedy. But not the huddled figure in the chair. Nothing of the comic about him. She dropped a hand on his shoulder.

"Why did you do it, Buddy?"

"They told me that—that—" The muffled voice struggled for coherence.

"That the proper way to approach the Ellen Street board was by bribery," I supplied.

"Then there is some mistake," she said simply, her eyes still searching Kelsey's soul.

"There is. This is not the Ellen Street board. It is the Allen Street board. Your brother was misdirected."

"Ah!" The simple, disastrous error seemingly made little impression upon this amazing girl-goddess. Nothing seemed to matter with her but the man whom she faced and the boy whom she protected. "Poor Acton! His nerves are gone. I ought to have managed it myself."

"And how would you have managed it, may I ask?"

The question was in the chairman's blandest voice, but she answered straight into Dick Kelsey's eyes that still held and cherished hers.

"I would have gone to you and I should have said: 'You are wise and fine and brave [no, it wasn't flattery—that would have been gross—but the assurance of a profound conviction, as if she had known him for a lifetime], and I ask you for once to go above the law—'"

"Which I am sworn to uphold."

"Which is stupid and harsh and cowardly!" she went on in her thrilling voice, "and save him for me! And you would say—"

"No!"

There was an incredulous tremor in her voice as she said uncertainly: "You couldn't say no. How could you say no?"

"How can you say what you are saying?" he burst out upon her, his voice shaken with passion. "How can you do what you are doing? A door opened, and you came into my life. You made life over for me by your coming. You understand?"

"Yes."

She accepted his avowal as simply as that. And to the rest of us—silent, disregarded onlookers—it seemed natural enough that he should speak and she should listen thus. The surge and pressure of great emotions was swaying, impalpable, about us.

"And now—now you destroy it all!"

"I? Destroy it?"

"By destroying my faith in you—in everything. By trying to buy me, if not with money, with a worse bribe. By tempting me to betray my country. Oh, it's a little betrayal, I know. 'What does one man, more or less, matter?'—and that man a coward. But it's my honor."

"Do you think I would not cherish your honor as if it were my own?" Oh, the carousing pride of the voice!

"You bewilder me," he cried. "You come to me with the face and voice of an angel and lay a hellish bargain before me. You ask me to dishonor myself and my profession and my oath to my country to protect a coward."

"And now you bewilder me," she retorted. "How can you call him a coward? Buddy!" She turned in appeal to the boy behind her. No answer came. His figure had assumed a curious, sidelong posture. Now it sagged lumpily to the floor. The face was grayish blue, and there were strange hollows beneath the eyes.

Kelsey was beside him instantly, loosening his collar. "You've seen him this way before?" he asked the girl.

"Yes," she answered with a strange reluctance. "It—it doesn't occur often. It's his heart. Didn't he tell you?"

Kelsey's ear pressed down on the broad chest. He caught up the inert hand and swiftly examined the nails. "His heart!" he repeated. When he looked up it might have been his own heart that had checked, so altered were hue and expression.

"Yes, he told me," he muttered, recovering himself, and returned to the work of revival.

Terrifying though the event had been, it was over shortly. We got Severance on the lounge where he lay, breathing with constantly improved rhythm. There was a long silence in which I could almost hear two of my

## One Joy That Need Never be Restricted

Puffed Grains seem to children like confections.

They are bubbles, thin and flaky, with a taste like toasted nuts.

Corn Puffs in particular have a most exquisite flavor.

A child at first will eat them one by one. He wants to make them last.

But these are goodies which, at any hour, need never be forbidden. And you never need say, "That's enough."

For these are simply grain foods puffed by steam explosions. Two are whole grains—Wheat and Rice. Corn Puffs are pellets of hominy puffed.

Every food cell is exploded, so they easily digest. By no other process are these grains half so well prepared.

They never tax the stomach, yet every atom feeds.

Prof. Anderson invented Puffed Grains to make ideal night foods for children. But all day long now children revel in them.

At meals and between meals, let children eat all they will.

Puffed Grains are the most delightful of all ready breakfast cereals. For luncheons or suppers—in bowls of milk—they are toasted, savory tidbits.

Children at play will eat them like peanuts, if you crisp and lightly butter. Try all three kinds and see which children like best.

With Berries

Mix them with your morning fruit, or serve with cream and sugar.

Use Like Nuts

Scatter them like nut-meats on ice cream. Use them in your soups.

Puffed Rice

Puffed Wheat

Corn Puffs

All Bubble Grains

Each 15c Except in Far West

## The Flying Fish

Continued from page 13

unknown applicants for positions to the guests of the hostelry. But Fabian was undismayed. His brief stay in the hotel had enabled him to locate the freight elevator, and it was the man who ran this that Fabian wished to see.

He shuffled out of the steward's office, his head hanging. But instead of leaving by the nearest door, he continued down a hall to the elevator. The kinky-haired operator of the freight elevator grinned at the white-haired old colored man.

"Whar you goin', uncle?" he asked. "Servants' elevator's back whar you come from."

"Yeh, yeh, I know, niggah; I know," said Fabian. "Don't matter none wheah I go, though. I ain't wukkin' fo' no one. You save yo' money, boy. When a man gits old and he ain't got no job a dollah is his bes' friend."

The freight elevator was not in demand. The operator, garrulous as all his race, did not disdain the opportunity to talk even with a broken-down old man. "What's the matter, uncle? Luck bad?"

"I don't have no luck at all, boy. Heah I walks all the way from Brooklyn, and they tells me my man ain't yere."

"Who was you lookin' for?" asked the colored boy kindly.

"Man name c' Waters. Benjamin Waters. You see, I been body schvant to a Majah Pelham. He up and died, and I been out of a job. I heahs about Mist' Waters needin' a schvant, so I comes oveh heah. Sickly old man, like the majah. Them's the kind I wants to work for. An' they tells me heah that they ain't neveh been no such pusson stoppin' at this hotel. Musta made a mistake somewheah, my friend must have. Don't happen to know of any old gentleman, sick, what needs a sorta valet and nurse, do you?"

The elevator boy scratched his kinky head.

"Dunno's I do, uncle. Sorry. They was a gemman here what kinda fills your bill, but he's gone. 'Name's McCord; Curzon McCord. Cranky old man, but when you wants a job dat don't matter, does it, uncle?"

"Lawd, no," agreed Fabian. "Mist' McCord, eh? And wheah'd you say he went to?"

"I dunno. I took his trunks down this mornin', but they was just checked to the Pennsylvania Station. You might find out at the desk wheah his mail bein' sent, though."

"Thanks, boy," said Fabian. "I'll do that."

But he didn't. If it were as easy as all that to find out where McCord had gone, Miss Leila Kildare would have found it out long ago. Fabian went out to the street. There he engaged in conversation a porter. A fifty-cent tip loosened this gentleman's tongue.

Yes, he remembered Mr. McCord's trunks. He'd helped load them aboard a wagon. Checked to the Pennsylvania Station; that was all. How many? Only two. No, there weren't any names on them. But they were McCord's, because he'd lugged them out of McCord's rooms himself. One was a lady's trunk; leastwise, it was small, and it looked like the sort of a trunk a woman would own. The name of the transfer company? Foote's. Why the questions, anyway?

But Fabian did not bother to answer this. He was on his way to Foote's nearest office. But here he came to the end of the trail. A man had come to the office, had asked that his trunks be sent for and taken to the railroad station. He had been given a check wherewith to claim them, the trunks had been fetched, and that was all there was to it. All this none too graciously and proffered only because of a bill that Fabian produced from a shabby old wallet.

And Fabian shuffled gloomily back toward University Place.

SAM WHITNEY was one of the dearest chaps in the world. He was as charmingly ingenuous as a frank boy. Unfortunately, he was not much brighter than a boy. In France, where his courage had been recognized by the bestowal of the Croix de Guerre, his comrades, loving him, were wont to chuckle quietly over his mental clumsiness. Told what to do, he could be relied upon to carry out orders faithfully, exactly. But left to his own judgment—his superior officers rarely left him to his own judgment. They knew better.

Had Leila realized Whitney's lack of finesse, she would have given him minute instructions. But there had not been time to analyze Whitney. She had only time to know that she liked him and trusted him, and that he was devoted to Farley Endicott, before they had gone their separate ways.

One more subtle than Whitney would have entered the Charlton quietly, have selected, if possible, a room near to that which Leila had occupied, and have begun by deftly questioning the servants on that floor. Whitney did nothing of the sort. He walked up to the clerk.

"A friend of mine, Miss Tarrant," he began. "Is registered here—"

"Certainly," said the busy clerk. "Your name, please?"

"She's not in at present," replied Whitney. "But another friend of mine, a Mr. Endicott, called here upon her, and—" He felt, himself, that he was blundering. "I—I was wondering if you had seen him go out."

THE clerk stared superciliously at the inquirer. Sam blushed. He was frequently blushing, from shyness, or from recognition of his own crassness.

"Haven't seen him," said the clerk shortly. He turned back to the books that had engrossed him when Whitney arrived. Whitney walked over to a leather-covered chair and sat down. Dismally he lighted a cigarette. Gloomily he puffed it.

Gosh! If he'd only had some sort of training in this sleuth work! If he only knew what the deuce to do next! But he didn't. Endicott wasn't there. But Endicott was a prisoner. He could hardly have been taken without a fight. Sam's eyes glistened. It must have been a peach of a fight! He'd seen Earl Endicott in a "jam" once. A bearcat, no less!

But there couldn't have been any fight. Otherwise the whole hotel would have been aroused. That was a moral cinch! Then if Endicott had been captured, he had been captured quietly. That meant a blow from behind, stealthily administered, or a drug.

Sam's brain worked very slowly, but it occasionally arrived. A fight; he could discount that. But a crafty overpowering of Earl— And Leila had said that the man Larsen had had the next room to hers! Sam walked over to the desk again and looked at the register. Following the name of Miss Josephine Tarrant was that of John Carney. And inasmuch as that "John Carney" had been assigned a room but two numbers away from Leila's! From a booth Sam called up Mr. Carney. The girl reported that the guest was evidently out. Sam went back to his leather armchair.

Earl might be a prisoner in this Carney-Larsen's room, but Sam preferred to do some thinking before acting. Suppose, for instance, that Earl had been taken away from this hotel. He wouldn't have gone willingly; to have taken him by force would have created a scene. His captors must have pretended that he was drunk or sick. Sam beamed at his own cleverness. After all, he wasn't such an awful dub. He rose eagerly to his feet, anxious to test his theories. He almost walked over a youth in the hotel livery.

"You looking for Mr. Endicott, sir?"

"Why, yes," Sam admitted.

"He's waiting in a taxi outside, sir," said the boy.

And Sam forgot all his elaborate theories, forgot that Leila had told him that Farley was a prisoner. He did not stop to think that the man whom he had thrown off Endicott's trail earlier in the day might have been in this hotel, might have seen him. He did not realize that there must be some explanation of a healthy normal man being carried out of a hotel a few minutes after his normal entrance; that some of the hotel staff must have been cognizant of Endicott's capture, and that it was a capture. Sam Whitney could think for a certain distance; after that he went woolgathering. Otherwise he would have questioned the page boy. But even if he had done so the boy would have outwitted him, doubtless. The boy was clever; also, he had received a hundred-dollar bribe.

Whitney followed the boy to the waiting taxi. He entered it. The next thing of which he was conscious was Farley Endicott's wry smile.

# OUR BATTLE PLANES ARE COMING

Continued from page 7

United States. They are not airplane designers and they have had no previous experience in building airplanes. They said sturdily that if they were furnished with a completed machine, exactly as required, they would copy it in quantity. They went ahead and built a fine new shop in Detroit. But it was a long time before they got the model they asked for. For a long time they couldn't get anything but blue prints of the changes that had been ordered by the designers who adapted the British De Havilland to American quantity production.

When I was there in the middle of June they were becomingly modest about what they were going to do. They were then completing their first machine and hoping to test it in flight that week. I had been told in advance that they would easily build from sixty to eighty a day; that they could build more than anybody else they finally admitted that they were getting ready to build forty a day. I went away with the impression that they preferred underestimating their capacity to raising any false hopes.

The Curtiss plant in Buffalo is the largest airplane factory in the world.

enough, turning out great flying boats with two Liberty motors each.

Perhaps by the time this is printed John D. Ryan will have seen that the biggest of all our factories has all the work it can do.

## Fifty Thousand Machines

THERE remains the Standard plant, which should turn out as many machines as the Dayton-Wright company.

I have no doubt whatever that these four plants could produce 200 De Havilland machines a day, 1,200 a week, say 50,000 between now and June 1, 1919. But I doubt if they will. I doubt if the army wants that many. After all—50,000 machines are only 50,000 machines. Before they will count in this war they will have to be laid down at flying fields in France, with men to fly them and men to keep them in repair, and with level space in which to land. As it looks now, we can build more machines than we can ship, and ship more than we can fly, and fly more than we can land.

The production of Liberty motors has been coming along

now a man of seventy-five and dean of motor-car manufacturers—formed the Lincoln Motor Company on August 29 last. Two days later they got their contract from the Government. On September 21 they broke ground for the magnificent new plant. They engaged tools with more than eighty manufacturers—that was about the time the shortage of toolmakers became acute. The tools were slow in coming and far below peace-time standards when they did come. Less than half were ready for use. And then the designs of the Liberty motor were changed. It went from eight to twelve cylinders. The job of tooling up had to be done over again.

But now the Lelands have a splendid

dow I could see the exhaust ports of the six cylinders on the side nearest me. Within was the red glare of explosions following each other too quickly to be distinguished from one continuous explosion. It looked awfully real to me.

Of course there are people who still insist that the board made a great mistake in choosing to develop an American motor instead of copying a foreign one. The French flyer of whom I spoke in the beginning indicated with the utmost good nature his belief that Americans were too proud to use any motor but their own.

Orville Wright told me that there isn't much difference between developing a new American motor and copying a

foreign one. The trouble with copying is that the metals in this country are not the same as the metals in Europe. It is absolutely impossible to make an exact copy of a foreign motor under these conditions and get a motor that will work. The Wright brothers once gave an order for half a dozen of their motors to the best firm in Paris. They provided a model. The French copied it with precision. But the motors wouldn't work. The metals were not precisely the same; the coefficients of expansion were different; and the clearances had to be changed—a long job. The experience of American manufacturers who imported foreign motors into this country has been similar. It has usually required a couple of years' experience to make a successful "copy."

But the point is that the foreign motor is invariably ill-adapted to American quantity production even when it is successfully copied. One has only to look from the Rolls-Royce twelve to the Liberty twelve to understand that the American motor can be produced more rapidly.

And as for American pride in developing an American motor? Well, the Liberty motor is an adaptation of the German Mercedes. It looks like two Mercedes motors set in the same crank case.

There are people too who insist that the ignition system is all wrong. It ought to be a magneto system, they say; it is a battery system. The man who designed it, C. F. Kettering, is a singularly successful electrical engineer. When the Cadillac motor got so heavy that it was difficult for a man to turn it over by hand fast enough to get a hot spark from the magneto, Henry Leland sent for Kettering. Kettering developed a battery system which furnished a hot spark at all speeds. Then somebody tried to start a Cadillac with the spark advanced and got hurt. Mr. Leland determined then and there to have an electric self-starter. People said it couldn't be done. But Kettering did it. When the Packard people put out their twin-six, the first successful twelve-cylinder motor car, the ignition system was by Kettering. The fact is that the battery ignition system on the Liberty engine does the work, and that it weighs half as much as a magneto system would.

## Most Powerful Two-Seater

THIS, then, is the case for the Liberty motor: the Liberty motor has been averaging far above its rated horsepower. It has been doing its work, hour in, hour out. It weighs less than any other motor of its power. And it is being produced right now in quantities that the world has never before known.

The Liberty motor is suitable for every type of battle plane now in use—save one. It is too big for the little avion de chasse, the single-seater fighting plane. For that sort of work we have ordered hundreds of foreign motors, and we have in addition an American version of the Hispano-Suiza made in this country by the Wright-Martin company. Above all, the Liberty motor makes the De Havilland the most powerful two-seater machine in use.

The pilot's gun is fixed; the observer's is movable

The Caproni, like its rival, the Handley-Page, can carry enormous weights

It has thirty-two acres under one roof, with everything routed like a Ford factory and an elaborate laboratory in one corner where every bit of material is tested, and some 9,000 employees. But they were not building much except flying boats.

There were a few Bristols on the floor, Bristols undergoing modification in the middle of their manufacture. A few days before a skillful American flyer, Rader, and a young American officer were killed in a Bristol machine. The general notion of those who saw the accident was that the fabric of the wings had torn off the frames. And though nobody knew that this was the cause, the Bristols in construction were being strengthened with a layer of wood veneer along the front edges of the planes. There was another and more obvious defect in the design of the Bristol. Originally built in England for a much smaller engine, the logs on which they were putting Liberty motors extended far beyond any support. A brace of tubing was so placed that even the casual layman could see its weakness and nobody I talked with attempted to defend it. Furthermore, the radiator was split, one-half projecting its full size on each side of the machine, like an elephant's ear laid forward, as if to offer the greatest possible resistance to the air. I thought of Orville Wright's concern over the quarter-inch cable on the De Havilland and his calculation that the difference between the air resistance of the round cable and streamline wire of the same strength would account for from six to eight miles an hour.

Now, of course, it is not the fault of the Curtiss company if the Bristol is as bad as it seems to be. They didn't design it. And I assume it is not their fault that they were not turning out a hundred De Havillands a day during the third week in June. They were having labor troubles the day I was there, but apparently not serious ones. Certainly their seaplane shop was busy

faster than the production of airplanes. The Packard company got an early start and last month was producing more than anybody else. Its estimated capacity for August is fifty a day. The Nordyke-Marmon company in Indianapolis is tooled up for a production of twenty-five a day. Henry Ford, who is now producing all the rough cylinders for Liberty motors on a machine that does 300 an hour, is expected soon to produce 100 complete Liberty motors a day. The Cadillac, Trego, and Buick companies have all taken Government contracts to build Liberty motors. And the Lincoln Motor Company in Detroit has completed a factory, designed solely for the quantity production of Liberty motors, which has a capacity of sixty a day. All told, these plants have an estimated capacity of 250 a day and they will come much nearer achieving their capacity than the airplane factories will come to achieving theirs.

The difficulties some of these plants surmounted in tooling up for the manufacture of Liberty motors were very great.

Henry Leland, who with his son built the Cadillac car, left the Cadillac company last summer to build Liberty motors.

The two Lelands—the elder is

the quality of labor now available for machine rooms is far below par. But he doesn't blame anybody for the changes in the motor.

"No one is open to criticism for that," he said. "A new motor means changes. The changes in the Liberty motor were not excessive—rather the contrary. I was talking with one of Mr. Ford's experts the other day and he told me that they had made more changes in their last engine—a very simple engine—than had so far been made in the Liberty engine."

Is the Liberty motor a success? Mr. Leland has no doubt of it. No-

body in a position to know seems to have any doubt of it. I saw one on the block in an open shed at the Lincoln plant. It was roaring away, driving a full-size propeller. I stepped into the cubicle to one side where stood a young engineer with a chart in one hand and a pencil in the other. Across the chart was written: "Log of fifty-hour test." I asked the observer how long the machine had been running. He said: "Twenty-four hours." I looked up at the tachometer in front of him. The needle hovered between 1,600 and 1,700 revolutions—full speed. I looked higher and through the win-

## The Liberty Motor: A Symbol of Service

FOR a time we seemed to know fewer definite facts about the Liberty Motor than about the internal situation in Russia. The truth about its real value was as elusive as the trail of a German propagandist.

But of late this situation has changed. Out of the chaos of dissension and doubt the efficiency of the Liberty Motor has emerged triumphant.

Every day the newspapers relate new proofs of its justification. In the July 1st *Official Bulletin*—the government newspaper—appears this item:

### **Liberty Motor Equals European Engine in Test Says Vice-Admiral Sims.**

Secretary Daniels to-day received a despatch from Vice-Admiral Sims stating that the recent test of a seaplane equipped with the Liberty Motor resulted in "better performance as regards climbing and load carrying" than similar airplanes equipped with one of the best types of European engines. Admiral Sims says, "The British express great confidence in the Liberty Motor".

The Liberty Motor, as everyone knows, is a product of the automobile industry. It is the result of the splendid organization and the engineering skill of the automobile industry when America entered the war.

And this great industry, the third in volume in the United States, has grown to its present size within twenty years. In 1899 a man was arrested for driving his "horseless carriage" in Central Park. Then the automobile was looked upon with the same fearful doubt with which in an earlier era the Indian regarded the locomotive. Yet today, despite the prejudice which it had to fight, its value and influence is woven into the fabric of American life.

How was this accomplished? Through the educational power of advertising.

Some prejudices against the automobile, however, still cling. Some of us are still apt to regard it as a "luxury." Our point of view is distorted by the luxurious parade of limousines along Fifth Avenue or Michigan Boulevard

whereas to get a true idea of the social value of the automobile we should think of the country doctor going his rounds, or the farmer, miles from the nearest market and recreation center, or the business man hurrying from one appointment to another. The number of automobiles used as a necessary utility compared to the number used purely for pleasure, it is estimated, is as four to one.

But this talk is in no sense to justify "business as usual." It is, however, very frankly a tribute to the accomplishments of the automobile industry in adding to America's preparedness before war came and in helping after it came.

It has been often said that this war is a war of machinery. The nation which has the best machines and the most machines will win. We can be thankful that this nation is our own. And much of this thanks must go to the automobile industry.

All machinery is built by machine tools—lathes, planes, milling machines and other types of large tools. The machine tool industry was in a period of depression and stagnation when the demands of the rapidly growing automobile industry re-invigorated it,

the country the paved road is taking the place of the old dirt road.

Machine tools, steel, roads!—can you imagine any more important service than the automobile has played in developing and improving these for America's use when humanity placed the sword in her hand?

\* \* \* \* \*

But with the coming of war the demands upon the automobile industry were speeded up as if with the snap of a gigantic whip.

In the twenty years of its life the little sheds and shops in which it began obscurely had grown into vast plants covering acres, equipped with the most modern machine tools, producing machinery rapidly and accurately, and manned by armies of skilled workmen.

And these splendid plants, these swift, productive organizations, were ready and eager for the vital work which the Government asked of them—munitions, airplanes, motor-trucks, motors.

The production of passenger cars now is in many cases seriously curtailed—because the automobile manufacturer is giving his manufacturing facilities to the Government.

It is becoming necessary for you to place your order well in advance to get the make of car you desire.

And as national advertising in the early days overcame the prejudices against the automobile and created vast markets for it, so now again advertising has stepped in, during this automobile shortage, to explain and inform and hold these markets.

Even if you have to stand in line a

little longer now than ever before, we believe that you will not be impatient when you remember that the automobile shortage exists because the automobile industry, bone and sinew, is working toward winning the war.

Think of the Liberty motor again. It is the symbol of the service the automobile industry offers its country in time of need.

spurred it on to new inventions, new time-saving devices of marvelous speed.

It was the same way with the steel mills. Automobiles demanded better steel, tougher, more resilient under stress and strain. And the steel mills responded to the demand.

Then there are roads. Automobiles had to have good roads—and all over

... and at all 6 stands  
in the Capitol building

### *Fact:*

The 6 tobacco stands in the Capitol building at Washington are patronized mainly by the big business and professional men from all sections of the United States who are constantly coming into and passing out of Washington.

At each one of these stands more Fatimas are sold every day than any other cigarette, regardless of price, which seems to show that the preference for Fatima is really nation-wide.

# THE GYPSY DIVISION GOES IN

BY JAMES HOPPER  
COLLIER'S SPECIAL CORRESPONDENT

The drawings for this article were made at the front by S. J. Woolf

ON March 21 of this year the Germans began with a drive what will probably be known as the biggest battle in history—a battle which is still going on at the writing of this, and which will probably go on throughout the summer and the fall with an increasing fury. By the second day of this battle, through the terrific masses employed, they had ruptured the British front before Saint-Quentin. By the third day, with its shattered British Fifth Army retreating to the north, leaving a big hole between them and their French allies, the Teutons were pouring through as the sea into the hull of a great rammed ocean liner. The fate of France hung in the balance; to all but very stout hearts (and, thank God, there were many), France trembled on the verge of doom.

Then it was that General Pershing, speaking for the American Government, speaking for all of America, offered all he had and all we had to France—his army, his infantry, his artillery, his airplanes (of which, tragic irony, there were very few)—to France, to do with as she wished.

What we had to offer, speaking in strict truth, by fact, figure, and number, was not much—our army in France was at that time still small, most of it only partly trained; its equipment was scanty, its artillery borrowed from the French. But the offer was made in good heart—nay, with sacrificial spirit—and accepted gratefully and graciously. A division was chosen and taken into the great battle then raging from Soissons clear to the sea.

## The Supreme Gift

THE unit chosen for this rôle I might well call the Gypsy Division of the American Expeditionary Force. It was not an ornamental unit. One of the first in France, it had suffered more than any from the effects of the inevitable hasty improvisation; first in France, it had been used and overused. Three straight months in the "quiet" but most wet and dismal trenches north of Toul was, I think, a part of its record. It was said to have fought with shoes that were not much shoes and uniforms that were not much uniforms. It wasn't spick-and-span; it was fleabitten—using "flea" in all politeness. It was a humble and patient but stubborn body. It had been at all the hard work and had been given but little honor.

But at this obscure toil it had slowly pickled and hardened, and when time came for this supreme gift—the right to represent the United States in this new and gigantic Battle of Nations, in this defense of all that the world has earned painfully through the centuries and holds dearest to its heart, the right to die for that only thing which makes life possible on this poor little ball lost in space—the Gypsy Unit was chosen. It was drawn out of its trenches north of Toul, and in trains taken—

men, guns, horses, material, and all—to the concentration point, in a fair province of France, on the lower edge of Normandy.

There followed a rather pleasing ten days, but filled with inward turbulence. The men were being reequipped; they were refurbishing leathers and metals. The horses, which had suffered severely during the winter, were being cared for like sick children in an effort to make them fit for the ordeal to come. Guns were being greased and polished. Maneuvers in open warfare gave all those trench-stiffened soldiers a chance to loosen muscles and start the blood coursing anew. There were charging runs across green fields. The spring had touched the land, and the larks were spouting up like little singing fountains toward the dappled sky. Meanwhile the rumble of the great battle came often to the little villages among which the division was scattered. The French by this time had plugged up with flesh and blood the great rent through which Germany had been pouring in. Amiens had been saved by a hair-breadth. The fighting had veered up north, where the British were holding desperately. In our minds was a whirling confusion of expectation and surmise. We firmly thought we were going into a great open battle, at some moment of crying need.

The spirit of the division was sacrificial; the word New Alamo was often on the lips.

## On to Montdidier!

THEN one day all the officers were called to headquarters, and, standing on the steps of the château, General Pershing addressed them and bade them Godspeed in a speech which, rough and soldierly, and even halting at times, rose now and then to a strange and sincere eloquence. The next morning, April 17, we had packed up at dawn, and were on the move toward the low rumble on the eastern horizon. We marched for four days. It was fun. The regiment to which I was attached was a regiment of light artillery, of seventy-fives. If there is anything which the artilleryman detests, it is walking. Walking is against the traditions of his craft; a humiliation. But the horses were poor and weak on account of the hard winter; heroically, this artillery regiment decided to walk. The officers gave up their mounts to the batteries and walked; the men gave up their places on limber and piece and walked. This placed everyone on the same democratic footing (no pun is meant here) and a pleasing comradeship resulted. Tramping has the advantage of making one indifferent to the weather. The early spring treated us capriciously, caressing us at times with a clear, light sunshine, flagellating us the next moment with hail, but we had always a nice warmth in our veins and our hearts. Usually I walked at the head of the column; from the top of a hill I would see its great stretching snakelike length; or, standing by the side, I'd let it go by rumblingly—cannons, caissons, wagons and ambulances, and the khaki-clad lads walking or trotting alongside—a sight never to tire of. Our way lay through small byroads; sometimes our regiment seemed isolated and lost, the only one, abandoned, marching on to battle—and then, on the top of a far hill we'd see another column—more artillery, or infantry, or engineers—and we'd know the whole Gypsy Division was with us, to the right and the left, whelming us, marching on by other byways and roads toward the same point of the horizon, where peril and honor waited. The land was of low hills and soft vales, enchantingly green with fat pastures, roamed over by velvety cattle, and with woods filled by singing birds. We started out in the fresh morning, and by two o'clock the march would be over, the cannon parked, the horses grazing, and always there would be at the billeting villages some cozy, warm little café or estaminet and a bottle of generous wine—that is, for me, who wasn't a soldier—and cursed be the long-noses at home who keep from our toiling and fighting men the glowing wine of France!

Thus, step by step, we approached the battle line. Daily the rumble of the cannon grew nearer. Airplanes began to appear often over our heads. Finally they were in squadrons. They seemed to be suspended up there in surprise, watching this astonishing sight of America going in. Now and then one dipped low over us, and the dipping was like a salute.

Then far ahead, a little pin point at first on the horizon, we saw a sausage balloon. It waxed clearer; another became visible to the right, an-

other to the left; at the end of that march we could see eight, forming a circle about the salient of Montdidier, of now historical Montdidier where the French had broken at length the German advance, the salient of Montdidier where the line, running south from the sea, bent into one running east to Verdun. We were marching toward Montdidier!

## Billeted and Superbilleted

THE variety of our billets was interesting. One night we were billeted in an old castle built by Louis XI of sinister memory. Later Mme. de Maintenon had made of it her country place and had received there Louis XIV, the Roi Soleil, and on the 18th of April, in the fourth year of the Great War, I slept there, in a canopied bed so large that all night my slumbers were tormented by a vague fear I should never be able to find my way out of it again in the morning! It was in this town I met Private Jinks. Private Jinks, sitting on the top of a wall, shouted to me:

"Say, Mr. Correspondent, when you see General Pershing, will you tell him that I ain't never got anything out of this gol-darned army? See them boots? I bought them myself. And them breeches? I bought 'em from an officer. They're officer's breeches!"

I haven't seen General Pershing to talk to, but he will no doubt read this, so I consider I have transmitted the message. Further investigation among Private Jinks's amigos, though, rather led me to suspect later the absolute accuracy of his information. They said he had lost his original army footwear playing craps, and also his breeches by the same means. They agreed the breeches he now wore were officer's breeches, but violently denied he had bought them. They stated he had merely "borrowed" them.

Our next billet was in a little summer-resort hotel kept by a Parisian chef who had retired here a few days before the war with the idea of living in profound peace to the end of his life. It was cold that day: we spent all of the late afternoon about his

stove, while he juggled casseroles, pots, pans, knives, spoons, tureens, and forks with a nervous and subtle skill which held us all in a perfect stupefaction of admiration. It was in this village I met Private Callahan. Private Callahan was coming out of the sort of place he was never supposed to enter, and one of his "buddies," lounging outside by the pump, "bawled him out." "Did you get anything, old sock?" he cried. "Naw-aw," replied Private Callahan with profound contempt as he passed. "Only some of that Frog cognac! Took fourteen without a kick!"

Our last billet before going in was what is called a "superbillet." That is, the village, when we came in, was al-

ready cram-filled with troops—French élite troops—chasseurs, zouaves, tirailleurs, and joyeux—the very troops who in the most fearful fighting of the war had plugged up the hole in the battle line; as soon as we saw those men whose place we were going to take, we knew fully what an honor had been tendered the Gypsy Division. On the other hand, there was little room for us. For the three days we were there I slept in a little outhouse. We were six in it, sleeping side by side on the straw—the

padre, a Falstaffian figure known and beloved throughout the unit; his thieving Irish, humorous, and adorable striker; Baptiste, the French noncom interpreter, who had been chef de cuisine in San Francisco; the Y. M. C. A. man; and this poor darned reporter. Enemy airplanes would come over at night to drop bombs, and the stout old peasant woman who lived in the house on the other side of the court would come running in to us through the darkness. We'd hear the crazy door slam open and shut, and then her vast bulk was within, vaguely discernible, panting and sobbing with pitiful emotion, and clad, I am afraid, in just a little chimmie. Prestige of the military uniform! We were not wearing ours just then, but she had seen us in it during the day. And so, at this supreme menace from the sky (the sky from which, all of her life, she had been taught to expect but beneficence—the kind sun, the kind rain), it was to us she ran for protection—to us, the six utterly worthless camp followers. She would stand there just within the door, and say: "Ah, messieurs, I am so afraid; ah, messieurs, my heart beats so. And last night bombs fell on Noisy, and the other night they bombed Carencelle, and they have killed widow Jeanne and her little Jeannette. Ah, messieurs, they will surely kill me!" Thus, on and on, in a circle. And we, opening one eye, would say: "But, my poor madame, do not take on so. But, my poor madame, go back to your bed. They will not hit you. We assure you they will not hit you. Your house is a little one, a very little bit of a small one; it would take them one million years ever to hit your little house. My poor madame, my poor madame, go back to your bed, your bed and your husband." (For she had a husband!) But she would remain, talking, talking, talking in the same piteous way, in a pathetic determination to draw replies from us, a longing for the reassurance of our voices, coming to her in the darkness. We shifted from our left sides to our right sides; we opened one eye and closed it; we raised our blankets over our faces; we expostulated—nothing mattered; she stayed till the last hum of the ugly birds had gone out of the skies. And in the morning her husband—an old peasant with little, bright, witty eyes, who had stayed in his bed during the whole performance—would place his knotty hands, all horny with the plow, on her great, broad shoulder, and, winking in the slightest way at us, would say: "Ah, yes, my little Madelon—she always did have a weakness for the soldiers!"

### "I Ought to Do Something"

IT was in this town I met Private Kellog. He had been a farmer in Oklahoma. He had clear hazel eyes that looked at you very straight—eyes of a brave man—but which, at the same time, were a little troubled, as though slightly puzzled by life. He had a poem he wanted to show me. It had been written about him, he said, by the woman working for his mother. Here is the poem:

*The pictures of his girls are here,  
Still smiling as of yore,  
And everything that he holds dear  
Is treasured as before.  
Into his room his mother goes  
As usual day by day,  
And cares for it, although she knows  
Her boy is far away.  
She keeps it as she left it when  
He bade us all good-by,  
Though I confess that now and then  
She views it with a sigh;  
For never night shall thrill with joy,  
Nor day be free from gloom,  
Until once more her soldier boy  
Shall occupy his room.*

The poem was signed, and underneath was written: "To George Kellog, Somewhere in France." The recipient stood before me, indeed somewhere in France. I questioned him a little, and found that it was an actual fact this mother was keeping his room, against his return, exactly as he had left it, with every object in place. But now he had something else to show me. It was a letter he had written; he wanted to know if it was all right. Here is the letter:

### "AMERICAN EXPEDITIONARY FORCE."

"DEAR PARENTS AND ALL: I received your letter last night, and it found me well. I hope you all keep until I can see you. That was a sort of funny dream Elsie had about me; tell her her papa said he

is coming to see her, don't worry. I appreciate your letters, dad, better than I thought I ever would. You tell very much of the news back home. A person realizes a father and a mother when he is away, but I feel as fine as can be expected. Well, here is a piece of cloth; keep it, pa. Now, don't worry about me any, for I am well, and I don't worry much, so I will close, hoping to hear from you soon, good-by, from your son,

"GEORGE KELLOG."

This drew from me more questions. I found that he was a widower; that his young wife had died six months before our entrance into the war. "But who is Elsie?" I asked (Elsie of the letter). "She's my littlest little girl," he answered. "You mean that you have children?" I pursued, astonished. "Yes, sir—two little girls. Elsie is the baby one." "Then why are you in the army?" I asked. He looked a little puzzled at my question, then said: "Well, I thought I ought to do something to help beat the Germans. I could go, because I could leave my kiddies with my mother. You see, they're all right, and I send them my pay."

I was reading his letter again, and when I had finished, I asked him what the sentence meant about Elsie, the sentence that said: "That was a sort of a funny dream Elsie had about me; tell her her papa said he is coming to see her, don't worry." "What had Elsie dreamed?" I asked. "Oh," he answered, "she dreamed that I had come home and didn't want to speak to her. She saw me, and I went to the letter box, and put a letter in, but I acted like I didn't know her at all, and I wouldn't look at her. She told them all at breakfast, and she cried."

Can you visualize the scene? The little kiddie at breakfast, remembering her dream, dropping her porridge spoon and weeping, then telling them how her daddy had returned and hadn't spoken to her? Can you see the consternation about that breakfast table, and imagine the chill of foreboding? Well, here's one presentiment gone wrong! But let us hope Private Kellog's reassuring letter made a record passage home.

By this time we knew pretty well what was ahead for the Gypsy Division. We were not going into a great open battle after all; neither were we to be sacrificed on the patriotic altar in a new Alamo. We were simply going in to take a sector—but a very hot one—at a very important part of the new line recently and partly stabilized—a position a little north of Montdidier. There it was not open fighting, but neither was it exactly the old trench fighting. The positions held were improvised positions. The infantry was in holes, not in trenches, with little wire or no wire in front of it, and patrols for liaison. The artillery was not dug in, but spread over the face of the ground, under camouflage. These were new conditions, unstable conditions, balanced on the pin point of fate, which might flop one way or the other. Either they would gradually return to the old warfare of trench and stationary position or break suddenly into the furious whirl and movement of open warfare.

On Tuesday, April 23, we began to take our positions. That is, we went into the great battle which, only smoldering here by now, flared hot for the moment in Flanders. The artillery went in first. That night I accompanied the colonel of my regiment. I'll remember that night. First came a reeling ride along roads in the dark, under shell fire, through deserted and destroyed villages, then an inspection of the battery positions we were going to take over. The French, awaiting our coming, seemed to be amusing themselves shooting off all of their ammunition. Never was there such a din. The night was all torn up with hot flaxes, with tearing screeches, with hard detonations; it seemed impossible any one could live in such a tumult, yet in a castle to which we went in

search of one of our majors, we found everyone asleep. Returning, we passed some of our batteries coming along the roads. The roads were being shelled, but our men were now no longer walking; they rode their horses with straight spine, looking incredibly high and vulnerable thus, or they sat their caissons with folded arms. The darkness, the mystery of place and hour, the low rumble of the wheels, the stamp of hoofs, and those high silhouettes, those severe profiles under the helmets—all this united in a scene profoundly impressive and moving.

We slept in a cellar of the village of X. that night—the colonel, Captain F., the French Lieutenant T., and I. We had no blankets, we were cold, our slumbers were most fitful. Above our heads the town was being mercilessly shelled. Three times, during the night, great crashes told us the house over us had been struck. Once, when a rumble of bricks avalanched down our steps, one of us cried from his sleep, warningly: "They are knocking at the door!" Our own safety down there intensified to us what was happening outside. Down there it seemed as if the night above were one cyclonic turmoil. Yet, from out this night, every half or three-quarters of an hour, a man appeared, who had coursed across it. He would show suddenly, without warning, just inside our door, indistinct, helmeted, booted, tight-jerked. His hand came to the salute, he went rigid till he looked like a full armor in the panoply room of the old castle. "What is it?" the colonel would say. And the rigid panoply abruptly became a being known and familiar to us again, as, in the accent of Maine, California, or Alabama, he answered: "Sir, Captain Proctor sends word that A Battery is in." Thus through the night the runners came across from the batteries to us—and successively we knew that A, B, C, D, E were in. Finally it was: "Sir, Captain Smith sends word that F Battery is in." Dawn was just coming down the cellar steps, and the weary colonel turned over on his overcoat and at last went to sleep.

### At the Crossroads

THE following night I went into position with a force of machine-gun men. This was quite a little affair. We started an hour after dusk. The men had gone at dusk, afoot, carrying their heavy implements on their shoulders: in the half darkness they looked like arquebusers of a past epoch. We followed later in an automobile—the major, a captain, Forrest of the New York "Tribune," and I. Two little Ford cars followed us, laden with ammunition. We had hardly left the village before we realized that we were on a road of very evil aspect. Shell holes bordered it in extraordinary quantities, and shell holes were in the middle of it. It was black night; we carried, of course, no lights; we would drop into those holes like a ship into the abrupt hollow of a wave. I looked at Forrest, he looked at me; our thoughts plainly were

(Con. on page 23)

When we came in the village was already crum-filled with troops

# LITTLE COUSIN SARAH

BY BOOTH TARKINGTON

ILLUSTRATED BY LUCIUS WOLCOTT HITCHCOCK

THE responsibilities of a lady of twenty who is almost officially the prettiest person in a town persistently claiming sixty-five thousand inhabitants are often heavier than the world suspects, and there were moments when Miss Julia Atwater found the position so trying that she would have preferred to resign. Although she lived in a large house with only her father and the servants, she was the one marriageable Atwater of her generation; the family connection was large, and most of her relatives were also her not distant neighbors. Julia was a warm-hearted, appreciative girl, naturally unable to close her eyes to sterling merit wherever it appeared; and she complained, not without warrant, that the whole family, including the children, regaled themselves with her private affairs as a substitute for theatre-going. On the other hand, it must be explained, for the people under this accusation, that a drama in the theatre usually presents to the auditors the progressive anguishes of no more than two loving hearts, whereas, at times of special climax, Julia's so-called private affairs appeared to consist of as many as six and seven such little dramas, all given simultaneously; and thus the privileged onlookers were offered a performance just that many times as interesting as an ordinary one, while the fact that one heroine served in all could not humanly be expected to dispel the interest of her relatives. However, the privileged onlookers bestowed all their privileges upon themselves, Julia insisted; and one day she went so far as to admit a note of unconscious confession into her protest that she was getting pretty tired of being mistaken for a three-ring circus! Such was her despairing expression, and the confession lies in her use of the word "three."

The misleading moderation of "three" was pointed out to her by her thirteen-year-old niece, Florence, whose mind at once violently seized upon the word and divested it of context—a process both feminine and instinctive, for this child was not precocious, but already she was feminine. "Three!" she said. "Why, Aunt Julia, you must be crazy! There's Newland Sanders and Noble Dill and that old widower, Ridgely, that grandpa hates so, and Mister Clairdyer and George Plum and the two new ones from out of town that Aunt Fanny Patterson said you had at church Sunday morning—Cousin Herbert said he didn't like one of 'em's looks much, Aunt Julia—and there's Parker Kent Usher and that funny-lookin' one with the little piece of whiskers under his underlip that Noble Dill got so mad at when they were calling, and Uncle Joe laughed about, and I don't know who all! Anyhow, there's an awful lot more than three, Aunt Julia."

Julia looked down with little favor upon this talkative caller. Florence was seated upon the shady steps

of the front porch, and Julia, dressed for a walk, occupied a wicker chair above her. . . . "Julia, dressed for a walk"—how scant the words! It was a summer walk that Julia had dressed for; and she was all too dashing a picture of coolness on a hot day: a brunette in murmurous white, though her little hat was a film of blackest blue, and thus also in belt and parasol she had almost matched the color of her eyes. Probably no human-made fabrication would have come nearer to matching them, though she had once met a great traveler—at least, he went far enough in his search for comparisons—who told her that the Czarina of Russia owned a deep sapphire of precisely the color, but the Czarina's was the only sapphire yet discovered that had it. One of Newland Sanders's longest Poems-to-Julia was entitled "Black Sapphires."

Julia's harmonies in black sapphire were uncalled for. If she really had been as kind as she was too often capable of looking, she would have rouged her ecstatic nose, fastened patches over both eyes—one patch would have been useless—and she would have worn old flat shoes and patronized a dressmaker with genius enough to misrepresent her. But Julia was not great enough for such generousities; and her lily-painting was an immoral and angelic success. She should have been locked up till she passed sixty; her sufferings deserve no pity.

And yet from certain quarters (not consanguineous) an attack of the mumps during the winter had brought Julia more sympathy than the epidemic of typhoid fever in the Old Ladies' Home and Infirmary, at the end of the street, had brought all of the nine old ladies who were under treatment there. Julia was confined to her room for almost a month—that was one time when she was indeed willing to remain entirely to memory dear but lost to eyes of longing—and a florist's wagon seemed permanent before the house. So passionate was impotent sympathy in its effort for expression that a confectioner's wagon frequently stood beside the florist's there, and young Florence, an immune who had experienced the mumps in infancy, became an almost constant attendant upon her afflicted aunt—with the result that the niece contracted an illness, briefer than the aunt's, but more than equaling it in intensity, caused by the poor child's economic struggle against waste. Florence's convalescence took place in her own home without any inquiries whatever coming in from the outer world, but Julia's was spent in great part at the telephone; even a poem was repeated to her by the instrument:

*How the world blooms anew  
To think that you  
Can speak again,  
Can hear  
The words of men  
And the dear  
Own voice of you!*

Julia's hearing had been unaffected, it is true; and she had been able to speak all along—several times during her illness she had used this privilege so freely that Kitty Silver, the cook, threatened to leave; but this was Newland Sanders. He was just out of college, where he had been a heavy contributor to the undergraduates' literary monthly, a reviewer, a poet, and quite an atheist. It was Newland who was present and said such a remarkable thing when Julia had the accident to her thumb nail, closing the double doors between the living room and the library, where her peculiar old father sat reading. "To see you suffer," Newland said passionately when she had

bandaged her injury—"to see you in pain, that is the one thing in the universe which I feel beyond all my capacities. Do you know, when God makes you suffer pain, then I know that there is no God!"

This strong declaration struck young Herbert Atwater as one of the most impressive things he had ever heard, though he could not account for its being said to any aunt of his. Julia had not closed enough doors, unfortunately. Herbert had just dropped in without the formality of ringing the bell; and, being thirteen, like his cousin Florence, and sharing Florence's and the whole family's interest in Julia, he had paused in the dim hall, outside the open door to the living room. He considered the matter, after Newland had spoken, and concluded to return to his own place of residence without disturbing anybody at his grandfather's. At home he found his mother and father entertaining one of his uncles, one of his aunts, two of his great-uncles, one of his great-aunts, and one of his grown-up cousins at a couple of card tables; and he proved to be warranted in believing that they would all like to know what he had heard. Newland's statement became quite celebrated throughout the family; and Julia, who had perceived almost a sacred something in Newland's original fervor, changed her mind after hearing how differently the words sounded in musing repetition at short intervals by her fat old uncle Joe.

HER niece thought proper to remind her of this to-day, after Julia's protest containing the too moderately confessional word "three."

"If you don't want so many of 'em," Florence continued, reasoning perfectly, "I don't see what you always keep leadin' all of 'em on all the time just the same for."

"Who have you heard saying that, Florence?" her aunt demanded.

"Aunt Fanny Patterson," Florence replied absently. "For instance, Aunt Julia, I don't see what

you want to go walking with Newland Sanders for, when you said yourself you wished he was dead, or somep'n, after there got to be so much talk in the family and everywhere about his sayin' all that about the Bible when you hurt your thumb. All the family—"

Julia sighed profoundly. "I wish 'all the family' would try to think about themselves for just a little while! There's entirely too little self-centeredness among my relatives to suit me!"

Florence looked puzzled but pleased. "You mean we're generous, Aunt Julia?"

"Too generous! With curiosity, I mean, Florence."

"Oh, do you think they are?" Florence cried. "Well, you might be right for once, Aunt Julia, because I and Cousin Herbert were getting up a

theatre in Herbert's attic, and it was ruined because Aunt Hattie and all of 'em—"

"I included you and Herbert," said Julia wearily. "You and Herbert especially!"

Florence was hurt. "Well, I and Herbert can't help being related to you, can we, Aunt Julia? And if you're goin' to marry anybody he'd be I and Herbert's uncle, wouldn't he? I guess if you look at it that way, we certainly got a perfect right to—"

"I can understand children being ungrammatical," said Julia, "but I can't understand their being allowed to be so sentimental!"

"Little Cousin Sarah"

Again her niece was puzzled. "Sentimental?" she repeated. "Why, it's only because you're related to us that I and Herbert pay any attention to what goes on here. It's our own grandfather's house, isn't it? Well, if you didn't live here, and if you wasn't our own grandfather's daughter, Aunt Julia, we wouldn't ever pay the very slightest attention to you! Anyway, I don't criticize all these people that keep calling on you—anyway not half as much as Herbert does. Herbert thinks he always has to act so critical, now his voice is changin'."

"At your age," said Julia, continuing to press her point, "my mind was on my schoolbooks—especially English grammar."

"Why, Aunt Julia!" Florence exclaimed in frank surprise. "Grandpa says just the opposite from that. I've heard him say, time and time and time again, you always were this way, ever since you were four years old."

"What way?" asked her aunt.

"Like you are now, Aunt Julia. Grandpa says by the time you were fourteen it got so bad he had to get a new front gate, the way they leaned on it. He says he hoped when you grew up he'd get a little peace in his own house, but he says it's worse, and not for one minute the livelong day can he—"

"I know," Julia interrupted. "He talks like a Christian martyr and behaves like Nero. I might warn you to keep away from him, by the way, Florence. He says that either you or Herbert was over here yesterday and used his house spectacles to cut a magazine with, and broke them. I wouldn't be around here much if I were you until he's got over it."

"It must have been Herbert broke 'em," said Florence promptly.

"Papa thinks it was you. Kitty Silver told him it was."

"Mean ole reptile," said Florence, alluding to Mrs. Silver; then she added serenely: "Well, grandpa don't get home till five o'clock, and it's only about a quarter of two now. Aunt Julia, what are you waitin' around here for?"

"I told you: I'm going walking."

"I mean: Who with?"

Miss Atwater permitted herself a light moan. "With Mr. Sanders and Mr. Ridgely, Florence."

Florence's eyes grew large and eager. "Why, Aunt Julia, I thought those two didn't speak to each other any more!"

"They don't," Julia assented in a lifeless voice. "It just happened that Mr. Sanders and Mr. Ridgely and Mr. Dill, all three, asked me to take a walk this afternoon at two o'clock."

"But Noble Dill isn't going if you say—"

"No," said Julia. "I was fortunate enough to remember that I'd already promised some one else when he asked me. That's what I didn't remember when Mr. Ridgely asked me."

"I'd have gone with Noble Dill," Florence said firmly. "Noble Dill is my Very Ideal! I'd marry him to-morrow."

"It seems to me," her aunt remarked, "I heard your mother telling somebody the other day that you had said the same thing about the King of Spain."

Florence laughed. "Oh, that was only a passing fancy," she said lightly. "Aunt Julia, what's Newland Sanders supposed to do?"

"I think he hasn't entered any business or profession yet."

"I bet he couldn't," her niece declared. "What's that old Ridgely supposed to be? Just a widower?"

"He's in business," said Julia coldly.

"And that George Plum's supposed to do something or other around Uncle Joe's ole bank, isn't he?" Florence continued.

"Supposed!" Julia protested. "What is all this 'supposed to do' and 'supposed to be'? Where did you catch that horrible habit? Implying that whatever people or things are, of course they're only unsuccessful imitations of what they pretend to be! You know the whole family worries over your superciliousness, Florence; but I always thought it was just the way your face felt easiest. If it's going to break out in your talk too, it's time you began to cure yourself of it."

"Oh, it doesn't hurt anything!" Florence made careless response; and her undeniable superciliousness of expression became intentionally emphasized as she saw, approaching briskly from the distance, the thin figure, clad in lively flannels, of young Mr. Sanders.

"Look!" Florence said, pointing. "There's the first one, Aunt Julia."

"Don't point at people!"

"Well, he's nothing much to point at!" She lowered her finger. "It's no depredation to me, Aunt Julia, to give up pointing at Newland Sanders. Atch'ly, I wouldn't give Noble Dill's little finger for a hundred and fifty Newland Sanderses!"

Julia smiled faintly as she watched Mr. Sanders, who seemed not yet to be aware of her, as he thought it would be better to reach the gate and lift his hat just there. "What has brought on this sudden tenderness in favor of Mr. Dill, Florence?"

Her niece's eyes concentrated in thought, then be-

came dreamy. "I like him because he's so uncouth," she said. "I think he's the uncouthest of any person I ever saw."

"Uncouth!"

"Yes," said Florence. "Herbert said I was uncouth, and I looked it up in the ditchanary. It said 'Rare, exquisite, elegant, unknown, obs, unfamiliar, strange,' and a whole lot else. I never did know a word that means so much, I guess. What's 'obs' mean, Aunt Julia?"

"Hush!" said Julia, rising, for Mr. Sanders had made a little startled movement as he reached the gate and caught sight of her; and now, straw hat in hand, he was coming up the brick walk that led to the porch. His eyes were fixed on Julia with an intensity which seemed to affect his breathing; there was a hushedness about him. And Florence, in fascination, watched her aunt as Julia's expression and habit of gesture took on those little changes which always seemed demanded of her by the approach of a young or youngish man, or a nicely dressed old one. By these almost imperceptible processes the commonplace moment became dramatic at once.

"You!" said Newland in a low voice.

And Julia, with an implication as flattering as the gesture was graceful, did not wait till he was within reach, but suddenly extended her welcoming hand at arm's length. He sprang forward convulsively and grasped it, as if forever.

"You must shake hands with my little niece too," Julia said instantly. "I think you know her."

"Know her?" Mr. Sanders repeated; then roused his faculties and gave Florence some fingers dangling after their recent emotion. "Florence. Oh, yes. Florence."

Florence had not risen, but remained seated upon the steps, her air and manner committed to that derisive superciliousness of which her aunt and other relatives complained. "How do you do," she said. "There's Mr. Ridgely."

"What!" exclaimed Newland.

"Comin' in at the gate," said Florence. "He's goin' walkin' with you too."

In this unexpected crisis Newland Sanders's first feeling consisted of a sudden gush of hatred toward his informant—no doubt partly an effect of her unfortunate habit of facial expression, which was strongly in operation as she gave him the information. His second feeling, however, was evidently one of startled anguish, for that was what he showed to Julia as he turned to protest.

"Why, this is terrible!" he said. "You told me—"

"Sh!" she warned him, whispering hastily, all

in a breath. "Couldn't-be-helped-explain-next-time-I-see-you," and advanced a graceful and too gracious step to meet the newcomer. But the dreadful superciliousness of Florence visibly increased at sight of this advent: Mr. Ridgely was easily old enough to be Florence's grandfather, yet she seemed to wish it evident that she would not have cared for him even in that capacity. Mr. Ridgely, in truth, was one of those widowers who feel younger than ever, and behave as they feel. Since his loss he had shown the greatest willingness to forego whatever advantages age and experience had given him over the granddaughters of his old friends and colleagues, and having thus laid aside his years, he was consistent enough to abandon ideas of time altogether, and so made longer calls than men a third of his age had the courage for. Thus his cheerfulness, his susceptibility to all that was charming, his cordiality and persistence were not without effect, and made him an unwelcome guest almost everywhere in town. But Julia had a kinder heart, as her father bitterly complained, than most girls.

THE widower came, holding out to her a votive bunch of violets, a pink rose among them, their stems wrapped in purple; and upon the lapel of his jovial striped flannel coat were clustered other violets about a pink rosebud.

"How pretty of you!" said Julia, taking the offering; and as she pinned it at her waist, she added rather nervously: "I think you know Mr. Sanders; he is going with us."

She was justified in thinking that the gentlemen were acquainted, because no longer ago than the previous week they both had staid, in her presence and simultaneously, that any further verbal communications between them would be omitted for life. Julia realized, of course, that Mr. Ridgely must find the contretemps as trying as did Newland, and, to help him bear it, she managed to make him hear the hurried whisper: "Couldn't-be-helped-explain-some-day."

Then with a laugh not altogether reassured, she took up her parasol. "Shall we be starting?" she inquired.

(Continued on page 24)

"I like him because he's so uncouth," she said. "I think he's the uncouthest person I ever saw"

British Official Photograph

### UP A TREE ON THE WAY DOWN

*This British balloon observer got into difficulties with a passing German airplane and was forced to make a hasty descent in his parachute, which, with the customary perversity of inanimate objects, naturally landed in the top of a tree, leaving the observer dangling forty feet from the ground. In the picture a rescue party may be seen swarming up the tree in order to bring him down, while a large crowd of Tommies watch the proceedings with interest and doubtless offer much excellent and useless advice*

# SALESMANSHIP AND SUCCESS

## SECOND ARTICLE: GETTING THE ORDER

### BY WILLIAM MAXWELL

ONE of the most interesting letters I have ever read came to me recently, in care of COLLIER'S, from a saleswoman of Indianapolis. There are perhaps two million retail salesmen and saleswomen in the United States. I possess no means of knowing what percentage of these retail sales people are in the habit of thinking introspectively about themselves and constructively about their daily work, but I am sure that nine-tenths of those who do so have more or less frequent experiences wherein a failure "to close the deal" gives rise to unpleasant doubts in their own minds of their abilities as salesmen—or saleswomen. In other words, most thinking salesmen, no matter how successful they may be, have occasion sometimes to chide themselves for losing a sale, and reason to doubt if nature really intended them to be salesmen.

I am going to give you all of the Indianapolis letter, as every sentence seems to be pertinent. It is a letter that has what lawyers call "atmosphere." Please read it carefully:

#### A Natural Gift?

"I HAVE read with more than passing interest your article on salesmanship, or 'Sizing Up a Customer,' as the article in question is headed, and I am taking advantage of your offer at the end of it. To begin with, I am, or have wished to be, and have made every effort to be, a saleswoman, my line being coats and suits for women. My record has been very discouraging, since I have spent almost seven years at it, conscientiously trying to make a success, and in every instance have been 'let out'—kindly, but nevertheless let out—and I am at a loss to account for it. Since I am a woman, may I be pardoned if I say that I have been credited with a pleasing personality, and in no instance have I lost a position through any complaint on the part of a customer; I seem able to interest them in my line, and am, or have been (although I am at the present time filling a clerical position) very anxious to find a color and style, both of which are very important factors in selling to a woman, to suit my customer. I am able to interest them, but cannot 'close the deal' often enough to justify my employer in continuing me in his service. Of course I realize that a certain amount of training is necessary in this line as well

as in all others, but my experience in the game should have been a training, which I seem to have failed to obtain, but for what reason I am unable to state—hence this letter to you.

"I wish to say, without being thought vain, that my customers are invariably kind, and seem to appreciate my efforts to please them even to the extent sometimes of complimenting me to my floor manager, or to the buyer; but that doesn't sell the goods. At times customers have presumed on my known courtesy to take up my time as well as that of my firm in looking at articles they probably have no intention of purchasing; right here let me say that there are many women who spend their leisure time in just that manner, and the word 'shopping' has come to mean anything but a prospective buyer in the minds of the majority of sales people. Of course these women buy, some place and some time, and for that reason I have never yielded to the perfectly natural desire to slight them. As you know, most employees in that line are paid a salary and commission, and time means a great deal in their business, and none of it must be wasted if a sales person is to make good with the firm or earn enough money to live on. I have had talks with many floor men, who, as a rule, are good business men, for, contrary to the common idea of a floor manager, he must be, in that department at least, a keenly intelligent man, and I have had no word of censure for my work, but they agreed with me that for some reason I was not a success.

"I have reluctantly come to the conclusion that one must have a natural gift for selling, just as another has a natural singing voice, and that training is an adjunct but not an absolute necessity for a salesman who has a natural aptitude for such work.

"I will merely mention in passing that I was compelled to enter the business world after many years of wedded life, which is not, to say the least, conducive to a successful career as a business woman. But the necessity arose, and with the 'pleasing personality' of which I spoke in the earlier part of my letter, and on the advice of friends who were pleased to think I was especially fitted by Dame Nature to fill such a place, and for other reasons, such as the fact that the days of my youth were far more easily counted in the past than they could be in the future,

I asked for, and got, a nice position in one of the highest-class stores in my city, where my training, if I had had any aptitude for that class of work, would have landed me in a much better place than I have ever been able to obtain. I have talked with two of my employers on this subject, for I am not easily discouraged. They both said there was no apparent reason for my failure, and that success would come. But I came to the conclusion that seven years is long enough to wait for success in one line, and so I made a change.

"However, this change is only temporary in its nature, and I am now contemplating a return to my old business of selling ready-made garments for women, as that is my only hope for a living. I dread the plunge because of the failure I have been, and yet I have no alternative. It is all I know how to do in business life, and I am too old to train for any other line. Can you advise me as to what is wrong? I feel it must be me, or my customers and employers would not talk so kindly to me. If I were not willing to work and conscientious in my manner of doing it, they would not be so kind as to say things like that. On the other hand, if—well—if you can help me by telling me where

my fault lies—and how I can remedy it, you would certainly confer a lasting obligation on

*You feel as if you ought to propose to her*

one reader of COLLIER'S who is very much concerned over the way she is going to earn her living. If you care to publish my letter, do so, though it may seem too insignificant to your trained mind to be of interest to others; but I should like very, very much to have your advice on a subject which is vital to me at this present writing."

#### That "Pleasing Personality"

AFTER reading this letter I feel very much as a physician might when he is able to assure a patient that the latter does not suffer from a suspected organic affliction.

The lady says: "I have reluctantly come to the conclusion that one must have a natural gift for selling," and that "training is an adjunct but not an absolute necessity for a salesman who has a natural aptitude for such work."

In my opinion there is no such thing as a "natural gift for selling." One may have natural gifts which, if properly developed and utilized, will make one an exceptional salesman, but there is no such thing as a born salesman any more than there is such a thing as a born race horse. A thoroughbred colt may be perfect physically and come from a family of winners, but he can never be a winner without training. Left to himself, he will fail to take sufficient exercise to develop his heart, lungs, and motive muscles in the manner in which they must be developed if he is to become a winner. There is this important difference between horse and man: that a human being can train himself, while a horse cannot. Horses have only instinct as their guide; men and women have intelligence. Good salesmanship is the product of intelligence habitually applied to the salesman's daily intercourse with his potential customers.

I can assure the lady from Indianapolis that she can become a good saleswoman. She may not achieve phenomenal success, but I am sure she has no faults that cannot be minimized to a point where she is, at least, certain of making a comfortable living as a saleswoman. I do not know her. I cannot diagnose her individual case from her letter and administer a specific remedy through the columns of COLLIER'S, but I should like to address all salesmen who believe, or have been told, that they possess this strange thing, "a pleasing personality."

If you are a salesman and believe that you have a "pleasing personality," you are confronted by two perils. You may overplay your personality, or you may underplay it. In either case you think too much about yourself and not enough about your customer. I know of a good-looking girl clerk in a drug store

BY ARTHUR SOMERS ROCHE

## CHAPTER NINE: PENLOW FARM

ILLUSTRATED BY F. R. GRUGER

**M**ENTAL excitement stimulates the appetite while apparently lulling it. Since breakfast Leila had not eaten, had not thought of food. Now, suddenly, she discovered that she was famished. She was not the least bit of a snob, and yet, to dine with Breen—Well, she was a perfectly healthy girl, and cherished her appetite. To sit opposite Breen would mean to lose all desire for food. Further, it would be quite impossible to take Breen to a first-class restaurant. Any self-respecting waiter in such a place would refuse to serve him. And Leila was not of the mind to patronize a third-rate place.

She yearned, not merely for food, but for subdued lights, for spotless napery, fine china, silent, deft service. A man in her predicament might very likely have been content with a bolted sandwich at a lunch room, but not Leila Kildare. The very fact that her mind and heart were torn with emotion made her desire the secure and assured feeling that a fashionable hostelry could provide.

In front of the Vanderbilt she found a taxi.

"You won't run away?" she asked Breen.

The ex-convict shrugged his shoulders. "Where'll I run to, ma'am?"

The question seemed unanswerable. McCord had disappeared. It was quite certain that the Birmingham people would know nothing of his whereabouts. Breen could, of course, go to the police, but—what had he to tell them? Nothing beyond the fact that Curzon McCord had been stopping at the Birmingham and that he was really Harmon Rayde. The police would pay the ex-convict nothing for such information. Whereas Leila could assure the man sufficient money for his immediate needs, food, and a place to hide should McCord do what Leila had done—trace the sender of the photograph.

It was this last that assured Breen's docility. If a mere girl could find his address, how easily Curzon McCord could find it!

"I'll telephone ahead, and the negro servant will look after you," she said. "If he doesn't happen to be in, you wait around until he returns."

"Yes'm."

She gave the man a bill, and the taxi drove off. Then she entered the Vanderbilt and telephoned Endicott's apartment. Fabian answered. He told

her what he had done, and she told him that Breen was on his way down.

"I can't explain it all now, Fabian," she said, "but give him something to eat, and—if he should change his mind, don't let him leave the house."

"Yes'm, Miss Kildare. I'll keep him here," said the negro grimly.

**I**N the dining room Leila surrendered herself to the waiter. McCord-Rayde, Endicott, Whitney, Larsen, Breen—a maze of figures drifted across her tired brain. She was not conscious of the food she ate, and the prideful waiter, to whom she had simply said: "Bring me whatever you can recommend," shook his head gloomily. He was an artist, that waiter, and he had served a dinner whose subtlety would have won the commendations of a gourmet. Oh, well, she looked as though she'd tip him well, and, after all, this is a commercial world, unappreciative of art.

It was early in the evening, and the dinner crowd had barely begun to filter into the dining room. In the middle of her salad Leila became conscious that the tables near her were slowly being occupied. And, though she did not deliberately listen, she could not help overhearing a fragment of the conversation of two young officers, British army officers, who sat next to her.

"Wonderful place, Penlow's," said one.

"That cream could be beaten only in Devonshire," said the other.

They could mean only one Penlow—Burchard Penlow, the multimillionaire philanthropist and man of affairs. For the last two or three days the newspapers had made references to the fact that he was entertaining, at his magnificent Westchester estate, members of the visiting Anglo-French Mission.

Leila's eyes held pity for the young officers. There was such patent homesickness in the tones of the boy who had mentioned Devonshire. On a brief respite from the trenches, the trenches might see them again before Devonshire did. Devonshire might never see them again.

She put the thought from her. Rather, she tried to put it from her. She had been hungry a while ago, and the incidents of the day, the people who

had acted in them, had become blurred. Now they were clear again. She saw the face of McCord, cruel, malevolent. And McCord was Harmon Rayde, whose activities might be the cause of prolonging the war; might even, by an easy stretch of the imagination, prove directly responsible for the deaths of the two gallant boys at the next table.

She had found Breen. But Breen knew nothing of McCord's present life, save the rumors that had seeped down into the underworld. Where to locate McCord—Fabian had been unable to trace his trunks. And she had not heard from Whitney yet. She must telephone Endicott's apartment again, but meantime—Penlow was famous not only for his wealth and social and political activities: he was famous for his dairy farm. He raised the finest cattle and the finest poultry. He was one millionaire who had a hobby and made the hobby pay. For Penlow milk and eggs were as well known as Penlow banks or Penlow steel girders—better known, perhaps, to sick babies who received the milk at a bit less than cost.

And the train of Leila's thought, shooting around the Penlow reputation, stopped again at Curzon McCord. McCord was extremely fussy about the eggs he ate. They were sent to him from some special place. McCord had been quite particular about those eggs. It might be—there was just the barest chance—that whoever sent them to McCord might continue sending them to some new address. At any rate, it would do no harm to find out whence they came.

She signaled her waiter and paid her check. The waiter was satisfied with the tip. He would, being human, have been contented with the smile and the murmured word of thanks she gave him for his excellent selection of dishes. However, he did not refuse her gratuity. He was an artist, as has been said, but artists often have families who must be clothed, fed, sheltered. He bowed Leila almost to the door.

**SAM WHITNEY** might have some news; or, if he had none, might have some advice to proffer. She rang up Endicott's apartment. But Whitney had not returned as yet, nor had he telephoned. But Fabian, who answered her ring, had much upon his soul.

There is no snob like the mental. The butler who has learned the idiosyncrasies of dukes resents the

foibles of the commoner. Fabian, the son of slaves, was affronted at being compelled to minister to the wants of Breen, the son of freemen.

"I'm keepin' him here, Miss Kildare, but I'm tellin' you it ain't no hard job to do it. I think he's goin' camp here the rest of his life. He's got on a pair of Mist' Farley's slippers, and is smokin' his cigars, and—"

"Put up with him, Fabian," begged Leila. "If we do have to go to the police, the fact that Breen knows Mr. McCord will make them believe us more readily, and act for us more quickly."

"Yas'm. And you, Miss Kildare? You'll ring up again."

"Soon," she responded.

A moment later she had the clerk of the Birmingham on the wire. "Miss Kildare? I hope"—the clerk was extremely polite—"that neither you nor your uncle had any fault to find with the hotel."

"Why, no," she told him.

"You left so suddenly."

She laughed. "Mr. McCord is rather eccentric, you know."

The clerk diffidently agreed.

"He—you know how peculiar he has been about the eggs sent to him each morning?" she asked.

"Yes, Miss Kildare."

"He told me to inform the express company of his change of address, and I—I've forgotten the name of the express company. Stupid of me, but uncle"—she had to force her lips to frame the hateful word—"might be upset if I told him that I forgot—"

"Why, of course, Miss Kildare. Just a moment until I look it up."

THE clerk sighed as he turned to a record book. If he were twenty years younger, he'd—oh, well, he wasn't twenty years younger, and he might as well quit dreaming. Anyway, nothing less than a millionaire or a prince of the blood was good enough for Miss Kildare. He wondered how the deuce she'd ever had such an uncle wished on her. He couldn't believe McCord had been her father's brother. Nor her mother's. Oh, well, families were queer things. He had a cousin, himself, who— Then he found the entry and returned to the telephone.

"The City and Suburban, Miss Kildare."

"Thank you so much."

He smiled as he hung up the receiver. Manners, that girl had. Just as polite—

As for Leila, she pursed her lips. Fabian, tracing trunks, had come upon an impasse. She prayed that she might not do the same thing. In the telephone book she looked up the City and Suburban Express Company. It had several offices, but the one nearest to the Birmingham was the one she wanted. She found it and left the Vanderbilt. The express office was just closing, but the face of a pretty girl unlocks doors. The request was unusual, but so was the girl.

"You want to know where the eggs delivered to Mr. McCord at the Hotel Birmingham are shipped from?"

Leila nodded. The clerk who had turned back into the office consulted a book. "Penlow Farm," he told her.

Penlow Farm! Suspicion rioted in her brain. Had it been any other place on earth that supplied McCord with eggs, she would have thought no more of it than as a place where she might procure McCord's new address. But Penlow Farm! Where eminent Englishmen, great Frenchmen, were being entertained! Penlow Farm, where undoubtedly matters of gravest import to the Allied cause were being talked over!

McCord had posed as an invalid. But he had posed as many other things, and the poses had been lies. She remembered what she had thought, at the time, was merely typical of his hypochondria—the fact that his eggs and milk had not prevented him from eating hearty breakfasts. She had never seen him consume the eggs and milk that the waiter at the

Birmingham brought to him each morning— But she did not know what to suppose. She only knew that McCord was Harmon Rayde, that he was an enemy to the country, that he had some connection, even though so slight as breakfast eggs, with the country estate of Burchard Penlow.

She thanked the obliging express-office clerk and reentered her taxi, ordering the driver to stop at the nearest place where there was a public telephone. He found one in a near-by apartment hotel. She rang up the Penlow Dairy Farm.

"This is the secretary of Mr. Curzon McCord talking," she said. "You have been sending Mr. McCord eggs at the Hotel Birmingham."

"No, ma'am," was the answer, "we haven't been supplying anyone at all for several months."

"I'm sure you're mistaken," she insisted. "And Mr. McCord wished the address changed—"

"There hasn't been a single thing sold from this farm since war was declared," came the answer. "Mr. Penlow has given, and will continue to give during the period of the war, all products from this farm to the Government."

There was the click of the receiver as the person out in Westchester hung up the receiver.

Leila had no opportunity to tell the white lie on the tip of her tongue; no chance to tell the Penlow employee that McCord thought he had given the wrong address and so manage to have the new address read off to her.

It might not have worked. The chances were very much against McCord bothering with diet when liberty, life itself, was hanging in the balance.

But now—the employee spoke with certainty. The Penlow products were not for sale, had not been for sale for some time. Then McCord had not been receiving such products. Then why— She was bewildered, more bewildered than she had been at any other time on this most puzzling day. She had stumbled on something, most certainly, but what was it?

She could have laughed. There is something funny about eggs. So many thousand jokes have been made about them. But Farley Endicott was a captive; Breen's admissions were fresh in her mind. McCord, she believed, did nothing at random, without a purpose. If he pretended that the Penlow Farm supplied him with eggs— Why?

She looked up the number of Penlow's home, and a moment later was talking with his private secretary.

"Mr. Penlow never speaks over the telephone with—"

already was precious to her. Even had she been connected with Penlow himself, what could she tell him? What could she ask him?

A man's brain. That's what she needed now. If Sam Whitney were back at the apartment now— She asked for the number. She insisted that there must be some one there.

"The line doesn't answer," was Central's final flat reply to her insistence.

Well, perhaps Fabian and Breen had gone out for a moment. And she should be there when Sam Whitney telephoned, as he must telephone soon. She ordered her driver to take her to University Place. But at Eleventh Street she leaned forward, and through the opened window spoke to her driver. Her voice was terror-stricken. "Keep on driving! Right through the square! Don't stop!"

Then she sank back, thankful that she was in a closed machine. For, beneath an arc light, conferring with a man whom she had not seen before, she had seen Larsen!

### Chapter X: The Soul of a Rat

BENCHLEY eyed his chief apprehensively. Beneath the gaudy dressing gown McCord's thin figure quivered. He made the fearful Benchley think of a beast of prey, hungry, gaunt, and cruel because cruelty was the natural thing.

"How could I know the girl would beat me to this guy Breen?" he whined. Nervously he twisted the ends of his waxed mustache, and smoothed, with ringed hands, the dark curls of his oiled hair.

Contempt crept into McCord's eyes as he looked at the dandy.

"You couldn't know—anything," he snapped.

"Well, I did the best I could. I found the photographer who copied the picture of you. If you'd only thought of it a couple of hours earlier—"

"Must I think of everything?" cried McCord.

A flush crept over Benchley's sallow face. He was a mongrel, but even mongrels show their teeth.

"You'll be blaming me next because you did time twenty years ago," he said viciously.

McCord's hands, hidden in the huge pockets of the loose gown, knotted into bony fists. But Benchley was valuable to him—just now. Later on— But loyalty was desirable, vital, at the present moment. Moreover, dapper, overdapper fop though he was, and a physical coward to boot, Benchley had more

fineness, more acumen, than a dozen Strombergs or Larsens. It was just as well to propitiate Benchley—now.

"Don't mistake criticism for anger, Benchley," he said. He actually smiled, and Benchley was immediately flattered and mollified.

"No one would have dreamed this Kildare girl would have looked up Breen. And at that, if I hadn't gone back to the Charlton, after bringing Endicott here, Larsen never would have hung around and got this Whitney guy—where does he fit in, anyway?"

McCord waved the question aside for the moment.

"You say the girl had taken him away?"

"Well, after I finally located the photographer that made the copy—it cost money to get the address from him too; he was all locked up—he said a girl had just asked for it, and he told me off-hand. But he told me wrong, gave me the wrong 'hundred' in the number. I figured, though, he was on the level, and had made a mistake, but I lost time finding the right 'hundred.' When I got there this Breen was gone, but a woman in the building told me he'd

gone away with a girl. The girl was the Kildare girl too. They described her, the photographer and the woman, too well."

McCord drummed on the edge of the chair with his fingers.

"Who is this Whitney guy, anyway?" demanded Benchley.

(Continued on page 22)

"White trash, you kin go plumb to the Pit, where you b'longs, and—"

out an appointment. If you wish to tell me your business—"

But what business had she to tell the private secretary? It sounded so laughable, so absurd, so unreasonable. Moreover, she could not talk without telling things that might cause the police to be brought in, and this she feared. Farley Endicott

# Collier's

## Cabbages and Diplomats

IN his "Recollections" BISMARCK, discussing the case of his enemy, Count HARRY VON ARNIM, observes casually: "As for the condemnation to five years' imprisonment, this was only rendered possible, as the condemned man himself truly remarked, by the fact that the ordinary judge in a criminal court was not in a position to gauge with full comprehension the sins of international relations." That is to say, a diplomat is expected to commit crimes for which a common man must go to jail. This was and is the morality of Prussian diplomacy, perhaps of European diplomacy in general. Corruption and bribery are among the essential contents of its tool chest. Buying editors was an everyday occurrence with BISMARCK—buying them or locking them up. He sent money to VON ARNIM to bribe the Paris papers. VON ARNIM used the money to bribe a German paper to attack BISMARCK. But usually the Chancellor got his money's worth, and, thrifty old rogue that he was, would have been horrified at the decay in the art of corruption among German diplomatic agents as illustrated by the disclosures of Count VON BERNSTORFF's transactions with a New York evening newspaper.

The story is almost too grotesque, but it proves how ill-founded have been the fears of German diplomacy. It could not keep Germany's ally, Italy, out of the war, nor Greece, nor Rumania. It tried its hand at Paris. Result, a procession of its agents going out in the cool of the morning to face a firing squad, CAILLAUX in prison, and CLÉMENTEAU, Prussia's most violent enemy, at the head of affairs.

But its stupidest venture was the attempt to debauch public opinion in this country. First DERNBURG was sent over. He had been financial adviser to the Kaiser. He had occupied the post of colonial minister. In his youth his parents had sent him to Wall Street for a financial education. He spoke better English than most Wall Street men. Yet, within a week after he arrived in New York, it was perfectly clear that he no more understood the currents of American thought than if he had come from the wilds of the Kongo.

DERNBURG went home beaten and BERNSTORFF had a free hand and all the money he needed. The German Government had sold a large issue of bonds, probably for this very purpose. BERNSTORFF was clever and presentable. His wife was an American of German parentage. He was a figure in fashionable society—a good dancer. He, too, spoke English as well as the head waiter of a Swiss hotel. He professed a great fondness for this country. One of its institutions which he most admired was the cocktail. But he drank cocktails *after dinner*—a characteristic expression of German outlandishness. He even affected to admire England. "If Lord Salisbury had lived, this war never would have occurred," he said on one occasion. "I would like to place a wreath on Salisbury's grave." It was about the time of the first child-murdering raids of the Zeppelins against London. The retort came from an American: "Why don't you do it? Drop the wreath from a Zeppelin."

How did this heir to the Bismarck tradition, who was supposed to know the American character, go about his business? Well, one of the things he did was to pay \$1,360,000 for an evening paper in New York and install as editor the former principal of an agricultural school for boys! At that the paper was not very vehement in defense of Germany. Some protective instinct bade the editor go slow. The articles he published were mild and dull. Yet BERNSTORFF expected this lower octave of a journalistic piccolo, heard indistinctly among the diverse noises of the American newspaper world, to drown the voice of the American people!

The disclosures were worth while if only to show how harmless at times—and most of the time—is the evil that lies at the root of modern German civilization. Like everything crooked in the world, it is also stupid and nearsighted. True, it has purchased LENINE and TROTSKY. But LENINE has been in the pay of the German Foreign Office for years. TROTSKY (BRAUNSTEIN) came late into the game, but he has done well. There is evidence of more than \$500,000 passing into his possession from German official sources, and that was but a small part of what he got. Millions of German money have been dumped into the laps of these "over-principled ruffians." It remains to be seen whether they can deliver their tortured country over to the corruptionists.

Ignorance of the thought of other people, and a thick incapacity

to learn, are at the bottom of German political failures everywhere. At a time when the tide of insulted national pride and fierce indignation against the murderers of our people was rising with a force which the Administration could not resist, even if it had so desired, who but a representative of Prussian diplomacy could expect to quell it through long-winded editorials on the glories of German Kultur by the hand of a gentleman who, a few months before, had been instructing the dispirited youth of Indiana on the habitat of the rutabaga turnip and the proclivities of the lima bean? If he was that easy, it is perhaps as well for him that he did not venture with his bank roll into the upper reaches of Broadway.

## The Five Million

KARL BLEIBTREU has published in a German periodical called "Das Neue Europa" statistics purporting to show that German army losses up to the end of last January amounted to 4,456,000 men, or, if deaths from wounds or illness are added, over 5,000,000 men. Why did Germany's press censor pass such tragic figures? J. HOLLAND ROSE, the British historian, thinks it was because the printing of these statistics would dwarf the losses of the 1918 offensives, so that Germans would say to one another: "After losing 5,000,000 men, what does the loss of half a million more signify if we gain our objects?" It is illuminating, all the same, to compare these figures with those of Prussia's nineteenth-century victories. Her victory over Austria and her German allies in 1866 cost the lives of only 3,473 Prussians, and three times as many wounded and missing. For the sacrifice of only 30,000 lives Germany completed her unity by the Franco-Prussian War, humbled France, and gained 1,500,000 subjects and vast material resources in Alsace-Lorraine. "Every time I first made it clear to myself whether the war, if it were successful, would bring a price of victory worth the sacrifices which every war requires, and which now are so much greater than in the last century," said BISMARCK in the twilight of his career. What would he say of 1914-18 and its unmeasured sacrifices? BISMARCK, had he lived on in vigor until these times of ours, would have spared the world this war: not out of regard for civilization, not out of humanity, but because BISMARCK did count the cost.

## Foch Is a Celt

IN the part of the London "Times" where they used to tuck in pieces about the Hon. SO-AND-SO's week-end we find this:

General Foch, the origin of whose name is said to be Celtic and derived from *foex*, which means "fire," divides his leisure time between art, his family, reading, and sport, and is very fond of old music and still more of old furniture. What one might term a Society-of-Nations note?

## Stunts in the Air

EDWIN BIDWELL WILSON, professor of physics at Boston Tech. and described in the "Yale Review" as "an authority on aeronautics," has a word to say about the dare-devil professional airmen whom we used to criticize before the war because, "to thrill spectators, they put their machines into all sorts of devil-may-care attitudes and frequently themselves came suddenly down to death." We know now, he adds, that such stunts are an essential part of the fighting aviator's repertory:

The more completely a pilot can control his machine, the more easily he can toss it hither and thither—cutting figure eights, looping the loop, nose diving, and tail diving—the better chance he has for his own life and the more certain he is to get his opponent. For an undertrained pilot to go overseas to the front is almost certainly fatal, and for every life lost in training many are saved in fighting.

Some will find, in these conclusions by an expert, a slight consolation for our loss of high-spirited youth through what has seemed, at times, a needless sacrifice.

## For Pulling Together

A NEWSPAPER in Ohio prints the following brief item, headed "Notice to Farmers":

We are as busy as any body but not too busy to help save the crops and if any farmer in Jackson County is in danger of losing wheat from lack of harvest hands, we are ready to come out and help save same free of all charge. If you need us, call THE JACKSON MILL AND LUMBER CO. We haven't investigated this advertisement—but it sounds to us, offhand, like downright patriotism. In winning this war, a whole lot of voluntary (not kaiser-enforced) cooperation is called for.

# Editorials

## To Win the War

WHAT rejoices some of us most in the current news from Europe is that our naval gunners, artillerymen, machine-gun operators, rifle firers, and revolver carriers seem to be getting into a habit of hitting what they aim at. Thrift, industry, and abstinence are all very good, but this war is going to be won by shooting straight.

## Pure Americans

NOT so very long ago there was a German ethnologist, of international reputation, who spoke of the important element contributed by the aboriginal Indian to the make-up of the American people: as attested by the common phrase, "a red-blooded American." German science occasionally makes such remarkable discoveries. At first sight there would seem to be a much closer approximation to the truth in the report of a German Intelligence officer at the front concerning the examination of some American prisoners taken at Bouresches in June:

The quality of the men must be characterized as remarkable. They carry themselves well, are well developed physically, and from eighteen to twenty-eight years of age. They only require proper training to make them formidable adversaries.

That, however, is mere externals. Our intelligent German Intelligence officer thought he was being scientifically precise when he continued:

Only a few of the men are pure Americans by race. The majority of them are sons of foreign parents. These half-Americans, however, most of whom were born in America and have never been in Europe, express without hesitation purely American sentiments.

In other words, pure Americans. This German officer's sharp eye detected, without his mind grasping, the fact that there are two kinds of pure Americans: those whose parents were born in Europe (or for that matter may have themselves been born in Europe) and those whose ascent on this side of the Atlantic goes back anywhere from fifty to three hundred years. Which in the last analysis means that by foreign testimony we are what we have always liked to think of ourselves as being, in origins diverse, in sentiments one; as racial phenomena mixed, as Americans pure.

For us the war is being fought by pure Americans named RANDOLPH BRADFORD and NIKLAUS BIESLOWICZ; which is again as it should be.

## Searching for Russia

WHO was it back in that quaint, orderly nineteenth century who said Boston was not a place, but a state of mind? That would be a truer remark about Russia in 1918. HAROLD WILLIAMS, a newspaper correspondent at Petrograd, writes in "The New Europe" that the central difficulty in the Allies' Russian problem is that

there seems to be nothing to grasp, nothing to lean upon. There are no stable institutions representing either the will of the people or the power and authority of the state. Russia . . . at present has an intense psychological, but not a physical, existence.

Yet Mr. WILLIAMS closes by saying we Allies "must go forward in faith" till we rediscover Russia, chaos or no chaos. "We cannot afford to lose touch with Russia. We must seek till we find her."

## Closing in on Wilhelm

ONE of the dearest victims of this war is the amateur spirit in government and administration. The American suspicion of "experts" had already received some hard knocks in the domain of city government: and nowhere more strikingly than at New York, where the late JOHN PURROY MITCHEL gave the Four Million their best administration yet—an administration by men who know their specialties. To-day no one says that there are no incompetents (trained and untrained) at Washington and elsewhere. But the war-time government of over a hundred million indi-

viduals and a high percentage of the earth's crust is an expert job—and the experts have been called in. The old theory that "successful" men—the captains of industry—must inevitably be corrupt, is neither proved nor disproved by our war, to win which Big Business has gone into partnership with the President and Labor. The national emergency has served us an irresistible challenge to the men who do things. The joy of Getting Things Done was probably always a greater reward to the American Captain of Industry than his bank account or stock holdings or his wife's social progress. The contest is, to-day, a contest between the armies of LUDENDORFF on the one side and those of FOCH and HAIG and DIAZ and PERSHING on the other; but it is also a duel between the Big Business and technical skill of Germany and America.

## Columbia in Flood

YOU may have noticed that the shipyards of our country doused the Kaiser on July 4 by launching only some ninety-five vessels (more than the United States ever built before in any one year!) because eleven boats were held on their ways in the district around Portland, Ore., by "the seasonal freshet in the Columbia River." Those seven words, as quoted here, give an Easterner no idea at all of what that freshet really is. From Alberta south to Nevada and

Utah the winter's snow lies packed twenty feet deep and more along the slopes and passes and down in the black-shadowed gorges of the Rocky Mountain system, a world of ice and rock and drifted sleet. June's hot sun beating down through the high, dry air of the intermountain country sets all that frozen water rushing on its way over the wind-swept granite of the great range. For over two thousand miles, as the eagle flies, the Columbia takes it all. Feeding in from countless tributaries and reenforced by a million leaping hill-side springs, clear and blue and utterly cold, over a hundred feet deep and a mile wide, running in waves that would swamp a small boat, attended by the untiring wind that haunts its lofty banks, carrying far more flood water than Father Mississippi himself at his lustiest, that imperial flood thrusts its untamed strength past plains and mountains and out into the Pacific. On that rush of melted snow the river men took steamers such as the old *Harvest Queen* over the great rapids past The Dalles, and on it the stern-wheeler *Telegraph* made her untouched record of four hours on the downstream run from Portland to Astoria. Beautiful, unhurried and unchecked, purifying and terrible, the Columbia in flood is like a Puritan's vision of the justice of eternity. For our day it is a fit symbol and prophecy of what kaiserdom brings down upon its evil head.

## A LETTER FROM FRANCE

(From a French officer to a civilian friend in France)

You say this to your American friends: It is impossible to imagine a more perfect understanding of one another than now exists between the French and the American poilus.

The reason for their ready camaraderie is easy to find: its base is mutual respect. When the Yankees first came our poilus looked with a little distrust on these troops with their elaborate equipment and all their spending money: we waited to see what they would be like in action. Well, they have been there and they have shown extraordinary nerve and guts. When surprised by the boche in a recent raid they defended themselves like wild men—even with their feet and fists. The boche did not take a single prisoner. American patrols are models of coolness and ingenuity. Under bombardment they do not give way, and that is test enough. They have not the silly vanity that thinks it can't be "shown": on the contrary, they ask questions whenever they get the chance, and learn how to do things better next time.

Their conception of discipline shocks us a bit. Here's a case in point: The other day an American driver was trotting down a steep hill with his four mules. The harness broke and the animals ran away. Very skillfully the driver managed so that he drove into some trees and stopped his team, but one mule was smashed against a tree. The American got down from his seat, cool as a cucumber, examined his beast, then tranquilly drew and fired his revolver—and drove on. If you could have seen the look on the faces of our men! They talked of it for days. Had such a mishap happened to us, we'd have been swamped under all the reports and statements!

I have seen a few of their officers in a little village near the lines. The village people are strong for them.

GOODYEAR  
AKRON

# 3,186,952 Miles of Proof

---

IN the course of our regular testing operations in New York City under conditions of normal service, eighty-two Goodyear S-V solid truck tires recently totaled a record of 3,186,952 miles—an average of 38,865 each.

We cite this information not so much as an example of unusual performance, as to indicate the extreme care exercised to assure our product's quality before and during its sale.

We cite it also as illustrating the consistent character of Goodyear S-V performance, a performance uniformly remarkable for efficiency and thrift.

The returns in these tests are well in keeping with those delivered by S-V tires in actual service, where mileages up to 20,000 on country routes and 40,000 in city usage are not uncommon.

The tests to which our truck tires are subjected bear an important relation to S-V quality, and to the fine service these tires are everywhere delivering.

They are a source of that process of manufacture which assures S-V users all three essentials of truck tire merit: long tread wear, freedom from chipping and cutting, and resistance to separation from the base.

They underlie in large measure the efficient design of S-V tires, which affords extra mileage, constant power-saving traction and the utmost solid-tire resilience underwheel.

They are part of that elaborate endeavor of invention, experiment and betterment out of which Goodyear has contributed so generously to all truck tire manufacture.

Tests of this nature have proved of universal benefit, in the development of such important Goodyear features as the steel base, as well as the pressed-on type of tire now in common use.

For the Goodyear truck tire user they have yet another value, as a permanent assurance of the goodness of the tire that he buys.

# SOLID TIRES

Returned and  
walked away,  
mumbling:  
"Niggah, put-  
ting on airs"

# JOURNAL OF A RED CROSS MAN

BY DAVID CARB

THERE is in Soissons a seminary, not so very old, but thick with memories. In the days before the war young men learned in those halls to become priests, and in the apacious gardens behind they walked at twilight, as priests should, upon the fragrant earth, looking toward heaven.

In the years that the German troops were hidden behind great barricades on the hills just beyond the River Aisne, the seminary received many missiles. The two upper floors were caved in; the rooms of the lower floor were gaunt and cracked. In the summer of last year the Department of Civil Affairs of the American Red Cross took over the seminary and established a branch office there. The chapel became a warehouse; its panels representing the Passion and the Crucifixion and the Resurrection were half hidden behind bales of blankets and beds and stoves and sacks of foodstuffs for the refugees. On the altar lay mattresses and agricultural implements. The other rooms of the ground floor were also converted into storerooms and offices. On the second floor several of the men of the Red Cross had repaired the cells of the erstwhile priests, and dwelt in them. The following extracts are from the journal of one of these men:

**SATURDAY, March —:** All day they have been bombarding Saint-Waast just over the Pont des Anglais. Only the methodical habits of the Germans permit us to do our work. They lunch from twelve to one-thirty, so by watching the clocks we are able to make our deliveries and return to our shelters before the artillerymen resume their work.

Late in the afternoon Monsieur G. came to the seminary to ask if we would let him have a few packing cases. He entered the office smiling and gracious, as always—a gentle, hearty man, belying by a decade his fifty years. He has been a sort of father to his village, the only cultivated person in a slovenly industrial suburb. Quite simply and without emotion he told us that his house and shop had been struck by a shell. He desired the cases to remove the things that remained to him.

I couldn't wait until the morning to offer to help him, so as soon as his bicycle got out of sight I started on foot to Saint-Waast. In the Rue Saint-Martin, here in Soissons, I was stopped by the scream of a shell and a terrific explosion. It was followed by a dead silence. Then people began to appear in the street—curious but silent. After a while a door opened and a woman said softly: "Il est tombé chez nous." Her little mercer's shop was strewn with goods which had fallen from the shelves; the parlor was cluttered with broken glass and plaster dust. Bits of china ornaments crunched under our feet. For a moment she stared at the ruin. Then she shrugged, seized a broom, and began vigorously to sweep up the debris. As I passed back through the shop her daughter was putting the goods in their places again.

Monsieur G. thought I had come to see the wreck of his home and shop, but when I refused to be shown the place and removed my coat he understood that I had come because I wanted to help him. Silently he indicated an empty box and the pigeon-holes on the walls filled with hammers, axes, knives, picks—all the rusty and greasy clutter of a large hardware store. As I bent over the packing he wept frankly, unashamed.

"I came to Soissons when I was twenty-one," he

said. "I had not a son, but I worked hard, and my wife worked with me, and we built up a fortune—at least what is a fortune in such a place. What the Germans did not take during their occupation I lost when a shell struck my house a year and a half ago, but Madame G. was cheerful, and after six months we began again to prosper."

He waved his hand comprehensively round the dark room. "Now I must begin again," he continued. "Oh, well. . . ."

**TUESDAY, March —:** The streets swarm with Americans and French soldiers en repos. The cafés during the hour or so that they are permitted to remain open are crowded with brown and blue uniforms. Frequently the two colors are at the same table. They share their light wine and clink glasses. They seem to have invented a sign language; there is no doubt about their comradeship. It is gratifying to notice how quickly our boys pick up some of the nicer French customs: saluting when one enters a café and when one leaves, making a ceremony of a glass of wine and consequently drinking slower. . . .

But sometimes strange things happen. There are also in the town a great many Algerians. They wear khaki too. To-day I saw an American negro stop a French black.

"Where is the hotel here?" he asked.

"Comment?" said the Frenchman.

"Where is the hotel?"—very loudly.

"Je ne comprends."

The American negro gazed at the French one with deep and visible scorn, and not a little anger. He turned on his heel and walked away, mumbling: "Niggah, putting on airs."

**FRIDAY, March —:** I dined to-night at the Soleil d'Or and lingered rather late over it. About half past eight I emerged into the deep blackness of the night. A great hulking figure passed me, walked a few steps and stopped.

"American?" he called.

"Yes," I said.

"I'm lookin' for the Blue Lion or the Red Lion or whatever they call it, and I can't spit this Frog talk."

I gave him the directions for the Lion Rouge. It was some distance, and he knew he'd never find it in the darkness.

"Ain't there some nearer place where one can get supper," he asked, "and a place to sleep? I just blew into this burg, and I'm beating it to-morrow."

I took him into the Soleil d'Or. Madame la patronne agreed to give him dinner, although it was after hours and against the law. She was desolated that she could not accommodate me by allotting him a chamber, but so many American officers were in town that her hotel was completely filled and so were the other two hotels. Carney looked at me pitifully, so I told him that we had fixed up a little cell for our chief when he made infrequent visits to us, and offered it to him for the night. After Carney had consumed the first two courses of madame's excellent dinner he began to talk.

"This is a funny game I'm in," he said. "Here am I, a corporal. It's a joke. I won't dare show my mug at home any more. All the boys think I'm a captain or something, or ought to be, because, you see, I've got some mighty big friends. Here, just look at this." He produced a letter from a well-

known politician of a large city. "You see who I hobnob with. He'd have wrote it out in longhand, but he's a mighty busy man. I know the guy that wrote it for him. Just before every election he comes down to my precinct and says, 'Carney,' he says, 'are the boys all lined up right?' I pulls out a paper from my hip pocket and shows him the list—shoes for Leary's baby, and all that sort of stuff. There ain't a precinct in — that votes solidier than mine."

"I've been pulling off that stuff all my life. That's how I got into college. They seen I was a good football player, and they paid me well."

"How long did you stay in college?"

"Only three months. Just for the football season." He showed me another letter. It was from the mayor of the same city. "That's a smart guy. He don't know much, but he sure knows where to get the dope. You see, if somebody asks him to talk about Napoleon Bonaparte, he just calls up a high-brow like you and says: 'Napoleon Bonaparte, K.I.S to-night'; and pretty soon the highbrow slips him a piece of paper with all the dope. He reads it on the way over to the meetin'. Then he shouts. He's a crack shot."

After a while he paid me a high compliment.

"You'd go good in politics," he said. "You've got a head on you. The boys need men like you and men like me. We'd make a great team. I'm a good fellow, always shaking hands and buying drinks, and you'd make 'em feel like dirt; and they'd like me and they'd respect you, and they'd always vote our way."

"But, Carney," I said, "you're in the war now. You have just come from the trenches and you're going back to them. What about the war?"

"Oh, we'll win it all right," he said casually. "There won't be no trouble about that."

**MONDAY, March —:** The bombardment of the town has increased. They must have sent over a hundred shells to-day. A great many of them are duds, but the others do a lot of damage. About three o'clock this morning I was awakened by a heavy pounding on my door. A lieutenant called to me that he wanted medical aid for one of his men. I piled into some clothes and opened the door. They were covered with mud—four of them, men in their middle twenties or under, a lieutenant and three enlisted men. The officer said that they were marching in with their company to the station where they were to entrain. This man had suddenly become ill, and the four of them had dropped behind. He had carried the sick man on his back for three miles.

"Why didn't you let the other men help you?" I asked.

"It's an officer's duty," he said, "to care for his men."

The sick soldier was very young. He had indigestion or ptomaine poisoning—he didn't know which; but it was evident that he had homesickness too. We finally got the Ford cranked and started for the French military hospital. One of the men lay on the mud guard holding an electric flash in front of him. I drove. The lieutenant sat in the back seat supporting his sick man. We crept through a damp, thick mist to the huge hospital. The doctors were in the cellar. A shell had gone through four floors of one of the buildings that afternoon, straight to the cellar. It would have blown the whole place to pieces had it exploded. Strangely enough, it didn't; and it was lying very near the improvised table where the doctors sat—a dark, sinister, ugly thing.

We came back to my room, managed to get a fire started and made coffee. The lieutenant was silent. He felt somehow that he ought not to leave his man with strangers. But the other two men, warmed by the coffee, became cheerful again.

"We've got to go seven and a half miles," one of them said, "by eight o'clock. You know, it's a great feeling to find that you're strong enough to play this game, and healthy enough to be cheerful when it don't always go your way. It'll be a gang of real men that marches up Fifth Avenue with the Kaiser's goat on their bayonets."

There are over a hundred thousand more people living in the four states on the upper right hand corner of the map than in the eleven states represented in black on the left.—*Latest Government Census.*

# LEADERS OF OUR NEW ARMIES

BY ARTHUR F. COSBY

FORMERLY CAPTAIN U. S. V.

THE future line officers in the American armies are to be trained and supplied through officers' schools to be held continuously. This is the latest policy of the War Department. There will be three schools for the infantry and one for field artillery in this country; others to be held abroad. The coast artillery early adopted the continuous-officer-school policy. The British and French have long had it. We tinkered with divisional schools; held sixteen of them—one for each division. The General Staff had it all beautifully worked out on paper, but the German offensive this spring upset all that. As soon as our divisions began going overseas at the rate of half a dozen a month, to go into action almost directly, the divisional school became a myth. How could men study on crowded transports or listen to lectures within the sound of the guns?

The new policy also recognized the potential military value of civilians as officers. A few older men, beyond the draft age, are allowed to attend the officers' schools to show whether or not they are the stuff of which officers are made. But the bulk of the candidate-officers will very properly come, as heretofore, from the enlisted personnel of the army.

## Smashing Precedents

AMERICA at last is awakening to the whole subject of the value of training. We are a people who are restive under restraint and discipline. We have been so long free and independent, in the best sense of the word, that our citizens have grown to think of themselves rather more as individuals than as a collective part of the Government and the nation. The spirit of America chafes under training, and yet the world concedes now that the much-vaunted efficiency of Germany means nothing more nor less than suitable training for whatever the job in hand may be.

Training, of course, goes hand in hand with preparedness. We cannot have one without the other, and it was the unpreparedness of America, when the hour of trial came, that made Americans blush at the possibility that the United States would be too late to play its part in this great world war. It was this idea of preparedness and training as to things military which Major General Leonard Wood preached earnestly and persistently for years. It was for training and preparedness that General Wood established the civilian camps at Plattsburg in 1915. General Wood and the small band of citizens whom he gathered around him had a great big idea. From the small beginning of 3,000 citizens in 1915, in the first camps at Plattsburg and elsewhere, it grew to 16,000 in 1916—men who had had some measure of training, if only of a month of intensive work. The country owes a great debt of gratitude to this small band of patriots who, before America was actually in the contest, gave up their vacations and at their own expense went into this practical demonstration of the value of military preparedness. From that band grew the Military Training Camps Association, whose efforts largely made the first officers' training camps possible. It is generally true that a soldier is no better than his

officer, nor is an officer any better than his training, and at the outbreak of war we had a mere handful of trained officers—some 5,000 regulars, as a force to handle the entire subject. The training of officers necessarily takes time. The course at West Point is four years. The elementary course in military colleges abroad is usually two or three years. But all hands agreed that, at the best, an officer could not be turned out in less than one year. The situation abroad, however, would not permit of twelve months' training.

It was here that the value of the civilian camps held at Plattsburg and elsewhere was proved. They had demonstrated that a three months' intensive training with a graduated scale of work could make a man not a finished officer, but at least show if he were valuable officer material. The results of the Plattsburg experience had smashed all precedents and astonished regular-army officers. The zeal of the civilians, their earnestness and intelligence, made satisfactory results possible. The class of reserve officers, which is now our main reliance, was only created in 1916, with the expectation that the officers were to be largely the graduates from these civilian training camps. The whole officer question, even to-day, is closely related to the earlier Plattsburg experience. The decision to allow civilians, in limited numbers, to enter the officers' schools, is a return to first principles.

At half past seven on the night when the United States declared war against Germany a committee of three men left the offices of the chief of staff in the War Department Building at Washington very tired but very happy. They had been working hard all day with the higher officials and had remained in the War Department long after the regular hours of closing to send telegrams to New York, Chicago, and San Francisco. The committee represented the Military Training Camps Association of the United States. They were in Washington to offer the aid of the association to help start at the earliest moment officers' training camps. This association was composed of some 20,000 men, civilians all, who had attended, chiefly in their vacation time, the training camps held at Plattsburg, N. Y.; Fort Sheridan, Ill.; Fort Oglethorpe, Ga.; The Presidio, Cal., and elsewhere. These men suggested that the legislation, funds, and machinery available to the department for civilian training camps be used for holding officers' camps. Mr. Baker, the Secretary of War, promptly sent the committee to see Major General Hugh Scott, the chief of staff. As soon as General Scott heard the suggestions about training camps he smiled, pressed a button, and called for the telegram, already prepared, to the Military Training Camps Association on this very subject. This announced that the War Department had decided to start officers' training camps at once along the lines previously suggested by letter, cordially accepted the services tendered by the association, and suggested that it confer at once with the commanding generals in the different departments.

As events turned out, this decision of the War Department proved to be a momentous one in shap-

ing a new policy for the armies of the United States. It was the basis for the earlier officers' camps and the future ones just announced. It really sounded the death knell of the old volunteer system of commissioning officers, in so far as concerned officers of the line; that is, infantry, cavalry, and artillery.

## A Colossal Task

THE officer problem to-day is a serious one, but at the outbreak of the war it was critical. The regular army had approximately only 5,000 trained officers—that is, graduates of West Point and the army service schools. A few more thousand had recently been accepted from civilian life as second lieutenants, but on examination only. In a war carried on abroad by armies running into the millions, it was, of course, clearly evident that one of the great problems of America, in raising its new armies, was to supply properly trained officers. Time was of the utmost importance. The Huns' campaign of ruthless submarine warfare was in full swing. Rumblings of the threatened Russian collapse were already heard. America had observed the strictest neutrality and had made no preparations of any sort. Our task was colossal. We were confronted with the task of selecting, training, equipping, and transporting troops in sufficiently large numbers and on a sufficiently huge scale to fight one of the most powerful military nations the world has ever known, perhaps the most powerful. When the call to arms sounded, volunteers sprang up by the thousands all over the country, as they have always done. There was talk of passing a conscription law through Congress, and it was clearly evident that there would soon be hundreds of thousands of men, whether volunteers or drafted men or both, that would have to be adequately trained. The question of supplying officers was acute. The first officers' training camps were distinctly emergency affairs. The Military Training Camps Association, through its branches throughout the country, acted as a huge recruiting agent for the War Department. It organized bands of local citizens into volunteer committees to help in the work of registering, examining, and preparing for the army examining officer the thousands of men who applied to enter the camps. The memorandum of the War Department concerning these first officers' camps was not completed until April 17. In the following eighteen days the members of the Military Training Camps Association, in an intensive campaign, helped the War Department to examine over 100,000 applicants; 90,000 were actually examined physically, 65,000 were certified as being satisfactory, and 40,000 were actually accepted by the War Department as suitable officer-candidate material.

There were dramatic, humorous, and pathetic incidents connected with this rush. In New York City, during the last few days of the campaign, the crush of applicants was so great that the line extended from the offices of the Military Training Camps Association in West Forty-fourth Street clear down the block to Fifth Avenue. The police had to be called in to see that the line did not interfere with the traffic.

In Chicago, when there was a special rush of papers to be mailed, one of the committee went to the University Club, forcibly rounded up all the men in the club, and marched them to the offices of the Military Training Camps Association, where they were put to work mailing circulars for the rest of the day and far into the night.

While the success of the first officers' training camps was instantaneous, it was a success that is repeating itself and vindicating the policy of training. Regular-army officers were in charge as instructors. Visitors have been deeply impressed with the deadly earnestness of the candidate officers, their tremendous zeal, and especially the spirit of grim determination to see the thing through.

The training camps are based on competition. In the beginning of the work the older men suffer. Men who have had fifteen or twenty years of experience in business and professional life, where they have achieved success and built up their own organizations, find it hard to adjust themselves mentally to the routine of a soldier, the spirit of discipline and obedience. It is all so new. Even men making \$20,000 and \$30,000 a year are slow in "coordinating mind and muscle," as the textbooks put it; they continually mix up the left foot with the right. But after the first month the older men begin to catch up. Meanwhile all hands are working, outside of the long drill hours, at the manuals, textbooks, and problems given them for study. They not only work far into the night, but many of the men get up before reveille at 5 a. m. and start in then. There is no such thing as play. Families who went hundreds of miles to visit their sons, husbands, brothers, and sweethearts in the earlier camps saw little of them. It was early announced that commissions would be awarded on the basis of merit alone and also that not all the men would be commissioned. There has always been a frantic effort to qualify and to qualify high.

#### A Revolutionary Step

THE old volunteer system of commissioning officers is dead to-day because of the success of the training camps. While these men, the very best red-blooded young manhood we have, were going through the grim business of training, the War Department was besieged with applications for commissions. Civilians at large, and especially politicians high in rank, urged the appointment of some favorite to commission as a volunteer officer. For a long time the question whether or not volunteer commissions were to be issued was in the balance. The United States Statutes expressly allowed the President to appoint volunteer officers, and there was ample precedent for it. Throughout all of our wars, whether the Revolution, the War of 1812, the Mexican War, the Civil War, or the Spanish-American War, owing to our American system of unpreparedness, when the crisis came and war was declared commissions were handed out freely. In the emergency it was the only way, even if a bad way. Under the volunteer system, all manner of pulls were exerted, social, political, financial, or business, but in every case it was a pull of some sort, which meant favoritism. Scandals under this system were notorious. The country has not yet forgotten the conditions of the Spanish-American War, when men who had never trained a soldier were appointed to grades as high as lieutenant colonel and colonel. Nor did they have an examination of any sort, not even a physical one.

The demands of this war against Germany are such that there is no room for graft, corruption, favoritism, or inefficiency. The wastage of life is enormous at best, without increasing it through inefficient officers. The pressure upon the War Department, however, was onerous. While it was necessary to issue commissions as reserve officers in many of the staff corps, the bulk of these were for men of special qualifications, such as physicians, engineers, technical men, and specialists in the Ordnance Corps and the Aviation Section of the Signal Corps. These appointments would not permit of delay, but was military training essential for them. But it was felt that for the line officers, the men who would actually lead our soldiers in the fighting lines, where the health and lives of the men were under the direct control of the officers, men should be selected only after due observation and training. The passage of the Selective Service Law,

or Draft Act, made it apparent that there would be steady successive increments, each of half a million men. These new armies would require thousands of new officers. So the War Department planned for the organization of a second officers' training camp, to open after the completion of the first, with others to follow. It announced as a definite policy that hereafter commissions for line officers would only be issued "after observation and training" in an officers' training camp. This step was really revolutionary in character. It committed the country to the new principle of training and did away with the evils and scandals of the volunteer system, for line officers at least, for all time. This policy has been rigidly adhered to. The creation of continuous officers' schools establishes more firmly than ever.

#### How It Works Out

THE real test of the officers' training camps came when the newly fledged officers took hold of the National Army recruits. Their task was indeed a hard one. Whereas a captain, in the old days, had a company of only 100 men, under the new conditions the reserve captain in the National Army was given a company of 250 raw drafted men, without a single noncommissioned officer to help. Many of these often could not speak the English language. Of course, scarcely any of them had had any military training. Many had gone into the army rather reluctantly, at least not from choice. This mass of raw material the captain had to train from the ground up. First he had to fill out all the necessary papers and red tape to enroll the men, then see that their equipment was properly issued, and then start on the job of training them. He had to select his noncommissioned officers as time went on, as best he could from the most promising material. The new officers met the test superbly. It was a wonderful sight to see them, fresh from the training camps, handling these huge squads of men. The confidence in the officers and a spirit of self-reliance developed early.

The real leaders of our new National Army, those who are living with and drilling the men who share their risks "over the top," are these junior reserve officers. The average National Army regiment of over 3,000 men has only two regular officers, the colonel and the lieutenant colonel. The three months' training of the officers at Plattsburg, Fort Sheridan, and elsewhere was only a beginning in the test of their qualities for leadership. It practically meant that they had been selected as suitable officer material. In the cantonments and camps themselves, officers' schools were started to continue the instruction. These were held at night because the officers were busy drilling their troops all day. The regular-army officers, inspectors, and all who visited the camps expressed the greatest satisfaction and pride in the work of the reserve officers. They said time and again that they felt the National Army, with its high quality of reserve officers—yet in the making—would probably be the peer, if not the superior, of any. (The news from France confirms this.) There was a very real spirit of enthusiasm.

#### Following the Line

THE various staff corps are now following more and more the example of the line in requiring training as a prerequisite to a commission.

The Medical Corps early opened several schools for doctors, the largest being at Fort Oglethorpe, Ga., and Fort Benjamin Harrison, Ind. These physicians in private life, who had received army commissions, were given special courses and also some slight measure of military drill to improve their physical condition, carriage, and general idea of discipline. The Quartermaster's Department arranged for quartermaster's schools at Jacksonville, Fla. The Ordnance Department started to establish schools at arsenals and, in connection with various educational institutions, to train selected men for ordnance work. As artillery is a technical branch of the service, the men selected for commissions in this branch were early sent from the training camps to special schools at Fortress Monroe and elsewhere; and later all captains were sent from their batteries for a special course at the School of Fire at Fort Sill, Okla. The Signal Corps organized not only regular schools for aviators, but extended the training idea to schools for its nonflying officers.

## Keds The Right Footwear for Summer

For walking, hiking, golfing and sports—outdoors or indoors, town or country—whatever the occupation and wherever the place, Keds are always good form.

Men, women and children find that the flexible canvas tops of Keds respond to every foot-movement. The live-rubber soles add spring to the stride—make for easy, graceful walking.

If you would have Summer shoes that fit well, look well and also wear well, buy Keds. Not only for yourself but for every member of the family. There are styles for all tastes; grades at prices to suit all pockets.

More than 50,000 dealers carry stocks of Keds. Each pair bears the stamp of satisfaction. Look for the name "Keds" on the sole.

To our patrons and dealers:

## With the AUTOSTROP RAZOR

as with everything else  
the needs of the soldiers come first

The AutoStrop Razor has, for some months, been drafted to do its bit, because it is now considered a part of the necessary military equipment for our boys "Over There."

Recognizing the value of a good, clean, comfortable shave to tone up a man for the hardest day's work, the Government has, for some months past, requisitioned our entire output of AutoStrop Razors. We quickly and gladly gave them every assistance in our power. We know every loyal American will endorse our action.

This has made it difficult for you to secure AutoStrop Razors. It may continue to be difficult, and we do not know how soon we will be able to resume the normal supply for those of us who are compelled to stay here.

We are doing our utmost to meet this unexpected demand and to get our manufacturing facilities in shape to supply you also. Our output has been greatly increased and is being further largely expanded. While the AutoStrop Razor is doing its bit on foreign soil, we ask

the kind indulgence of its many boosters in the United States until such time as we are able to again take care of all requirements. In response to this request, we know that we will be afforded your hearty cooperation, because of your willingness to do what you can to help in the great cause.

AUTOSTROP SAFETY RAZOR CO.

345 Fifth Avenue, New York

The Engineer Corps from the beginning established and ran most successfully its own schools for officers.

The Coast Artillery has announced continuous officers' schools, to be held four times a year, at Fortress Monroe, in which it trains practically all of its candidates for second lieutenant.

The last staff corps to follow this movement was that of the chaplains. It has opened a school, lasting a month or six weeks, at Fortress Monroe, Va.

The policy of training the new officers, however, did not end here. There was a National Guard army of about 450,000 men, and officers' schools were held in the divisions themselves. A school was even opened in San Antonio, Tex., for field officers. Majors,

lieutenant colonels, and colonels, and all such, in the National Guard were ordered there for instruction. This was probably one of the most radical steps taken and clearly showed the working of the new policy of training. It would have been impossible a few years ago even to suggest such a thing for these high ranking officers, without raising a storm of protest.

This policy of training is now established, we believe firmly for all time, as a definite policy for our armies. Men in the service are given opportunities for promotion. Two per cent of the best men are recommended for entrance into the officers' training camps, and all are encouraged to try.

America has indeed awakened.

## The Flying Fish

Continued from page 13

"Neither he nor Endicott will talk," replied McCord. "But his pockets contained letters addressed to him, Samuel Whitney."

"And the address?"

"The Moreland bachelor apartments. Stromberg is over there now."

The telephone rang as he spoke. He answered it.

"Stromberg? Endicott's address? . . . Wait for Benchley and Larsen. . . . No, meet them at the southwest corner of University Place and Fourteenth Street. In ten minutes."

He hung up the desk telephone beside which he sat.

"Get Larsen," he ordered. "Meet Stromberg. Go to Endicott's apartment. If the girl's there—there's a chance she might be there. Where else could she be? She doesn't know anyone in New York—" He spoke dreamily, as one soliloquizing, arguing to himself.

"The police?" suggested Benchley nervously.

McCord shook his head. "The Birmingham is watched; so is the Charleston. If the police, even plain-clothes men, had been there, I'd know it. And those places are the first places the police would go to if Miss Kildare had gone to them."

"But what's her idea of locating Breen?" asked Benchley.

"What is her idea in turning on me at all?" retorted McCord harshly. "I don't know. But she won't try the police yet awhile. And Endicott's apartment—Well, we'll learn more of Endicott. If he's a Government agent—"

Benchley turned white. "You don't think that?"

"What can I think? A girl that I've befriended turns on me. She plots against me. Fetch Larsen and start."

"But what'll we do with them? With Breen and her? You don't want any rough stuff—"

"Breen?" McCord's eyes were hard, and his voice lost its soliloquizing tone. "Breen? We have enough prisoners here. Get rid of Breen. As for Miss Kildare, it doesn't matter what she has done, how she feels toward me, Benchley. Let that be thoroughly understood. I want her here—unharmed."

"It won't be easy. A woman can make more noise—"

"Go," said McCord.

THE doorbell of Endicott's apartment rang. Breen looked at Fabian.

"Get a hustle on, nigger," he ordered. "You might keep the lady waiting. Answer the bell."

Even as Fabian had been luxuriating in the free play of his snobbery, showing his contempt for the poor white trash that he was compelled to shelter by Miss Kildare's orders, so Breen was luxuriating in his snobbery: giving orders to a negro servant. That the negro servant fairly hurled contempt in his face did not bother Breen in the slightest. He grinned up at the angry face of Fabian, the face almost white in its anger.

"Speed up, coon, speed up," he jeered.

Well, Miss Farley was in danger. He must endure. So Fabian answered the doorbell. It was unfortunate for Fabian, but more unfortunate for Breen, that the ex-convict had chosen to anger the negro. For anger made Fabian forget caution.

There was a chain on the door, which would have permitted it to open but a few inches. There was no certainty, merely assumption, that Leila Kildare was outside the door. Though uncomprehending the mysterious forces at work against Endicott, Fabian was no fool. He realized that they must be powerful forces. And he would have thought of the possibility of enemies having traced Endicott's apartment had

not a couple of hours of Breen's companionship so aroused his wrath that he was almost incapable of thinking.

He flung the door wide. The ex-postulation that he planned to utter to Miss Kildare changed to a strangled cry. For the burly Larsen was through the door and upon the colored servant immediately the way was unbarred. And the equally burly Stromberg crashed into the apartment. Breen, weak and sickly, could have put up no fight anyway. But he had no chance. Stromberg was upon him, choking him, before Breen could lift a finger.

The cautious Benchley was last in the apartment. He entered then only because no signs of alarm, that would have proved the presence of others in the rooms, were heard.

"Easy, Stromberg," he counseled.

Stromberg released his grip of the gasping Breen.

"Keep quiet?" he asked.

Breen's eyes rolled. He swallowed convulsively; he nodded acquiescence. Larsen entered, dragging Fabian. The negro was thrust into a chair. He was conscious, though barely so.

"Now, listen, you two birds," said Benchley. The dapper man, now that violence was done with, took command.

"We got no time to waste on you," he continued. "You, Breen! What's your game?"

"I—no game—at all," blurted Breen.

"Where's the girl?" demanded Benchley. "No use stalling. You're Breen, all right, the guy that threatened McCord. I've been told what you look like, and you're the guy. Now, what are you doing down here? And where's the girl?"

THE fear of death was in the heart of Breen. "I—she left me—at the Vanderbilt. I—she came to me, and threatened to jail me, and—I dunno where she is."

Benchley turned to Fabian. "You work for Endicott?"

"Who you talkin' to?" demanded Fabian. They could abuse his body as they chose, but no word about Endicott or any of Endicott's friends would they win from him.

"I'm talking to you," blustered Benchley. With Larsen and Stromberg here to wreak any punishment he saw fit upon the feeble captives, Benchley exulted in the feeling of power.

"You're Endicott's servant, all right. We learned all about you from the valet of a guy named Whitney. Funny what a ten-dollar note will do." Which was a libel upon the loyalty of the valet-cook-chambermaid-Jap of Whitney, who had given up information only because Stromberg had posed as a newspaper man anxious to give credit in the public prints to Whitney's valor as a fighting birdman.

"A ten-hundred-dollar note won't do no good with me," asserted Fabian stoutly. "I got nothin' to tell you trash."

"What did McCord say?" asked Stromberg.

"Nothing about the coon. Said to bump this bird Breen off."

"But listen," cried Breen. "I don't know a thing. I—"

Larsen cut him short with a blow. He turned to Benchley. "Ring up McCord."

Benchley found the telephone in the next room. He returned in a moment. His sallow face was dead white. His waxed mustaches seemed limp. He addressed himself to Breen and Fabian.

"If either of you birds got anything to say, and want to save your skins, now's the time to say it," he announced.

"So help me, God, mister," pleaded Breen. "I don't know a thing about Mr. McCord, except that I used to know him years ago, and—"

"Don't know this Endicott guy?"

"Never heard of him until this girl that looked me up told me to drive to this apartment, and—"

He was telling the truth. Fear inspired sincerity.

"What did you go to the police for and tell them about McCord?" queried Benchley.

"So help me, I never did."

"Mean to say you never tipped a soul off about seeing McCord? Who he was?"

"Honest, I never—"

Too late Breen saw the trap. Fool that he was! If he had lied, made them think— But that was the end of Breen. From the body of the ex-convict, grotesquely sprawled where Larsen's black-jack had knocked it, Benchley turned to Fabian. It was with difficulty that the dapper criminal spoke. He was McCord's right-hand man, McCord's assistant planner; he was not the doer, and the sight of deeds made him flinch.

"You see—what he got? Where's the Kildare girl? And how long has she known Endicott? Come through!"

Fabian met the eyes of the threatener. "White trash," he enunciated painfully, his throat aching with the effort to speak, "you kin go plumb to the Pit, where you b'longs, and—"

The same weapon, red now, that had quenched Breen's speech, cut short the defiance of Fabian.

Benchley staggered into the next room. Nausea overwhelmed him. Not even Larsen's and Stromberg's sneers could arouse him for minutes.

"All right, pup," sneered Larsen. "Stick around until the cops come—"

Benchley staggered to the door. "The girl—if she comes here—she'll tell—"

"Buck up," jeered Stromberg. "If the girl comes, we'll be here. It ain't safe to wait right here. She might bring cops with her. Y'can't tell about the dame, even if she is scared we'll put the skids under Endicott. But outside—and listen, Benchley! You're the fair-haired boy with McCord, but you're a deuce to Larsen and me and a few others. You're not going over to McCord now. You're going to stick with me and Larsen. If the girl comes along, you help grab her. There's the chair in this business and, believe me, I'm game enough to risk the chair, but I ain't goin' to let you take any smaller risk. You're in on what's just happened and, believe me, you're goin' to be in on whatever else happens. Get it?"

BENCHLEY "got it." He was not popular with McCord's followers. Those followers did not mind the fact that McCord never figured in scenes of violence. But he was their leader. Benchley was, they felt, a sycophant. Further, besides despising his cowardice, they mistrusted his loyalty. Better men than Benchley had saved their necks by betrayal to the police. It was as well, now that opportunity presented itself, to involve Benchley as deeply in actual physical crime as they were themselves involved.

Sick though he was, frightened to the rat's soul of him, Benchley stayed in University Place. It was he whom Leila saw talking with Larsen, this aid to McCord whom she had never seen before, as she sped down University Place in the taxicab.

(To be continued next week)

## The Gypsy Division Goes In

Continued from page 1

like: we wondered just on what sort of an expedition we had so lightly embarked. The worst of the situation was the silence. If only a shell or two had dropped to give reality, to explain, as it were, how all these holes had come—that is, gradually, in slow cumulation, we would have felt better. But there was not a shot, there was not a sound; what we saw seemed to have come all at once, in one tremendous squall of steel, and the possibility of a sudden repetition hung poised in a tremendous menace over our heads. In a little while we came to another village; in spite of the darkness we could see by its silhouette that it had been shockingly bombarded, and the crossroads at its entrance, the fields about, had the appearance of a scape scene in the moon. Here we steered our car up against a great haystack, and got out to walk the rest of the way. The Fords were to go on farther, but before we could signal them they ran off on the wrong road. This, of course, necessitated quite a maneuver. The road was narrow, and I have told what there was to its right and its left—let alone on it. The Fords began backing and filling. The drivers were rattled; they used much gas; the little machines made the noise of a million devils: it seemed impossible the boche should not hear; it seemed impossible the strange truce should continue. Unwittingly we bent our backs, expecting the rain to fall. Never have I heard such a racket as these little Fords were making; our teeth were on edge. Finally the leading car made a triumphal getaway in the field, and then slowly, very slowly and gradually, backed into a shell hole. R-r-r-rump she went, and then was still. We cranked her up. The driver set her at her task with open throttle; she did not move, but filled the universe with her abominable clamor. The other driver sprang from his seat to help; he left his car throbbing with full gas on. We seemed fairly to be shrieking to the boche the news of our presence.

Well, we all gathered about that luckless little car and pushed with bursting veins and no result, and finally getting down on all fours to view closer her situation, found that the wheel which was in the shell hole was whirling and whirling in the void, for the shell hole was bigger, much bigger, than the wheel. The body of the car was on the ground. We looked solemnly at each other and said: "By Jove, by Jove (only we didn't say 'By Jove'), we've got to unload her, by Jove." If her load had been furniture, or the week's washing, it would not have been so bad—yes, it would have been bad anyhow, for we were on crossroads. I don't know if the peaceful people back home know the true inwardness of

crossroads. Let me say simply that if the boche loves roads (he is always caressing them with his 150's and his 210's), he loves a place where two roads cross not twice as much, but four times as much, and one where three meet, not three times as well, but nine times, and that as we stood about that miserable little roaring Ford, four roads came together and tangled themselves up beneath our feet—oh, it was a beautiful place! And we were not unloading laundry nor pianos, but ammunition—which is much more explosive. We went at it with a will, piling out the nice boxes and trays like cordwood, and looking over our shoulders meanwhile like so many thieves. Soon we had spread out upon the white road the finest little munition dump imaginable. We did not leave it long. Picking the Ford up bodily out of its hole, we stoked that ammunition back into it like bakers shoveling loaves, and then sent both little cars off, roaring and rejoicing.

### "Where Is the Church?"

THE men had gone on ahead; we had seen them vanish into the night, spread out fan-fashion over the field so as to offer poor target. The Fords rounded a turn and now also disappeared. As for us, being officers and gentlemen (except two, who were journalists), we decided to short-cut through the village. It was a sinister little village. Some houses were mere stumps, others were jagged teeth, others skeletons against the sky, and others were just holes; our feet crunched on all sorts of debris, and we hated the noise of it and felt as if in a place where, an hour ago, murder had been done. I recognized the ruins of the chateau, the ruins of the church—and then, suddenly, I knew we were lost. Following our major, we were running into one cul-de-sac after the other, darting to the left, to the right, trying to get out of the village and not getting out—exactly as in a first-class nightmare. The major would plant himself at a street corner (always a street corner, which is city for crossroads). He would spread his map, balance his compass, send on both the luminous shaft of his electric torch, then would dash off muttering: "I've got it"—and we'd find ourselves in the center of the place once more. "What is it you're looking for, what is it you're looking for?" we asked at length, all together. "The church, the church," he answered, "where is the church?" "You mean on your map?" we cried. "You want to know where the church is on your map?" "No," he shouted, highly disgusted. "I want the real church, the church that is in the town! If I can only find that, I'll know my way out!" "Good Lord!" we cried. "Good Lord! we've been running circles

# Why Brushing Fails to Save the Teeth

All Statements Approved by High Dental Authorities

## It Leaves the Film

Dental authorities say that tooth decay and pyorrhea have constantly increased. Yet the use of the tooth brush, in late years, has multiplied ten-fold.

Old-time methods are a failure, as everybody knows. Teeth still decay and discolor. Tartar forms. A dental cleaning is often essential.

The trouble lies in a clinging film. That slimy film which you feel with your tongue.

That is what discolors. It hardens into tartar. It holds food particles which ferment and form acid. It holds the

acid in contact with the teeth—the cause of all decay.

It is an ideal breeding place for germs. Millions of germs are ever-present in it. When pyorrhea develops they may enter the system. And many serious diseases are due to them.

That film—the cause of nearly all tooth troubles—resists the old-time brushing methods. It clings to the teeth. It gets into crevices and stays. That is why those methods fail. They simply remove the debris. After brushing, you still can feel that film.

## Now You Can End It In a Simple, Pleasant Way

Now a way has been found to end that film—a way called Pepsodent. It is based on pepsin, the digestant of albumin—the chief film component.

Pepsin seemed long forbidden, because it must be activated. The usual activating agent is an acid, harmful to the teeth.

Now science has discovered a harmless way to activate the pepsin. Five governments have granted patents on the combination.

It is used in Pepsodent to dissolve the film. To end it as fast as it forms. After three years of clinical tests, it is offered direct to users, as a product which film can't resist.

We offer you a One-Week

tube. Send the coupon for it. Use it like any other tooth paste. Note how the film disappears. Note how clean the teeth feel after using. In a few days, note the glitter.

That week's use will be a revelation. You will gain a new idea of clean teeth. Never again, we believe, will you return to methods that are useless. For your teeth's sake, make this one-week test.

ONE instance of Heinz thoroughness is in the preparation of the tomato sauce which adds its fine flavor to Heinz Baked Beans.

On our own farms and the farms of many growers who cooperate with us, a

selected Heinz seed is sown and cultivated under Heinz supervision.

Then, many Heinz kitchens are located in these tomato districts to receive the tomatoes as fast as they are picked—insuring their fine, fresh flavor.

# HEINZ

## OVEN BAKED BEANS

Beans are economical in comparison with other good foods, and are as good for you as meat and bread. A pound of beans is about equal in nutrition value to  $1\frac{3}{4}$  pounds of beef—and you know the price of beef.

Heinz Baked Beans, rich brown and appetizing, make as wholesome and satisfying a dish as can be placed on any table. Baked in dry heat in real ovens, they come to your kitchen ready to serve hot or cold.

They are prepared in four ways, and you can select the style the family likes best.

Heinz Baked Beans with Pork and Tomato Sauce

Heinz Baked Pork and Beans (without Tomato Sauce) Boston style

Heinz Baked Beans in Tomato Sauce without Meat (Vegetarian)

Heinz Baked Red Kidney Beans

All Heinz goods sold in Canada are packed in Canada

around the church for twenty minutes!" Which was true. When the major had made his reconnaissance the night before the church had had a steeple. Now it had none—and he, being a West Point man, accustomed to seeing everything in its right place, could not recognize it.

### The Infantry Goes In

ALL this time the strange truce had held, as though some profound evil were being meditated against us. Now, however, it broke, and it was almost a relief to have it break so normally. We were on the road just out of the town, going toward the lines, when the first one came. We heard her far off, far off as if starting from the horizon. She came rather slowly and heavily, leisurely—where, where, where, where, where for a long time—it seemed thirty seconds at least—then abruptly let out a demoniac shriek. We threw ourselves on our noses, and a tremendous concussion shook us like rats. Subsidiary buzzings went through the air with nasal twangs; stuff rained down all about us—just stuff: we did not stop to find out what. We rose and went on. "That was a 210," said the major in the tone of a connoisseur, and with a certain satisfaction at the importance of the thing we had drawn—then stopped, listening. From afar off, from the very confines of the horizon, another was coming—where, where, where, where, just a little flat-wheeled. Again we flopped, like men after a fumbled football; legs went up in the air, then slapped the earth. And thus we went along the road, and, leaving it, up along the side of a ridge—a hundred feet or so, at a half trot, then down on the ground, a hundred feet at a half trot, then flat again. It was rather fun too—if anyone will believe me. For one thing, this repetition of going down, then up, was a wonderful exercise. The blood coursed fast and free through our veins, and when the blood courses thus fast and free, one is happy—that is all there is to happiness! Besides, we felt what children feel in their games and what men feel in theirs: we were playing a sort of intense hide and go seek, and we were also getting all the emotions of poker or roulette. Tag and roulette, that was it, both together and multiplied by a million—pity the poor guy who never goes to war!

We reached the position at last. It was at the top of the ridge, at the point where it ended like the prow of a ship, and it was hidden in green brush. Up there, commanding the "mitrailleurs" whose place we were taking, the French lieutenant awaited

us with his sergeant. He was an old boy, with a beard, in a rusty uniform not at all elegant or jaunty, and he smoked a pipe. His sergeant was still older, if anything, a grizzled nonconformist with all the vigils and wears and tears of the long war. Their men had just gone. I had seen the last one vanish down into the night as we arrived—and these two seemed to have been here alone on top of this hill for centuries and centuries of vigilance and combat. Their uniforms were wrinkled and worn; they looked dead tired, but their eyes burned. And we, the major, the captain, the young lieutenants, the men (they had arrived with us)—we looked indeed the *relève*, as is the French word, the relief. We came panting a little with our exertion; we had flopped a good deal on the way; but we were here, young and ardent, full of a half joyous and terrible eagerness.

The lieutenant looked at us a moment, pulling at his pipe, a bit stupefied—stupefied by the noise we were making, the clatter and tumult and indiscreet vigor of our coming. He looked at us a long while thus, pulling at his pipe—then he took the pipe out of his mouth and smiled, seeing, I think, the symbol enacted up there on the hill in the night. And his old sergeant went up to our foremost man and took from him his machine gun and placed it in position, then went to the second and took from him his gun and placed it in position, and then to the third and placed his gun in position. Twelve times he did this, till all the guns were in, their slight and terrible muzzles all turned upon the plain where, invisible in the darkness, the Teutonic hordes spread. When this had been done the two, their backs humped a little bit as if still carrying the memory of a heavy burden, went off down the path and out of sight.

We followed a little later, the major, Forrest, and I, having left the captain, the young lieutenants, and the men on the hill. And it was then we saw the infantry going in. They were filing along the bottom of a little draw—two lines, ten feet apart, coming out of the night and vanishing again in the night. A heavy shell fire was above and about them, but they never broke their formation nor bowed their heads. They moved forward smoothly, as if sliding, in perfect silence, all erect, helmeted and grim, new knights entering without a tremor the most terrible adventure the world has ever seen.

Mr. Hopper's next article from France will appear in an early issue.

### Little Cousin Sarah

Continued from page 9

"Here's Noble Dill," said Florence. "I guess he's goin' to try to go walkin' with you too, Aunt Julia, no matter what you told him."

Julia's lovely color became the token of sheer consternation as she turned toward the gate, which had just clicked behind the nervously advancing form of Noble Dill. He came with a bravado that was merely pitiable, and he tried to snap his Orduma cigarette away with thumb and forefinger in careless fashion, only to see it publicly disappear through an open cellar window of the house.

"I hope there's no exelcslor down there," said Newland Sanders. "A good many houses have burned to the ground just that way."

"It fell on the cement floor," Florence reported, peering into the window. "It'll go out pretty soon."

"Then I suppose we might as well do the same thing," said Newland, addressing Julia first and Mr. Dill second. "Miss Atwater and I are just starting for a walk."

Mr. Ridgely also addressed the new arrival. "Miss Atwater and I are just starting for a walk."

"You see, Noble," said the kind-hearted Julia, "I did tell you I had another engagement."

"You said another," Mr. Dill responded in a tone which commingled timidity, love, and a fatal stubbornness. "I came by here—I mean I just happened to be passing—and I thought if it was a walking party—Well, why not go along? That's the way it struck me." He paused, coughing for courage and trying to look easily genial, but not succeeding; then he added: "Well, as I say, that's the way it struck me—as it were. I suppose we might as well be starting."

"Yes, we had!" was the severe rejoinder of Mr. Sanders; and he placed himself at Julia's left, seizing upon her parasol and opening it determinedly.

Mr. Ridgely kept himself closely at the lady's right. "You were mistaken, Noble, my boy," he said, falsely benevolent. "It really isn't a walking party—though there's Miss Florence, Noble. Nobody's asked her to go walking today!"

But Florence took this satire literally. She hopped up from the cellar window and said brightly: "I just as soon! Let's do have a walking party. I just as soon walk with Mr. Dill as anybody, and we can all keep together, kind-of." With that she stepped confidently to the side of the selected escort, who appeared to be not too joyously overcome by her kindness, yet at a loss how to avert it.

There was a moment of hesitation, during which a malevolent pleasure slightly disfigured the countenances of the two gentlemen who stood with Julia; but when Florence pointed to a house across the street and remarked: "There's Great-uncle Milford and Aunt C'nelia; they been lookin' out of their second spare-room window about half an hour," Julia uttered an exclamation.

"Oh, good Heavens!" she said, and moved with decision toward the gate. "Let's go!"

THUS the little procession started. Mr. Sanders and the sprightly widower at beauty's side, with Florence and Mr. Dill so close behind that before they had gone a block, Newland found it necessary to warn this rear rank that the heels of his new shoes were not part of the pavement. After that the rear rank, a little abashed, consented to fall back some paces.

Julia's heightened color, meanwhile, was little abated by some slight episodes attending the progress of the walking party. Her aunt, Fanny Patterson, rocking upon a porch, rose and evidently called to some one within the house, whereupon she was joined by her invalid sister, Aunt Carrie, with a trained nurse and two elderly domestics, all summoned obviously to act as a whispering audience for the walking party until it had passed. And in the front yard of "the Henry Atwater house," at the next corner, young Cousin Herbert Atwater underwent a genuine bedazzlement at sight of the party; but he affected more. His violent gaze dwelt longest upon Florence, and he permitted his legs slowly to crumple under him, until, just as the party came nearest him, he lay prostrate upon his back in a dead swoon, abashing Florence, however, but little. Afterward he rose and followed for a time in a burlesque manner; then decided to return home.

"Old heathen," said Florence, glancing back over her shoulder as he disappeared from view.

Mr. Dill was startled from a reverie inspired by the back of Julia's head. "Heathen?" he said in plaintive inquiry.

"I meant Herbert," Florence informed him. "Cousin Herbert Atwater. He was following us, walking Dutch." "Cousin Herbert Atwater?" said Noble dreamily. "Dutch?"

"He won't any more," said Florence. "He always has to show off, now his voice is changing." She spoke, and she also walked, with dignity—a rather dashing kind of dignity, which was what Herbert's eccentricity of gait intended to point out injuriously. In fact, never before had Florence been so impressed with herself; never before, indeed, had she been a member of a grown-up nonfamily party; never before had she gone walking with an actual adult young man for her escort; and she felt that she owed it to her position to appear in as brilliant an aspect as possible. She managed to give herself a rhythmical, swiveling motion, as she walked, sufficient to cause her knee-length skirts to swing from side to side—a pomp bringing her the brightest satisfaction as she now and then caught the effect by stretching her head far enough to see down behind, over her shoulder. And in general superciliousness of attitude and expression she reached heights which inevitably would have attracted attention from passers-by if Julia had not been so near.

This high poise of Florence was temporarily threatened when the walking party passed her own house. Her mother happened to be sitting near an open window upstairs, and, after gazing forth with warm interest at Julia and her two outwalkers, Mrs. Atwater's astonished eyes fell upon Florence taking care of the overflow. Florence bowed gracefully.

"Florence!" her mother called down from the window; whereupon both Florence and her aunt Julia were instantly apprehensive, for Mrs. George Atwater's lack of tact was a legend in the family. "Florence! Where on earth are you going?"

"Never mind," Florence thought it best to respond. "Never mind."

"You'd better come in," Mrs. Atwater called, her voice necessarily louder as the walking party moved onward.

"Never mind," Florence called back. Mrs. Atwater leaned out of the window. "Where are you going? Come back and get your hat. You'll get a sunstroke!"

Florence was able to conceal her indignation, and merely waved a hand in airy dismissal as the walking party passed from Mrs. Atwater's sight, leaving her still shouting.

Her daughter smiled negligently and shrugged her shoulders. "She'll get over it!" she said.

"Who?"

"My mother. She was the one making all that noise," said the damsel. "Sometimes I do what she says; sometimes I don't. It's all according to the way I feel." She looked up in her companion's face, and her expression became politely fond as she thought how uncouth he was, for in Florence's eye Noble Dill was truly rare, exquisite, and unfamiliar; and she believed that he was also, too, whatever that meant. She had thought a great deal about him, and no longer ago than yesterday she had told Kitty Silver that she couldn't see "how Aunt Julia could look at anybody else!"

Florence's selection of Noble Dill

for the bright traveler of her dream skies was one of her own mysteries. Noble was not beautiful; neither did he present to the ordinary eye of man anything especially rare, exquisite, unfamiliar, or even so far distinguished as to be obsolete. Except for the emotions within him, he was in all the qualities of his mind, as well as in his bodily contours and the apparel which sheltered these, the most everyday and commonplace person of twenty-two-and-a-half in Florence's visible world. The less exposed portions of the first and second fingers of his left hand bore cigarette stains, seemingly indelible; the first and second fingers of his right hand were strongly ornamented in a like manner; tokens which proved him ambidextrous to but a limited extent, however. Moreover, his garments and garnitures were not so notable as those of either Newland Sanders or that dapper antique, Mr. Ridgely. Noble's straw hat might have brightened under the treatment of lemon juice or other restorative; his tie was folded to conceal a spot which his mother would have gasolined to nothingness had he urged her, and his own recent efforts upon his trousers with a tepid iron, in his bedchamber at home, had achieved not coercion but a mere wheedling which failed now to conceal proofs that cloth responds to repeated pressure of the human knee.

ALL in all, nothing except the expression of Noble's face and the somewhat ill-chosen pansy in his buttonhole hinted something indeed remarkable about him. Yet even that was something for which he was not responsible himself; it was altogether the work of Julia. What her work was, in the case of Noble Dill, may be expressed in a word—a word used not only by the whole Atwater family connection, in completely expressing Noble's condition, but by Noble's own whole family connection as well. This complete word was "awful."

Florence was the one exception on the Atwater side; she was far, far from thinking or speaking of Noble Dill in that way, although, until she looked up "uncouth" in Webster's Collegiate Dictionary, she had not found suitable means to describe him. And now, as she walked at his side, she found the experience nothing short of thrilling. For it must ever be borne in mind that this was her first and wholly unexpected outburst into society; her sensations were those of an obscure and irresponsible aerolite suddenly enveloped in the terrestrial air and become a noble meteor. Her cousin Herbert would have felt as she did had he been transformed (in the twinkling of an eye) from an ordinary thirteen-year-old boy to the rider of a caparisoned horse in the van of a parading brass band. Florence longed to say or do something magnificent—something strange and exhilarating, in keeping with her new station in life.

It was this longing, and by no means a confirmed unversality, which prompted her to amplify her comments upon her own filial independence. "Oh, I guess I pretty near never do anything I don't want to," she said. "I kind of run the house to suit myself. I guess if the truth had to be told, I just about run the whole Atwater family, when it comes to that!"

The statement was so noticeable that it succeeded in turning Noble's attention from the back of Julia's head. "You do?" he said, and his tone was one of genuine inquiry. His condition was such, in fact, that he was unable to apply his mind properly to matters which came before it. "Well, that seems queer," he added absently.

"Oh, I don't know!" she laughed, though perhaps unnaturally. In her increasing exaltation things appeared actually to be as she wished them to be; an atmosphere both queenly and adventurous seemed to invest her, and no doubt any remnants of human caution in her were assuaged to peace by the circumstance that her aunt Julia's attention was subject to the strong demands necessarily imposed upon anybody taking a walk between two gentlemen who do not "speak" to each other. "Oh, I don't know," said Florence. "The family's used to it by this time, I guess. The way I do things, they *have* to be, I guess. When they don't like it I don't say much for a while, then I just—" She paused, waiting for her imagination to supply a sequel to the drama just sketched. "Well, I guess they kind of find out they better," she concluded darkly. "They don't bother around too much!"

# GEM DAMASKEENE RAZOR

Khaki Service Outfit

Wherever Duty calls—in the training camps, in the trenches, on the seas—the **GEM Service Outfit** in its natty little suit of **Khaki** is the universal favorite among "our boys". Strong, light, convenient—fits in anywhere; equipped with the wonderful keen cutting **GEM Damaskeene Blades** that assure a quick, smooth, comfortable shave under any circumstances.

Seven blades included, are in dust-and-rust-proof, wax-paper wrapped package, sealed.

**Separate set Gem Blades, 7 for 50c.**

*More than twenty-five years old—  
Millions of Gems in use today.*

**\$1.00** without  
Trench  
mirror  
Add 5c  
for blades

**Gem Military Outfit**  
includes razor complete  
with seven Gem  
Damaskeene Blades and  
Strapping Handle.

**\$1.35** with  
Trench  
mirror  
Add 5c  
for blades

Ask for the **GEM** at your  
dealer, or the Post Exchange, Camp  
Contractor, or Quartermaster's Depot.

**Gem Cutlery Company, Inc., New York**  
Canadian Branch, 101 St. Catherine St., W., Montreal

others have turned the corner. She—  
they—

But Florence lifted the baby from  
the carriage and swung it dangerously  
round and up and down in the air.  
"Rockums by baby," she sang. That is,  
her intention was musical. "Rockums  
by baby in ums tree top—"

Noble became a little more pressing,  
though timidly so. "She—they really  
might get away from us altogether,"  
he said. "We'd better—"

Florence replaced the baby in the  
carriage, where its vehemence did not  
abate. She was incapable of parting  
from it.

"Oh, I couldn't leave poor little Sarah  
alone like this, Mr. Dill!" she exclaimed  
importantly. "Just look! Sitting all  
alone out here on the sidewalk in front  
of a vacant lot with nobody at all any-  
where around!" Then she remembered  
a grown-up phrase that would do hand-  
somely. "Why, her mother would never  
forgive me in the world!"

"But her mother or her nurse or  
somebody has probably just gone some-  
where for a minute or—"

"Why, how could we tell?" the deter-  
mined girl inquired reproachfully. "It's  
my own second cousin, little Sarah At-  
water Burgess, and they have a very  
careless colored darky nurse for her.  
She might not come back for her at all.  
Oh, I couldn't leave her like this, Mr.  
Dill!"

"But the nurse might not come back  
for a long time," Noble suggested desol-  
ately, looking over his shoulder in the  
direction of the corner where the rest  
of the walking party had vanished.  
"I'm afraid if we don't hurry—"

"I'll tell you what we'll do," said  
Florence with brightest enthusiasm.  
"We'll take her with us! We can't  
leave her here, and I'd just love to have  
her along. We can take her with us  
to the walking party, and then we'll  
take her home. You push the wagon,  
and I'll walk along close 'side of it and  
keep quieting her."

"But—"  
"It'll be just lovely!" Florence in-  
sisted warmly. "Take hold of the  
handlebar and push; that's all you  
ist to do, Mr. Dill."

If Noble had not feared to lose the  
favor of this powerful influence with  
John's dreaded father, he might have  
deferred further demur, in obedience to  
various reasoning voices within him.  
He had a hazy notion that it was not  
entirely proper to walk away with a  
baby in this manner, even at the com-  
mand of the infant's second cousin, but  
with more keenly he felt a strong re-  
pulsion toward the idea of pushing a  
baby carriage under any circumstances,  
and particularly in a walking party of  
which Julia Atwater was a member.

Florence was too much for him.  
"Hurry, Mr. Dill!" she commanded.  
"It's absolutely the only thing we can  
do. The family'd never forgive me if  
I left this child out here in the street  
like this—never in the world! If that  
colored darky woman comes back,  
and Sarah isn't here, it'll be a lesson  
to her; that's all. We got to take her,  
Mr. Dill, and that's just everything  
there is to it! You  
take hold of the  
handlebar and  
push; I'll keep the  
baby quiet."

After a mute  
march of all hori-  
zons, Noble aban-  
doned hope of a  
providential nurse,  
took hold of the  
handlebar, and  
pushed, while Flo-  
rence walked beside  
the perambulator,  
flourished her arms  
and itchy-cooed at  
the top of her  
voice. The baby re-  
sponded in volume  
and pitch, but not  
in kind; for so long  
as his eyes, every  
time he opened  
them, were able to  
see the source of  
his terrors still  
persistent near  
him, he naturally  
endeavored to ex-  
press his desire to  
escape from its  
presence. And this  
interlude of the  
walking party  
brought Florence  
some minutes as  
nearly perfect as  
may be known by  
a human being—

she was playing that she was the  
mother and Noble Dill the father.

She convinced herself that one or two  
strangers, passing the group, took this  
to be the situation.

It was a rapture.

THEY turned the corner and saw the  
others of the walking party at a con-  
siderable distance in advance of them,  
for Julia, in her stride, went like a  
strong fugitive. Noble was in two minds  
as to the wisdom of coming up with her,  
but when he beheld the charmed figure  
thus hastening and fluttering against  
the afternoon light, he could not choose;  
his feet would have borne him forward  
had the baby he perambulated been  
twins. Noble hurried; he hurried and  
perspired; his complexion could not  
safely have taken a more vivid tint.

The overstimulated Florence, mean-  
while, skipped and trotted beside the  
whooping perambulator, equaling it in  
vociferousness and in other ways help-  
ing to make lively the progress of the  
unusual little caravan. And presently  
Julia and her two close companions  
were conscious of something noisy not  
far behind them, but for a little time  
remained unaware that the noise bore  
any definite relation to themselves.  
During this interval the hubbub was  
continuously maintained at a distance  
of about eighty feet behind them.

Noble felt that to be close enough.  
His feeling toward the persons re-  
sponsible for his condition had become  
one of bitter animosity, mitigated, in  
respect to Florence, only by his coward-  
ly fear of offending her, but in respect  
to the baby not mitigated at all. If  
he could have been alone with the lat-  
ter for a few minutes, Noble would  
have said things that Mrs. Dill, his  
mother, did not know he knew.

Now approaching upon the opposite  
side of the street, there came lightly  
strolling a gentleman even more he-  
dizened than the merrily appareled  
Ridgely; and at sight of him Florence's  
championship of Noble temporarily pre-  
vailed over her passion for minister-  
ing to babies.

"Look," she said. "It's that old  
Mister Clairdyce."

"Oh, I know him," Noble muttered,  
but this was an understatement, since,  
like Newland Sanders and Mr. Ridgely,  
Noble and Mr. Clairdyce knew each other  
so well that they no longer "spoke."

Florence went on. "He's the one  
sent her the alligator when he was  
in Florida, and it was over three feet  
long. She had it put in the kitchen  
sink, and when Kitty Silver came down  
in the morning it was looking at her  
over the edge of it, and she never got  
so upset in her whole life! My, how  
grandpa does hate him!"

Mr. Clairdyce was destined to cause  
more trouble immediately. As he  
bowed to Julia, from across the street,  
he hesitated, and seemed of a mind  
brazenly to join the trio, but an in-  
sistent assault upon his ears had logi-  
cal effect upon his eyes; they roved  
unwillingly from Julia to the rear of  
her walking party, and opened wider  
in happy surprise.

With every element  
of conspicuousness  
he uttered a loud  
laugh, then went on  
his way, having  
abruptly changed  
his mind about join-  
ing the party.

His conspicuous  
laugh was what  
caused Julia to  
glance over her  
shoulder and come  
to a halt.

"Noble Dill!" she  
cried.

"Here we—here  
we are," Noble fal-  
tered.

"Whose child is  
that?"

"It's dear little  
Cousin Sarah At-  
water Burgess,"  
Florence explained  
complacently.  
"That old colored  
darky nurse left  
her out on the side-  
walk by a vacant  
lot all alone."

"Then why didn't  
you leave her  
there?" demanded  
Julia, addressing  
herself principally  
to Noble Dill. And  
as he seemed un-  
able to explain, she  
turned upon Flo-  
rence.

KEEP TO RIGHT-DRIVE WITH CARE

HOOD TIRES

ARE BETTER  
THAN GOOD TIRES

THIS IS THE SIGN  
OF A HOOD DEALER

HOOD  
TIRES

## The "Why" of the Hood Extra "Ply"

The famous Hood outdoor sign will introduce you to the sign of a Hood Dealer in a near-by town or city. Look him up for an educational test.

Take in your hand the 4" section construction of a Hood Arrow Tread Tire. Count the plies of finest fabric. Remember that fabric, the strength and substance of it, is the backbone of the tire.

Compare the Hood 4" section construction with any 4" or even 4½" section of a "standard" tire. You will discover 4½" strength in a Hood 4" tire.

The price is slightly higher, but the cost per mile much less.

If you do not find a Hood Dealer near you, look him up on the page in the 1918 Blue Book opposite the contents page. That will direct you to where you may be shown the "why" of that extra "ply." Your judgment will do the rest. Try a Hood Tire.

Hood Tire Co., Inc., Watertown, Mass.

## "The Story of the Great War"

What led up to it—How it began—  
Through it all

An Authoritative, Scholarly History  
Published Only by P. F. Collier & Son

It gives  
you his-  
toric per-  
spective.

digging out the  
roots of the war  
over the past fifty  
years. Vivid description,

covering in detail the thrilling

events of the war; there is an outline

of the plans behind the first German

Offensives against France and Russia, the

Gallipoli affair, Verdun, the Battle of 1917, the

collapse of Russia, the entry of the United States into

the war, and the great German offensive of 1918—a vivid account  
of the fighting, an analysis of each campaign with the causes of its  
success or failure, a resume of the net results.

This is a full and complete history of the war, from the actual fighting; an  
analysis of the industrial and social factors, the financing of the war, etc.  
It shows the war from the beginning to the end, from the very beginning to the very end, and  
the whole story of the war is given in detail.

The Story of the Great War is a new history written to keep pace with the  
war, and to show the war in its true perspective.

Send for Booklet. The booklet below  
will tell you the story of the war in its true perspective.

## Salesmanship

Continued from page 11

who has the kind of personality which smiles and shows its teeth and wiggles—yes, literally wiggles. When she approaches you to learn what brand of cigar you want, you feel as if you ought to propose marriage to her, if you happen to be unmarried, or, if married, that you should promise to do something for her in your will. Only yesterday I visited this place to buy three articles. I bought one, thrust it into my pocket, and escaped without the other two. The young lady put me positively into a panic. She used her personality until it hurt. Without doubt she was thinking: "How nice I am to this poor drab man. I'm treating him so differently from the way most sales girls would treat that type of man. I'll bet he appreciates it."

She did treat me differently, but I didn't appreciate it. Instead I got nervous and frightened. The young lady overplayed her personality. I wonder if our Indianapolis lady is at all like her. I wonder if she renders the Indianapolis dowagers, matrons, and misses a trifle uncomfortable by too much personality. I notice she makes it a point to select becoming colors and styles. Does she do it tactfully, or does her personality strike a patronizing note which unpleasantly reminds the shallow woman of her yellow skin and the stout woman of her embonpoint?

If my Indianapolis lady misuses her personality, I am rather confident that she overplays it. The vividness of her letter indicates that she would not be likely to underplay anything. However, there is the barest chance that she may underplay her personality. A noticeably restrained personality among salesmen and saleswomen is particularly a Fifth Avenue vice, yet it is not confined solely to Fifth Avenue. Restrained personality is like a too tightly laced corset. Neither is comfortable, and neither deceives anyone. The abstracted and condescending attitude of a salesman, who is conscious of his personality but has it on leash, is just as offensive and nonproductive as the gushing eccentricities of a salesman who gives full swing to his personality. If you think you have a "pleasing personality," you are pretty sure to pose, and no really good salesman is a poseur. Be sincerely agreeable. Learn—before a mirror if necessary—how to greet a customer, and after that forget yourself. If you have what you think is personality, leave all of it at home except that which you use in saying good morning or good afternoon. If you really have a pleasant personality, you will never know it. A self-conscious person cannot have a truly pleasant personality.

### "You Will Like This Shade"

WHAT has the foregoing to do with Getting the Order? Simply this: To get the order, unless the resolve to buy takes place in your customer's mind without the necessity of salesmanship on your part, you must forget yourself and adopt his viewpoint. You should endeavor to think of the article as he is thinking of it. When you attempt to intrigue his interest in a given article, you should emphasize his views—not your own. Instead of saying: "I recommend this," it is better to say: "Here is something that will please you, I think." Rather than say to madam: "Here is a color that I think you can wear," it is better to say to her: "You will like this shade, I feel quite confident."

When a salesman desires to point out the superior qualities of his merchandise, he should respectfully indicate his conviction that his customer has the capacity for appreciative interest. Instead of glibly parroting that a bolt of silk is "the best grade of genuine Lyons silk," he might say: "As you are probably aware, over 80 per cent of the silk looms in Lyons are idle; therefore you will be interested to know that this is a genuine piece of Lyons silk which we succeeded in getting past the submarines. It is the very highest grade too—but I needn't tell you that. The quality is quite apparent, isn't it?"

Intriguing and developing a customer's interest constitute a well-defined phase of salesmanship which may be discussed at greater length in another article. I touch upon the subject now merely to emphasize that in every step of a sale the salesman should speak through, rather than to, the mind of the buyer.

That we may now progress rapidly

## SCHOOLS

### New England CONSERVATORY OF MUSIC

George W. Chadwick  
Director

BOSTON, MASS.

Year Opens  
September 10, 1918

Located in the Music Center of America. It affords pupils the environment and atmosphere necessary to a musical education. Its complete organization, and splendid equipment, offer exceptional facilities for students.

Complete Curriculum. Courses in every branch of Music, applied and theoretical.

Owing to the Practical Training in our Normal Department, graduates are much in demand as teachers.

The Free Privileges. Of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra. Offers advanced pupils in piano-forte, voice, organ and violin experience in rehearsal and public appearance with orchestral accompaniment.

Dramatic Department. Practical training in acting.

Address Ralph L. Flanders, General Manager

### COLLEGE OF MEDICINE University of Illinois

Announces that, as a war emergency measure, it will begin on June 1, 1918, to operate a continuous session on the Quadrimester System, for the benefit of those students who are entering or are in the Extended Medical Reserve Corps. Under this system, the academic year is divided into 4 terms of 10 weeks each, instead of 2 terms of 16 weeks each, as under the Quadrimester System, or into 2 terms as under the normal semester system.

Students other than those entering or in the Extended Medical Reserve Corps must not be at least 4 years of age and must have completed the first year of the college of arts and sciences. The last of the year may not be less than 40 days before the first of the year. The last of the year may not be less than 40 days before the first of the year. The last of the year may not be less than 40 days before the first of the year.

College of Medicine of the University of Illinois Box 12, Congress and Monroe Streets, Chicago, Illinois

### Colorado School of Mines Golden

Mining more active and important than ever before. Located on location and equipment for practical work. Four year courses in Metal Mining, Coal Mining, Metallurgy, and Mining Engineering. High standards of instruction in the most advanced methods of mining. The college is located in Golden, Colorado. The college is located in Golden, Colorado.

Registrar, Dept. C, School of Mines, Golden, Colo.

### Dentistry offers unusual opportunities

Know about the opportunities of dental education. The Indiana Dental College offers a unique opportunity to study dentistry at a moderate cost for tuition and living expenses. The college is located in Indianapolis, Indiana. The college is located in Indianapolis, Indiana.

### INDIANA DENTAL COLLEGE

Electrical Engineering. Every detail taught. Actual construction, installation, testing. Course, with diploma, in one year.

20 years' reputation, with over 1000 graduates. Located at 205 Columbia Ave., Washington, D. C.

### COLLEGE OF DENTISTRY UNIVERSITY OF ILLINOIS

More to learn now and through a first year curriculum leading to the degree of Doctor of Dental Surgery. Pattern clinic, medical high school, the school. Informal instruction. A full of equipment and operating facilities. Located in the heart of the city. The college is located in the heart of the city.

College of Dentistry, University of Illinois Box 12, 1832 West Harrison Street, Chicago

### Chicago TECH

ARCHITECTURE ENGINEERING DRAFTING. Practical one year courses in electrical and mechanical engineering. The college is located in Chicago, Illinois. The college is located in Chicago, Illinois.

### PRACTICAL ONE YEAR COURSES ELECTRICAL & MECHANICAL ENGINEERING

Day and Evening Classes. The college is located in Chicago, Illinois. The college is located in Chicago, Illinois.

### BAHNEMANN MEDICAL COLLEGE and HOSPITAL

including TRAINING SCHOOL FOR NURSES. The college is located in Chicago, Illinois. The college is located in Chicago, Illinois.

## WENTWORTH Military Academy

Lexington, Missouri 43 Miles From Kansas City. Military work under active army officer is real, interesting, and instructive. Courses of study thoroughly prepare for college or for life. Small classes. Separate department for boys in 5th to 8th Grade. Strong, but sympathetic discipline. Certificate by the War Department in the form of "Board of Officers" of the United States. Junior and Senior Division of Reserve Officers Training Corps. Address: COL. S. SELLERS, Supt. 1840 Washington Ave., Lexington, Mo.

## CASTLE HEIGHTS MILITARY ACADEMY

Most equipped boys' school in South. TEN BUILDINGS. Large campus. Excellent athletic facilities. Faculty of experts guarantees thorough work. ATTENTION DAILY TO CASUALTY. CARE SUPERVISION AT NIGHT. Character-building, sound scholarship, real habits, clean sport—school ideals. Chemical, scientific, agricultural, commercial courses. Certificate admits to leading universities North and South. ADEQUATE PREPARATION FOR ADMISSION TO WEST POINT AND ANNAPOIS. Military work supervised by the Government. Rates \$120 at the Annex, \$200. See Hand-illustrated catalog address: Box 118 Col. L. E. RICE, President, Lebanon, Tennessee.

## Gulf Coast Military and Naval Academy

Open a school on the Gulf. Boys sleep out of doors, every night in the year. Junior school for boys between ages of 8 and 15. Military and Naval training under Government Officers. Address the Principals, Gulfport, Miss. R. L. Send us the Boy and we will return you the Man.

## Staunton Military Academy

An Ideal Home School for Manly Boys. The college is located in Staunton, Virginia. The college is located in Staunton, Virginia.

## PEDDIE A SCHOOL FOR BOYS

Special Health Tests. The college is located in Peddie, New Jersey. The college is located in Peddie, New Jersey.

## OHIO MILITARY INSTITUTE

Purpose—Carefully balanced academic, military and physical training under personal supervision. The college is located in Ohio. The college is located in Ohio.

## KEMPER MILITARY SCHOOL

The college is located in Kemper, Missouri. The college is located in Kemper, Missouri.

Which would you pick as a future winner?  
The young fellow who spends *all* his precious moments with the daily paper, or the other who, little by little, is gaining that knowledge of a few truly great books which will distinguish him always as a *really well-read man*?

What are the few great books—histories,

novels, dramas, poems, biographies, books of science and travel, philosophy and religion—that “picture the progress of civilization”?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—40 years of it as President of Harvard University—has answered that question in The

# HARVARD CLASSICS

*The Five-Foot Shelf of Books*

We want to send you by mail at our expense a copy of a little guidebook to books, describing “The Harvard Classics.” “To me,” writes an inquirer, “the little book opened the door of a vast new world of pleasure.”

## Read this Booklet!

It is the most valuable little book of its kind ever written. It contains Dr. Eliot’s best advice to you, on just what and how to read; besides this, twelve delightful five-minute essays on literature; your copy is wrapped up and ready to mail; no obligation; merely clip this coupon now.

## Looks Like Camouflage

But It Is Just the Reflection of the Surroundings  
In the Highly Finished Body of the New Reo Light Four

Referring of course, to the cut of the car at the bottom of the page.

Usually we retouch photographs of this kind to eliminate the reflections. That is what gives the average automobile illustration such a lifeless look.

Here is Reo beauty unadorned—the car is shown just as photographed, with the rippling road reflections in the mirror-like finish of the Reo.

And that outward beauty is a fitting cover—just as it is indicative of—the internal excellence of this newest product of the Reo plants.

Mechanically, this Light Four is the epitome of Reo experience and skill.

The Four is the ideal type of automobile for these times.

The ruggedness that is inherent in the four-cylinder principle and especially in Reo motors;—

The freedom from "temperamental ills" to which poly-cylinder cars are subject;—

The accessibility, the simplicity and the absolute interchangeability of parts;—

These render the Reo owner singularly free from the necessity of calling upon the garage man.

Skilled mechanics are scarce just now—Uncle Sam is using them in his war work.

Those that are available come high—and for the same reason.

The owner who can care for his own car is doing double duty.

So perfect is the interchangeability of this Reo, you yourself can, without any mechanical experience and with the most meagre mechanical understanding, make any adjustment or replace any part—at the expense of a suit of allover.

In building more of this Light Four Model at this time we had these very conditions in mind.

The Dependability that is Reo is your guarantee from pesky little troubles and vexatious delays.

That Reo factor of safety "50% oversize" in all vital parts—driving shafts, gears, axles, bearings, etc.—is your guarantee against major troubles.

That L<sup>o</sup>yers appreciate these qualities is evidenced in a demand greater than the possible output.

Our problem is not to sell, but to make enough of them.

They are coming faster now and if your order is in your Reo dealer's hands at once he can promise you a reasonably early delivery.

But don't delay—today won't be a minute too soon.

*P. S.—We feel we ought to suggest that it behooves the prospective buyer, nowadays more than ever, to look carefully into the resources, financial and otherwise; and especially the sources of supply, of concerns whose product is offered to him. If you neglect this, you may find yourself a year hence with no source from which to obtain replacement parts—no manufacturer to stand back of the "guarantee"*

## "AMERICA'S ANSWER"

*Second U. S. Official War Feature*

### See our boys go over the top at Cantigny!

**G**ENERAL PERSHING himself sent to this country much of the material included in "America's Answer"—the second Official Government War Film, now playing at the Geo. M. Cohan Theater, New York; the Forrest Theater, Philadelphia; and the Majestic Theater, Boston.

See our boys building a 3-mile pier in a French port; assembling American locomotives; baking bread—each loaf stamped with the company's trade-mark.

See huge heaps of Yankee shoes being salvaged—quantities of worn out underwear being put in shape for our boys by motherly French women; American motor trucks swung off ships and freed

from their crates by Austrian prisoners.

See American soldiers going over the top at Cantigny—the French tanks and flame-throwers in action—the capture of German prisoners.

This stirring war film is a fitting sequel to "Pershing's Crusaders," which is now appearing in thousands of motion-picture theaters throughout the country. If it hasn't been shown in your town, ask your theater manager to get it.

ANOTHER feature-picture every American will surely want to see is "The Bridge of Ships"—a two-reel film telling a graphic picture-story of the ship-build-

ing achievements of the U. S. Government.

Also look for the Allies' Official War Review, a digest of current activities of the American, French, British and Italian troops on the Western Front. Shown each week at your favorite theater.

Is YOUR BOY over there? Or perhaps your brother or husband? Do you want to see how he is living—what he is doing and how he is doing it? His life in the new environment is vividly portrayed in these impressive war films prepared by Uncle Sam for the folks who have to stay at home.

The exposition of Captured War Trophies will be held in the leading cities of the United States. Watch for announcements.

It is very gratifying to us to be able to contribute, in the present crisis, the results of 60 years experience gained in the solution of fuel conservation problems.

FUEL WASTE IN THE POWER PLANT  
WHERE TO LOOK FOR IT - AND HOW TO AVOID IT  
AND PREVENTABLE FUEL WASTE

# IT tells how to save coal

*A real help sent free to  
Plant Owners & Operators*

**W**HAT question could be more pressing to those interested in a power plant or factory than that of next winter's coal supply? Particularly now, when the government has added further emphasis to the situation by its move to cut fuel waste through a plant questionnaire.

The booklet offered above—"Fuel Waste in the Power Plant," is designed to be of help in assuring coal supply—by suggesting, as it does, many simple and effective measures for the reduction of preventable waste, in the burning of coal and in the use of steam for power, heating or processing.

The pamphlet does not attempt to suggest radical and expensive equipment additions. It discusses plants as they are and indicates a score of individually small but collectively large losses

commonly overlooked in the operation of the power plant and factory.

A reading of this pamphlet will be reassuring to manufacturers or other plant interests in showing how inexpensively and often how readily, waste power, heat losses, wear and tear and frictional losses can be reduced. Its timeliness speaks for itself.

For sixty years we have been developing and advocating the use of coal and power saving materials and feel that we can serve the common good by sharing our experience with plant executives and engineers—particularly now when coal and power saving mean so much to everyone.

We will be glad to forward you a copy of "Fuel Waste in the Power Plant," if you will write our nearest branch.

## FOCH

*A new and hitherto unpublished photograph of the Allied generalissimo*

"We charged a nest of machine guns across an open field. It didn't seem possible that any man could live"

© Committee on Public Information

THE big gray ambulance backed shorting across the dark court and came to a bumpy stop with its hind wheels ground against the bottom of the two stone steps that led up to a long, stone-floored porch. A nurse who was actually reeling with fatigue knelt by a dark form prone on a stretcher and, in the dim light of a smoky lantern held by a medical lieutenant who was intermittently sleeping on his feet, picked up a tag and read from it.

"Shell shock and exhaustion," she droned. She gently shook the prostrate man beneath the blanket. "Can you walk?"

The man on the stretcher raised himself on his elbow and stared at the woman stupidly from red and swollen eyes. He had on a trench helmet. His week-old stubble of black beard was plastered with dirt.

"We was goin' some up there," he said hoarsely. "Believe me, we was goin' some!"

"Can you walk?" the nurse repeated.

The man's broad, bearded face contracted in a spasm of fright. He leaned forward and clutched at his legs with both hands, feeling them eagerly from foot to knee.

"My leg!" he cried sharply. "My leg is—is—"

He stopped short and his face wrinkled in a ghastly caricature of a grin.

"No! I thought for a minute my leg— It was Jimmy got his leg blowed off. Sure! Sure I can walk."

He stumbled awkwardly to his feet, a burly figure of a boy, and walked toward the front seat of the ambulance, swaying, stumbling, wagging his head.

"We was goin' some up there," he insisted hoarsely as he was helped to his seat. "Believe me, we was goin' some!"

He slumped into the seat and was immediately asleep, snoring noisily.

"Goin'—a-s-some," he mouthed between audible breaths. "B-b-believe—m-m-me!"

#### A Weird Nocturne

THE huge dark stone courtyard was full with the roar and cough of motors as the ghostly looking ambulances came and went and backed and turned. Scarcely a light showed: Here and there a small dim side or tail light on a car; the flicker of a lantern as the nurses, stretcher bearers, and a medical officer picked their way among the rows of prone, blanket-covered figures on the stone floor of the long, open porch; a clearer view of the lantern as it was held aloft while

the stretcher bearers slid their blanketed burdens into the dark maw of a waiting ambulance. As each laden stretcher was lifted the two American women nurses would sit for a moment on a pile of bloody stretchers and for that precious moment drowse with their heads on each other's shoulders like weary children; then up to pick their way down the rows of dark forms, kneeling here and there to read a tag in the lantern light.

Through the darkness, made more weird by the dim flicker of search lights, came the roar of motors in the stone courtyard, and here and there, from the dark porch, a low muttering. From the front came the stupid, incessant growling of the guns, whose sinister metal throats were muttering their threats throughout the night as, with steel and flame, they essayed to blast a pathway to Paris, the symbol city of Freedom.

"Go get him, Scotty!" a hoarse voice bawled suddenly into the night. It came from the delirious lips of what was left of a man lying under a blanket on a stretcher in one of the long rows. "Go get 'em, old kid! At-a-boy! We can lick 'em, old kid! Give it to 'em, Scotty! They won't fight like white men. Go on, Scotty! Give 'em about a foot o' that old toadsticker. At-a throwin' it into 'em! Fight 'em, boy! Fight 'em! We got 'em! Now we got 'em! The old toadsticker, Scotty, old kid; give it to 'em!"

#### At Château-Thierry

THE distant, low, half-audible growling of the guns! They were raging this night, for they had been stayed. A few days before a certain way had been clear for them, and into that open way wave upon wave of American boys went slinging to block the path with their lives. They washed up against the Hun in the open land, stopped him, drove him back and held him fast in the spot of their choosing.

You've read of the action as the American engagement near Château-Thierry. In singing waves they rolled out on the Hun and blocked the way that was open. And here now in this dark stone courtyard, in this witches' place of weird, scarce light and roaring motors, where all shutters were fast against the lights within, so that no swift-winged murderer of the skies might locate the helpless and rend

from their enfeebled grasp the remnant of life to which they held—here on the dark road to the Symbol City that they had given themselves to defend—was the sluggish backwash from the storming waves that had rolled so fiercely into the way that was open and made it the way that was shut.

From the individual drops in that flow of backwash—the human drops that, massed, had formed the storming waves which halted and held the boche—I got this story. It is theirs, not mine. I give it as I got it, from stretcher and hospital cot, from ambulance and courtyard. Theirs the high courage to have lived the story, each his line or paragraph or chapter.

#### Doing Things That Can't Be Done

HE was a man of thirty or more, with fine-cut, clear-cut features. His intelligent brown eyes ran with tears as he talked. Not tears of pain from his wounds—which were grievous—but tears of pride at recollection of the heroism of his comrades who had fought and fallen about him.

"I never dreamed that anything could possibly be as fine as the spirit of those fellows," he said shakily, reverently. "They were like—like people you read about in some fine book and wish were real. They were as fine as men from books, and they were real. Just ordinary everyday American fellows like any of us, they were, and they were like the finest men in the finest books. We charged a nest of machine guns across an open field. It didn't seem possible that any man could live in that fire. But some of us did and got those machine guns and put them out of business."

"The spirit of those men up there was so fine that they did things that can't be done. They did, sir! They did things that can't be done. They don't make bullets that can stop men who feel the way those fellows felt. Well, as I started over, there was a fellow lying there—he was only a young fellow, a kind of a kid he seemed like, and he'd been hit by a high explosive. You know what that stuff does. He'd been hit fair in the middle, and he—he was just practically torn in two. He didn't have five minutes of life left in him. But he laughed at me, and he wiggled the fingers of one hand like he was waving at me—that was about all of himself

he could move—and yelled: 'That's the stuff! Give it to 'em! Go get 'em! Stick a few for me. I didn't get my share.' No matter what happened to 'em, that's all they were thinking of—just to go on and get 'em! I—I didn't know anything could be like it was up there with those fellows! Why, the Germans can't fight anything like we can! Really they can't. They get everything planned out, and if it don't all go just like they planned it, they either run or surrender. Why, we can lick the Germans—just as soon as we get enough men here to make a real showing and take a big front! Why, if all the American army's anything like what our fellows were up there, we can lick 'em off the face of the earth!"

"From what I hear I guess you put up as good a scrap as any of the rest," I said in compliment. The blood rushed to his white face, and he gave a sharp cry of protest.

"I wasn't thinking about my-

When our troops fought their way into the city the Huns stuck to their dugouts and had to be driven out with liquid fire

self when I said how fine the fellows were," he said earnestly. "No. I—I didn't think about it that way. I wasn't thinking about myself when I was—telling you about—about them."

"I know you weren't, old man."

"I just—just was along with 'em," he muttered. His eyes were full of a worried puzzlement. For the first time he was thinking of himself as a part of the wonderful things of which he had been telling me. His mind was an opened book as he strove to reconcile his accustomed modest appraisal of his ordinary self with this identity that had been a worthy part of the glorious whole that had so impressed him.

### "We Can Lick 'Em"

HERE was a tall, slender young fellow who spoke with a Southern accent. He lay on a cot in the corridor of a hospital near Paris that was filled with cots on which lay American wounded. Two Ameri-

wind of 'em plain as they went past. If I'd 'a' raised up just a few inches, I'd 'a' got it sure. But you bet I wasn't raisin' my head or movin' any then. I ain't squeezed myself down so small since I got my growth, an' it seemed to me like I was twice as big as I usually am. I ain't felt so big since I put on long pants! We all lay there like that for about two hours, an' then one of the fellows yells: 'We got to get out o' this. It's gettin' worse all the time. What'll we do?' 'Well,' I says to him, 'the only thing we can do is to have a lot o' luck,' I says. 'We've had more'n our share already,' I says to him, 'an' if we live through this we're goin' to have a lot more,' I says. 'They've put a bullet in every inch o' this part o' France,' I says to him, 'except the few inches we're lyin' on, an' I'm goin' to lie right here until I got some better reason for movin' than just to be goin' some place that may be worse.' 'Well,' he says, 'we're goin' to get killed sure if we stay here.' 'Well,' I says to him, 'we're goin' to get killed sure if we don't. Somewhere in France is just as good as somewhere else in France.'

machine guns opened up again we was all hunky-dory. They was a regular stream of 'em goin' just overhead, but we didn't care. So we lay there till about dark an' then we got orders to go on over. So we went over an' cleaned 'em out o' the town with the bayonet. They won't fight when you once really get at 'em. As long as they're lyin' behind something shootin' or comin' over with their elbows touchin' an' machine guns behind to knock 'em off if they don't keep on comin', they're all right, but when you get up onto 'em they don't want any of it. My, it was great to have a chance to tear into 'em an' do something! After we cleaned the town out I run down a street with some men an' out a little piece off to the left, an' I stumbled over some o' these—what they call pill boxes. There was a lot of them there, but there wasn't anybody home. All the Dutchmen, that'd been lyin' there hid an' pepperin' at us all day, had a date somewhere back toward Berlin, an' they'd gone to keep it. So after a while we went back a piece, an' while I was back there restin' a shrapnel come along an' put me out. Oh, I'll be all hunky-dory in a few days. I wouldn't wonder if I'd be walkin' before long. I got pretty badly cut up in my back an' down along my hip, but I'm feelin' fine now. I hope I can get back with my old company when I got fixed up. They're a great bunch. I guess most of 'em got hit sooner or later, but we did a lot more to the Germans than they did to us. We went over an' set 'em back an' held 'em where we put 'em! An', believe me, we got a lot more o' them than they got of us."

"They counterattacked up there yesterday," I told him.

"The Germans?"

"Yes."

"They didn't get anything."

It wasn't a question. It was a

Doughboys and poilus who rolled back the German tide are confident of ultimate victory

can women had just passed distributing strawberries and cherries. Two more were coming down the corridor, their arms laden with roses, stopping to leave a bouquet with each man. The tall young fellow took the proffered flowers in his war-roughened hands and caressed the velvet crimson petals awkwardly, wonderingly.

"They're awful pretty, ain't they?" he said shyly. "We used to have lots of 'em in our front yard. I reckon they'd just about be in bloom now, don't you think? Everybody's been mighty nice bringin' things an' stoppin' to talk an' all. It's kindo nice to have real American women come in an' stop an' say a little something to you. Every time one of 'em stops an' says a little something to me or brings in some flowers or something I think what happened to a lot o' the Frenchwomen over here an' I feel more like fightin' than ever. Yes, sir! Well, sir, I got a dose o' shrapnel after gettin' through the worst of it without ever bein' scratched. We'd gone over an' took the town an' cleaned 'em out all around there, an' we'd been relieved in the line when a shrapnel come along an' got me. I was in the worst kind o' machine-gun fire an' never got scratched. We was crawlin' out across an open field along about two o'clock in the afternoon an' a lot o' machine guns cut down on us, so we had to just lie there an' take it for a while. There was no sense in crawlin' back. It's always just as hot back a piece as it is where you are, an' if you're goin' to go at all you might as well go on forward. We didn't figure we had any chance o' goin' forward just then, so we just lay where we was. We kindo dug in with our fingers the best we could, an' some of us got some little pieces o' rock an' put 'em right in front of our heads."

"There was one machine gun kep' traversin', an' the bullets from it were hittin' the dirt just about ten inches in front o' me. There were several of us lyin' there in a row, an' if that machine gun that was traversin' all the time had just nosed up so's to throw 'em two foot farther it'd got every one of us. It kept kickin' dirt into my eyes an' over my head all the time, but it never quite got me. Then another got to traversin', an' the bullets was passin' just over me—just over the back o' my head as I was lyin' flat. There was the one shootin' 'em right in front o' my nose an' the other one puttin' 'em right over the back o' my head. I could feel the

to the rest o' the fellows about the smoke, an' we all got up an' beat it like hell off to the left a little piece where there was some bushes an' some kindo little hollows, some o' 'em a foot or so deep, or two or three feet—some o' the bigger ones. When the

"He didn't say anything to that, an' we lay there a while longer, an' by an' by they kindo let up on the machine guns for a minute an' began throwin' in an awful lot o' shells along there where we was lyin'. They busted all around us, but nobody got hit, an' after a lot of 'em had busted right near I got a kind of an idea. So I kindo rolled my head around on the ground until I was sort o' lyin' on my ear an' could see a little, an' there was an awful lot o' smoke from these shells all around us. So as I didn't hear any machine-gun bullets comin' real close for a minute, I took a chance an' raised my head a little. Nothin' happened to it, so I yelled

calm statement of known fact, and there was nothing interrogatory in the tone that implied a request for confirmation. It was the first he'd heard about the counterattack, but he knew that "they didn't get anything."

"Those fellows up there won't give up what they took," he went on quietly. "If they do any movin', they'll move on an' take some more. I know 'em. We can lick these Heimies. Why, give us man for man an' gun for gun an' we can lick 'em every morhin' before breakfast an' then have to do settin'-up drill to get up an appetite!"

He awkwardly fingered the flowers in his war-roughened hands and looked longingly out the window at the soft, bright sky.

"They're awful pretty," he said wistfully. "We got several great big bushes of 'em in the front yard. I reckon they're just about bloomin' now, huh?"

### Smashed by H. E.—Feeling Fine

HIS hair was red and curly, and his eyes were gray, spotted with tiny hints of brown. He was propped up on his cot, laboriously endeavoring to write a letter with his one available hand.

"Say, hold that pad against my knee for just a minute, will you?" he begged. "I'm tryin' to write a little note to the folks to tell 'em I'm not hurt bad, an' my left arm's all busted up with high explosive. I can't keep that pad in place."

I held the pad on his knee while he scribbled his message of assurance. (Continued on page 22)

# MORE FARE, PLEASE!

BY EDWARD HUNGERFORD

IT is less than thirty years since electricity first came into general use in this country for city traction and was hailed immediately as the greatest transportation boon of a nation peculiarly dependent upon its transportation. It effected economic revolutions; it widened and rearranged cities and opened the country to them. It complicated our national life—and at the same time greatly simplified it.

To-day the electric railway in the United States is bankrupt. With three or four conspicuous exceptions, there is hardly a traction line across the land that is not in the hands of receivers or close to them. Many miles of interurban lines already have been abandoned or are about to be abandoned; in some cases their rails have actually been torn up and put to war-emergency uses. A good many other electric-railway companies would like to tear up their rails—or at least abandon their lines. But public sentiment and hard-headed utilities commissions will not permit. And the traction company groans—an old man in shabby clothing and well-nigh sick unto death.

## Broomsticks Sweep Out Bobtails

YET it is less than thirty years since Richmond, Va., was rejoicing in the fact that it had the first completely equipped trolley system in the land—"broomstick cars" they sometimes called them in those days. That was in the fall of 1888 or the spring of 1889. Within three years many towns were replacing their slow, jangling, dirty horse cars with clean new trolley cars. Thirty minutes each day to and from work in the old days meant some three miles in a foul, ill-smelling, uncomfortable horse car. The trolley car did at least twice that distance in the same time. When it replaced the "bobtails" cities redrew their maps and the profession of the real-estate promoter was really born. And the trolley cars were not only far swifter than the horse cars; even their earliest models carried many more people far more comfortably.

No wonder the new method of city transportation leaped into popular favor and that there were plenty of keen-minded, observant men who stood ready to coin that popularity into dollars and cents. They busied themselves with gaining control of the little horse-car lines of the medium cities and larger towns which had been as independent and as individualistic as grocery stores—first trains, forming them by electric equipment; and then slowly but very surely bringing them into larger units of operation. They shot brand-new lines out into the open country from the ends of their transformed horse railways, and whole streets of neat new detached houses appeared in their wake. About the limit with the old-time horse-car line was a six- or seven-mile run; beyond that, in the larger cities, one might take little suburban steam railroad—semioccasional trains of battered coaches hauled jerkily by small "dummy" locomotives, most uncertain in performance. These lines began to be transformed into electric routes—in place of three or four or six or eight trains a day, one had a trolley car every half hour or thereabout—and so the electric interurban was born. It developed with great rapidity.

It was only a short step thereafter to the point where the important lines in the big cities were tearing out the expensive cable installations—the San Francisco idea—which they had adopted hardly a decade before. In New York and Washington the cable slots were ingeniously adapted to underground electric transmission; and, the underground plan proving popular, it was adopted on new lines. Expensive? Yes, indeed. But those were not the days when the tractions were counting the pennies. The business was in the flash period of its existence—a period through which other typical American businesses—the bicycle, the motor car, and the motion picture, to mention three conspicuous instances—have had to pass before they could adjust the wild, popular demand to economic common sense. The tractions were young, making money fast and spending it more rapidly. And new ones were being born each month.

In the larger cities men saw huge possibilities in the tractions. The wiser of them from the beginning realized the difficulties that the electric railways in the small cities and the widely extended towns would have to encounter sooner or later. But the real cities—the closely knit communities where men and women had to ride to and from their daily toil, the cities whose outer rims were being extended and peopled by industrious real-estate operators with thousands and thousands of little houses—there was the real opportunity! Big Business hugged the trolley car to its breast and High Finance cavorted with it. Many of the great fortunes of the nineties had their foundations laid in tractions. Smart men carried further the process of consolidation of city railways. They saw rich possibilities of a monopoly of the carrying facilities of good-sized communities. And because they saw the possibilities they were willing to pay well—very well indeed—for the individual horse-car routes of trolley lines that were necessary to their plans. In turn the owners of these individual lines saw how their own properties were vitally necessary to such consolidation schemes and kept demanding—and receiving—higher prices for them. Certain lines in Philadelphia were leased at enormous prices to the great traction monopoly which the Wideners were forming in that widespread city. The Union Traction Company was rented to the Philadelphia Rapid Transit Company for an annual rental amounting to just 18 per cent of its paid-in capi-

tal. Of the \$10,000,000 annual fixed charges of the Rapid Transit Company about three-quarters is in rentals and one-quarter in interest charges. And some of the staid Philadelphians wonder to-day why their local railway system is in such financial difficulties and is making such violent appeals for increased fares.

## Turbines to the Rescue

THESE big consolidations frequently whipped their individual and smaller competitors not merely by maintaining excellent service on closely parallel lines, but by unlimited free transfers. In the beginning the tractions were wildly generous with these privileges. In the end the dear old public—having been educated to the transfer habit—demanded the little magic slips, which gradually became the *bête noire* of the traction operators and played a large part in the damnation of their properties.

The men who had consolidated and who owned the properties were not particularly concerned about trolley convenience or comfort or service in their individual principalities. Dividends were more to the point. "The dividends are in the strap hangers" began to be a popular slogan in the street-railway business in many sections of the country, and in order to make them there were cuts in the service—in the quantity, if not in the quality.

There was another reason for the cuts. The cost of furnishing service was steadily increasing while the individual revenue per passenger was standing still—or losing ground. Custom and tradition had seemingly fixed five cents as the standard fare between the limits of any one community, no matter how large it might be. As a matter of fact, because of the transfers, it rarely was that figure in actuality. In some cities of the mid West

and of the South it was lower because of the firmly established custom of selling six or seven or even eight tickets for a quarter—and to these also extending the transfer privilege. Yet cost of living had begun to hit the long upgrade. Motor-men and conductors found that mere living was growing more expensive, and so had to have a little larger pay envelope at the end of each week. Similarly all the physical necessities of the street railway—rails and cars and copper wires and dynamos and coal (where the road was not fortunate enough to be propelled by water power)—

were beginning to climb. But the nickel, or such portion of it as came to the company as the offering of each individual passenger, stood stationary.

The time ceased when the men who operated the tractions were being crowded by the men who owned them for closer economies in order to promote larger dividends. The problem was to make moderate dividends—a modest 6 or even a 5 per cent—in many cases to meet the fixed charges and the operating costs. You might go out into the industrial world and make 10 or 12 per cent on your invested dollar. Not so in the tractions. Despite their practical monopoly of carrying a city big and cities small, the fixed and customary ticked was crowding down their net earnings. And it took a very moderately capitalized property to make even modest dividends.

The question of capitalization was nearly out of it—high rentals more permanent. The era of exploitation and of over-capitalization was done—the flash youth of the street-railway business ended. It had lived on

On the New York City Railways, as elsewhere, the dividends (if any) "are in the strap hangers"—and hang on. But the dividends reaped by the seatless multitude are danger, discomfort, and ill health.

terapin and on pâté de foie gras; it was approaching the day when it would have to gnaw at husks.

For a time that day was deferred by great operating economies and efficiencies. It looked extravagant to see a big beautiful Corliss engine, which fifteen years before had taken a medal at the Chicago World's Fair and which was still perfectly strong and good, torn down and sent to the scrap heap, and to see upon its stout base a turbine, but it was good business. The ugly, emotionless turbine might cost half a million dollars, but it did the work of a dozen Corliss engines. Fashions in power houses might change as rapidly as fashions in women's clothing—and frequently did—but they were justified by the operating economies which they brought about. I have known men who have looked at blueprint charts wherein income and outgo were shown by unlying curved or jagged lines and who have laughed at what they were pleased to call "business by drafting board," but it was those very prints which many times charted dangers, otherwise unseen, toward which the craft was drifting. The drafting board saved many a traction in the past decade—for a time at least.

There came the inevitable time when operating economies could no longer keep pace with the steadily mounting costs. And then service was cut again and again—at first in the nonrush hours and on Sundays and holidays.

#### 10-Cent Fares Coming?

AS for the patrons, their protests long before had taken form before the various State regulatory commissions. Just as steam railroad practices of other days made the Interstate Commerce Commission, so did the street-railway practices give birth to many of the State commissions of to-day. Some of these commissions antedated the coming of the trolley car. Others, like those of New York State, which refused to take cognizance of the vastly changed economic conditions, found themselves out of a job—replaced by younger and more energetic bodies. For a time these State commissions worked

strenuously, many times effectively, notably the commissions in Wisconsin and Massachusetts. But others have fallen into politics, have become the cat's-paw of this party or of that; have been composed of men chosen for political fitness rather than for transportation aptitude—and so are impotent and in great disrepute.

These State commissions have struggled long and hard with the problems of street-railway financing and operation; of service and of its recompense. Sometimes the first of these last two questions has been the dominating problem, and at other times—particularly in Detroit and Cleveland—the question of the proper rate of fare has been the all-absorbing one. Neither Detroit nor Cleveland has ever suffered from poor trolley service as New York, Brooklyn, Philadelphia, Pittsburgh, Cincinnati, and St. Louis have suffered. They have assumed good service—clean, comfortable, roomy cars running at reasonably frequent intervals—as their birthright, and have, in fact, received it almost at all times, but have fought their traction monopolies bitterly on the question of fares. In a moment I shall show you how the tractions are edging up to six- and seven- and perhaps even eight- and ten-cent fares. Six-cent fares! Eight-cent fares! Those stern gladiators of the Detroit and the Cleveland of other days—Pingree and Johnson—what would they have said? They would have convinced you that a five-cent fare which custom had fixed in so many cities was hardly less than highway robbery, and because they succeeded in convincing so many of their fellow citizens to that effect the standard fares in Cleveland and in Detroit are even to-day considerably less than five cents.

It had been freely predicted that just as the trolley car drove out the horse car, so in turn would the gasoline car crowd out the trolley car. No longer would it be necessary to have fixed routes, elaborate track systems. A motor bus could go where traffic necessitated; and when traffic ceased in any street the motor route could be abandoned or moved far more easily than the elaborate structures of a street

railway. I firmly believe that the motor bus is but in the infancy of its development. It has been conspicuously successful in New York and in Chicago, but in Philadelphia an elaborately equipped line which was established some five or six years ago between the Public Buildings and Fairmount Park failed completely. It made the fatal mistake of fixing its fare at five cents and trying to compete with the trolleys. In New York and Chicago the motor-bus service is supplemental rather than competitive, and a ten-cent fare is charged.

#### Bucking the Jitney

ONE of the great weaknesses in street-railway service has been the fact that the roads have had but one price, but one quality. You could either stand in an overcrowded car—or be stood upon—or you could hire a cab. There was nothing in public transportation for the average man between the street car at five cents and the taxicab at many times that figure until the arrival of the high-class motor bus. It gives quality service. And just as quality service is almost invariably appreciated—in railroad trains, in hotels, or in shops—so do discerning folk like to ride upon the smart motor busses along Fifth Avenue, New York, or Sheridan Road, Chicago. To many persons it is worth a double fare to have a legal and a moral right to a seat.

Even the biggest and most modern of motor busses—seating twenty-eight persons—can make economic headway against a trolley car seating twice that number and standing as many more besides.

"Economic headway! How?" you wonder. Then you argue: "Look at the jitney. Two men in a trolley car transport a hundred passengers, and one man in a battered automobile carries only seven or eight!"

Well, the jitney never was economical—never can be. But it was—and in some sections of the land still is—popular. In this dear country of ours, however, there are many things that are popular that are not economical. (Continued on page 27)

# SMALL-TOWN STUFF

BY GEORGE F. WORTS

ILLUSTRATED BY ERNEST FUNK

THE last picture she carried away in her mind as the accommodation train pulled out of the paint-peeled little station in a whirl of white dust had been that of the Greenforks grocery store, ancient and forlorn, the tipsy front of which Jim Dobson, the hardened village loafer, was manfully endeavoring to support, with a sprig of timothy sprouting from his tobacco-painted lips. That picture would always characterize for her the village from which she had sprung. Now that a delicately preserved beauty plus years of hard work had netted smugness and conceit to her press agent; now that all of her gowns were fashioned by Cécile and studiously copied by women throughout the land; now that she rolled to work late of mornings upon the pneumatic tires of her own shining black limousine—now that fortune had visited all of this upon her, Yvette Vaughn continued to be at heart little different from the small-town girl she had started out to be.

Of course Yvette had a secret sorrow hidden away in her past, which was the one her press agent had never mentioned and never would. Not because she hadn't loved him dearly had she foregone a career in the kitchen of a coming young farmer out Greenforks way. She had foregone him simply because her star had not been hung among pots and pans.

YVETTE VAUGHN—and who does not tingle with envy and wonder at the very mention of that magic name?—kept on corresponding with the broken-hearted farmer for eighteen years. No; that is not a miscalculation. But perhaps you didn't know that Yvette Vaughn, who can play those sixteen-year-old parts because she is so hopelessly and wholesomely young, quietly celebrated her thirty-seventh birthday only a few weeks ago.

Yes, indeed; for eighteen years growing on nineteen Yvette Vaughn exchanged letters with poor old Bud Alter, thanks to the tolerance of the deep-chested farmer girl whom Bud had taken unto him-

self when the shallower scars of Yvette's refusal were healed up by the hot sun of the cornfield.

It was natural, to be sure, when good old Bud asked a great favor of her—the first he had asked since that silvery, bitter moonlit night, when, after hotly kissing him good-by, she had sadly pressed his freckled nose with her little thumb—well, it was certainly natural that she should grant that favor.

"When are you leaving for Greenforks, Mister Dobson?"

Bud's favor was not a hard one to grant, as a matter of fact. He had a golden-haired, blue-eyed daughter of seventeen, and the only thing that ailed Matilda was movie madness. Could Yvette make a place for her? Of course, if it would cause Yvette any inconvenience, etc., etc.

If you should ever have the opportunity to glance over the shoulder of a really great moving-picture actress when she goes through her morning's mail, you would first laugh until your tongue was sore,

and then you would indulge in a secret tear or two. Perhaps half the letters Yvette received contained casual and brave requests for "positions." The other 50 per cent were brave, if not casual, proposals of marriage. Yvette rarely wept over the latter.

In his habitually straightforward and honest way Bud Alter described his daughter, tabulating her pictorial points with that open-faced candor which was such a charming part of him.

Being of an imaginative turn of mind, Yvette could summon out of the blue sky a portrait of Matilda. She could see her standing all alone against the white balustrade of the old front steps, her golden hair in pretty contrast against the sober brown-gray shadows, her young eyes looking forlornly across the green lawn, which Yvette remembered as an oblong pool of satin under the whispering elms. The portrait of Matilda was simply the blue-eyed, golden-haired portrait of youth, resurrected from her own. So, while Bud's straightforward request was an echo, a carbon copy, of the hundreds which had come to her dressing table, she sat right down with pen and paper and expressed warm and cordial interest in Matilda's coming.

MATILDA recovered from her trembling and confusion at finding herself actually in the same room with the rouge, powder, and gowns of the divine Yvette Vaughn, whereupon she enunciated in a ringing school-girl voice the speech she had prepared on the eastbound Pullman.

"It was exceedingly kind and thoughtful of you, Miss Vaughn, to offer to help me seek a position in the motion pictures. I cannot begin to tell you how indebted I and father are to you." In a fainter voice she added: "M-mother sent some currant jam to you."

Yvette, with her exquisite back to the window and the green of the Jersey meadow, smiled tenderly.

"I am so glad to be of help, dear," she said. "Your father and I are very, very old friends, and I do appreciate the currant jam. I love currant jam—" "Do you—ree-eal-ly?" Matilda sparkled delightedly. —"On toast!"

Matilda simply had to sigh. It was harder for her to associate Yvette Vaughn with currant jam (homemade too!) on toast than it would be for you or me to associate Aphrodite with corned beef and cabbage.

And Yvette, whose breakfast in bed ran shamelessly to ham and eggs, country style, was thinking of something to eat too. Matilda, slim and grudgingly seventeen, reminded her of nothing but an innocent saucer of peaches and cream.

"Matilda," she asked as the round eyes devoured an autographed photograph of Walter Johnston, that king of them all, "what decided you?"

"You," vouchsafed Matilda candidly. "Father told me ever so many times how you just hated Greenforks, and how you made up your mind when you were my age that you would make a name in the world. And you did," she added logically. "Father says the only thing Greenforks is good for is to get a good running start!"

Yvette smiled. "Won't you go back to Greenforks—after a little while? Sometimes we grow discouraged, you know. And most of us never arrive anywhere. Don't you intend to go back—ever?"

Matilda's gold curls wagged vigorously, and she voiced a romantic "Never!"

"Isn't there anyone in Greenforks who will be very lonely if you don't come back?"

"Did father tell you that, after all?"

"Do I know his parents?"

The pink and white face became rather pouty; and Matilda looked away evasively, with the symptoms of a guilty sparkle. "The Dobsons. His name is Billy. He's only a clerk there."

"Only a clerk in the grocery store?"

"Uh-huh!" Matilda side-stepped the cynicism.

"Does he love you—very much?"

"I—really don't know, Miss Vaughn."

"Didn't he tell you, when he said good night, the evening before you went away, that you would break his heart if you didn't come back? Weren't those almost his very words?"

"Why, Miss Vaughn? Who's been telling you?"

Knuckles at Yvette's door interfered with the riddle's solution. The voice of Jimmy Anderson, one of the assistant directors, was pitched low. "Mr. Griffley is ready whenever you are, Miss Vaughn. Same as yesterday—the conservatory set."

William Dobson proved to be a robust, sandy-faced youth, with kind brown eyes and a blush.

Yvette wondered, as she saw the inviting freckles disported by his roomy nose, if he had by chance inherited his father's life-long disease, laziness. Indeed, the only trouble with that old loafer had not been lack of good warm mid-Western blood, but a circulatory lack thereof.

How time winged it along! Now the offspring of Greenforks's Van Winkle creaked uneasily upon Yvette's guest chair; and as far as his hands and face were concerned she was surprised to find that he was a young man after her own heart. Bud Alter had been most unhandsome too. His outstanding features had been golden freckles and sturdiness and a blush; and we all know by now that Bud Alter, freckles, bowlegs, blush, and all, had come nearest to being the One.

Yet she who strives for greatness must sacrifice the littler things, sometimes the littler things of others, to boot. Their hearts had not been broken by the parting, for such fractures occur only in similes. Yet both had suffered spiritual and physical agonies.

"I came all the way from Greenforks," the young man was saying in an indisputable voice. "I don't think Matilda was right. I don't think she was."

"Who gave you the money for the trip?"

William Dobson elevated his thin eyebrows

"Why, I earned it myself," he said. "In the grocery store?"

"Sure!" He seemed displeased; anyway, the blush deepened and broadened. "You don't think I'm a loafer, do you?" he asked impetuously. "I'm not saying anything about him. He's dead. But I'm not like that, if that's what you meant. I work hard. I like to. I'm getting good money, more than any fellow my age around Greenforks. And we're going to put in a hardware department, on purpose to—"

"Enough," said Yvette. "Now, what about Matilda? Do you love her—honestly?"

"Honestly?" The blush drowned the freckles.

"Why?" asked Yvette relentlessly.

"Oh—you—" Gulp.

"I—why—she—" he gurgled by way of explanation.

"Enough," said Yvette amiably. "Now, answer a question. That moonlight night, at the front gate, when Matilda let you kiss her good-by."

and said that she must give you up, that she must sacrifice your love for her future, and for you to work hard in the grocery store, and try to forget, and marry some nice girl who did not have a cold, artistic soul—although perhaps she didn't use those very words—did she push that stub nose of yours with her thumb, and—did she do that, William?"

William's honest brown eyes became steady and stern. "Did she go and tell you?" he breathed.

"Please answer my question, William."

"N-no," he blurted; "she—pulled my—e-ears."

"That's all I wanted to know," said Yvette kindly. "Now, why did you come to me?"

"Because I want Matilda!"

Yvette digested that with a delicate pucker. "Well, what do you propose doing?"

"Gee, I don't know," he confessed with a gusty sigh. "I talked to her last night. She wasn't very pleased to see me, I guess." A dark vertical niche formed between his worried eyes. "She said I ought to go on back to Greenforks, and to watch my step or else the birds might injure my complexion when they began scratching the hayseed out of my hair, and that New York birds were tough! And she laughed at me. Ha, ha! That was how she laughed. She never used to laugh that way. It isn't natural—or sweet—any more."

Yvette suspended judgment, but her expression was solemn. She was thinking that Matilda had become independent and saucy without any good reason.

NO one heard anybody knock, yet the door at that instant opened quickly, and who should be poisoning on the threshold like a lovely golden butterfly but Matilda herself! She swayed, smiling the arch smile of a youthful favorite. She was on the way to her dressing room, from the studio stage, and

her peach-blow complexion was larded with yellowish-pink grease paint, and her fair blue eyes were blued.

"What!" she cried, at sight of William, her smile hardening into indignant firmness.

"Yes—me," asserted William sturdily.

"Come right in, dear," invited Yvette. "You're standing in a draft."

Matilda floated in like a camouflaged storm cloud.

"You little mischief!" exclaimed Yvette. "Why didn't you tell me more about Mr. Dobson? I don't blame you for loving him. He's perfectly fascinating! What was that you were saying about that droll girl in Carrol Junction, Mr. Dobson?"

The fascinating Mr. Dobson gaped as if horrified, his teeth clacked metallically, his jaw muscles began revealing themselves in bulges of dismay. He had said nothing about a girl in Carrol Junction.

"Oh, is he?" retorted Matilda icily.

Yvette could detect only the slightest tremor of concern. She had been defeated, driven beyond her third-line trench, routed, with all lines of communication cut, by this innocent fledgling!

"Mr. Griffley wanted me to tell you on the way down to my dressing room," went on Matilda with a languid little air, "that we would start out to shoot up some exteriors in an hour."

"Shoot, not 'shoot up,'" corrected Yvette.

Matilda ignored the gentle rebuke, lifting her head and gazing sidewise and down upon the mortified William. "When are you leaving for Greenforks, Mister Dobson?"

"My name is Bill!" said William in the voice of a man cursing. "You look here, Matty—" he began anew, heatedly.

"Oh, is it?" She silenced him with frigid sweetness. And out she flung, or flang, closing the door so abruptly that the photograph of the king of them all shivered upon the dressing table.

William regarded the white panel stonily. A despondent grunt finally escaped through his nostrils. "Looks as if she's become one of those birds herself," he decided sadly.

But Yvette was attending William's freckled ears and snapping her fingers. That delicately angry mood of hers was aroused. In the workshop of her mind something devilish was being fabricated! Nighty-night for poor Matilda!

PEOPLE who are about to be pushed headforemost into the limelight of dazzling success often marshal together their pleasant thoughts at bedtime, and as Matilda did so she found that, sticking athwart her ecstasy, was a jagged little lance of doubt. Having a tender heart and fresh feelings in the matter, she squirmed a little between the sheets, and voiced silently into the attentive darkness: "Poor William!"

Pleasurably, then, she yielded herself to a cloud of sweet gloom. An automobile rattled down the cobbled street outside her window. She tossed and sighed. As Yvette Vaughn had done, she, Matilda Altrue, would brave the perils and the chilly indifference of this iron city, sacrificing her heart to the bloodstone of ambition. I mean, she was going through the motions all over again of giving up Billy Dobson for her art. The small cottage, with crimson rambler growing all over the front of it, would ring with the merry laughter of another. Her course was as narrow as a concrete sidewalk. Perhaps the droll girl in Carrol Junction would take her place, would fry Billy's eggs in the morning—as her mother had taken the place of Yvette Vaughn. Yvette's romantic tragedy was common history in Greenforks. (Continued on page 25)

"Is it quite proper to visit me in my room?"

# NO THOROUGHFARE

BY BOYD CABLE

AUTHOR OF "BETWEEN THE LINES" AND "ACTION FRONT"

FOR a week the line had been staggering back, fighting savagely to hold their ground, being driven in time and again by the sheer weight of fresh German divisions brought up and hurled without a pause against them, giving way and retiring sullenly and stubbornly to fresh positions, having to endure renewed ferocious onslaughts there, and give to them again. Fighting, marching, digging in; fighting again and repeating the performance over and over for days and nights, our men were worn down dangerously near to the point of exhaustion and collapse, the point over which the Germans strove to thrust them, the point where human endurance could no longer stand the strain, and the breaking, crumbling line would give the opening for which the Germans fought so hard, the opening through which they would pour their masses and cut the Allied armies in two. At the end of a week it looked as if their aim was dangerously near attainment. On one portion of the line especially the strain had been tremendous, and the men, hard-driven and harassed for two days and nights almost without a break, were staggering on their feet, stupid with fatigue, dazed for want of sleep. Of all their privations this want of sleep was the hardest and cruellest. The men longed for nothing more than a chance to throw themselves on the ground, to fling down on the roadside, in the ditches, anywhere, anyhow, and close their aching eyes and sink in deep, deep sleep. But there was no faintest hope of sleep for them. The divisions they had fought all day were being held stubbornly by rear-guard actions until the new positions were established; and plain word had been brought in by reconnoitering airmen of the new masses pressing up by road and rail to converge with all their weight on the weakened line and the worn-out men who made ready to hold it. Everyone knew what was coming. Our men would be outnumbered, would be unrested and worn with fighting and digging and marching continuously—that was the rub; if our men could have a rest, a few hours' sleep, a chance to recuperate, they could make some sort of a show, put up a decent fight again, hold on long enough to give the promised reinforcements time to come up, the guns to take up new positions. But "a renewed attack in force must be expected by dusk," said the word that came to them, and every precious minute until then must be filled with moving the tired men into position, doing their utmost to dig in and make some kind of defensive line. It looked bad.

## The Air Navy Attacks

BUT there were other plans in the making, plans figured out on wider-reaching lines, offering the one chance of success in attacking the fresh enemy masses at their most vulnerable points, fifteen, twenty miles away from our weary lines. The plans were completed and worked out in detail and passed down the chain to the air squadrons; and flight by flight the pilots and observers loaded up to the full capacity of their machines with bombs and machine-gun ammunition and went droning out over the heads of the working troops digging the fresh line, over the scattered outpost and rear-guard lines where the Germans pressed tentatively and waited for the new reinforcements that were to recommence the fierce "hammer-blow" attacks, on over the dribbling streams of transport and men moving by many paths into the battle line, on to where the main streams ran full flood on road and rail—and where the streams could best be dammed and diverted.

The air squadrons went in force to their work,

bent all their energies for the moment to the one great task of breaking up the masses before they could bring their weight into the line, of upsetting the careful time-table of the enemy. In one squadron where the commanding officer held council with his flight leaders and explained the position and pointed out the plans, one of his captains summed up the instructions in a sentence: "That bit of road," he said with his finger on the map. "You want us to see it's 'No Thoroughfare' for the Hun up to dark?" "That's it," said the commanding officer. "And if you get a chance at a train or two about here—well, don't let it slip."

"Right-o," "That's simple," "No Thoroughfare," said the captains, and proceeded about their business. The flights went off at short intervals, intervals calculated to "keep the pot aboiling" as closely as possible, to allow no minutes when some of the squadron would not be on or about the spot to enforce the No Thoroughfare rule. For the rest of the afternoon they came and went, and came and went, in a steady string, circling in and dropping to the drome to refill hurriedly with fresh stocks of bombs and ammunition, taking off and driving out to the east as soon as they had the tanks and drums filled and the bombs hitched on. They were on scout machines, carrying four light bombs and many hundred rounds of ammunition apiece, and Dennis, the leader of the first flight, made an enthusiastic report of success on the first return. "Found the spot all right, major," he said cheerfully. "The crater reported is there all right, and it has wrecked half the road. There was a working party on it going like steam to fill in the hole. We disturbed the party a whole lot."

They had disturbed them. The road was one of those long miles-straight main routes that run between the towns in that part of France. They were well filled with troops and transport over the first miles, but the flight leader followed instructions and let these go, knowing other squadrons would be dealing with them in their own good time and way. "Although I wish they'd get busy and do it," he told the commanding officer. "Having nothing to worry them, those Huns just naturally filled the air with lead as we went over 'em. Look at my poor old 'Little Indian' there—her planes are as full of holes as a sieve."

## "A Beautiful Block"

BUT he had pushed his Little Indian straight on, and presently he came to the spot where the squadron was to tackle its job—a spot where an attempt had been made by our engineers to blow up the road as we retired and where a yawning hole took up half the road, leaving one good lorry-width for the transport to crawl round. An infantry battalion was

tramping past the crater when the flight arrived above it, and since the Little Indian flew straight on without loosing off a bomb or a shot, the rest of the flight followed obediently, although in some wonder as to whether the target was not being passed by mistake. There was no mistake. They followed the leader round in a wide sweep over the open fields with stray bunches of infantry firing wildly up at them, round to the crater and past it again and out and round still wider. The road by the crater was empty as they passed, but a long string of lorries and horse transport that had been waiting half a mile back began to move and crawl along

toward the crater. The Little Indian kept on her wide circle until half the lorries were past the crater. Then she came round in a steep bank and shot straight as an arrow back to the road, swept round sharply again, and went streaking along above it. Two hundred yards from the crater she lifted, curved over, and came diving down, spitting fire and lead as she came, pelted a stream of bullets on the lorries abreast of the mine hole and diving straight at them. Thirty feet away from the hole, one, two, three, four black objects dropped away from under the machine, and four spurts of flame and smoke leaped and flashed among the lorries and about the hole, as the Little Indian zoomed up, ducked over and came diving down again with her machine guns hailing bullets along the lorries and the horse transport. And close astern of her came the

rest of the flight, splashing their bombs down the length of the convoy, each saving one or two for the spot by the crater, continuing along the road and emptying their guns on the transport. Half a mile along the road they swung round and turned back and repeated the gunning performance on men struggling to hold and steady crazed and bolting horses, on wagons in the ditches, on one lorry with her nose well down in the half-filled crater and another one comfortably crashed against her tail that stuck out into the half-width bit of road.

"A beautiful block," the flight told the major on their return. "Couldn't have placed 'em better if we'd driven the lorries ourselves. And there's horse wagons enough scattered along the ditches of the next half mile to keep the Hun busy for hours."

## The Huns Jump

THE second flight, arriving about ten minutes after the first had departed homeward bound, found the Huns exceedingly busy struggling to remove the wrecked transport which so effectually blocked the way. There were men enough crowded round the crater especially to make a very fine target, and the first machine or two got their bombs well home on these and scattered the rest impartially along the road on any "suitable targets" of men or transport. They established another couple of very useful blocks along the mile of road behind the crater, and completely cleared the road of marching men for a good three miles. The third flight found no targets beyond the working party at the crater until they had gone back a few miles to a crossroad, where they distributed some bombs on a field battery, bolted the teams, and left the gunners well down in the ditches beside their overturned guns and limbers.

They had barely finished their performance when the first flight was back again, but by this time the enemy had taken steps to upset the arrangements, and with a couple of machine guns posted by the crater did their best to keep the traffic blockers out of reach of their targets. But the flight would not be denied, (Continued on page 25)

# PEACE

Made In Germany

*It takes three Austrians and a machine gun to conduct a German-run locomotive through peaceful Russia*

*Last March the Brest-Litovsk Treaty was signed and safely tucked away in the Prussian archives, and sweet peace settled over Russia. At least that's the German account of it. Here are some recently arrived photographs, taken in Russia about the end of April, that furnish a cheering illustration of the German idea of what a good, Grade-A peace is like*

*A bery of peace-loving Germans getting ready for a friendly jaunt in what looks like a Russian armored automobile, but is undoubtedly a taxicab*

*Those Russians are a suspicious lot. When the Germans arrived at this Russian hangar they found that the airplanes had maliciously been wrecked to keep them out of Prussian hands*

*Here is a German picnic party cycling through a peaceful Russian railway yard. They look like members of the Prussian guard, but they can't be, for peace had reigned for a month when this picture was taken*

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

## CHAPTER ELEVEN: "FIND MISTER FARL"

ILLUSTRATED BY F. R. GRUGER

THE telephone clerk at Police Headquarters spoke to Lieutenant Flynn.

"Woman on the phone, lootnant. Says she thinks there's somethin' wrong at an apartment on University Place. Wants us to shoot somebody over there. Name of Endicott."

"Lemme talk to her, Jim," said the lieutenant.

"Hello, hello," he grunted. "Who are you?"

"Never mind," came the answer. "I want you to send some of your men to Mr. Endicott's—Mr. Farley Endicott's apartment, on the corner of Eleventh Street and University Place. I think that there's something wrong there, and—"

"What do you mean, wrong? Who are you, anyway?"

But the same fear that had possessed her many times to-day, that her whereabouts as she stood talking might be traced, had made Leila Kildare hang up the telephone. By the time that Lieutenant Flynn had located the number whence the call had come, Leila was half a mile away.

Lieutenant Flynn never overlooked a bet, to quote the lieutenant himself. The active head of the Detective Bureau, he had not attained his eminence in the Police Department by any favoritism or "pull." He was a painstaking policeman, with a creditable record, which, had one cared to examine it closely, would have been discovered to be due to careful labor rather than to any intellectual powers possessed by the lieutenant. He had, however, a certain imagination. He knew what to tell the newspaper men and what to withhold from them. And he never disdained publicity when such publicity could not hinder police work.

In his mind's eye, as he moved the telephone hook up and down to recall the Headquarters operator, he could see newspaper headlines lauding the work of Lieutenant Flynn, who, on receiving a mysterious telephone call from a woman (the "woman" would crowd the war out of one front-page column if a real crime had been committed) had immediately, by the exercise of his detective talents— Even a Headquarters detective dreams his little dreams.

"Kelly!" He dismissed visions and became the methodical policeman. "Find out where that call came from, and who was talking, if you can. Tell Cadoza and Hinchcliffe to beat it up to Eleventh Street and University Place; apartment of Farley Endicott; and see if anything is wrong. Send Ryan up to wherever the woman phoned from. Got it? All right."

Efficient, swift, comprehensive. He had to hand it to himself. He leaned back in his chair and lighted a fat cigar. His forehead wrinkled as he turned to other work. A guy had to keep his wits about him in this game. You never had one job at a time. Always something new.

Exactly twelve minutes elapsed before the telephone rang. "Cadoza's on the wire, lootnant," said Telephone Operator Kelly.

"Awright. Let him shoot," grunted Flynn.

"Lootnant?" said another voice. "Cadoza speakin'. We're up at the University Place apartment. Double killin', lootnant, and—"

"Get the guy that did it?" snapped Flynn.

"Looks like they bumped each other off," said Cadoza.

"It does, does it? Well, you wait until I look it over," said the lieutenant. "Be there right away."

He hung up the receiver and started for the door. The phone rang again. He hesitated a moment, then turned back. It was Plain-clothes Man Ryan who wanted him this time.

"Up at Perlman's drug store, on Madison Avenue, lootnant. Woman that phoned about University Place—"

"Yea? Who is she?" cried Flynn.

"Dunno, lootnant. Druggist don't know. Described her, though."

"Come downtown, quick," ordered Flynn. "Have description printed, sent out—"

He waited to instruct Ryan no further. Ryan knew his business. He himself, Lieutenant Flynn, raced downstairs and into a police automobile.

"Looked like they'd bumped each other off, did it? When a Jane had phoned in about it? Where did she come in, then? He got it, though. Uh-huh! Lovers' quarrel, she'd witnessed it."

BUT his visions of figuring in the big murder mystery of the year, as the brilliant sleuth who unraveled the snarled tangle, were momentarily dissipated when he reached Farley Endicott's apartment.

"A bum and a dinge," he grunted disgustedly. "Everything just as it was when you came in?" he asked Hinchcliffe.

"Didn't do a thing except ring for the ambulance," replied the plain-clothes man.

The clang of the hospital automobile told Flynn that he had beaten the doctor by moments only. He

told Cadoza to open the door and let the physician in.

The doctor gave Breen a glance only. But he knelt over Fabian. He worked over the colored man for several minutes, before he spoke. Then his speech was brief. "Help me carry him out."

"Alive?" questioned Lieutenant Flynn.

"Barely."

"The other?"

"Dead."

Flynn nodded. Well, the negro would talk. But meantime— He walked over to a desk and opened it. His eyes widened. He beheld a picture of a young man attired in aviation costume. Beneath the photograph were written the words:

To Farl Endicott from his pal, Sam Whitney.

Then Lieutenant Flynn knew why it was that Farley Endicott's name had had a familiar ring. He ought to keep up on the society end of the game more. Then it wouldn't have needed this photograph— Farley Endicott! He whistled. The young chap who'd made a record flying for France? And the woman had said that this was Endicott's apartment. As if that was needed—now. Endicott's card was over the letter box. He'd noticed that when he rang for admittance. Farley Endicott! And a woman. His eyes brightened.

Cadoza and Hinchcliffe were carrying Fabian out, at the doctor's orders. Flynn took a good look at Breen. Blackjacked. So was the negro. And the weapon? It took Lieutenant Flynn exactly forty-five seconds to decide that the weapon that had killed the white man, and perhaps fatally injured the black, was not in the Endicott apartment.

"Looks like they'd bumped each other off!"

Oh, Lord! What luck that he'd been telephoned by this girl, and that the case hadn't been handled, from the outset, by a couple of flat-footed, heavy-headed—

If he could locate this Endicott before the morning papers went to press— He began a systematic, methodical search of the apartment. That finished, he gave swift directions to Cadoza and Hinchcliffe, and betook himself downtown.

THE reporters crowded into Lieutenant Flynn's office. They glanced anxiously at the clock. Eleven-thirty, and if it was a big story that ran over a column—and a story that ran over a column and didn't have to do with the (Continued on page 20)

## Numbers—and Exodus?

IN the week preceding the German offensive of middle July, between Château-Thierry and the Argonne, the number of American soldiers in France was 1,100,000, according to the chief of staff at Washington. Our troops have been pouring into France at the rate of a quarter a million and more a month. This means that on the fourth anniversary of the beginning of the Battle of the Marne (September 5) the American army abroad will be 1,600,000 strong. At about the same time that our own strength was 1,100,000 it was authoritatively stated that the British army numbered 2,000,000 men. By early September it will undoubtedly be 2,250,000 strong. The French now hold three times the British front at the least. Give the French two millions. Add a quarter of a million for Belgians, Italians, Portuguese, Polish, and Czech-Slovak legionaries, and we have, four years after JOFFRE turned the Kaiser back from Paris, an Allied strength of 6,000,000 men pledged and determined to keep the Kaiser's acquaintance with Paris entirely one of book knowledge.

Against this army, three times as strong as the one that JOFFRE worked with, the Kaiser will have hardly more than twice the army with which he set out on his two weeks' excursion to Paris four years ago. That is the central fact around which the Allied strategy of the last five months will have centered.

It is not in the hope of taking Paris that the German blows have been delivered since March 21. It is not in the hope of reducing the Allied line to a brittle condition where one final blow would settle matters that the Ludendorff campaign has been conducted. German hopes are not based on Allied defeat, but on Allied weariness. The peace the Junkers hope for is to come when France acts, not out of fear of disaster, but out of the decision that perhaps it is not worth while after all to undergo the strain of another two years of war to redress the situation on what used to be the eastern front. Reason alone says that for the Allies to recognize the status quo in Russia means that Germany has won. But a nation which has suffered during four years as France has suffered may be conceived—by the Junker mind—as leaving the possibilities of twenty-five years hence to take care of themselves if to-day peace is to be had with French territory intact, Belgium restored, Serbia provided for. That is the significance of HERTLING's screwing himself up to utter the word which German statesmen have been unable to pronounce: Belgium. "We have no intentions to keep Belgium; we hold it only as a pawn." In other words: "Say you will be reasonable with regard to Russia, and there is peace."

What the Allied answer will be is plain to anyone but Berlin. On the fourth anniversary of the Battle of the Marne we may see the Allies settling down in earnest to restore the Russian front.

## Coming Down!

THE boche assault beginning March 21 was known officially as "The Kaiser's Battle" until it fizzled out in a very partial success. The attack of July 16 was dubbed "The Friedenssturm" ("Peace Storm"), a much less gloriously personal designation. From gilding the Hohenzollern crown to appealing to the peace cravings of the rank and file is a genuine comedown, and that is what Prussian militarism had to undergo in those four months.

## Part of What France Expects

IT would be natural if Americans were both very proud and a little alarmed by the position we now occupy, not on the French firing line only, but in the thought and expectation of our British and French allies—soldiers and civilians. It is a tremendous responsibility to measure up to the valuation now given us. "We have military technique," asserts "L'Humanité" of Paris; "and the Americans have paid us the honor of asking us, in consequence, to be their instructors. May they in turn be good enough to be our instructors in industrial methods. We wish they would, without delay, organize the industrial 'general staffs' of this war, for which we furnish the military general staffs. And may the two sets of staffs, the military and the industrial, merge in a union which will give us the needed superiority over Germany. France is rich enough in scientists, chemists, engineers, and industrialists. . . . Remember what Carnot did in 1793, and that Carnot earned this appreciation of History: 'Science directing Enthusiasm: such is the character of the military effort that saved France.' . . . The Americans are bringing us the industrial genius which is to-day the indispensable condition of Victory."

August 10, 1918

## Stamp Activity

IT was announced early in July that there had been turned into the War Savings Fund at Washington, in cash or pledges, \$1,600,000,000. Of this amount between \$400,000,000 and \$500,000,000 is in cash and represents stamps actually bought by patriotic savers. This country has done better even than England, where the plan—or its general outline—originated. How much like a rising tide the movement has been may be judged by the fact that the total receipts for December, 1917, were equaled by the receipts of one day in June. It will continue to mount. Those in charge of the enterprise believe that the \$2,000,000,000 mentioned in the act will be reached before the end of the year, although when the bill was passed no one dared to hope for such an achievement. The figures are larger, but they are not so impressive as the fact that at the present writing more than 30,000,000 persons hold these Government securities! That is, 30,000,000 men, women, and children have learned the habit of saving, in a country whose recklessness in spending has been a byword among foreign nations. What that fact, coupled with the wide distribution of the Liberty Loan, means to the financial future of the country, it is hardly necessary to say. The Treasury Department is to be congratulated on its intelligent handling of these two enormous undertakings, and the enthusiasm of hundreds of thousands of unpaid workers promises well for the next Liberty Loan, and assumes, we believe, the absorption of the entire issue of the War Savings Stamps.

## Where Distance Lends Enchantment

WHEN reading cheering reports as to the zeal, vim, fresh enthusiasm, etc., that our soldiers in France bring to the firing line, some whose memories go back to '61 and '98 would probably like to add that our men are further blessed in that the Atlantic Ocean is between them and their country's politicians.

## The Great Food Offensive

THE New York "Times's" correspondent cables from Paris a resolution voted by the French senators and deputies of the invaded districts, who thank Mr. HOOVER for having made life possible in those regions since the beginning of the war and add that his aid has been an "important factor in the conservation of the French race in the invaded country in the continuance of the moral resistance of their unhappy compatriots and in the preservation of their faith in victory despite the enemy occupation." Meanwhile a Philadelphia newspaper paragrapher has noted that

Senator Reed of Missouri took up most of one afternoon in the Senate this week denouncing Herbert C. Hoover, Food Administrator, sarcastically referring to him as "Herbert the Good."

Since the general proposition of food control was up in the Senate last summer Senator Reed probably has taken up no less than a dozen afternoons denouncing Hoover. If the time of the Senate that has been consumed by Reed could be accurately measured in terms of dollars and cents, it probably would amount to enough to buy a destroyer for the navy.

Against the cheap but costly sarcasm of Senator REED one may now set down in cool figures some of the recent achievements of HOOVER and his coworker, the American housekeeper. In the year 1917-18, thanks to HOOVER and the housekeeper, we were able to ship our allies over 80,000,000 more bushels of grain than the same countries got from us the previous year—when we were not yet their ally. We were able to ship 844,600,000 more pounds of meats and fats. Despite the submarines, we shipped nearly 100,000,000 pounds of beef to the Allied nations in May, 1918. In a time of food shortage nearly everywhere, we have won a notable victory for America and her allies, and HOOVER was the Field-and-farm Marshal of this great food offensive against the Central Powers. One may weary of the overworked words "propaganda" and "morale," but it's true all the same that HOOVER and the plucky, cooperative American housewife have put over the best piece of American propaganda and our best contribution to the morale of the Great Alliance.

## Two Kinds of Inflation

A NEW YORK banker has boiled the whole economic philosophy of inflation down into one sentence. It is worth thinking over for the next few years: "An expansion of credit to increase production is one thing, but an expansion of credit which enables private wants to compete with the Government is another thing, and the latter is something to beware of." Money and credit are good when used to energize business; bad when used to inflate it.

# Editorials

## One Way to Look at It

CONGRESS is talking about taxes on luxuries. A luxury (for this purpose) appears to be something which is not much used by the majority of voters. Our soldiers are doing the fighting and ought to get the best of what there is. We all agree to that. But how far would taxes on luxuries have to go before the mass of us got down to the plainness of a soldier's living?

## The Letters They Write

SOLDIERS' letters are, at their best, the most vital and, within the limitations of the inevitable censorship and that ugly nuisance, self-consciousness, the most real of current literature. The men who are writing them are the men who are translating into action the conscience and aspiration of America, of democracy everywhere. Often these men are apter at the thing than at the word—but we want to see their letters, anyway.

Here, for instance, is another letter from a United States railway engineer. He hails from the Northwest and used to be a reporter on a newspaper in a city of 15,000. He writes with ease and ranges in a letter to his home folks over subjects as varied as Lombardy poplars, bicycling, jazz, Mr. Roosevelt's "Metropolitan" articles (the soldier prefers WILLIAM HARD'S), and the importance of his younger brother "reading up" on French history and literature, besides French grammar, before he too gets into uniform and crosses the Atlantic. This letter-writing engineer also proves himself a human person—as follows:

I met an attractive French girl the other Sunday while going through the Art Museum in the city. She is going to the Normal School here for teachers and has studied English for six years. She has the funniest way of saying "What-ta" for "What." Usually I don't care much for the French accent in English. She has a friend Suzanne something or other who is also studying English. In fact, the A. E. F. has done much to spread the study of English in France, particularly among the girls. And it has worked the other way too. The French don't have to use German methods to make others learn their language. The French girls are the chief reason for most of the boys studying French.

## Swat the Mosquito; He's Not on Our Side

DRAINING a stagnant pool five hundred miles inland does not seem to have much to do with war work, but we note by the "Railway Age" that certain lumber towns and railway companies in eastern Texas have been getting after the Kaiser by cleaning out his malaria-bearing ally, the mosquito. The methods are simple: spray oil on standing water, dig out all ditches and runways through lowland, paint ceilings white, screen doors and windows, and swat any intruding insects of whatever genus. This means care, education, and some expense, but it pays. In Lufkin, Keltys, and Wildhurst (all in Texas) the lumber mills are now running day and night in their task of feeding material to the national shipyards. Left unmolested, Herr ANOPHELES would have cut it down to half time. The railway's profit from larger and steadier freight haulings pays its share of the cost of this antimalaria work many times over; malarial sickness has been reduced 85 to 90 per cent in the towns concerned, and many other places can profit by their example.

## On "Labor Missions" and Socialists

AN American "Labor Mission" was sent to England and France some time ago—expressing an excellent idea, though the financing of the mission, and its behavior toward labor leaders in the countries of our allies, were somewhat curious. A friend of ours, at Paris, saw a letter from a member of the French High Commission at Washington in regard to the American "Labor Mission"; it said, in effect: "Send them to the Folies Bergères and dine them at the Café des Ambassadeurs, and show them something of the front, and introduce them to a few hand-picked French labor men—BUT don't let 'em meet the French socialists!" This might lead one

to infer that the French Government doesn't want American labor to get in touch and sympathy with French labor, or it might mean that the French representatives at Washington suspected that the aforesaid "Labor Mission" was better adapted to *hors-d'œuvres* and pony ballets and patriotic speeches on the steps of the Hôtel de Ville than to discussion of war-labor problems with the Frenchmen who specialize in such matters. An American socialist delegation is now visiting France and England—a delegation of such American socialists as aren't named Hillquit or Berger. On general principles, we believe that such a visit will prove worth while, and illuminating all round. The American public will share in the enlightenment of such a trip. That part of the public which thinks of "socialist" and "pacifist" as equivalent terms, and that section which even goes so far in foolishness as to think of every socialist as probably disloyal, will learn something of the real position of French and British Labor and socialism in the war: which is much too large and costly a war to be the property of any class.

## For Remembrance

RUSHING by the edge of town at forty miles an hour, one saw a row of cheaply built, partly painted houses standing on a long lot with their carefully gardened little back yards slanting downhill to the edge of the tracks. The house in the middle of the row had a trellis all along the back porch and a great grapevine rioting over it in full glory of green leaf and new blossoms, right up to the second-story windows. On either side in turn were other trellises not yet so fully covered, and the outside houses had their tended vines also, set only a year or two ago, but dedicated to the same pleasant shade and luscious fruit. One saw it all in a flash: how that one example of pleasure in growing things and of helpful neighborliness in teaching others had spread like a kindly magic along the whole row, blessing what might otherwise have been but sour and dreary ground. One thought of the great cemetery a few miles back down the line, with its durable, pretentious monuments of marble and of bronze—immeasurably more costly than that strip of blossoming back yard. But, in your heart, which memorial would you prefer? Anybody who has the money can buy a big gravestone, but it takes kindness to make pleasant green things grow and flourish. Those grape arbors are a far truer symbol of what our cities are really for: that each may sit under his own vine and that none shall make him afraid—as the prophet foretold so many years ago.

## A LETTER FROM FRANCE

(From a U. S. engineer to his parents in New Jersey)

DEAR MOTHER AND DAD: I am more and more delighted with this country. The people are friendly and helpful, but it is only when we speak French very slowly that we make each other understand.

I suppose you still hear of how the American engineers refuse to keep out of the scrap over here. One regiment of us stepped over the top right into an attacking line of boches, and hit them so heavy that they retreated. When an engineer gets angry he can show things to the doughboys.

I enjoy myself most when I can take walks out into the country and mix with the French. A few of them still think Americans must be ignorant backwoodsmen. I enjoy talking to the children. I have teased them by asking, in as serious a manner as possible, if they are Germans. Instead of hitting me, as I deserve, they deny it indignantly, and explain so patiently that they are French. They are all to the good.

I will have my picture taken with a trench helmet and gas mask on and send it home. And I would like very much to have the home paper. We have the "Stars and Stripes" and several papers here that publish English editions, but they give almost no sporting news. It will be great if they hold the world series over here.

I ran into an old man the other day who was not in favor of the American troops being here. He asked me what part of French territory we were going to get for our services. I told him we would not take all nor any part of the country as a gift. Then I told him about America—until he declared that he would go to America as soon as possible.

I am in perfect health, and try to keep so, realizing that is the patriotic thing to do. Love to each one. ROYALL

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

## A Clarion Cry of Confidence

**P**ICTURE for a moment the British Isles, completely surrounded by water. In war times this has placed England in a much more trying position than America will ever face. Take, for instance, oil. Due to the limited natural resources of the British Isles they have no oil wells. Thus oil or gasoline or "petrol," as they call it, with many other raw materials has had to be shipped in by boats, and, as Mark Sullivan puts it, this great war hinges on boats and man power.

In England this petrol shortage has seriously handicapped automobile owners, while the Canadians, for instance, who have been at war as long as the Britons, have not been deprived of their cars. And we too in America, until our oil wells run dry, do not have to depend upon this shipping menace for oil. American car owners can be supplied as readily as we have supplied our Canadian allies.

The geographical location of the British Isles, the lack of these natural resources, plus this overseas shipping menace, which affects their inhabitants more than any one else, gives us an opportunity of drawing an illustration from the Great Britain manufacturers of intense value.

On our desk there is lying at the moment some recent copies of the great popular British periodicals—"Punch," "The Sphere," "The London Illustrated News"—and in each of these, in practically every issue, there is an abundance of advertising.

Many of these manufacturers will have nothing to sell until after the war. For three years they have had nothing to sell. And yet they still advertise their products, planning courageously on an after-the-war-is-won basis.

Take for example the advertisement of the famous Daimler Company from the June 22d issue of "The Sphere":

### THE TIME WILL COME

Difficult as it is to direct one's thoughts away from Armageddon, it is permissible to peep into the future and anticipate some of the joys that the blessings of peace will bring. The time will come when petrol restrictions will be no more, when motoring will be enjoyed by many thousands who have now no thought but for helping to win the war.

When those happy days arrive the Daimler Company will resume the production of those motor cars of surpassing excellence which together with the Daimler Sleeve-Valve Engine have created a world-wide reputation for reliability, silence, power and refinement.

The greatest courage, of course, is called for on the battle field; there the supreme duty of a man's service to his country is paid. But courage, too, is demanded of the business man in war time. Each must do his part in upholding national confidence, in maintaining national security. And an advertisement such as that of the Daimler Company not only shows the staunch spirit of the business men of this company, but it is an inspiration to everybody who reads it.

It is a clarion cry of confidence.

You will remember that, for a time, England cried "Business as Usual" just as we did until the absurdity of the phrase was demonstrated by the pressure of war's demands. Business cannot be as usual until after the Government's needs are satisfied. But after the Government has received from us all the men and steel and coal and other essentials required, then we should endeavor to carry on business as usual. It would be the height of folly, both from our own standpoint and that of our Government, to lie down and cease work just now because the road is rocky with difficulties.

Says President Wilson: "In these times commercial organizations should not decrease their activities—on the other hand, they should continue to work along their usual lines, and, if possible, increase their activities and spheres of influence. There is greater need now than ever before for cooperative activity and systematized organizations in commerce."

In America to-day, as in England, there are hundreds of manufacturers who have nothing to sell to their usual customers because they are giving their

entire productive capacity, patriotically and enthusiastically, to the Government. But like the manufacturers of Great Britain they keep up their advertising; they are planning now to continue their business after-the-war-is-won.

Here, for instance, is a recent American advertisement which breathes as fine a spirit and as staunch a courage as the Daimler Company's:

### PLEDGED

This entire organization with all its productive resources is pledged to the enthusiastic support of our Government's War Programme.

None of the peace-time Savage products will be made until every Governmental requirement, in which we are assisting, shall have been satisfied.

We feel that with the spirit behind our efforts we will have fulfilled our Government's expectations of us.

Who can doubt the stimulating effect of these two advertisements—the British and the American—on the reader? Who can deny that each plays its part in bolstering up our courage and in concreting our confidence? Advertising like this binds us all more closely together in a unity of purpose.

# THE MARK OF THE BEAST

BY CHESTER L. LYMAN  
ILLUSTRATED BY HERBERT PAUS

"IF I had not taken a hand, this spy—Von Westrup—would have escaped with no other punishment than death!"

It was a moment before either Harris or myself could believe that we had heard the old doctor aright.

"Would have escaped with no other punishment than death?" Harris repeated testily. "The man was shot—six bullets. He was killed! In the name of Heaven, what more than that could the English have done to him?"

The old doctor—Major John Montgomery, to give him the name and rank that belonged to him in the American army—had planted himself near the center of our little hut. His vigorously ample body was balanced on widespread feet; his hands were clasped behind him. It was his characteristic attitude in the few leisure moments which we were able to enjoy at the front. He had not commenced his conversation until he was assured that his abominable French cigar burned smoothly, and now waited in patience until Harris had made an end of his outburst, meanwhile shaking his head in mock pity.

"Harris, my boy"—the old doctor is old enough to be the father of either Harris or myself—"without meaning any offense, I am bound to say that in many respects you are quite like a German. You must have studied in Germany; you have so much confidence in the things that you can see and feel and count—like those six bullets."

Harris gave up his attempt at letter writing, pushed away the little oil lamp, which made a weak, flickering halo in the middle of the rough wooden table, and closed his writing case. "We will grant all that, major, about my being a German by nature, or education," he interrupted, "but tell us, what did you do to add to—to those six bullets?"

There was enough of acidity in Harris's tone to arouse the old doctor. His voice came strong and resonant, while he leaned forward slightly toward Harris, the better to press home his answer to the latter's half-mocking question.

"I did the thing that hurts a German most; I pricked the bubble of his conceit. This Von Westrup thought he was so smart. He thought he had been caught only by an accident; as if Divine Providence had made a misstep. The bungling of the Almighty had aggravated him; as to his own part in the business, he was going to his execution in the perfect satisfaction that he had not made a mistake."

HARRIS laughed grimly. "And from what little I have heard of the affair, Von Westrup had not made a mistake. No one suspected him, not even Colonel Marston, the Englishman who had him arrested. The British have said little about the thing at mess—a spy at headquarters is not a pleasant subject—and they say less when one of us Americans is about. But I know this, that no one was more surprised than Marston himself when they searched Von Westrup and found the mass of confidential stuff he was getting away with. That was not the reason for the arrest. It seemed as if Marston's action was just a sudden impulse—an accident—a blundering mistake."

The old doctor shook a restraining finger in Harris's direction. "It was not Marston's mistake,

Harris; nor was it an accident. The Englishman was not a blunderer. It pleased Von Westrup to think so, and saved his vanity; but it was Von Westrup himself who made the mistake, and, by Heaven, I made him know it before he died!"

HATE of the English appears to have been the dominant characteristic of Sixt von Westrup. Some hours before that named for his execution he was asked if he had any statement to make or requests to prefer. He had both, but would not consider submitting them to an Englishman. He spat this answer from his mouth with an exaggeration of fiendish venom. This display of feeling seemed to embarrass the subaltern, who had been the victim of it, but he was willing to oblige. Our unit is attached temporarily to the First Battalion of the London Sweeps, getting a taste of work in the advanced dressing stations. The subaltern had found the old doctor just coming off duty and had directed him to the hut in which Von Westrup was confined.

The German wanted to talk. The floodgates of his speech had been sealed overly long, and his cankering hate of all things English demanded expression. Of course he spoke English perfectly.

"The muddling, shopkeeping swine!" Von Westrup called them. "Faugh! We will trample them underfoot—so!" He stamped heavily on the board floor, and laughed with that peculiar snarling malignance which was his nearest approach to humor. Then he launched into an impassioned eulogy of the German race, which, girt with the sword of God, would battle itself to the dominance of the world. He came suddenly to an abrupt pause in the midst of his bloody, conquering dream.

"Herr Doktor, have you ever been within the headquarters of the Great General Staff in Berlin? You have not? Even had you been, you could not conceive of the vast system of it, a system which foresees every infinite detail, which makes no mistakes, which puts no trust in chance."

The old doctor had listened to this outburst with intense interest. He had read such things as this German was saying, but they had never seemed real. He had thought of these things as being the fluff and froth of holiday speeches. But here was a man who appeared to believe what he was saying, and certainly Von Westrup was not a madman.

The old doctor took two cigars from his inner pocket and offered Von Westrup his choice. The German extended his hand to take one; then, as if suddenly recollecting himself, he drew back sharply.

"I will not smoke. It is not necessary now. I have had to do it for the past eight years—and I hated it! Chambers smoked," he added, as if that were a sufficient explanation.

"You mean Colonel Chambers of the British Staff?" the old doctor asked. "I know him only by reputation; I do not know what his smoking had to do—"

It has been said that hate of the English was the predominating characteristic in Von Westrup's makeup. His racial vanity was almost as great a part of him. This came to the surface now. He sprang to his feet and advanced close to the old doctor, whence he could look directly into the latter's eyes.

"Tell me," the German demanded passionately, "are you mocking me? Has no one told you the truth?" He laughed again that snarling, violent laugh of his. "I do not wonder that they keep it a secret, these English; they must save their faces. Know you then, Herr Doktor, that I, Sixt von Westrup, am that Colonel Herbert Cheyne Chambers of the British Intelligence! Ever since the retreat from Mons, Chambers has been a German!"

"Eight years ago—five years before the outbreak of the war—I was stationed in garrison at Tilsit in East Prussia. You could not guess my age from my appearance now. Such a face as mine carries no history. It is this face of mine that resigns me to death. At the time I speak of I was thirty years of age, an underofficer. I seemed to be doomed for life to just such beastly dull garrison towns as Tilsit in East Prussia. One day there came to me a summons from Berlin."

"Many times since that joyous journey, upon which I started so light-heartedly at the command of the Great General Staff, I have wished that the train might have plunged me to my death. But what would you? When the Great General Staff commands, it is done; the impossible performs itself!"

"You may well believe that I was excited. A summons to the Great General Staff! The holiday in Berlin! There was the wife of the regimental surgeon—an intimate friend of mine—but that has nothing to do with what I am telling you. It was night when I reached Berlin. The next morning I reported at the time and place mentioned in my orders. I was among the last to arrive, and it was a rare sight that greeted me. You will observe me, Herr Doktor, and you will picture me before my face was such a face as it is now and before my hair had become so splotchy gray. I was six feet and two inches tall. I was spare without being thin. My back, of course, was straighter than it is now. No army makes such straight backs as does the German army. My hair was flaxen, my ears small and regular, and set close against my head. My eyes were, as you see, light blue."

"The great lecture hall on an upper floor of the headquarters building was crowded with officers. I was conscious at once of some unusual quality in the scene, but moments passed before I realized what was this odd thing. Three hundred and seventy-three officers, I learned later, in addition to the staff colonel and his clerks, were crowded into that room, and every man of us was a flaxen-haired, blue-eyed man, six feet two inches tall. There had been summoned to Berlin every officer of the German army who answered to that description."

"I WILL not bore you with all the infinite details of the weeks that followed that first morning in Berlin. Within a few days only twenty-one of us remained out of the original three hundred and seventy-three who had been summoned. The others went back to their garrison towns; became again the little cogs in the machine. The twenty-one who remained owed their choice entirely to physical reasons. The staff colonel consulted many photographs which at that time we were not permitted to see. Later I was to see much of them, photographs

of all sorts and kinds, in all possible poses and situations, in every sort of dress from hunting togs to full-dress uniform, of Herbert Cheyne Chambers, a captain in the British army.

"May his soul be damned!"

The ardent curse fairly burst its way through the German's tight-drawn lips. For some moments he sat in silence. Only the straining cords in his hands and the twitching of his lips betrayed the curbed violence of his passionate hate, so passionate as almost to approach the bounds of madness. When he spoke his voice was hoarse, and his words fairly choked from his throat.

"God had no right to make this end to all my work. Eight years I have played my part. The perfection of system and science and knowledge have been devoted to success, every resource of the Great General Staff"—he clenched his hands together and held them tight between his pressing knees during another moment's pause—"only to have the whole thing lost by the unthinkable blunder of a stupid Englishman!"

HIS passion subsided after a time, and he resumed his talk quite as if there had been no diversion.

"You will have guessed the purpose of my being brought to Berlin, myself and the other three hundred and seventy-two officers. It was wanted to find the counterpart of Captain Chambers—and not one only, but three or four. Accidents must be discounted; death—so many things may happen. The Great General Staff leaves nothing to chance. It foresees everything—and prepares for it.

"Chambers was but one of many British officers as to whom like preparations were made; and in his case four of us were chosen to take up the work. Within two years one of these had died. In the third year one was thrown from a horse while practicing the following of the damned hounds—one of the things that Chambers persisted in doing and, of course, one of the things that we all must become proficient in. We had not only to be as proficient as he, but proficient in the identical manner. How many mornings have I lain behind hedges for just a sight of my quarry riding by; that I might catch some infinitesimal detail of his carriage—the swing of his body, the way in which he flicked his whip or held his arm—and then spent hours to make myself perfect in it. That one who was thrown from his horse suffered a broken leg and, what was worse, was left with a limp. That ended him.

"How I worked and strove and worried! The last year before the outbreak of the war was the most frightful time. This thing that I was doing—the re-making of myself into the likeness of Herbert Cheyne Chambers—had become an obsession, and at times I thought that I should go mad with fear and worry and discouragement and—hate. For at bottom I hated the work. I hated Chambers. I hated England and everything English; the beastly athletic grind that Chambers punished himself with and called sport; the vile whip's plug that he smoked; the cold morning bath that I had to learn to enjoy. There was no surcease. Whether Chambers worked or played, it was all one to me—work.

"And I could not give it up. Of the four of us who had been assigned to this detail, only two of us were left after four years, Von Niemann and myself. You can imagine our dismay when Chambers commenced to put on flesh. Was it because of too much exercise or too little exercise? we asked each other, Von Niemann and I. It was neither, as we found when we put it to the test."

"What!" the old doctor demanded in surprise.

"To be sure," Von Westrup answered. "His servant was in our pay. It was through him that we became familiar with the most intimate details of Chambers's private life, his letters, his callers, the people to whom he talked on the telephone, the books he read, the ones he liked and the ones he did not like. It was through the servant that we suggested more exercise. That had no effect. We tried less exercise. Then we learned that this tendency to stoutness was hereditary in the Chambers family, commencing to take effect generally at about the age of thirty-four years.

"This was but one example of the infinite care and attention to detail in the work of the Great General Staff. I had been in despair, and Von Nie-

mann was in no better way. We should not have worried. That very complication had been foreseen. Chambers's hereditary tendencies had been taken into consideration, and only those who had like tendencies had been chosen for our positions.

"I was relieved, you may well believe. In due course I commenced to take on weight. Von Niemann died. He had not been wholly confident in what the Great General Staff had told us, and had dosed himself with some poisonous flesh-building preparation.

"I was alone now, the last of four! Herr Doktor, I doubt if you can conceive what I did in those five years. You cannot! I, Sixt von Westrup and Hagenau, a Mecklenburger, had made of myself a likeness, in all but mere matter of facial feature, of Herbert Cheyne Chambers.

"It was no mere surface likeness, a thing of clothes, the same twist to a mustache or a duplication of accent. It was deeper. I knew the things that he knew, because we read the same books—and nothing but the same books. It would not do for me to know things that he did not know. Again, I did the same things that he did—and in the same way.

"Do you know, Herr Doktor, which stocking you yourself put on first in the morning? No, though you have been doing it every morning for sixty years. Nor did I, Sixt von Westrup, know which one of my stockings I put on first, nor do I know now. But I know that Chambers invariably put on his left stocking first, and so must I always do.

"And so it was with the ten thousand and one items that go to make up the round of daily living."

Von Westrup paused, as if to consider those years of strange preparation in their orderly se-

quence. His eyes narrowed as he brought one after another of his recollections into focus.

"I brushed him aside; I wanted to be gone before Marston arrived"

"Odd things, these little traits and habits that we pick up. Chambers had his share of them. I

do not think of him often now. That may seem odd, too, when one considers that I am imitating him in every act of my life; but so much of it has become second nature with me that I almost forget at times that I am not myself.

"When I consciously think of Chambers, it is always as I saw him the last time. Chambers was never in a hurry to open a letter. Once a letter was in his hands it must go through a preliminary examination which never varied one iota. I doubt if Chambers knew of this habit, or if his friends knew of it; but I am sure that if ever he had omitted any part of his program connected with the opening of a letter, the omission would have been noted. He always regarded the address carefully. He held the envelope in his right hand, by its upper right-hand corner. He brought the reverse side of the envelope to view by merely turning his hand as one might turn a fan. He examined the seals and glued edges, then brought it face uppermost again. Not until all this had been gone through with was the envelope opened with the little gold penknife which Chambers carried for the purpose.

"He was standing so, an envelope in one hand and the little gold penknife in the other, when I last saw him—beside the road in Charleroi. It was an order that he held in his hand, a sealed order. All the hell of the British retreat raged about him while he paused and methodically examined that envelope. There were shells falling about. A damned glacier would have shown as much feeling.

"I wondered if I could ever attain such mastery of myself. I think that at that instant I hated Chambers with such an intensity as I had never before achieved. I do not know why.

"I HAVE said that that was the last time I saw Chambers. He was some twenty paces in front of a half-wrecked little hut, in which I, with a half dozen men, was hidden. We had managed to get there the night before in the confusion of the retreat. It was an intense moment for me. Many of the details have escaped me now. It was a scene of desperate disorder; and there in the midst of it all, in the confusion and smoke, in the midst of the burning shells, the screaming horses, Chambers stood. I watched him carefully cut the edge of the envelope, which he held in his hand, while four of my companions stole out from the concealment of the little hut.

"They were in British uniform. There was no one about to pay any particular attention to them. There was nothing to notice except that the officer had been suddenly stricken by a bullet, and that the four men had caught him and were carrying him to cover. Even as they were bringing him in through the doorway of the hut, I felt a sudden blow on the back of the head.

"No, Herr Doktor, nothing had gone wrong; it was all a part of the plan. It was now that the real Chambers was to be withdrawn, and I, his other self, was to take his place. The final steps must now be taken. You must understand that we did not look alike. We were not doubles, except in build and general feature, and in all those details of speech and action which I had studied. Other steps were necessary to make the masquerade effective, and they were best taken when I was unconscious. And there were other reasons why I must be found unconscious, and no one can really imitate that. That must be real.

"I awoke many hours later. I was on the caisson of a light field piece. It was dark. I was strapped to the box. I heard the curses of the drivers and the creaking of the limbers as they plunged and sank and rolled through the Flanders mud. I felt the rough bandages on my right arm, and I realized that my head too was swathed. I was deathly sick, stiff, and

in pain.

"But with my first conscious thought I remembered the great thing! I was now Captain Herbert Cheyne Chambers of the British army. My left hand crept up to my breast, and I felt there the bits of ribbon and the two service medals which Chambers wore. I was indeed Captain Chambers. I sank back into unconsciousness.

"The disaster of the Marne and the first Battle of Ypres were things of the past when I was able to leave the base hospital and report for duty. I need not tell you that I was (Continued on page 23)

cap, but we know it is a  
U. S. Marine

## The Call of the U. S. Marines

A Norwegian-born American in the far interior of the Yukon country got a scrap of newspaper six months old. He read of what is being done to babies, to young women, to helpless old men—the same things you have been reading of—in the onslaught of "Kultur" against civilization.

In six short words he expressed the spirit of the United States Marine Corps: *"This thing bane got to stop!"*

He abandoned his "claim," "mushed" six hundred miles across a frozen wilderness, sold his dogs for the price of passage to Seattle, and is to-day in France, "stopping it" after the fashion of a MAN and a Marine!

Now here is your chance: Congress has authorized the increase of the U. S. Marine Corps to 75,500 men. It's a chance for a few among millions.

If you can pass the physical examination, you will be specially trained as a soldier for the "Three-in-One Service:" on land, at sea or in the air. You will get action and adventure; the kind that makes your blood tingle to read about; the kind that makes the world take notice.

Ample opportunity for advancement. 1,800 officers to be promoted from the ranks. Registered men, ask your Local Board to let you volunteer. Age limits, 18 to 36 years.

*This call is to you. Are you, too, built of the stuff U. S. Marines are made of? Apply at the U. S. Marine Corps Recruiting Station in any city, or to the Postmaster in any town.*

## THE FLYING FISH

Continued from page 13

*"I think there's a bully story in you"*

war would be a whale of a yarn—there wasn't much time to get the facts and phone them into offices where rewrite men would whip them into readable shape.

The lieutenant hustled in from an inner room. He held some notes in his hand, and his face wore a satisfied smile.

"Got a regular story for you, boys," he announced.

"Spill it," grumbled the City News man. His story not only had to go to his office, but from there had to go to every newspaper office in town.

"Ever hear of Farley Endicott? Young society man, been in the French Aviation Service, medal for gallantry; all that sort of thing?"

"Uh-huh." The City News man spoke again, more impatiently.

"Well, he's wanted for assault with intent to kill—"

"Joy ride?" asked the "Planet" man. His eyes were bright.

"And murder," Flynn finished triumphantly.

"Murder?" The reporters' bored faces took on expressions of interest.

"Who'd he kill?" Half a dozen asked the question.

"Unidentified white man. Tried to kill his colored servant. It's a big yarn, boys. A woman in it too—"

"Well, start it from the beginning," snarled the City News man.

Flynn puffed at his cigar. Then he removed it from his lips, and, consulting his notes, began:

"S evenin', eight-twelve, woman phoned, advising police be sent immediate to apartment Farley Endicott, University Place. Lieutenant Flynn answered her call, tried to get her to give name. Woman rang off. Lieutenant Flynn had call traced. Woman gone before Policeman Ryan, detailed by Lieutenant Flynn to this end of the case, could reach Perlman's drug store, where she'd phoned from. Lieutenant Flynn sent Officers Cadoza and Hinchcliffe to University Place. These officers reported to Lieutenant Flynn that double killing had occurred. Stated that it looked like fight. Lieutenant Flynn decided to investigate personally. Decided, upon viewing bodies, third party must have done killing. Ambulance doctor discovers one of the men is alive, colored servant. Other man, white man, is dead.

"In hospital, recovering consciousness for a few moments, colored servant states his employer, Farley Endicott, did the killing."

"What reason?" It was Morley of the "Planet" who asked the question.

"Didn't state. Conscious only a moment." Flynn looked his dislike of the speaker. The "Planet" had often treated the lieutenant too jocosely to suit his dignity.

"Exactly what did the colored survivor of the massacre state?" persisted Morley.

"Huh? Why, what he said was: 'Find Mister Farl.' Ain't that good enough?" demanded Flynn.

"Sure. Go ahead," growled the City News man. It was getting late.

FLYNN continued his narrative. "Morgue attendants, trying to identify murdered white man, send for Bertillon man. Finger prints identify dead man as Samuel Breen, yeggman and counterfeiter. Criminal record that I've got typewritten out for all you boys. Been in hiding from police for past year or so.

"Condition of colored man precarious. May live and may not. Murderer took weapon—probably

blackjack—away with him. And that's about all. Pretty good yarn, eh, boys?"

The bright eyes of Morley gleamed. "The woman? You have her description?"

"Got that written out for you too," said Flynn complacently. The "boys" ought to treat him right in to-morrow's papers. He'd thought of everything for them.

"We'll have the woman by to-morrow some time," he asserted. "It's a pipe."

"And the motive?" questioned Morley.

"Well, we ain't got that yet, but I've figured it this way. This Breen, we learn from his record, was married once. He had a daughter. Now, this Endicott was a rich young feller. Suppose he'd met this daughter, and had her at his place, and Breen learned of it and came down there, and Endicott killed him, and then got afraid of his servant, and killed him too, and the girl got scared and telephoned us—"

"Farley Endicott! You aren't proposing that seriously," said Morley.

"Well?" Flynn shrugged his shoulders defiantly. "A woman telephones. The dinge says his master done it. Practically says that. An ex-convict is found dead in the apartment. What do you make of it? Why would Sam Breen, yeggman, be in Endicott's apartment? And, anyway, it don't matter why just now. We got the goods on Endicott, and—"

"Located him?" The City News man, his eye on the clock, put the question.

"Can't do it. Tried his club, but no one knows where he is. Simply gave us his apartment address that we already knew. Only intimate friend of his, Sam Whitney—you've heard of him; he flew in France too—has been absent from his apartment since afternoon. Can't locate him. Valet told of some newspaper men calling to inquire for him this afternoon. Any of you boys know about that?"

The reporters shook their heads.

"Well," Flynn went on, "seems as though Endicott's been lying low since his return from France some months ago. Hasn't been in the city at all, so far as we can find out, until recently. All his actions look suspicious."

"You didn't know that he'd been recuperating from injuries received at the front, did you?" asked Morley.

"No. But what's that got to do with it?"

Morley shrugged his shoulders. "Nothing, except that oh, I hate like the devil to pass over a 'beat,' but—well, if I don't, a good game citizen will get eternally damned as a mur-

derer to-morrow morning, and—Endicott is dead, lieutenant."

"Eh? Where? When? How?"

"I mentioned joy ride a little while ago. He was driving a high-powered car along a country road up near Greenwich. Car turned over. Endicott flung from it. Badly mutilated. Instantly killed. Our correspondent got the story from the chief of police. No other correspondent got it. It was a 'beat,' but—Think up a new theory for your friend Lieutenant Flynn to tell the newspapers, will you, Lieutenant Flynn?"

"A new one? Why, don't that prove my theory? He was tryin' to escape, and—"

"They have good doctors in Greenwich. According to the doctors who examined Endicott, he had been dead at least four hours when he was found, and he was found at nine o'clock. How long had this man Breen been dead when the body was discovered?"

Flynn's jaw fell. "Not more than an hour, anyway," he admitted.

"Say seven o'clock. And Endicott had been dead since five. Make it a mystery, fellows—it's all of that. But lay off the end that makes Endicott a murderer."

The others nodded. It was a big enough story anyway. And the death of Endicott near Greenwich, Conn., tended to complicate it even more than Endicott's being alive would have done.

THE first editions of all the newspapers carried front-page stories, and in two of them Lieutenant Flynn's name was mentioned in the headlines. It was a self-satisfied lieutenant of detectives that retired at two-thirty, after having read all the first editions.

Shortly after he awakened, about eight hours later, he was less self-satisfied.

## Chapter XII: "Miss Benson"

THE game was up. Larsen was not on University Place by accident. His presence, coupled with the fact that Fabian had not answered the telephone, proved—to Leila, at any rate—that McCord and his followers had learned Endicott's address.

Without Fabian, without Breen—with no one at all to help her—Leila might just as well turn to the police. In the unfamiliar district south of Washington Square Leila bade her taxi man halt. The neighborhood frightened her, however, the only near telephone sign being outside a saloon. She ordered her chauffeur to turn and proceed, via Carmine

*"Pretty good yarn, eh, boys?"*

Street and Sixth Avenue, uptown. As she rode she reconsidered.

If McCord's followers had found Fabian and Breen, the danger to Endicott was not lessened; neither was it increased. Endicott's position, with McCord, would be as it had been. Somehow or other, she refused to believe that violence had been offered Endicott. It could not be possible. She had no basis

## There's Many a Ride Left in That Rim-Cut Tire

Put a Goodyear Rim-Cut Patch inside it and keep it in service

**M**ANY a tire that has been discarded by the owner because of a fabric break, rim-cut or blow-out, can be kept in service by means of the Goodyear Rim-Cut Patch. This patch is of multiple-fabric heavily reinforced construction, designed for application on the inside of the tire, and made with flaps which fit underneath the bead of the tire on both sides to hold the patch in place. It is flexible and enduring, and once applied is out of sight and mind. It is a most effective means of increasing tire mileage, and of keeping your tire costs down. Remember the last thousand miles are the cheapest.

The Goodyear Tire-Saver Kit is an assortment of the most needed tire accessories handily arranged in a compact package. Your car ought to carry one.

## The Doughboys Make Good

Continued from page 1

"How bad are you hurt?" I asked him. He laughed mischievously as he folded up the letter.

"About as bad as a man can be an' live, I guess. I've got holes in my back and on my hip from high-explosive that you could stick your fists in, an' my left arm's all busted up. An' I feel fine. That's what gets me. I feel fine! When I come to after I was hit an' kind of looked over what was left of me I just kissed myself good-by an' wondered how it come I was still livin'. Then they bandaged me up an' got me into an ambulance, an' when that old bus began to move an' jolt I was afraid I was goin' to live too long. Oh, boy! That was a ride! But I'm all right now. I'm not goin' to be crippled anyway, an' I'll probably be marked for duty again in another month or six weeks. It's the limit what can happen to a man without killin' him! But, oh, boy! We certainly did tear 'em loose up there. We kicked 'em out o' that town, an'—"

"What town was it?"  
"Darned if I know. It was just one o' them French towns. Up there somewhere near that Chateau-Thierry place. They had some fun with us while we was gettin' there, but we done all the laughin' after we got at 'em. I been in France for pretty near a year now, doin' everything from stevedore work to provost guard. I've peddled wheelbarrows an' long-shored ships an' built roads an' swept up towns that was dirty an' been a bucket o' cold water on poor guys that was just out tryin' to have a little good time, an' up there last week was the first chance I had to get at a Heinie."

### Digging Out

THE next was a broad-faced, heavy-set young fellow with stubbly, mouse-colored hair and a wide mouth that was turned up at the corners in a never-ceasing grin, a grin that erupted in gurgles of laughter at the slightest provocation.

"I got it while we was goin' through them thick woods," he said, grinning. "Gee, them woods was lousy with machine guns. They was up in the trees an' down in the holes an' hid everywhere in the bushes. Gee, you'd 'a' laughed yourself sick to see us goin' through there. You'd see the boys sneakin' along on their bellies, an' they'd push aside a bush with their rifles an'—blooie! blooie! blow! A guy was next to me, an' I near died laughin' at him. He was sneakin' along in a little kind of a hollow, like, an' he was crazy to get at the Germans. 'Where the devil are they?' he kept yellin'. And I says: 'Buddy, they're right through there where them bullets are comin' from.' Well, he was in this little kind of a hollow, an' he raised his head a little an' kinda poked some bushes to one side with his rifle, an', believe me, he found out where the Germans was."

"There was one o' their machine guns an' ahead a little piece, an' it cut down on him when he pushed aside them bushes with his rifle. B-r-r-r-r-r, it went, just like that—b-r-r-r-r-r—an' the bullets come spattin' over where he was like water out of a hose. Well, it was funny. I near died laughin'. He scrooched his head down in the dirt an' acted like he was tryin' to bite himself a hole to crawl into. Boy, they was just trimmin' his back hair, an' he was scrooched down there flat with his nose in the dirt, not darin' to so much as take a breath for fear he'd swell up enough to get himself hit. 'There's the Germans, Buddy,' I yells at him. 'Right ahead o' you there,' I says, 'where all them bullets is comin' from.' I near died laughin' at that guy wrigglin' there in the dirt an' tryin' to get himself smaller than he was already. I knowed how he felt 'cause the night before I'd just got myself dug in back a piece an' I no more'n got dug in when I got to start all over an' dig out again."

I just got me a nice kind of a hole dug—just a little place scraped out—when—Wham! an' old shell busts right alongside o' me on my right an' near buries me over with dirt. I waited a minute to see if I'm killed or somep'n, an' nothin's the matter with me, so I thinks: 'Fine! I'm half covered up with dirt now, an' I'm better off'n ever. I'll just take me a little snooze now,' I thinks to myself, an' then—Wham! Bam! Right alongside of me on the other side two o' 'em lights, an' there I am all covered over with dirt an' near chokin' with not gettin' any air, an' my nose an' mouth all bein' stuck up. I started to diggin' like a dog to try an' get myself unburied again, an' then it struck me funny to think how hard I'd been workin' to get myself dug in, an' here I was workin' all the harder tryin' to get myself dug out, an' I near died laughin' at myself. I got laughin' an' swallowed some dirt an' near choked. Well, I got through that all right, an' then up there in them thick woods right after I was laughin' at the

time to study the terrain. I didn't know anything about the ground. I didn't even know where the Germans were. There wasn't any line. I didn't know we were going in until just a few minutes before we started. Then away we went down the road—and I found out where the Germans were. They were raking us with machine-gun fire, and I was lying in the road because I could see down that where their line of fire was. I happened to notice a man lying by the side of the road near me, and he wasn't dug in. 'What's the matter with you?' I asked him. 'Why don't you dig yourself in?'

"I haven't got any intrenching tool," he said.

"Well, use your teeth then," I told him. 'Get dug in somehow.'

"He didn't seem to know any way of doing it, though, so I lay there for a little while, and some machine-gun bullets caught me in the leg. They were falling around there like thick hail for a few minutes. I turned over on my back and happened to see this fellow that told me he didn't have anything to dig in with. Well, sir, I lay there on my back and laughed till I cried! He was flat down on his face with his hands out in front of his head, and he was digging away with his fingers like a gopher with an epileptic fit! He was getting himself dug in, you bet!"

"I came across one of my men well dug in in hard ground," the second officer said. "He showed me a little piece of tin not much bigger than a dollar. 'That's what's left of my mess tin,' he told me. 'No use keepin' it any longer, 'cause we never get any food any more to put in it, so I used it for an intrenchin' tool.' He'd worn that tin down till there was hardly enough left to hold onto, but he'd sure got himself well dug in."

"Say, who was on my right that night—the second night I think it was—when you were over on my left?" the third officer inquired.

"I don't know," the second answered. "Nobody, I guess."

"Nobody is right. I was lying there with my right flank in the air. I kept sending out scouts to try and establish contact, but they all either got picked off or came back and reported that they couldn't find anybody. I was just hanging there by one ear and trying to make myself believe it wasn't as bad as I knew it was."

"It was some wild scrap," the other sighed. "I had to do everything that I'd ever learned not to do. According to military science, we were licked and had to fall back, and didn't achieve our object, and were wiped out. But that was the time of the big wind when all signs fail. We weren't licked, we didn't fall back, and we did achieve our object and we weren't wiped out. Military science the way they give it to you out of a book is great stuff as long as the battle goes according to the book. But sometimes the battle don't behave the way the book says it ought to."

At this point a nurse put her head in at the door.

"Lemonade?" she inquired.

"You bet!" we answered in chorus. The man who had been a football star grinned and smoothed the sheet on his bed.

"It's a hard life," he sighed with mock seriousness.

"Terrible!" the man on the cot opposite agreed.

"The Red Cross only brings us six packs of cigarettes a day for each man. How can we stand it?"

A young nurse passed and nodded smiling. The officer who was up and beginning to get about began humming softly:

"I don't want to get well,  
I don't want to get well—"

"War's hell!" the football player sighed. . . .

### "My Name Is Ozymandias"

The heading of a recent editorial touching on the attributes of Wilhelm Hohenzollern, King and Kaiser, has driven many of our younger readers to the reference books—most of which are mute. Here is Shelley's sonnet "Ozymandias":

I met a traveller from an antique land  
Who said: Two vast and trunkless legs of stone  
Stand in the desert. Near them, on the sand,  
Half sunk, a shattered visage lies, whose frown,  
And wrinkled lip, and sneer of cold command,  
Tell that its sculptor well those passions read  
Which yet survive, stamp'd on these lifeless things,  
The hand that mock'd them and the heart that fed:  
And on the pedestal these words appear:  
"My name is Ozymandias, king of kings:  
Look on my works, ye Mighty, and despair!"  
Nothing beside remains. Round the decay  
Of that colossal wreck, boundless and bare  
The lone and level sands stretch far away.

guy that was tryin' to flatten himself out more I start on a little piece an'—Bim! A little old machine-gun bullet picks me off. I just get one an'—Biff! Bing! I get two more. Gee, it was funny! Here I was comin' through all of it an' not gettin' anything, an' just as soon as I get one I get two more right away. Gee, I'd liked to 'a' stayed an' seen the end of it. They say it was a scream when they got them Dutchmen kicked out into the open. Them Dutchmen wanted to stay off a piece an' throw rocks, but when we got up close to 'em they didn't care nothin' about no more war. No, sir! As long as we was far enough off they was strong for the Kaiser, but when we got up on 'em they didn't want to play no more. No, sir! They want to play war while we're away off an' they can pot us from behind somethin' with machine guns, but when we get up close to 'em they want to change the game an' play this Kamerad thing. Well, as the guy says, 'it's a great life if you don't weaken!' . . .

### Digging In

A SMALL room in an officers' ward looking out on a cool, green garden. Two wounded lieutenants were lying on cots on opposite sides of the small room, and another, wrapped in a dressing gown, was already tentatively hobbling about. One of the lieutenants was a recent Middle Western football star.

"I don't know much about the fight," he said, laughing. "I just walked right in and got turned around by a flock of bullets and crawled right out again. We'd been marching and riding for seventy-two hours with mighty little to eat and practically no sleep, and we'd no more than gotten up there when in we went. There wasn't any

He sat at a little table before a tiny, hole-in-the-wall café on a leafy street of a Paris suburb. He was white and shaky-looking, as though he had just come out after a long illness.

"I guess it must have been shell shock I got," he said. "I was actin' as a runner, an' I had to go through barrage fire time an' time again. I went through three barrages on one trip."

"There was a kid goin' up with me, an' when the barrage started he stopped where he was. Might just as well move on as stop. I went on. I was knocked down five times by explosions, but I didn't get a scratch. The kid that stopped had his head blown off. If it gets hot, go ahead! No sense in stoppin'. Keep on goin'—that's the system. Then one morning I just keeled over. I didn't know there was anything the matter with me, but I had a high fever, an' they sent me back. I'm all right, only I'm kinda shaky an' light-headed. It was goin' through so much o' that shell fire got me I guess. I wasn't hit, but I just got sort o' shaken loose, I guess, from bein' blown around so much."

"If I'd only 'a' been just half a second quicker, I'd 'a' got clear," the wounded boy mourned. "Three Germans got me, an' they were takin' me back prisoner. One was on each side o' me an' one behind me. I went with 'em a piece, an' then I thought to myself: 'Well, you'd lots better be dead than be a prisoner in Germany. Be game an' get it over with now.' So I whanged away an' knocked out the guy on my left an' then I caught the guy on my right with a hook to the jaw an' bowled him over, but I couldn't get turned around quick enough to get at the guy behind me, an' he got me in the back with his bayonet. I guess he thought he'd finished me. The two guys I'd knocked down got up, an' they all beat it. The guy behind got me pretty bad all right, but I'm glad I put up a battle with 'em. Keep on fightin' no matter what happens. That's the best way. They can't more'n kill you, anyhow, an' until they do—keep on fightin'. That's the system."

#### Not a Moan

"It got my goat," the ambulance driver said shakily. "I had four coudes in the bus, three guys with badly fractured legs—one of 'em had a shattered hip—and the fellow that was bleeding from the mouth a little when they put him in. But he thought he'd be all right, so I came along. The three fracture cases were yelling when they were put into the ambulance, and whenever we'd go over any kind of a bump they'd scream, so I was just

easing along as slow as I could go. I'd been crawling along like that for nearly an hour when I heard a knock on the window behind me. I opened it and found the fellow who'd been bleeding from the mouth in horrible shape. 'I'm bleeding to death, buddy,' he said. 'Get me to a doctor quick.' 'The nearest doctor's Paris,' I told him. 'And if I open her up these fellows with the fractured legs—' What about it, fellows?' I asked them. 'This boy's got to get to a doctor.' 'Let 'er go, the three of them said. 'We'll get by.' So I threw her wide open and came into Paris hell-bent."

"I left the fellow who was bleeding at one hospital and had to take the other three to another. After I left the fellow who'd been bleeding so bad it struck me all in a heap that all that awful ride not one of those three fellows with the fractured legs had as much as uttered a moan. As soon as they found out I had to get in quick with this chap they shut up tight, and not a word from one of them all the way in! I cut loose and cried like a kid. That got my goat!"

#### "I Cannot but Weep"

THERE is a hospital in a suburb of Paris into which French wounded have been flowing steadily ever since the war began. The arrival and unloading of ambulances there are matters of no more interest to the people living near by than the passing of a street sprinkler. While the flow of the American backwash was on I went out to that hospital as I had gone many times before. A crowd of boys and women and old men was gathered at the gate. They stood with their faces pressed against the iron bars of the fence, looking through into the yard where forms in olive-drab were being taken from the ambulances. I made my way into that crowd and watched. All about me women were crying silently. A Frenchwoman of the neighborhood, whom I knew and who spoke a little English, turned and saw me. Her face was dripping with tears.

"Ah, but it is so sad!" she said brokenly. "The poor brave American! So far from the home! So far from the family! He comes so far for us, and he fights so bravely and so well, and so far from the home and the family! I cannot but weep, monsieur."

Here, where the backwash flows so far from home and family, the women stand by the way and pay their silent tribute of tears to the men from overseas.

Mr. McNutt's fifth article from France will appear in an early issue.

## The Mark of the Beast

Continued from page 18

nervous. Now for the first time I must put to the test—with my life the forfeit—all the years of study and practice and imitation through which I had followed Herbert Cheyne Chambers.

"Your eyes shun my face, Herr Doktor. It is a face to shun, is it not? They did their work well in that hut beside the road at Charleroi. Two surgeons from Munich did the job, and they were thorough. The mother herself of Herbert Cheyne Chambers could not have said that I was not her son."

"I was ordered to report to the commander in chief. I found him in his study in an old country house a few miles back from the Ypres salient. I had known Sir John French quite well before the war—that is, Chambers had known him. Still, I was not prepared for the reception he gave me. He said nothing until the orderly, who had introduced me, had left the room. Then he arose and extended his hand. It is so with the English. They think they are soldiers—and a field marshal extends his hand to a captain."

"I am glad you are with us again, Herbert," he said. He looked at my face, this face like none that God ever made; looked long and searchingly until I wondered if he had penetrated the deception. I might have saved myself the doubt. Such a fool he was!

"I am sorry, Herbert," he said in a low voice, and I knew that he was thinking of my disfigurement. "But in the days to come these things will not be observed. England will learn to look beneath the surface, and find their beauty in the hearts of her sons, who did not hesitate even to grapple with hell barehanded."

"I am glad the thing is finished. I am tired—very tired. I had not realized until yesterday, when I found myself under arrest, how great the strain had been. An actor moves across a set stage for an hour or two. The penalty for failure is not more than a hiss from a disappointed audience. I must act my part night and day, waking and sleeping. The penalty for discovery?" Von Westrup laughed bitterly. "The hiss of bullets!"

"You have heard, Herr Doktor, of the work of Colonel Chambers of the British Intelligence? Few on the British front have not heard of it. But in the great balance of things it was nothing."

"My orders were to spare no pains to make myself trusted. The time must come, the Great General Staff knew, when there would be possible for me, in my confidential position, such a magnificent treason as would be decisive of the war. Then I must justify the years and work which had gone to making me perfect in my part."

"I knew the constant dangers about me. Only a few days ago I had had a narrow squeak, through the damnable blundering of one of my men, a Saxon named Weinert, a reserve lieutenant, the rich whelp of the owner of cotton mills, who was carrying a message from me to Von Ludendorff, and he got himself caught."

"He was searched in my presence, and I got back the message. Then the only thing to fear was that Weinert would confess. I settled that. I told him not to worry, that means would be found for his escape. He did not worry. Until the very instant when

the rifles cracked he thought a means would be found for his escape.

"Such things and others had brought my nerves to a raw edge. I found it more and more difficult to hold myself to the cool nonchalance of Herbert Cheyne Chambers. Have you ever considered, Herr Doktor, how difficult it is to imitate a man who is always master of himself?"

Now Von Westrup was silent for a few moments. He arose and paced nervously from end to end of the hut. His every action bore witness to the tension under which he labored. At the end of one of his feverish paces of the length of the room he stopped suddenly and burst out in his angry, high-pitched voice:

"The British luck! Again it saves them! It is one of God's mistakes!

"Last night was to have seen the end of my masquerade. What the Englishmen know about my plans, they know; what they do not know I will not tell them. The capture of the Premier and Sir Douglas Haig, of which so much has been said, was only a part of the plan, a small and unconsidered portion, an afterthought. The whole thing was a magnificent coup. It would have been a blow from which the English would not have recovered. And the whole thing is upset by the witless blunder of an empty-headed, football-playing artillery colonel!"

"Have I mentioned Stanley Marston? He was one of Chambers's intimate friends before the war. We had not met since the retreat from Mons, until yesterday at the headquarters luncheon in honor of the Prime Minister.

"You do not know the English, Herr Doktor? No? It is said that they conceal their feelings. Faugh! They have no feelings, no imagination. They are dumb, inarticulate creatures, without love, without friendships, cold and brutish. Consider this meeting between Marston and myself; or rather, between Marston and Chambers, because it was Chambers, of course, whom he thought he was meeting. They too have been intimate for years. They are separated for more than three years by the hell of this war. They meet—and there is not so much as the pressure of a handshake between them!

"It was not until we were seated at table that I noticed that Marston was present. He was a colonel, attached to the Premier's staff. He sat at my left hand.

"'Rotten bore, this sort of thing, Herbert,' Marston remarked to me indifferently, while he tasted a bit of the preserved ginger which had been served us.

"'No end rotten,' I answered. Such was our greeting. During the luncheon we chatted about this and that. It had been planned for me to escort the Premier and the commander in chief through the front lines of the sector. I think we made some little mention of that and of work he had to do in the afternoon. When we separated after luncheon, Marston promised to look me up in my quarters before dinner, to talk a little of old times.

"I am positive that when he left the dining room he had not the slightest suspicion that he had not been talking to Herbert Cheyne Chambers; and I know too that nothing occurred during the rest of the afternoon to arouse any suspicion in his mind.

"It is that which makes the whole thing so maddening!" Von Westrup exclaimed fiercely. "Out of sheer spite, God tossed this blundering boor into the perfect fabric of our plans. That night's trip through the front lines with me would have been the last one the Premier and Sir Douglas Haig would ever take. Everything had been foreseen by us. Every finest detail had been carried out. The deception was perfect—and then, like a bolt from a clear sky, Marston ordered my arrest!"

"One little remark he made at the time. It was a senseless remark; without reason, as was the entire proceeding. In the whole affair he acted as a madman might have acted. I was just stepping out of the door of my hut. I remember, a Chinese coolie was cleaning the door or the steps, and stumbled awkwardly into my way. I brushed him aside. I wanted to be gone before Marston arrived for his promised visit. I had too much to attend to in the next few hours to waste time in talk. The great moment for which I had lived during the past eight years was at hand.

"It was because my nerves were strained to the breaking point that I

did not see Marston at the moment, or recognize him.

"There is something tricky here," I heard him say slowly, and in such a tone as if he doubted his own words. Then, suddenly and without a word of warning, he turned to two near-by sentinels and roared out his commands: "Take that man—Arrest him!"

"I protested. I knew that I had done nothing to warrant the arrest. I was at the very door of my hut. I had just stepped out. My rank should have been enough to protect me. Marston had no right to arrest me or to order my arrest. All these things I shouted as I tried to fend the two soldiers off.

"Let him feel the point of that bayonet, man! Bring him to headquarters!" Marston commanded.

"The rest was short. When I stepped out of my hut it was evening. Within the night I counted on being inside the German lines. I had on my person enough confidential information to wreck the entire British organization. There was no defense. I made none."

Von Westrup had gotten to that point when there came a rap at the door. It was the subaltern with his firing squad. "If you are ready, Von Westrup," he said, "we will be getting this thing over with."

"I am ready," Von Westrup answered.

THE old doctor paused in his recital and drew a huge lungful of smoke from his cigar. "I was not satisfied," he explained to Harris and myself. "As I have said, I am not by nature given to hating, but I was not willing that that man should go to his death so perfectly satisfied with his own part in this affair, and so confident in the wonder-working intelligence of that Great General Staff. That would have been too happy a death. I knew deep in my heart that it was not luck that had betrayed that spy. I did not know what it was, but I was sure it was not luck. I felt it would be cheating justice to allow Von Westrup to die in the belief that only blind chance had marred his plans. He must know that somewhere—somehow—he and his Great General Staff had blundered.

"I spoke to the subaltern. 'Is Colonel Marston in the vicinity?' I asked. 'And can he be brought here before you go ahead with this thing?'

"The subaltern dispatched a man to find the colonel. We waited.

"That was a long wait for me, Harris. I am not like you, my friend; I see other things in life than those only which can be weighed in a scale, or measured with a rule, or counted—like those six bullets that ended Von Westrup. These Huns had challenged the world to combat, and believed they were so efficient as to be unbeatable. There was the great question. Can wrong be so efficient as to overpower right? Rather, is there not in right some inherent power which will protect its own?"

"Marston came; his story was simple, so simple that for a moment I was disappointed. Then it dawned upon me that here indeed was the very proof. There was something inherent in right and something inherent in wrong which at the critical moment had flashed from the souls of these two men, Marston and Von Westrup.

"'Surprised!' said Marston. 'Of course I was surprised. The thing was a knock-out. I had just come across the parade and was almost at the door of Chambers's—Von Westrup's—hut; was going in to have an hour's chat with him of old times, you understand, when the door opened. There was a coolie servant there cleaning the brass plate. He appeared not to move out of the way fast enough to suit Von Westrup. Sometimes a clout on the side of the head does a coolie a lot of good. Still, I did not think it necessary for Von Westrup—or Chambers, as I supposed it was—to hit this one as hard as he did. The blow knocked the coolie sprawling just as I was stepping up to say good evening.'

Von Westrup had been leaning forward, listening eagerly and impatiently to learn the reason for his arrest. He slipped his hand nervously, as if to urge Marston to hurry over the details. "The coolie was in my way," he snarled.

Marston's head came up with a jerk, and his face flamed. The outraged pride of generations of sportsmen roughed his voice, and he pointed a quivering and accusing finger at the German. "But, by God, Von Westrup, the poor devil was not in your way when you kicked him in the face!"

## No Thoroughfare

Continued from page 11

and drove in through the storm of bullets, planted bombs, and gave the ground gunners a good peppering, and got away with no further damage than a lot of bullet holes in wings and fuselages. For the next hour the Germans fought to strengthen their antiaircraft defenses, bringing up more machine guns and lining the ditches with riflemen, and the attackers got a reception that grew hotter and hotter with each attempt. But they held the road blocked, and effectually prevented any successful attempt to clear and use it, and in addition extended their attacks farther back and to other near-by roads, and to the railway. Crossing this line on one outward trip, Dennis, still flying his bullet-riddled Little Indian, saw a long and heavily laden train toiling slowly toward the front. It was too good a chance to miss, so he swung and made for it, swooped down to within a hundred feet, and dropped his bombs. Only one hit fairly, and although that blew one truck to pieces, it left it on the rails, the train still crawling along. But the flight followed his lead, and one of their bombs hit and so damaged the engine that a cloud of steam came pouring up from it, and the train stopped. Another long train was panting up from the German rear, so the flight swept along it and sprayed it liberally with machine-gun bullets, scaring the engineer and fireman into leaping overboard, and bringing that train also to a standstill. Dennis headed back home to bring up a fresh stock of bombs, and to see if he could damage the train beyond possibility of moving, although he feared it was rather a large contract for a scout's light bombs. But on the way back he met a formation of big two-seater bombers carrying heavy bombs, and by firing a few rounds, diving athwart their course, and frantic wavings and pointings, managed to induce them to follow him. Two of them did, and he led them straight back to the two trains. The engineer and fireman of the second had resumed their duties and were trying to push the first train along when the bombers arrived and planted one bomb fairly on the train, started a fire going, and with another, which fell between two trucks, blew them off the rails. The burning trucks were just beginning to blow up nicely as our machines raced for home and more ammunition.

The next hour was mainly occupied with a fast fight against about twenty Hun machines, evidently brought up to break up the road blockers' game. The fight ended with three of the Huns being left crashed on the ground, one

of ours going down in flames, and two struggling back across the lines with damaged machine and engine. Dennis was forced to leave his machine for one trip and borrow another while his damaged wings were replaced with new ones.

This time two flights went out together, and while one engaged the Hun machines which still strove to drive them back the other dived back on the road and again scattered the working party which struggled to clear the road. They had a hot passage, whirling down through a perfect tempest of machine-gun fire, and another machine was lost. Dennis struggled back across the lines with a shot-through radiator and an engine seizing up, was forced to land as best he could, wrecked his machine in the landing, crawled out of the wreckage, got back to the drome, and, taking over his repaired machine, went out again.

### Blocked!

"That road's blocked," he said firmly, "and she's goin' to stay blocked." And he got his men to rig a sort of banner of fabric attached to a long iron picket-pin harpoon arrangement, painted a sentence in German on it, and took it up with him. They found the road still blocked, but columns of troops tramping in streams over the fields to either side. They spent a full hour scattering these and chasing them all over the landscape, had to break off the game to take on another fight with a crowd of Hun scouts, were joined by a stray flight or two who saw the fight and barged into it, and after a mixed fast and furious "dog fight" at heights running from anything under three hundred feet to about as many inches, chased the Hun machines off. They came back in triumph down the deserted road and the empty fields, spattering the last of their rounds into the wrecked lorries and wagons still lying there, and then as they passed over the piled wreckage at the crater Dennis leaned out and dropped his streamer harpoon overboard. It plunged straight down and stuck neatly upright, displaying its legend clearly to anyone on the ground.

"What was on it?" said Dennis in answer to the questions of the flight later on. "It was a notice in German. Maybe it was bad German, but it was a dash good notice. It said 'No Thoroughfare,' and I fancy we've taught the Huns what it means, anyhow."

The expected fresh attack on the line did not develop at dusk as foretold. And that night the weary troops slept a solid six hours.

## Small-Town Stuff

Continued from page 10

The prospect of sacrifice, of a desolate and loveless future, aroused a sweet ache in Matilda's heart. And she could trace an undeniable parallel between the sacrifice of Yvette Vaughn and the sacrifice of Matilda Altrue. Did not the gods of success laugh at torn hearts? Yet, when she recalled the dumb hurt in Billy's eyes, guilt came and crept into bed with Matilda.

PERHAPS you have seen, in some of the more pretentious picture shows, Director Griffey's masterpieces, "God's Small Children," and "Babylon." In "God's Small Children" you will recall that soul-vibrating touch in the battle scene, where the two tiny black kittens crawled for safety into the mouth of a cannon about to be fired. Poor little waifs! The whole nation wept over those kittens.

Griffey's greatness was due to two things, his wonderful sympathy and his realism. By the most trivial of incidents he could smash home to any polyglot audience the most thunderous of seas. In other words, Director Griffey was convincing.

So when Matilda, freshly greased, came up into the golden sunlight of the glass-enclosed studio and began to wait the long wait for something to happen—mainly her unimportant turn—she found, very convenient, a comfortable lounge with its back against a bank of alighted quartz lamps.

Almost at that precise instant two men, whom she had not noticed, opened a brisk conversation on the other side of the quartz bank.

One of the men, however, she could

see mentally as he talked. He was Jimmy Anderson, Griffey's right-hand man, a cherry-faced, excitable young fellow. At this moment he could hardly restrain himself.

"Have you seen him?" he exploded. "He's a perfect wonder! A find! The chief picked him out of the crowd last night as he was leaving. Some friend of Miss Vaughn's, I understand."

Matilda cocked her head and listened with the greatest interest. That was one of Griffey's accomplishments, to weave a startling web of suspense about his audiences. He gripped them right off.

"Well, I should say I did have a look at him!" snorted the other. "And, Jimmy, he sure is one knockout—one knockout—with the war paint on. Why, you wouldn't know he's the same boy! Cert'n'y got to slip it to the chief for picking winners, huh?"

"Did you hear the latest, though?" inquired Jimmy distinctly.

"No. What's up?"

"The chief is going to star him—not going to waste a minute—putting him into a pic right this morning! Set's on the way up now."

"That boy sure does know how to make the clock lose time!"

"He sure does! Say, do you know the kid's right name? The chief's going to name him something classy, like—pause—"Milton Merkyl."

"Yeh! That's it; Milton Merkyl. Won't the women go nuts about that boy? Oh, mamma! Dress-suit stuff, every inch of it, too. No more small-town parts for him. Some lucky stiff, I call him!"

**The Scientific Way to End Corns**

**THE** Blue-jay plaster is a scientist's invention. It is made by the makers of BAB surgical dressings, used by physicians and hospitals everywhere.

So you may be sure that this is the right way to treat a corn.

The corn is ended by a bit of wax, which is centered on the corn. It cannot spread.

While the wax is acting, a pad protects the corn. So all pain ceases when the plaster is applied.

A band wraps the toe snugly and fastens itself. With this comfortable dressing one forgets the corn, and the plaster can't become displaced.

The pain stops instantly. Then the bit of wax gently undermines the corn. In two days it lifts out. Only rare corns need a second application.

Let Blue-jay prove itself tonight. You will never again merely pare a corn, or treat it in the old, crude ways.

## BAB Blue-jay For Corns

There was a pause. Matilda wrinkled her nose courageously, braced back, and sniffed in silence.

"Yes; I admit he may be a bit green," Jimmy was saying. "He's simply got to play underworld parts—the gentleman crook, and all that; it's the rage now—and Griffley's appointed me a committee of one to show him around some. I've got that boy slated for the wildest course of education— Say! We're going down to the Dirty Rat tonight for a starter, to wise up on wickedness. We'll gather in a couple of painted ladies, and—"

Matilda simply could stand this blasphemy no longer.

"—you can come on along. We buy that dissipated look in green bottles, you know—"

"Who are you talking about?" demanded Matilda, coming around the quartz bank.

"Oh—morning, Miss Alter! Why, Griffley's latest find, Miss Alter. Haven't you seen him? He's coming down in a minute, down there in that study set. You can't miss him."

"What did you say his name was?" asked Matilda sternly.

Jimmy Anderson scratched his sandy tinks. "His real name's slipped me, I do declare!" Then his face brightened. "But his screen name is going to be Milton Merkyl." He looked at Matilda expectantly.

But Matilda only compressed her lips and stalked off down stage toward the new study set. Stage carpenters and painters had finished the corner of a gentleman's library, which was to a complete library what a five-cent slice of pig is to the entire confection.

She detected more than the usual bustle here. Six—at least six—cameras were aimed from different points, to shoot the scene at all angles possible without interfering. Operators were busily adjusting lenses and tripods and swivels, with the aid of a property man who walked about the set with a lighted candle, which he raised and lowered and moved from right to left and left to right as commands were given.

Director Griffley, wearing his absorbed look, was strolling back and forth behind the battery of cameras, occasionally glancing at a sheaf of papers in his hand—the scenario.

"My dear!" cried a joyous voice behind her, "I have the most wonderful surprise for you! Wait! He is coming now. Here he is! Do you recognize him? Would you believe that Billy Dobson—your own Billy Dobson—is to be a star! It does seem almost impossible, doesn't it, dear? But you know Mr. Griffley has that wonderful knack of seeing genius when all the rest of us see only the commonplace. He did discover him, of course; but you and I are responsible. Isn't it splendid?"

And following Yvette's slowly turning head Matilda did behold a strange vision, and her eyes became as round and bright as brand-new silver quarters.

IMMACULATE, faultless, splendid, in a dress suit with a blazing white shirt front, down across the studio floor came swaggering William Dobson, glancing neither to left nor right. His curly hair was brushed straight back, and oiled. His eyebrows were black as jet and an inch longer than usual; while each and every eyelash dangled at its end a drop of black wax! Tiny drops of perspiration were oozing through the veneer of pinkish-yellow face grease, but that was inconsequent.

With a very brief, condescending smile, accompanied by a hardly perceptible tilt of the head, he trod past her. Slowly she turned and stared and could not believe.

Griffley was speaking, in that clear, strong voice of his. He too was a small-town, if the question should ever be debated.

"Mr. Dobson, I trust you slept well." The rich voice shaded off to one almost of deference—Griffley, who could be as indifferent as he pleased to any man! "If you are ready, Mr. Dobson, we will take this scene—"

Horror! The god of films had inquired after Billy Dobson's repose—Billy Dobson's!

"Gracious sakes!" said Matilda to herself. She felt acutely unimportant all of a sudden. But because she was human and could not, therefore, admit to miracles, she thought she must be dreaming. Yet there was the evidence—the cameras, the attentive master director—and Billy Dobson, the grocery clerk of Greenforks, as precious as John Drew!

The biting orders, the speedy re-

hearsals, the buzz of crank handles—all these were a swimming confusion. The sun was shining through the roof plates. A golden aureole seemed to attend the new underworld star. Other items were lost.

How could Matilda know that the sextet of grim camera men were grinding away with cameras that were perfectly empty—not an inch of film in any of the six of them?

How could Matilda guess that the script in Mr. Griffley's hand was one for a play which had been produced six months ago?

All she could see and all she could think about was a stout young man in a well-fitting dress suit, going through mechanical motions, with every eye, every brain, every lens, in the great studio concentrated upon him.

"That will do. Cut," said Griffley. "Close-up at the desk."

WHAT is indelicately referred to in film circles as the soft-soap scene, meaning the one which is most prolific of heart interest, took place without direction in William's dressing room.

He was panting over a determined collar button when the door latch clicked, and, after a moment, clicked again.

"William Dobson!" said an agitated young voice.

"Why, Miss Alter!" He stared at her in alarm. "Is it quite proper to visit me in my dressing room?"

"I have just as much right here as you have, Billy Dobson!" she cried, overlooking the indelicacy that he implied.

"Nothing of the sort," he said impatiently. "This is a star's dressing room."

She became perfectly rigid, then inched up a little closer to him. She tried to look grim and determined, but she really was melting like wax in July sunlight, the first indications being tears which trickled down her yellow-larded face to the corners of her mouth.

"Billy—d-don't you love me any more?" she asked wretchedly.

"What!" he gasped. "Can you have the nerve to speak of I-love—after that about those birds? Besides, the time is past for loving," he added, as if exhausted. "Griffley says I dare not marry. It would spoil my opportunities." He shrugged wearily. "I am sorry."

"But you said you loved me—"

"Stop!" said William coldly, and again: "Stop! You are forgetting that you too may have a future, although—"

"It isn't right," sobbed Matilda. "I don't want a future. It isn't nice. It's wicked. They are going to take you down to the—Dead Rat to-night!" she shivered—"with a painted woman! I don't want you to go to the Dead Rat!"

"Yes," he confessed, with drooping shoulders. "Yes; I must learn."

It was not William's fault; he was carrying out Griffley's orders like a soldier. But Matilda, with all her slenderness, had the useful muscles of a small-town girl, and he could not have removed her arms from around his neck unless he had broken them.

"Billy, won't you please take me home?"

"And go on working in that grocery store when I could stay here and earn thousands and thousands a week? Give up my future under Griffley for a dinky cottage with fussy old crimson rambler running all over the front of it?" he demanded, as though doubting her senses.

"Yes—with me, Billy!"

He hesitated a long while, a terribly long while, searching her eyes as if he could find the answer therein. He pondered and pondered.

"You really want to go back to Greenforks—and leave this?" he said incredulously.

"Yes, I do, Billy!"

"Very well, Matilda," he gave in reluctantly. "I will sacrifice my future. We will take the noon train."

And he kissed her a number of times, but not so reluctantly as you might have imagined.

YVETTE, staring out across the glossy green Jersey meadow from her dressing-room window, tried hard to picture a little cottage with crimson tangles growing all over the front of it, but the vision persistently kept dwindling away.

All she could see, after repeated trials, was the Greenforks grocery store, ancient and forlorn, the tipsy front of which Jim Dobson was manfully endeavoring to support with his hunched-up shoulders.

## More Fare, Please!

Continued from page 9

It is not necessary to tell the whole story of the jitney—how once proud touring cars descended to humble and servile uses just as in other days the carriage horse might come in his old age to the traces of a bobtail car—how it first came into being in southern California, spread north to San Francisco and the Puget Sound country and east all the way across the continent. It came in the spring to the North and the East from the land where spring is eternal. When winter arrived in the less favored sections the jitney's real struggle began. It was one thing to ride in a touring car on a pleasant summer's evening, but along in January, when the mercury began to have an affection for the zero mark, a comfortably heated and lighted trolley car had its appeal. The jitneys remained in the garages.

The jitneys soon found they had more to fight than weather conditions, however. The traction interests rallied. They called attention—and with great truth and force—to the fact that not alone did they pay many taxes, including those assessed upon corporations, but that they played a large part in placing and maintaining the very street pavements upon which their new competitors operated so blithely and so easily. Moreover, they were responsible parties in the case of an accident—their damage vouchers asserted that. There was little responsibility about the average jitney—either in ordinary operating conditions or for damages in the many, many accidents which such unregulated operation in congested city streets quickly brought to pass.

These things were patent. And in the calm judicial eyes of the better of the State regulatory commissions they brought a distinct relief to the tractions—either in the form of a complete abolition of the jitneys from city streets or else in a rather strict regulation and oversight of them. Which was as it should be. And—with some rather glaring exceptions—the jitney to-day is a fair competitor of the trolley car.

But the traction man's automobile had dream is by no means ended with the subjugation of the jitney. The public motor car he can in many cases force to the same systems of regulation that are put upon his own shoulders. The privately owned and operated automobile is a far different matter, however. I sometimes feel that in the far-flung community in which I dwell the lessening of criticism against our local traction company is due in no small measure to the fact that the men who were its chief and most potent critics a decade ago are the men who to-day ride to their work in their own automobiles. Our service is no better than it was a decade ago; as a matter of fact, it is not as good. But the men who could kick and kick with force—and who frequently did kick and kick with force—the big bankers, manufacturers, and merchants—no longer ride upon the trolleys. The street-railway service is no longer a personal grievance with them. Neither is it a personal grievance with the more prosperous professional men or many of our well-paid mechanics of to-day. The poor mass of humanity—owning not even the cheapest or the most battered of second-hand cars—which hangs to and from its work, in the aisles and upon the platforms of the trolleys, is without an organized voice of protest. And I am not sure that such a voice would be of much avail.

For the tractions are in their last trenches. Their fire is weak—a ragged lot they are and finally fulfilling the prophecy of eating huaks.

### Soaring Prices

IF that were all, it would be quite bad enough—the property loss, the money wasted, the hopes unfilled. But that is not all. There is the public.

No, this time I do not mean the stockholders nor the folk who hold the mortgage bonds and wonder how much longer their coupons are to have any real value. The most of these walked into the traction situation with their eyes open. A good many went in as a speculation, and if a speculation loses a true gambler knows that he takes excessive profits with the possibility of losing in front of him always. And a good many of these investors were in at the beginning and have taken the wine and cake of good dividends of cash and stock.

The public I am referring to is the

public that must ride upon the cars or the trains of the tractions—the folk who pay in ill health the dividends of overcrowded and infrequent cars. These undesired dividends must continue to be paid as long as street-railway income is not commensurate with outgo. And street-railway outgo, on a steady but slow increase for a score of years or more, in the last two has jumped in an inordinate fashion.

Take the single item of coal—a very large item on most of the roads. In December, 1916, the cost of bituminous coal at the mine was \$1 a ton, plus, say 90 cents for an average haul of 600 or 700 miles. Through 1916 the price at the mine began advancing. By December it was \$1.85, while thirty days later it had reached \$2.38. In December last it was standardized—for a time at least—at \$3 for slack and \$3.78½ for mine run, and the average traction had to take what it could get of either and be mighty thankful into the bargain. To that mine cost add anywhere from \$1.06 to \$1.25 for freight haul, taking no account of Mr. McAdoo's most recent boost of freight rates. Two hundred and fifty per cent increase in the coal bin in two years is going some; yet it is practically matched by copper at an increase of 147 per cent, steel for axles and bearings at 300 per cent, and brass at 272 per cent—and all this while the nickel remains fixed as the standard rate of fare.

### Squeezing Out Water

WHAT is true of the material costs is equally true of labor costs. The motormen of such "war bride" Connecticut cities as New Haven and Bridgeport and Hartford were content less than a decade ago with twenty-four cents an hour pay; the company to-day is glad to close a contract with its platform men at forty cents. The straight fares in all three of these Connecticut cities have been raised already to six cents, but L. S. Storrs, the president of the big Consolidated Company which operates the trolley lines of the State, is by no means assured that even the six-cent fare gives the company an even chance to make its expenses, to say nothing of making even a modest profit on its investment.

"Oh, yes, I know," you interrupt. "Modest profit—but on what capitalization? What was that you were saying but a moment ago about the men who lived on the *pâté de foie gras* of fattened dividends? And was not the Connecticut Consolidation born of the New Haven scandals?"

The street-railway problem, reduced to the dire necessities of a war situation, has ceased to be a capitalization problem. As a matter of fact, a good many roads regarded as "watered" but a few years ago have absorbed a good deal of the "water" in expenditures upon their property from their earnings rather than from the issuance of additional securities. The big Brooklyn Rapid Transit some ten years ago had its property assayed in a valuation test by a none too friendly public-service commission. It assayed at \$116,000,000, which compared favorably with its \$127,000,000 of outstanding securities at the time. The Consolidated assayed its Connecticut properties at \$42,000,000, which is a full million dollars less than all the capitalization outstanding against them.

One may easily—and truthfully—dilate upon the sins of the past, not alone overcapitalization, but failure to meet the public fairly or squarely or with understanding. One can find rank dishonesty thinly hidden in many, many cases. But all the roads were not dishonest. In very many of them men toiled loyally and faithfully for the success of their properties and found themselves classed with the thieves and buccaneers.

But this is not the time for post-mortems; this is the hour for tonic prescriptions and alimentary measures upon which hang not only the lives of the tractions themselves but of the great helpless communities dependent upon them. The simple scheme of raising the fare one cent is one form of remedial traction medication. It has been adopted already not only in the Connecticut cities, but in such larger communities as Pittsburgh—whose local system already is in receivership—St. Louis, Mo., and Portland, Ore., as well as in two or three score of smaller ones. In a few places the fares have been increased

## Rushing the Grain to Hungry Millions

THE greatest grain crop in the history of the nation—the greatest army to be fed in the history of the nation—war-stricken peoples of allied nations depending on America for bread—

Here surely is a real opportunity for motor trucks to prove their superiority over old methods of moving the grain crop.

And Federals are meeting it—just as they are meeting every other haulage problem.

In many instances they carry the grain from field to granary and thence on to the elevators at the great mills of the northwest, in this way avoiding the former need for storage of grain at small wayside elevators.

Motor truck haulage, as this application of Federal illustrates, has arrived most opportunely to aid in solving haulage problems of vital importance to our country.

These pictures will illustrate the widespread application of Federals to grain haulage: upper view, in the wheatfields of Southern Michigan; oval, in the Southwestern rice fields; lower, hauling Milo Meise on the good roads of California.

## "The Story of the Great War"

—A History—

PUBLISHED ONLY BY P. F. COLLIER & SON

IT SHOWS what led up to the war—how it began—through it all. It gives you historic perspective, digging out the roots of the war for the past fifty years; vivid description, covering in detail the thrilling events of the war; expert analysis, a resume of the net results. A whole army of noted authors and

correspondents assisted in its compilation, taking advantage to the full of the world-wide facilities of the Collier Organization. The result is a real history written to keep pace with the conflict—the only connected history of the World War that has yet been written.

all very well—for a time. With greatly increased operating costs, however, the big system began to go backward; its net earnings decreased and disappeared. Then Brush got busy. He found that because the Boston Elevated extended well without the corporate limits of the city its relief would have to be a State matter. He prevailed upon the Legislature to pass a measure appointing State trustees for the property as well as providing that the State should purchase from the road the short but elaborate underground line from the South Station to Cambridge at its cost price of approximately \$9,000,000. The last provision would have brought great relief to the Boston Elevated. Governor McCall, however, objected strenuously to the State purchase of the Cambridge subway and promptly vetoed the bill.

A man less persistent than Matt Brush might have given up the fight then and there and looked for an easier one. But it is not Brush's habit to give up. He dropped the subway purchase and introduced another trusteeship bill. This time the General Assembly was fairly lukewarm. The war had progressed to a point that engrossed its attention. It was Brush's job to bring the problem of his company to the State House and keep it there until it was worked out. He brought pressure upon the Legislature. Finally it appointed a joint committee of thirty members, who sat in the old State House upon Beacon Hill for a day and heard Brush tell of his troubles.

The record of that hearing will live long in the annals of the Bay State. Never before had there been such a hearing—never before thirty men in a crowded room listening from ten o'clock in the morning until ten o'clock in the evening to a single man on the witness stand; a vigorous young man who talked 85,000 words of testimony into the ears of relays of tired stenographers. Brush was dramatic, logical, pleading, argumentative. But he was unfailing. He answered questions by the hundreds. He carefully arranged his points, brought them up one after another in soldierly sequence and in convincing array. Brush was logical—and entertaining—and during the entire long session not a single committee man left the room, save for the two meal periods of one hour each.

The president of the Boston Elevated did not quit with the hearing. He put himself in personal touch with every stockholder of the road either through interview or the telephone. He told the stockholders plainly that their property was in great danger and urged them to get in personal touch with their legislators. A letter would not do—no; a personal visit was the best thing; failing in that, a telephone call would be absolutely essential.

The bill passed. The governor signed it.

#### How It Works

THE Boston plan may not be ideal. But it is so far better than any that have preceded it that it is deserving of especial attention. Five trustees appointed by the governor—to give a part of their time, at a salary of \$5,000—are, in effect, to replace the Board of Directors and the Executive Com-

the two years following, and 6 per cent thereafter. It is this feature that has restored the credit of the Boston Elevated; that has made its stock like a bond of the Commonwealth of Massachusetts.

To meet this end the trustees are ordered to fix nine rates or scales of fare—a current rate and four successive steps below and four successive steps above it. If at the end of three months' time the current rates have produced a deficit, the succeeding higher step in fares is adopted, almost automatically. If, on the other hand, current rates are piling up a surplus, the step is taken toward a lower rate. There is no limit set in either direction to this sliding scale; but the trustees are compelled to prepare and keep on record at all times at least four steps below and four steps above the current rates.

As this is being written neither the new rates of fare nor the method by which the various steps upward and downward are to be attained has yet been fixed. The trustees are just being appointed, with full authority to hire or fire any man from the president down. But of necessity one of their earliest steps will be the engaging of transit experts to work out, as speedily as possible, some scientific plan of fare adjustment into sequential steps—probably either through the zone system or through flat-fare steps, with transfers free, or charged for—as is done in the Cleveland plan. Only, of course, the Boston plan is not subject to the statute limitation of the Cleveland one. It is vastly more elastic.

#### Give Them a Fair Run

I WOULD not say that the Boston plan is an absolute panacea for traction ills. Only it is so far ahead of anything that has been offered to us up to the present time that it is worthy of grave consideration; its practical workings should be of tremendous interest to every American community large enough to boast a transit system.

Not all our tractions, however, have had a personnel like Boston's. That will count against them. The trouble was that too many companies lost the ability to look at transit problems from one big angle—the point of view of their patrons. They neglected to keep in close touch with the folk who ride upon their cars and trains. And to-day they are paying what is in a large part a penalty for their own shortsightedness.

There are two ways in which you can run a railroad property. One is for all the money that there is in it—confound the service, get the dividends—the dividends are in the strap hangers! The other way is with a full sense of the moral responsibility and great necessity of the street railway to a large community. There has been no war-time advance in the price of either courtesy or consideration. The other fellow is still to be reckoned with. Recognition of him generally brings, in the long run and when one needs it the most, recognition—nay, more, a helping hand, from him. If you do not believe this, Mr. Traction Man, ask Matthew Brush, president of the Boston Elevated Railway. He knows.

Likewise there is a lesson and an opportunity in this for the average American. It makes no difference what the sins of the tractions have been in the past; as we have seen, they already have been punished amply for all of these. The point which I have tried to make clear is that further punishment meted out to them in a refusal to permit them to increase their rates upon a fair and scientific basis hits not so much the company as the patrons who are absolutely dependent upon them. It all comes down to a "you and me" proposition. If we do not give the tractions at least a fair run for their money, they cannot give us a fair run for ours.

# An industry that is saving millions out of waste

*The development of by-products out of waste means a saving of about one hundred and fifty million dollars annually—a sum sufficient to keep New York's six million people supplied with meat for six months.*

## Swift & Company, U. S. A.

A nation-wide organization with more than 20,000 stockholders

**T**HERE was a time when the steer was handled solely for its edible meat, its hide, and its tallow.

The remainder of the animal, in weight totaling many millions of pounds annually, was thrown away—a sheer waste.

Today virtually all of this former waste is utilized. Over 250 articles are now contributed by the steer to human needs, and a larger proportion of the animal is saved for human food.

\* \* \* \*

At the time of writing, Swift & Company has to get about \$125 for the dressed meat from an average beef animal in order to break even.

But if the old order of waste prevailed today and only the hide and tallow were saved, Swift & Company, to break even, would need to get about \$135, or to pay the producer less for his cattle.

This is a saving of about ten dollars per animal—a saving which, when multiplied by the total number of cattle dressed annually by Swift & Company, over two million, amounts to more than twenty million dollars yearly, and this saving results in higher cattle prices and lower meat prices.

If applied to the entire number of cattle dressed annually in America, approximately fifteen million, this saving would amount to about one hundred and fifty million dollars annually.

\* \* \* \*

The real development of by-products came with the development of the larger packing organizations.

Success was attained not easily, but by patient effort, by exhaustive experiment, by intense specialization. It has been a big job and has called for big methods—a job far beyond the resources of the old, unorganized system of local meat dressing.

Not only are by-products saved but their value has been increased through better handling of hides, fats, and other edible portions of the steer.

Swift & Company is glad to have had a part in this development. It is an achievement of thrift—an achievement that has made possible today lower meat prices to the consumer and higher prices to the producer of cattle.

## The Reliability that means Sound Tire Economy

Reliability is the most important consideration among motorists today. It is the foundation of service.

The whole effort of the United States Tire Company is devoted to making tires of unfailing reliability.

All the rich experience of the first and foremost tire factories in America has been combined with superior facilities and the purpose to make good tires.

The result has been that sales of these good tires are increasing tremendously.

Right now when supreme service is demanded by the work of war, when every resource must be de-

voted to national welfare, United States Tires are more than making good.

This reliability of service not only produces the low tire cost per mile that constitutes real tire economy but increases the usefulness of your car.

Equip your car with United States Tires.

In the five United States treads there is a type that exactly fits your requirements.

Any one of the thousands of United States Sales and Service Depots will give you careful and courteous service.

*For passenger cars: 'Royal Cord', 'Nobby', 'Chain', 'Usco', and 'Plain'. Also Tires for Motor Trucks, Motorcycles, Bicycles and Airplanes.*

### United States Tires are Good Tires

*United States Tubes and Tire Accessories Have All the Sizing Worth and Wear that Make United States Tires Supreme.*

THE NATIONAL WEEKLY

Your  
Wheatless  
Days

More than a million a week

You cannot tell the amount of sediment in ordinary oil when the engine is running, but after it has stood still for some time a black deposit settles at the bottom of the crankcase, as indicated by the arrows in the cross-section of the engine above.

Ordinary oil after 1000 miles of running

Showing sediment formed after 1000 miles of running

Arrows point to the small amount of sediment in Veedol. Even after prolonged running so little sediment accumulates that only the slightest deposit can be found when the oil is allowed to settle in the crankcase. As shown by the two bottles, Veedol reduces sediment 86%.

# Sediment or Oil?

What percent of each do you feed your engine?

**THINK** what would happen if you tried running your engine without a sufficient amount of oil in the crankcase!

It would prove a costly experiment. Friction would soon rack the engine to pieces.

This is just what happens with inferior oil, which breaks down quickly under the heat of the engine, forming large volumes of black sediment.

Sediment has no lubricating value and crowds out the oil with lubricating qualities from points of friction where it is most needed.

## The menace of sediment

The Sediment Test first showed to the motorists of America how much sediment is formed in ordinary oil.

It brought home to them how dangerous to the engine is this excess of sediment and how any oil that decreases sediment *increases* power, reduces gasoline and oil consumption and prolongs the life of every working part.

As motorists discover that cheap, ordinary oil is the real cause of 90% of their troubles, they begin to ask for Veedol—the lubricant that resists heat and friction.

## What the Sediment Test means

The striking superiority of Veedol to ordinary oil in this respect is clearly illustrated by the Sediment Test, shown in the two bottles at the top of the page.

Notice that the ordinary oil, in the left-hand bottle, contains fully seven times as much sediment as Veedol.

The average motor oil acts like water in a kettle. When water is subjected to intense heat it evaporates in the form of steam. Under the terrific heat of the engine ordinary oil evaporates very rapidly.

Veedol not only resists destruction by heat and the consequent formation of sediment, but also reduces oil evaporation in your engine to a minimum. You will get from 25% to 50% more mileage per gallon with Veedol for this reason.

When figured by miles of service, and not by cost per gallon, Veedol proves much more economical than ordinary oils, which evaporate rapidly under the heat of the engine.

## Made by an exclusive process

Veedol is made by a distinctive method—the Faulkner Process—recently discovered and used exclusively by this company.

## Try this road test with your car

Drain the oil out of your crankcase and fill with kerosene. Run the engine *very slowly* for 30 seconds and then drain out all kerosene. Fill up with Veedol and make a test run over a familiar road including steep hills and level straightaways.

You will find that your engine has acquired new power, hill-climbing ability and snappy pick-up. It will run more smoothly and quietly and will give greater gasoline mileage.

## Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

## Send for this 100-page book on lubrication

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

### CONTENTS

- Part 1. Internal combustion engines design, operation and lubrication.
- Part 2. Oil characteristics and methods of testing qualities.
- Part 3. Transmissions, differentials and their lubrication.
- Part 4. Oil refining, Veedol products and lubrication charts.

## TIDE WATER OIL COMPANY

Veedol Department

2129 Bowling Green Building, New York

Branches or distributors in all principal cities of the United States and Canada

All Veedol greases are of the same high quality as Veedol Motor Oil. Veedol Cup Grease is made in three grades, Light, Medium and Heavy, as is Veedol Graphite Grease, which is recommended for lubricating water pump shafts. Veedol Gear Compound gives efficient lubrication to the transmission and differential gears with the minimum leakage. It is fluid enough to flow back continually to the moving gears to be picked up, yet the consistency remains practically the same at full operating temperature.

*Every electrical engineering and manufacturing facility of this company is being applied "without stint or limit" to the vital business of winning the war*

*When Steel faced the crisis, Electric Power was ready to aid*

Some day, when there is time to tell the history of America's industrial mobilization, the romantic story of steel will be a source of pride to every American.

For a decade or more, wise men of business were certain that steel in America had reached top production.

But, when the war call came for "a bridge of ships," thousands of guns, and an endless supply of munitions—steel did the impossible. With furnaces flaming with patriotism, steel gave every ounce of energy to the cause. In 1917, tonnage reached forty millions—an output exceeding that of all other nations.

When steel faced the tremendous tasks imposed upon it, plant managers and production engineers turned to the General Electric Company. They

found G-E industrial power specialists prepared to render this additional service, and G-E manufacturing facilities ample to supply their needs in record time.

In unloading ore, charging open hearth furnaces, operating blast furnace blowers, rolling mills and giant cranes, electric motors and control apparatus have become indispensable.

And yet, steel is only one of the many war industries dependent on electric power. G-E engineers, located throughout the country, with the company's plants behind them, are also energetically engaged with the electrification of other expanded industries—food, textiles, coal, oil, chemicals, mines, metals; ships, aeroplanes, automobiles, munitions, central power plants, lighting and transportation systems—all essential to victory.

Look for this—  
the mark of leadership  
in electrical development  
and manufacture

## GENERAL ELECTRIC COMPANY

# The Repair Man

Who Uses

## FISK REPAIR MATERIALS

*is the man you  
can depend upon*

His daily association with repair materials and the repairing of rubber products has proved to his entire satisfaction the unqualified superiority of Fisk.

His convictions are the result of years of experience with Fisk quality—successful experience, with no trouble from “kicks” or unpleasant “come backs.”

The Fisk Rubber Company has long been the leader in the manufacture of repair materials and tire sundries, and was first in building a successful steam vulcanizer. This aggressiveness has been characteristic in the entire field of sundry production.

*\*Note the consistency of  
Fisk Vulcanizing Cement*

### *Fisk Rapid Repair Kit for Emergencies*

A handy package containing piece of patching rubber, coated on one side with raw stock, and tube of cement. Will patch anything made of rubber. Easy to apply. Perfectly safe to use. No danger of tearing tube. Makes permanent patch when vulcanized. Economical. Convenient.

### *Fisk Vulcanizing Cement*

Made thin enough to be absorbed by cured stock to which applied, yet carries twice rubber content as average. Also Pure Para Cement for use without heat. "It's the rubber that makes Fisk stick."

### *Fisk Stock*

Highest quality. Uniform thickness. Costs less per square foot to use. There is a proper Fisk stock made for every specific purpose.

### *Fisk Fabric*

Three separate applications of highest grade rubber friction insure perfect adhesion and maximum strength when vulcanized.

Other Fisk Repair Materials and Tire Sundries of the same high character include Emergency Patches, Pure Para Cement, Tube Splices, Fabric Patches, Air Bags, Air Valves, Gear Mould Filler, Flaps, Vulcanizing Cement, Bead Strips, Soapstone and Head Cavity Filler.

## THE THREE OF THEM

BY EDNA FERBER

ILLUSTRATED BY HENRY RALEIGH

FOR eleven years Martha Foote, head housekeeper at the Senate Hotel, Chicago, had catered, unseen, and ministered, unknown, to that great, careless, shifting, conglomerate mass known as the Traveling Public. Wholesale hostessing was Martha Foote's job. Senators and suffragists, ambassadors and first families had found ease and comfort under Martha Foote's régime. Her carpets had bent their nap to the tread of kings, and show girls, and buyers from Montana. Her sheets had soothed the tired limbs of presidents and princesses and prima donnas. For the Senate Hotel is more than a hostelry. It is a Chicago institution. The whole world is churned in at its revolving front door.

FOR eleven years Martha Foote, then, had beheld humanity throwing its grimy suit cases on her immaculate white bedspreads; wiping its muddy boots on her bath towels; scratching its matches on her wall paper; scrawling its pencil marks on her cream woodwork; spilling its greasy crumbs on her carpet; carrying away her dresser scarfs and pincushions. There is no greater test of character. Eleven years of hotel housekeeping guarantee a knowledge of human nature that includes some things no living being ought to know about her fellow men. And inevitably one of two results must follow. You degenerate into a bitter, waspish, and fault-finding shrew, or you develop into a patient, tolerant, and infinitely understanding woman. Martha Foote dealt daily with Polack scrub girls and Irish porters and Swedish chambermaids and Swiss waiters and Halsted Street bell boys. Italian tenors fried onions in her Louis Quinze suite. College boys burned cigarette holes in her best linen sheets. Yet anyone connected with the Senate Hotel, from Pete, the pastry cook, to H. G. Featherstone, lessee-director, could vouch for Martha Foote's serene unacidulation.

Don't gather from this that Martha Foote was a beaming, motherly person who called you dearie. Neither was she one of those managerial and magnificent blond beings occasionally encountered in hotel corridors, engaged in addressing strident remarks to a damp and crawling huddle of calico that is doing something sloppy to the woodwork. Perhaps the shortest cut to Martha Foote's character is through Martha Foote's bedroom. (Twelfth floor. Turn to your left. That's it: 1218. Come in!)

In the long years of its growth and success the Senate Hotel had known the usual growing pains. Starting with walnut and red plush, it had, in its adolescence, broken out all over into brass beds and birds'-eye maple; these,

in turn, had vanished before mahogany veneer and brocade. Hardly had the white scratches on these ruddy surfaces been doctored by the house painter when—whisk! Away with that somber stuff! And in minced a whole troupe of near-French furnishings; cream enamel beds, cane-backed; spindle-legged dressing tables before which it was impossible to dress; perilous chairs with raspberry complexions. Through all these changes Martha Foote, in her big, bright twelfth-floor room, had clung to her old black-walnut set.

The bed, to begin with, was a massive, towering edifice with a headboard that scraped the lofty ceiling. Head- and foot-board were fretted and carved with great blobs representing grapes and cornucopias and tendrils and knobs and other bedevilments of the cabinetmaker's craft. It had been polished and rubbed until now it shone like soft-brown satin. There was a monumental dresser too, with a liver-colored marble top. Along the wall, near the windows, was a couch; a heavy, wheezing, fat-armed couch decked out in white ruffled cushions. I suppose the mere statement that, in Chicago, Ill., Martha Foote kept these cushions always crisply white, would make any further characterization superfluous. The couch made you think of a plump grandmother of bygone days, a beruffled white fachu across her ample, comfortable bosom. Then there was the writing desk, a substantial structure that bore no relation to the pindling rose-and-cream affairs that graced the guest rooms. It was the solid sort of desk at which an English novelist of the three-volume school might have written a whole row of books without losing his dignity or cramping his style. Martha Foote used it for making out reports and instruction sheets, for keeping accounts, and for her small private correspondence.

Such was Martha Foote's room. In a modern and successful hotel, whose foyer was rose-shaded, brass-grilled, peacock-alleyed and tessellated, that bed-sitting room of hers was as wholesome and satisfying and real as a piece of homemade rye bread on a tray of French pastry—and as incongruous.

It was to the orderly comfort of these accustomed surroundings that the housekeeper of the Senate Hotel opened her eyes this Tuesday morning—opened them, and lay a moment, bridging the morphean chasm that lay between last night and this morning. It was 6.30 a. m. It is bad enough to open one's eyes at 6.30 on Monday morning. But to open them at 6.30 on Tuesday morning, after an indigo Monday—The taste of yesterday lingered, brackish, in Martha's mouth.

"Oh, well, it won't be as bad as yesterday, anyway. It can't." So she as-

sured herself as she lay there. "There never were two days like that, hand running. Not even in the hotel business."

For yesterday had been what is known as a muddy Monday. Thick, murky, and cozy with trouble. Two conventions, three banquets, the lobby so full of khaki that it looked like a sand storm, a threatened strike in the laundry, a traveling man in Two-Twelve who had the grippe and thought he was dying, a shortage of towels (that bugaboo of the hotel housekeeper), due to the laundry trouble, that had kept the linen room telephone jangling to the tune of a hundred damp and irate guests. And, weaving in and out and above and about and through it all, like a neuralgic toothache that can't be located, persisted the constant, nagging, maddening complaints of the Chronic Kicker in Six-Eighteen.

SIX-EIGHTEEN was a woman. She had arrived Monday morning, early. By Monday night every girl on the switchboard had had the nervous jumps when she plugged in at her signal. She had changed her rooms, and back again. She had quarreled with the room clerk. She had complained to the office about the service, the food, the linen, the lights, the noise, the chambermaid, all the bell boys, and the color of the furnishings in her suite. She said she couldn't live with that color. It made her sick. Between 8.30 and 10.30 that night there had come a lull. Six-Eighteen was doing her turn at the Majestic.

Martha Foote knew that. She knew too that her name was Geisha McCoy, and she knew what that name meant, just as you do. She had even laughed and quickened and responded to Geisha McCoy's manipulation of her audience, just as you have. She knew the value of the personal note, and it had been her idea that had resulted in the rule which obliged elevator boys, chambermaids, floor clerks, doormen, and waiters, if possible, to learn the names of guests, no matter how brief their stay, and to call them by name whenever necessary or possible.

"They like it," she had said to Manager Brant. "You know that better than I do. They'll be flattered and surprised and tickled to death, and they'll go back to Burlington, Iowa, and tell how well known they are at the Senate."

When the suggestion was met with the argument that no human being could be expected to perform such daily feats of memory Martha Foote battered it down with: "That's just where you're mistaken. The first few days are bad. After that it's easier every day, until it becomes mechanical. I remember when I first started waiting on table in my mother's quick-lunch eating house in Sorghum, Minn. I'd bring 'em wheat cakes when they'd ordered pork and beans, but it wasn't two weeks before I could take six orders, from soup to pie, without so much as forgetting the catchup. Habit; that's all."

SO she as well as the minor hotel employees knew Six-Eighteen as Geisha McCoy—Geisha McCoy, who got a thousand a week for singing a few songs and chatting informally with the delighted hundreds on the other side of the footlights. Geisha McCoy made nothing of those same footlights. She reached out, so to speak, and shook hands with you across their amber glare. Neither lovely nor alluring, this woman. And, as for her voice—And yet for ten years or more this rather plain person, somewhat dumpy, no longer young, had been singing her everyday, human songs about everyday, human people. And invariably (and figuratively) her audience clambered up over the footlights, and sat in her lap. She had never resorted to cheap music-hall tricks. She had never invited the gallery to join in the chorus. She descended to no finger-snapping. But when she sang a song about a waitress she was a waitress. She never hesitated to twist up her hair and pull down her mouth to get an effect. She didn't seem to be thinking about herself at all, or about her clothes, or her method, or her effort, or anything but the audience that was plastic to her left and magic manipulation.

Until very recently. Six months had wrought a subtle change in Geisha McCoy. She still sang her everyday, human songs about everyday, human people. But you failed, somehow, to recognize them as such. They sounded sawdust-stuffed. And you were likely to hear the man behind you say: "Yeh, but you ought to have heard her five years ago. She's about through."

Such was Six-Eighteen. Martha Foote, luxuriating in that one delicious moment between her 6.30 awakening and her 6.31 arising, mused on these things. She thought of how, at eleven o'clock the night before, her telephone had rung with the sharp zing! of trouble. The voice of Irish Nellie, on night duty on the sixth floor,

had sounded thick-brogued, sure sign of distress with her.

"I'm sorry to be a botherin' ye, Mis' Phut. It's Nellie speakin'—Irish Nellie on the sixth."

"What's the trouble, Nellie?"

"It's that Six-Eighteen again. She's goin' on like mad. She's carryin' on somethin' fierce."

"What about?"

"Th'—th' blankets, Mis' Phut."

"Blankets?"

"She says—it's her wurruds, not mine—she says they're vile. Vile, she says."

Martha Foote's spine had stiffened. "In this house! Vile!"

If there was one thing more than another upon which Martha Foote prided herself, it was the Senate Hotel bedcoverings. Creamy, spotless, downy, they were her especial fad. "Brocade chairs and pink lamps and gold snake work are all well and good," she was wont to say, "and so are American Beauties in the lobby and white gloves on the elevator boys. But it's the blankets on the beds that stamp a hotel first or second class." And now this, from Nellie!

"I know how ye feel, an' all. I sez to 'er, I sez: 'There never was a blanket in this house,' I sez, 'that didn't look as if it cud be sarved up wit' whipped cr-ream,' I sez, 'an' et,' I sez to her, an' fu'thermore, I sez—"

"Never mind, Nellie. I know. But we never argue with guests. You know that rule as well as I. The guest is right—always. I'll send up the linen-room keys. You get fresh blankets. New ones. And no arguments. But I want to see those—those vile—"

"Listen, Mis' Phut." Irish Nellie's voice, until now shrill with righteous anger, dropped to a discreet octave. "I seen 'em. An' they are vile. Wait a minnit! But why? Becus that there maid of hers—that yella' hussey—give her a body massage, wit' cold cream an' all, usin' th' blankets f'r coverin', an' smearin' 'em right an' left. This was afther they come back from th' theayter. Th' crust of thim people, usin' the lligent blankets off'n the beds!"

"Good night, Nellie. And thank you."

"Sure, ye know I'm that upset f'r distarbin' yuh, an' all, but—"

Martha Foote cast an eye toward the great walnut bed. "That's all right. Only—Nellie—"

"Yess'm'm."

"If I'm disturbed again on that woman's account for anything less than murder—"

"Yess'm'm?"

"Well, there'll be one, that's all. Good night."

Such had been Monday's cheerful close.

Martha Foote sat up in bed now, preparatory to the heroic flinging aside of the covers. "No," she assured herself again; "it can't be as bad as yesterday." She reached round and about her pillow, groping for the recalcitrant hairpin that always slipped out during the night, found it, and twisted her hair into a hard bathtub bun. With a jangle that tore through her half-wakened senses, the telephone at her bedside shrilled into life. Martha Foote, hairpin in mouth, turned and eyed it, speculatively, fearfully. It shrilled on in her very face, and there seemed something taunting and vindictive about it. One long ring, followed by a short one; a long ring, a short. "Ca-a-an't it? Ca-a-n't it?"

"Something tells me I'm wrong," Martha Foote told herself ruefully, and reached for the blatant, snarling thing.

"Yes!"

"Mrs. Foote? This is Healy, the night clerk. Say, Mrs. Foote, I think you'd better step down to Six-Eighteen and see what's—"

"I am wrong," said Martha Foote.

"What's that?"

"Nothing. Will I step down to Six-Eighteen and—?"

"She's sick, or something. Hysterics, I'd say. As far as I could make out, it was something about a noise or a sound or—anyway, she can't locate it, and her maid says if we don't stop it right away—"

She was performing her morning job on the settee stairway

"I'll go down. Maybe it's the plumbing. Or the radiator. Did you ask?"

"No; nothing like that. She kept talking about a wall."

"A what?"

"A wall. A kind of groaning, you know. And then dull raps on the wall, behind the bed."

"Now, look here, Ed Healy. I get up at 6.30, but I can't see a joke before ten. If you're trying to be funny!"

"Funny? Why, say, listen, Mrs. Foote. I may be a night clerk, but I'm not so low as to get you out at half past six to spring a thing like that in fun. I mean it. So did she."

"But a kind of moaning! And then dull raps!"

"Those are her words. A kind of m—"

"Let's not make a chant of it. I think I get you. I'll be down there in ten minutes. Telephone her, will you?"

"Can't you make it five?"

"Not without skipping something vital."

Still, it couldn't have been a second over ten, including shoes, hair, and hooks and eyes. And a fresh white blouse. It was Martha Foote's theory that a hotel housekeeper, dressed for work, ought to be as inconspicuous as a steel engraving. She would have been, too, if it hadn't been for her eyes.

She paused a moment before the door of Six-Eighteen and took a deep breath. At the first brisk rattle of her knuckles on the door there had sounded a shrill "Come in!" But before she could turn the knob the door was flung open by a kimonoed mulatto girl, her eyes all whites. The girl began to jabber incoherently, but Martha Foote passed on through the little hall to the door of the bedroom.

Six-Eighteen was in bed. At sight of her Martha Foote knew that she had to deal with an overwrought woman. Her hair was pushed back wildly from her forehead. Her arms were clasped about her knees. At the left her nightgown had slipped down so that one plump white shoulder gleamed against the background of her streaming hair. The room was in almost comic disorder. It was a room in which a struggle had taken place between its occupant and that burning-eyed hag, Sleeplessness. The latter had won. A half-emptied glass of milk was on the table by the bed. Warmed, and sipped slowly, it had evidently failed to soothe. A tray of dishes littered another table—yesterday's dishes, their contents congealed. Books and magazines, their covers spread wide as if they had been flung, sprawled where they

# YOUR WHEATLESS DAYS

AMERICA'S RECORD IN ONE YEAR OF FOOD SAVING

BY WILLIAM ALMON WOLFF

**"FOOD Will Win the War—Don't Waste It!"** Do you remember how, just about a year ago, that slogan first struck your eye? You do, of course. It's never been very much in the background since then, either. Now it is time for a report. Has food won the war? What has it all come to, all the saving you have done? Has it been worth while?

Well, the war hasn't been won yet. You still have that to do. But, on the word of the Food Administration, the way you have backed it up, the way you have saved food, has prevented the war from being lost. Winning it remains; in this next year that task still lies before you. But it ought to be easy to do what Herbert Hoover will ask of you now. Because—what you have done has been so tremendously worth while. It has helped so much. It has given you such a definite part in the war.

I wish everyone in America could hear the big Food Administration building in Washington humming with the praise of what America has done. Your ears would burn, madam and sir—and particularly you, madam! This is what one man—who knows what he is talking about—says:

"There's never been anything like it in history. Here was a people that had never known want, that had never experienced famine or anything remotely resembling it—a people that had plenty within reach of its hands every moment. We asked the American people to do voluntarily more than any other people has ever been asked to submit to under compulsion. And the American people made good! They have saved more voluntarily than any country in Europe has done under the most stringent compulsion!"

Now, just what is it that you have done? And just what are you still called upon to do?

In the first place, the crops of 1917 were, in general, bad. That was true of the whole northern hemisphere. In the face of inevitable reduction of crop areas, directly due to the war, nature herself seemed to fight, for once, on the German side. So that the demands upon you had to be increased, proportionately, as the result of crop failures. Herbert Hoover wrote to the President in July that for the fiscal year 1917-18, ending July 1, the total nutritional production of the country was between 7 and 9 per cent below the average for the three previous years. That doesn't sound particularly dramatic or serious. But—the statistical genius of the Food Administration smiled, sadly, when I said so to him.

"Well," he said, "I'll tell you what it means. If that nutritional production had been 15 per cent below average, nothing under heaven could have saved our allies in Europe from famine and disaster. The war would be over—we would be beaten!"

Now that we have turned the corner, it is permitted to tell how narrowly we skirted the edges of disaster. In July, 1918, there were less than 10,000,000 bushels of wheat in the United States—in storage, in transit, anywhere! We were within ten days of being out of wheat. We came to the new harvest with that slender surplus! And normally we carry over 60,000,000 bushels of wheat for seed alone. We have never before, even in years of blighted crops, carried over less than 100,000,000 bushels of wheat into the new harvest. We are

going to take no such chances in this coming year. To begin with, a bumper crop is in sight. The crop of 1918 looks to be safe. Barring a disaster now unforeseeable, Hoover will have a great store to work with. And already plans are being made that will end all uncertainty. There has been time, as last year there was not, to make things easier for you. You can't look for white bread this winter. But you can look for something that, all things considered, ought to please you even more.

As I write, Herbert Hoover has just landed in England. And he has gone to try to perfect certain plans and arrangements that will standardize bread and flour for all the Allied world—that will result in your eating Victory loaves and pies and cakes made from a standardized Victory flour that will be the only flour used in any country of the Allies. If Hoover's plan goes through, you won't be obliged, any longer, to buy a certain amount of corn meal or barley or rye or potato flour when you get a sack of white flour.

There won't be any white flour for you to buy.

The mixing of the white wheat flour with substitutes will be done scientifically at the mills, before it goes into the sacks, instead of in your kitchens, or the kitchens of the hotels and restaurants you patronize. There will be no wheatless days and wheatless meals. You won't have to wonder whether everyone is living up to Hoover's requests. You'll know.

## Don't Those Figures Pile Up?

**THIS** new flour isn't coming because you have failed Hoover; it is a way of killing two birds with one stone. First, it will permit of more exact calculations in building up the reserve of two hundred million bushels of wheat which Hoover wants to have on July 1, 1919; second, it will save you a lot of trouble and red tape in doing what you have proved yourselves absolutely and happily willing to do, and what it is as important as ever that you should continue to do.

Reduced to figures, here is what you made possible:

We sent to our allies, in the fiscal year 1916-17, 259,900,000 bushels of cereals and cereal products. In 1917-18 we sent 340,800,000 bushels—an increase of 80,900,000 bushels. And in the first year our exports were all out of surplus—in the second we raised just enough for our own normal demand, so that it was only by reducing that demand that we were able to feed our allies.

You have to think over these figures before you can appreciate what you made possible! In 1916-17, out of a surplus of something like 200,000,000 bushels (we had a world's record wheat crop, you remember, in the previous harvest) we sent over 135,100,000 bushels of wheat and 2,300,000 bushels of rye—wheat and rye being the prime breadstuffs. In 1917-18, when, as the result of a subnormal crop and what was almost a corn blight, we sent 131,000,000 bushels of wheat—and every bushel of it you saved! We sent 13,900,000 bushels of rye, so that there was an increase of 7,500,000 bushels of the prime breadstuffs—all saved by you. Moreover, since those figures were tabulated, 10,000,000 bushels more from our scant 1917 crop have reached our allies—so that we actually sent more wheat out of our savings, in this last lean year, than we sent out

of our abundance the year before! And we also spared 10,000,000 bushels more to neutrals who faced starvation unless we helped them.

It isn't wheat alone. We have built up a surplus of bacon and ham "over there." For the first time since 1914 our allies have that comfortable feeling that comes when you know that if something happens to the deliveries you can scare up a bite in the ice box and on the shelves in the closet.

In 1916-17 we sent to our allies 2,166,500,000 pounds of meats and fats—which means all sorts of meats and meat products, canned and powdered milk, butter, cheese, vegetable oils, lard, and so forth. And in 1917-18 we sent 3,011,100,000 pounds—an increase of 844,600,000 pounds. That increase didn't come out of vastly increased production either! It represents what you didn't eat—it represents your meatless days, your abstinence from bacon at breakfast, all your self-denials and sacrifices in the way of foregoing fried potatoes and extra pats of butter! And next year you will send even more.

The Food Administration, playing affectionately with figures, turns up all sorts of little statistics. For example, it says that from April 1, 1917, to April 1, 1918, we sent enough food over there to ration completely more than 21,000,000 men—and to give them, at that, an excess of protein and fat! Before the war we used to send enough to France, Great Britain, and Italy each year to ration about 6,000,000 men. We used to send, on an average—this was before 1914—153,260,963 pounds of bacon a year to the Western allies. In our first war year we sent 490,523,133 pounds. Was it worth while to heed that line the good hotels had all last winter on their menus: "Please do not order bacon"? Was it? We used to send 3,004,537 pounds of fresh beef—in our first war year we sent 235,368,478 pounds. How about those steaks you didn't order?

The corner has been turned in this matter of food. Hoover knows now, and so do you, that you can do all that is needful, and that we can supply the Allied world. This year, in all probability, we won't have to deny ourselves quite so sharply. We won't have a surplus. And we are facing the certainty that we can't have as big a harvest next year as we are looking forward to now. We have lost too many men—lent too many men to Pershing, rather. So we will have to keep on saving.

You know about flour. Sugar you'll have to use very sparingly—two pounds a month a person, for all purposes, from August 1 to January 1. There won't really be enough sugar for everyone again until peace comes. Even after peace we'll all have to go easy for a time. Meat and fat ought to be a little more plentiful in this coming year. There's going to be a big corn crop, and, since corn means hogs, bacon and pork ought to be reasonably abundant. The beef situation is looking up too.

One thing is certain. You can eat all you need. You can't waste any food, but you won't be asked to carry self-denial to the point of serious sacrifice. And still you will, by such sacrifices as Hoover will still have to ask of you, put health and strength into the peoples of our allies. You have begun to give them the infinite comfort of knowing that the ghost of famine can never stalk in their lands again!

# UNCLE SAM—EMPLOYMENT AGENT

BY MARK SULLIVAN

WASHINGTON, D. C.—In an official brief, which was presented to Congress when that body was asked to authorize and finance the mobilization of labor which will be described in this article, there was one of those pregnant phrases which can come only from a man with vision enough to see a big thing in all its proportions, and the accuracy of thought that can express itself in words which tell the whole story and impress the memory:

"It is not enough," he said, "to think of this nation as having an army; you must think of it as being an army."

Now, that is what we must come to. If anyone still remains who thinks of the American Expeditionary Force as a sort of sublimated landing party of marines, sent abroad for duty while we go on with our accustomed affairs, he must soon come, voluntarily or through pressure, to disillusionment. He must come to see that he is one of the army, and he is going to find that much of the pressure of army discipline is slowly settling down on him. He will learn that this is no longer a world in which any man can do what he feels like doing at the time he feels like doing it. This is no ordinary emergency where the easy-going individual takes no more responsibility than to ask why the police don't attend to it. President Wilson saw it in its true proportions when he said that this is "a war of peoples." And that American army officer saw it when a foreign officer asked him a technical military question as to the depth of the American force holding a section of trenches. "The depth of the American army," he replied, "is from No Man's Land to San Francisco."

Now if this whole nation is to be an army in any true sense, an army composed on the one hand of an expeditionary force of five million men in France, and on the other hand of a supporting force at home composed of all the nation's workers, then we cannot go along with the five million organized to the highest degree of military discipline, and the other part, the industrial army, not organized at all, not coordinated, willing enough, eager enough, but stepping on each other's toes, getting in each other's way, neutralizing each other's efforts. Most particularly we cannot go along with the five million who are in France or to be in France, receiving a definite pay fixed by statute and absolutely equal as to all in the same rank; and, on the other hand, the industrial part of the army without a fixed pay—and, worst of all, with the various captains, colonels, and generals of industry permitted to lure and bribe the private soldiers away from each other. To bring mobility, continuity of effort, and stability of pay into the army of industry is the chief purpose of the taking over of labor which the Government embarked upon on the first of August. The purpose is to make industry as nearly like an army as it is practicable to do. The "army of labor" has long been a phrase with which political orators have flattered workers. That phrase will now come to express something approaching reality.

The essential thing about an army is mobilization under a single command, the shifting of masses of men to the points where they are needed at the time they are needed. And the industrial needs of a nation at war shift as rapidly as the military needs on the field of maneuver. At one time we need shells in the largest quantity, at another time rifles, at another time gas, at another time ships. It is to enable the Government to shift men

about with the greatest speed and economy of effort that our industrial workers are going to take on the aspect of an army. The Government is undertaking huge new industrial enterprises in widely distant sections of the country, many of them where there is little or no local labor supply. There is to be a huge nitrate plant at Muscle Shoals, Ala., docks and terminals at Charleston, S. C., chemical plants in Maryland, an ordnance plant near Pittsburgh, an armor plant in West Virginia. Each of these enterprises will call for labor in quantities of tens of thousands. In addition, private corporations doing war work will need labor in similar quantities. The Government must be able to assemble this labor and move it about. The Government must be able to move its army of workers from point to point, to meet the emergencies of war, just as General Foch was given the power to move the Allied soldiers from point to point to meet the emergencies of the actual fighting.

## Organizing Our Labor Army

UNTIL the first of August the industrial part of our army was quite largely unorganized and uncoordinated. To a great extent that is what it still is, for the step which was taken on August first was the merest beginning. Indeed, so small a matter was that entering step which the Government took on the first day of the present month that few realize the significance of what has happened. It can be expressed so as to appeal easily to the understanding in this way: Precisely as the Government has taken charge of the country's coal supply under Mr. Garfield; precisely as it has taken charge of food under Mr. Hoover; precisely as it has taken over the railroads under Mr. McAdoo—in the same way the Government, acting through Secretary Wilson of the Department of Labor, has taken charge of the nation's labor supply. If you reflect on it a moment, you will see this thing the Government has done as an exceedingly striking event, and an especially interesting phase is the possibility of some striking personality emerging from it. If the phrase "staggered the imagination" were not old and trite, this would be an occasion to use it. But in this war imaginations have ceased to stagger. They have become permanently cataleptic.

The Government's first step is, as things are done now, rather cautious. Its officials restrict their operations to what is known as common labor, or, in some sections of the country, as day labor. Also they restrict their authority to the larger factories, to those which have more than a hundred employees. But, while these limitations are adopted for the purpose of the Government's own convenience in getting under way smoothly, there is no reason why the persons affected, and the public generally, should not know the whole story now. In taking over the control and distribution of labor, all the Government's self-imposed limitations are merely postponements. As one of the officials of the Department of Labor said: "Skilled labor we shall take over just as rapidly as we can. . . . We don't want to try to bite off too much the first bite."

The Government's policy is to assert for itself a monopoly over all labor, common and skilled. Its policy is, further, to outlaw all private employment agencies and make the United States employment service the only employment agency which may be patronized either by employers or workers for the

recruiting and distributing of labor. And the final step in the policy is to stabilize wages, which means, in effect, that wages are not to be determined by uncoordinated individual bargaining between employers and workers, but by Government agencies.

Public discussion of the Government's recent action has been rather loose and vague, it has been based quite generally on the assumption that it is a great social change which has come to stay. That may be so, but consideration of that has no place here or now. Roughly, people are divided by their temperaments or their interests into two groups: those who assume that the end of this war is going to mark a complete overthrow of the old relations of society—and the other group who fondly assume that the day after peace is declared they can breathe a sigh of relief over the turmoil passed and go down to the office to begin business again, as of August 1, 1914.

As usual the truth will probably turn out to be somewhere in the middle. But what can be asserted here and now as an indisputable fact is this: that this step of the Government has been taken without thought of anything except the necessities of war. The purpose is solely to end a condition of chaotic disorganization in industry, disturbing alike to the worker and the employer, and, most damaging of all, to the speedy and orderly production of war material.

I have talked with about every one of the large group which has done the working out of this policy and will be in charge of administering it. Some of them are bankers, some of them are manufacturers, some are teachers of political economy, some are social reformers. Although all of them have much admiration for the way in which the official heads of the unions cooperate with them, only one of them is himself a labor leader or a member of a union. If you probe for their inner convictions about things, you will find that some of them are radicals and some are conservatives. But neither their radicalism nor their conservatism is in the foreground of their minds in what they are now doing.

They are intent on only one purpose, and that purpose is to get guns, bullets, and ships to our army in France in the largest quantity in the shortest time. As the chairman of the War Labor Policy Board expressed it: "The labor policy of the United States in this time of war is nothing else than the fullest and most fruitful use of the man power of the nation consistent with the maintenance of those standards of decent industrial life which we must preserve." . . .

The men who are putting the machinery of this policy into motion are an unusually attractive group of young and middle-aged men. They have a fine zeal and enthusiasm, and it is a stimulation to the spirit to come in contact with them. But their zeal, their enthusiasm, is not for any propaganda nor for any scheme of social reform; it is wholly a concern for success in the practical details of the hard and complex job of mobilizing the workers of this nation as an effective industrial army. That is all that the United States Employment Service is attempting; and an explanation of what it is attempting is all that the present article contemplates.

## "Turnovers"

FOR American industry—for the labor element in American industry at least—war-time conditions began, not with our entrance into the war, but with the beginning of the war itself. The summer of

1914 was one of those periods when labor is easy, when the factory owner can hire all the men he wants "at the gate." If he needed 100 laborers, his custom was to insert an advertisement in the local papers, saying: "Wanted—1000 laborers; good wages, steady employment." And in such a period as 1914 was a thousand men would appear at the gate. The factory owner had what was ideal according to his way of looking at it—a hundred men to go to work, and nine hundred at the gate to keep wages down. During the latter part of 1914 and the winter of 1915 this condition of abundant labor was accentuated. Imports and exports were cut off by the war; business was bad. But in the early spring of 1915 came war orders from the Allies. And the general spirit of these orders was: "Time is essential; price is no object." Under the stimulation of these orders, American manufacturers began to look about for labor. Very quickly labor became scarce, for our usual yearly crop of a million immigrants had not come in. Moreover, many of our foreign-born laborers had gone back to their native countries. With that fountain gone dry, the manufacturers sent out their "labor scouts." The first thing these did was to scour the farms. When the farms had been drained the labor scouts turned to the South. Trainloads of negro laborers were carried from the cotton fields to the munition factories of Pennsylvania until the Southern States made it too uncomfortable for the labor scouts to operate.

### Stabilized Wages

THEN the manufacturers began to steal from each other. "Get the men," they said to the scouts; "we don't care how you do it, but get them." Under this condition there began a period of bidding up wages which became a sort of mutual suicide on the part of the factory owners. Even before we entered the war the rule in the manufacturing world was constantly increasing wages and, because of the excessive "turnover," constantly decreasing efficiency. With our entrance into the war the condition became very much worse. In those early days there was no cooperation at Washington. An earnest young captain in the Quartermaster's Department of the navy would pound his fist on the table and say to a manufacturer from Philadelphia: "We must have these guns at once." And an earnest young captain in the Quartermaster's Department of the army would pound his fist on the table and say to a different manufacturer from Philadelphia: "We must have these shells at once." And the two Philadelphia manufacturers would proceed to outbid each other for whatever labor was in the market, and when that was exhausted would proceed to lure and bribe each other's mechanics.

Then came the cantonments. They, too, were a case of "at once." And finally came the ships. They, above all things, had to be built "at once." And in all that time Washington had not achieved cooperation. The army was bidding against the navy and the Shipping Board was bidding against both. There were cases where the same labor union in the same town was charging one price for work on ordnance for the army and another price for work on rifles for the army. Wages excessively high, high without rime or reason, was a bad enough result of all this, but it wasn't the worst result. The work was not being done. When they began to straighten out the intolerable chaos at Hog Island they found that local employment agents had a rake-off arrangement with some of the foremen. The agent would supply a laborer to foreman A and get a fee from the Government. At the end of the week foreman A would fire the laborer, as per arrangement, and the employment agent would place him with foreman B—and collect another fee—and each one of the fees he would split fifty-fifty with the helpful foremen. These cases are of official record: A Pacific Coast shipbuilder sent a labor scout to the Atlantic Coast to recruit a carload of riveters. On the way back, at Chicago, that carload passed another carload which Eastern shipbuilders had seduced away from Seattle. Secretary Wilson reported cases where the turnover was 100 per cent a week, which means that a factory employing a thousand men had to hire a thousand new men every week. At Bethlehem, in the course of a year, they hired 56,000 men while 49,000 quit work or were discharged. Of course all this was to an accompaniment of rising costs. But the rising costs were not the worst

result. The work was not being done. It was just this severely practical consideration, the prevention of excessive turnover, and the prevention of the wastage of labor which results from excessive turnover, that led to the action the Government has just taken.

After taking to itself exclusively the function of recruiting and distributing all labor, at once the most important and most difficult of the policies announced by the Government is the stabilizing of wages. The exact language of the official utterance on this point is:

"We cannot have labor stability while we have wage instability. We cannot have harmony or direction in labor distribution if we have discord and anarchy in wage scales applicable to the same territories and the same class of work for the same Government. When once we enter upon the question of wages, we are entering upon the most delicate and most difficult of all so-called labor problems. We do not, and we should be fools if we thought for a moment we should, seek to impose our will upon the industry of the country. We shall work out these problems in council and reach our decision with a discerning mind and the cooperative understanding of industry, which means fit representatives of the workmen and fit representatives of the employers. We are proceeding cautiously, but surely, and I hope firmly, with that problem, and just as soon as the decisions are reached, representing as they will the thought of the Government, of labor, and of industrial leaders, decisions will be carried out with firmness and without compromise."

This is an admirable statement within a most difficult field. Of course, as one of the members of the board said informally: "There can't be under present conditions any such thing as stabilization downward; what stabilization means is fixing wages at something near the present top—and then sitting on the lid." That is about the only thing that it is practicable to do. For common labor the present top will probably turn out to be somewhere between thirty and forty cents an hour. The wages of common labor in the various parts of the United States at the present moment runs from twenty-five cents an hour to upward of forty cents. The highest price paid is, as it has been for some years, the wage paid by Henry Ford, five dollars a day for an eight-

result more or less completely in doing away with geographical distinctions.

What will be done about the rates for the various skilled trades is at once a more distant and a more difficult problem. About all that can be said definitely now is that the Government intends in due time to take up the wage question in all trades and industries and try to bring uniformity and stability to each.

There are some minor policies in the Government's program: its representatives will avoid, so far as possible, the taking of labor away from farms; they will aim to meet local demands for labor from local supplies, and when transfers from one community to another are made they will aim to make these transfers for the shortest distances possible.

### England's Example

SO much for the policies. The more difficult part, of course, will be the mechanism that must be built up and perfected to carry the policies out. For this country it is as novel and as experimental as war itself. Every helpful person will wish for its success, and, whenever it has contact with him, will aid in its success. It is a most difficult job; it had to be done; some one had to do it; the "some one" upon whom that responsibility rested was the President, or, in a collective way, the Administration. It has been done with care and thought. It follows the advice and experience of many men; delegations of English labor leaders and employers have come over here to help; Americans have gone to England and France to study what was done there. As a matter of fact, the machinery which the Administration is setting up follows quite closely, almost step by step, what was done more slowly in England, we having the good fortune, of course, to be able to avoid whatever in England's experience turned out to be mistaken.

To make a start with, our Government had a very small number of official employment agencies in a few large cities, chiefly on the seaboard. They had been started during the hard times of 1907, chiefly with the purpose of finding jobs for immigrants out of work. Their function disappeared quite largely with the passing of acute hard times, and anyhow they never could amount to much in competition with private agencies. Starting with this negligible nucleus, the Government is just now establishing between four and five hundred official employment agencies, covering about every city of over fifteen thousand people. In addition there is an affiliated service which has about eighteen thousand volunteer representatives placed in most of the counties of the country. A most important feature of the mechanism is placed at its outer circle, where it comes in contact with the public. That is a system of Community Boards, which are being organized wherever the Government's employment service has a representative. To manufacturers

and to workers the headquarters of the local Community Board may come to approach in importance the local Federal courthouse, or even the local post office. To the public generally these Community Boards will be the point of contact with the Government in a field which includes the most intimate and practical parts of life. The chairman in each board will be the local representative of the Government's employment service. His function is to represent the national as distinguished from the local interest. One other member will be chosen from among the labor leaders of the community. The third member will be chosen from the local Chamber of Commerce, or some other organization representative of the employing interests.

All the rules and prohibitions so far laid down within this field by the Government seem to be aimed at the employer.

But there are implications which will take care of the employee as well. A workman can quit, it is true. But after he quits, where does he go from there? If he tries to stay idle, he will collide with a good deal of unpleasantness. If he is within the draft age, he will be made aware of the "work or fight" rule. If he is beyond the draft age, he will be subject to the "idler" statutes already passed by many States. On the other hand, a worker who quits in one factory cannot get (Continued on page 24)

"WHEN THE BOYS COME HOME"

hour day. But the Ford scale never has had, and does not now have, any relation to the prevailing scale. After Ford the next highest rate now being paid is forty-seven cents an hour, which is paid by a small group of employers near Chicago. That too is exceptional. From that point downward the rate varies greatly in different sections of the country. In the South there are communities where the rate is still below twenty cents an hour. Inevitably the action of the Government in stabilizing the rate will

# "THERE'S HITS IN EVERY BAT"

BY JEROME BEATTY

ILLUSTRATED BY W. E. HILL

AS a general thing, young folks shouldn't be encouraged in their efforts to improve upon the work of the masters. The upstarts only profane the models they work from.

New York bartenders shoot carbonated water into New Orleans gin fizzes, brides add chocolate frosting to their grandmother's recipe for Washington pie, musical-comedy producers interpolate motor-car jokes in "Pinafore" and the boys return to the farm from the agricultural college and put gas grates in the old fireplace.

But there's one young fellow that improved on the masters by putting a little up-to-date zip into their work. He showed Shakespeare, Kipling, Plato, and Solomon where to dismount.

If you run through your volume of "Familiar Quotations," which is a best seller because it contains only unfamiliar quotations, you will find that the old boys have had much to say about the philosophy that there's something worth while in the worst of us. All the literary Ty Cobbs came up with that thought on third base, took a hefty swing, and drove it home. Their work was neat. But it remained for an umpire in the National League to show how much better it could be done with modern improvements.

BILL BYRON is this umpire's name, and his act was good. It was as if he had stood back tolerantly for a few thousand years and let Aristotle, Pope, Browning, and the others do their best with the thought. Then, finally growing impatient, he stepped forward, pushed Bill, Rudyard, Alexander, Robert, and the rest firmly out of the way and said: "Now if you fellows are through, I'll show you how to put that idea over." And he showed them.

It was at the Polo Grounds one hot afternoon when the Giants needed a few runs and had a couple of men on base. Dave Robertson was due at the

plate, and Byron turned and saw that the Giant outfielder, instead of hurrying up to take his turn, was hefting the bats in front of the Giant bench, picking them over as carefully as an old lady looking at sweet corn that she's buying from a strange huckster.

"Hurry up, Dave," said Byron. "There's hits in every bat, if you only swing 'em right."

There it was, said better than ever before! "There's hits in every bat, if you only swing 'em right!"

ARTHUR SCHULTZ was the kind of a bat that Dave Robertson would have thrown aside in disgust. Even an English boy, playing rounders, would know that there wouldn't even be a foul tip in a stick like Arthur Schultz, no matter who swung it, no matter who was pitching. Not that this is an effort to show up Bill Byron or his fellow philosophers. They're all right, those birds are. But—

The dope books are full of historical bonhead plays. There was Lot's wife who, in spite of sound advice to keep aprinting until she got to first, paused and looked back to see what the catcher was doing. There was Jesse James, who got up on a chair to straighten a picture and for the first and last time took his eye off the ball. There were the Zimmermanns, the German "diplomat" who told Mexico she could have Texas—all she had to do was to go and take it; and the Giant third baseman who chased Eddie Collins home. There was John Anderson, who stole second with bases full; Fred Merkle—

And Arthur Schultz, who made the greatest bonhead play of all.

Henry Schultz, Arthur's father, was an American citizen. He could have shown you naturalization papers to prove it, but he never did. He let you ask his friends or his enemies. Almost everybody in El Paso admired Henry Schultz. He had made a pile of money in the packing business, and he hated the Kaiser. He didn't say so. He didn't need to.

A stranger heard Henry Schultz say: "I wish my boy Arthur was in the German army," and the stranger went out and told a policeman of this treasonable utterance.

"Ho, ho!" laughed the policeman. "So do I. You don't know Arthur."

Henry Schultz once saw in a magazine an advertisement of an Eastern college which asserted that it made real men out of its students. Mr. Schultz read the advertisement over several times and sent Arthur to the school.

Arthur returned after a term and went bouncing into his father's office in the packing plant. Arthur wore strange clothes and spoke with a strange accent. He patted his lips with a silken handkerchief when he coughed.

"Go home!" exclaimed Mr. Schultz finally, and when Arthur had left Mr. Schultz called in his secretary.

"My boy is worse than ever!" he moaned. "Get me the advertisement that made me think that school would make a man out of Arthur."

The secretary found the ad and laid it before Mr. Schultz.

"Take a telegram!" he ordered.

"Going to raise the dickens with the school, eh?" the secretary observed.

"School? No," Mr. Schultz asserted. "I'm going to hire the fellow that writes their advertisements." And he did.

Then he sent Arthur to Yale and was elated when Arthur made the baseball team as a substitute infielder, but the next year he called him home by wire when Arthur sent him a photograph of the cast of the class musical comedy in which Arthur played one of the soubrettes.

Mr. Schultz's friends told him it wasn't all Arthur's fault. Arthur was an agreeable sort of a kid, famed as a story-teller, the life of every party, a natural comedian—but he always had had too much money to spend. Perhaps the fact that his mother had long been dead had much to do with the state of affairs.

"He's my own boy, ain't he?" Schultz would storm. "Where do you come in telling me I shouldn't give him money? He's a good boy. Some day he'll be all right."

WHEN he returned from Yale Arthur was put to work in his father's packing plant. He was given an executive position—"general supervisor of office service," he called himself. His duties were to watch over the office boys. His father paid him fifty dollars a week, and since Arthur lived at home and used one of his father's cars, as well as most of his father's charge accounts, he managed to get along. When the new year arrived Arthur Schultz had become an utter economic loss, a superblack sheep. Then he met Dorothea O'Rourke, the pretty little operator in the branch telegraph office around the corner from the Schultz packing plant.

It was one of the days that Arthur worked. He went to the telegraph office to correct some mistakes he had made in bills, and to his great delight he found that the manager of the branch was a lovely girl with sparkling brown eyes. She was an efficient young person and lost no time in transacting Arthur's business. The details finished, Arthur was prone to pause.

"I hope," he offered carefully—"I hope there will be many mistakes so that I can come often."

Her eyes snapped. She took a quick breath as if to retort sharply. But she caught her words and said only: "You seem to do very well at making mistakes."

She smiled grimly and turned away. There was a double meaning in her words that Arthur did not miss. Arthur at once applied himself to his duties as never before. He began to arrive at the office at nine o'clock in the morning, and he stayed late in the afternoon. And he began an orgy of mistakes. No ordinary mistake maker had Arthur been before. Now he was a past master. He showed what a first-class error artist could do when he put his heart into it. Three or four times a day he had to put on his hat and run down to the telegraph office to apologize or to correct an error or to ask if there wasn't something he could apologize for or if there wasn't some error he had overlooked.

Arthur was raving mad in his sudden love for Dorothea O'Rourke.

At first she rebuffed him, for she had heard of Arthur. But one day she laughed at him, and Arthur, who was no mean hand at understanding girls, immediately followed up his advantage and was allowed to take her to her home in his car that evening after she had finished work.

Henry Schultz noticed the sudden improvement in Arthur and boasted to his friends about how Arthur was taking an interest in the business. Two months had passed without Henry Schultz being called upon to pay any of Arthur's I. O. U.'s or to call up the newspapers to ask them to keep out any story about Arthur's escapades in restaurants.

So he raised Arthur's salary to seventy-five dollars a week and announced that Arthur would be made assistant to the assistant general manager, an appointment that Arthur declined with vehemence. His explanation was that he was doing some special work on his present job and that he didn't want it interfered with.

"What special work?" Henry Schultz scoffed.

"In connection with the telegraph service," Arthur explained solemnly. "You'll find out about it when I've finished it."

**HENRY SCHULTZ** intended to investigate the new work, whatever it was, but bigger things came. The United States declared war on Germany, and Henry Schultz was genuinely glad.

He called Arthur into his office.

"Son," he said solemnly, "it's come. We're going to fight. It's not just for us over here, you know. We're fighting for your cousin Otto in Berlin, and his babies, and all the other babies in Germany. Do you know it, son?"

"Yes, father," Arthur answered quietly. "I know it."

"I'll hate to lose you." He stood and patted his son on the shoulder. "But it's for the best."

Arthur hung his head and shuffled his feet uneasily.

"That's all," said Henry Schultz. And Arthur walked slowly out of the office.

El Paso immediately knew it was in the war. Its Mexican troubles had put it close to the army and the National Guard, and it was glad the boys were going to take hold of a real job. From all around they came to volunteer. The streets began to fill with men in uniform, recruiting posters went up, and the silent men of the Secret Service came drifting into town, watching the Germans, fleeing from the United States, who were using El Paso as the gateway into Mexico.

Sons of Henry Schultz's friends entered training camps; Henry himself placed his services at the disposal of the Government. Arthur Schultz helped toward winning the war by keeping track of the men who left the plant to enlist. He put the stars on the service flag.

"Arthur will go soon," Henry Schultz said hopefully. "They won't need to draft him."

The Selective Service Bill passed Congress, became a law. Hundreds of slackers rushed to be married.

"Cowards!" snarled Henry Schultz as he sat at home reading about them in the evening paper. "Where's Arthur to-night?" he asked one of the servants.

"He took the car out. Said he would be back soon."

There was a loud and unusual honking outside, a rush of feet on the porch, and Arthur burst into the room, pulling behind him a little girl with sparkling brown eyes.

"Papa! Look!" he exclaimed. "My wife! We just got married!"

Three minutes later Arthur and his bride alunk out of Henry Schultz's home, fleeing from abuse, cast off, homeless.

There were many men in El Paso who hated

Henry Schultz. Most of them were Germans who did not believe as he did about the war, who considered him a traitor to the Fatherland. Among these Arthur Schultz found friends who gave him work to do. But none of his jobs lasted. Arthur didn't know how to work, and it was not long before Dorothea, who had not left the telegraph office, was the only visible means of support.

Then Arthur disappeared, and a few weeks later word came from Meco that Bill Daniels had signed him as shortstop for the Buzzards in the Arizona-New Mexico League.

Meco is a tiny mining town that lies on the border line, with Mexico just across the street from the post office. The six-club league of which Meco was a member played a short season and flourished. The salaries were as bad as the baseball that the men put up, but not even the Cubs in their pennant-winning days had supporters more loyal. Several times enthusiastic friends of Bill Daniels, when the Buzzards were behind, had offered to help out by shooting the pitcher of the opposing club, but Bill never would let them. He was superstitious and believed that shooting a pitcher never helped.

**BILL** had percolated down to the Arizona-New Mexico League after a long but not entirely praiseworthy career in St. Louis. He knew a lot of baseball, and when Meco signed him to manage the Buzzards there was much rejoicing, for Bill was a second-class man in a fifth-class league. His health had been bad, he said, and he thought New Mexico was what he needed, so he started to work in Meco in the spring of 1917.

Bill was the most superstitious cuss in baseball. He believed in all the old charms and always was ready to try out a new one.

He introduced in Meco the "game in the ball bag" hunch that McGraw made famous. The idea is that if you're ahead in the eighth inning the game jumps into the ball bag, so that if you take the ball right out of the lot, the game is yours. The other club has no chance to make a ninth-inning finish and beat you.

He insisted that his outfielders always touch a base when they came in to take their turn at bat. Just a friendly tap with a toe. It made the base want you back and it pulled for you when you came up to bat.

As long as the club was hitting Bill never allowed one bat to rest on another in front of the bench. If the hitting fell off, he went to the other extreme and mixed up the bats like a pile of jackstraws.

In spite of all his arrangements to make the way easy for fortune, Bill found June coming along and the Buzzards were running second to the Sage Hens. Something was missing, and he finally figured out the trouble. He didn't have a "nut" on his club.

Baseball managers know the value of "nuts," who sometimes are good ball players, sometimes bad. "Nuts" are comedians, conscious or unconscious, who keep the men cheerful. McGraw for years always had a "nut" around. Clarke Griffith, in Washington, wouldn't think of starting a season without one. Hughey Jennings believes so strongly in "nut stuff" that he will not intrust it to an outsider. He does the work himself.

Bill sat in the sun in front of the Commercial House in Meco, his chair tipped back, silently pondering upon the situation. There was no doubt about it; he had to get something to put a little more luck into the team. He had thought about trying a hunchback, but he had found that while hunchbacks were first

Bill was the most superstitious cuss in baseball

rate for helping prize fighters they weren't worth much for baseball clubs.

A young man approached him.

"Mr. Daniels," he said, "I fain would join your baseball club."

"Huh?" said Bill.

"I want a job on your team."

"What have you done?"

"I have played shortstop for Yale; I have been kicked out by my father."

That sounded interesting to Bill. He had never heard that men who had been kicked out by their fathers were good luck, but they might be worth a try.

"What else?" he asked.

The young man paused. "If you must know," he answered finally, "I have conducted an exhaustive investigation into the ever-present problem as to why vests never meet trousers in the back, and I have found a cure. It is, never wear a vest."

Bill rose slowly from his chair, peering at the young man. A cartoonist would picture the scene by drawing a dotted line from Bill's eye to the young man's.

"I'll give you sixty a month," said Bill, closing in on him like a scientist who has spied a rare butterfly whose capture will make him famous.

"All right. My name is Schultz, Arthur Schultz."

"From El Paso?" Bill exclaimed.

"The same."

"The guy I've read in the papers about?"

"Right."

"You're hired. Get on a uniform, and we'll go over and I'll bat you a few ground balls."

**I**N Meco the boundary line runs down one side of town. All the business is on the American side. Across the line you find Mexicans in hovels, dogs, undressed Mexican children, and the ball park.

Its entrance was at the edge of Mexico. On the American side the laws were strict, but in Mexico one could gamble all one pleased and sell liquor in the stands to one's heart's content. That was why they played the great American game just outside of America.

Arthur, dressed in his old suit of Yale, walked beside Bill. Arthur noticed soldiers patrolling the border line, other soldiers in front of the custom-house, down the way. Since America had entered the war the border was carefully guarded night and day—not that America feared Mexicans, but because the Germans were using Mexico as a relay station between America and Wilhelmstrasse.

Arthur viewed this evidence of war somewhat uneasily.

"You in the draft?" Bill asked.

"No; I'm married."

"Fine. Marriage is a great thing," said Bill, who had deserted his wife and three children four years before.

As Bill and Arthur reached the line in front of the park one of the guards near by stepped up and patted the pockets of the two men perfunctorily.

"Silly, ain't it?" Bill asked. "This examin' everybody goin' both ways."

Arthur did a hand stand and kicked his feet in the air.

"I can't shake out a single incriminating document, general," he said to one of the guards.

Bill roared. "Say, George," he said to the guard. "Ever try to figure out how to make your vest meet your pants in the back? Don't wear a vest." He roared some more. So did the soldier.

"Gee, Bill," he said, "you're gettin' funnier every day. How do you think 'em up?"

Bill winked, subtly conveying the idea that it was a gift that few possessed.

In his first tryout as a shortstop Arthur fared badly. But his tryout as a "nut" was a great success, and Bill Daniels was well pleased as he trudged beside Arthur back to the hotel.

The correspondents of the El Paso papers were immediately apprised of Bill's "find" by Bill himself, who announced that nothing was too good for Meco and that at a great expense and by artful persuasion he had engaged the famous Arthur Schultz.

Back in El Paso Arthur's friends at first were glad, for they judged that he had at last determined to earn an honest living. But on the first trip the Buzzards made around the circuit it became apparent that Arthur was earning a living by deliberately making a fool of

(Continued on page 18)

"You seem to do very well at making mistakes"

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

## CHAPTER THIRTEEN: REPORTER MORLEY

ILLUSTRATED BY F. R. GRUGER

**G**OOD, regular feeding! That's what a real man needs! And if he doesn't get it, how do you expect him to think, or reason, or theorize, or—anything?

So mused Lieutenant Flynn. He was fresh from a bad half hour with the commissioner of police. Instead of being praised for his activities of yesterday, he was condemned.

"I want results," the commissioner had said.

Now, in his own office, Flynn bewailed the politics that placed civilians in command of uniformed men who knew their business. Civilians expected so much. They didn't realize that it took time to apprehend criminals. And because they didn't realize that, they had no hesitation in telephoning a man, dragging him away from a nice hot breakfast, and bawling him out. He glared at the doorman. "Well, what do you want?"

"Reporter from the 'Planet' wants to talk to you, lieutenant."

"Tell him to go to blazes!" roared Flynn.

The doorman saluted and turned away. But the newspapers, with their occasional flattering commendations, were important to Flynn. Moreover, Morley of the "Planet" had saved him from making a fool of himself yesterday. But for Morley he would have publicly accused Endicott of a murder that he had not committed and, even though Endicott were dead, the resultant hue and cry would have been unpleasant for a detective lieutenant who is directly responsible to a civilian overlord.

Flynn reversed himself immediately. "Show him in. I'll tell him myself," he added, as a sop to pride.

The doorman grinned as he left the office. The "loot" was in a fine humor this fine morning.

"He's as cheerful as a pro-German to-day," he confided to the man from the "Planet."

Morley smiled. He was cheerful. He was always cheerful when a piece of news was elusive. When he had found it, and printed it, he was a solemn sort of individual. But on the trail he was different. He beamed upon Lieutenant Flynn as he entered the office.

Flynn stared at him. "Thought you worked on a morning paper, Morley," he growled. "What you doin' around so early in the day?"

"Busy-see stuff, lieutenant," answered the reporter. "Been having headaches lately. Working too hard. Doctors advise early rising. Thought I'd come down and have a little chat with you and give you a great big, fat cigar."

Flynn looked at the great big, fat cigar. "Fifty-center," he commented, holding the cigar to his nose. He laid it preciously away in his desk. "After dinner," he stated. He eyed the reporter questioningly.

"Is that all? No words of gratitude. No pleasantries of the day, lieutenant?"

"Not even a pass

to let you talk to Endicott's servant, Morley," said Flynn.

Morley raised his eyebrows. "So soon? Do you have wireless here, or—"

"Cadoza phoned down before you'd left the building," chuckled Flynn.

"A worthy soul, devoted to his life's labor. But why mention me especially? Every other paper in town had a man trying to get to the negro."

"Maybe"—and Flynn was the least bit sour—"he thought you'd fake an interview, and he wanted me to warn you."

"Very thin, lieutenant." Morley still smiled cheerfully, but his eyes were sober. He had helped Flynn last night, but—Flynn was not a grateful sort. Too often the "Planet" had published important news before the police had stumbled upon it, and there was a certain jealousy in the heart of Flynn. But Morley had overcome this jealousy before. He had always something to offer Flynn in exchange for what Flynn might be able to do for him.

"I suppose," he said carelessly, "that Endicott's relatives have claimed his body?"

Flynn noted the carelessness. He was immediately suspicious. "You read your own paper, don't you? Endicott ain't got a relative on earth nearer than California. And they'd hardly have time to wire even by now. What's the idea?"

"Trade?" queried Morley.

"What do you want?"

"An interview with Endicott's servant twenty-four hours before anyone else has one."

It was hard. It was terribly hard.

How a newspaper man, who didn't take himself or his work—apparently, seriously, could always run across something that the police would give their eye-teeth to run across! It stumped Flynn. But Morley was always honest. If he made terms, it was because he had something to exchange. And, after all, the business of the police was to apprehend perpetrators of crime. If granting a favor to a newspaper man helped police business—

"What you got?" demanded the lieutenant.

"Better wire Endicott's distant relatives that it's a mistake."

"Eh?" Flynn was genuinely surprised. "What do you mean?"

"I went to the mortuary at Greenwich this morning. Fact is, lieutenant, I went out there last night. The story looked bigger to me every minute. And after I'd turned in my copy—well, I felt restless. I slept in Greenwich, and the first thing this morning I went over to view Endicott's body. I don't know why. I just did, that's all."

"And it wasn't Endicott? But how did you know?"

"I interviewed Endicott when he returned from France. He wore a glove on his right hand. Matter of fact, he wore two gloves, but the right one was very large. He said that it covered a bandage. Burn, he told me. Now, that was some four months ago, but a burn that had to be bandaged so long after the injury—Endicott had been in a hospital a week before he sailed for America—must have been some burn. It would leave a scar. There wasn't any."

"You got your interview with the negro," said Flynn instantly. "Hut"—and there was a trace of malice in his tones—"that won't be for a while yet. The doctors claim that trying to talk might kill him."

"So Cadoza said, but I didn't believe him," Morley

"It'll cost another ten to get in Breen's room!"

was momentarily cast down. But his cheerfulness almost immediately returned. The more obstacles the more fun.

"Thanks, lieutenant. I'll give you a ring every so often. By-bye."

**M**ORLEY had only one job at a time: to get to the bottom of whatever it was that engaged his attention at the moment. He had an advantage over the police in this; over Lieutenant Flynn. To offset this advantage, Flynn had system, organization, vast resources behind him. It was about fifty-fifty, Morley told himself.

He had not discussed the substitution of another body for that of Endicott. Beyond stating the fact to Flynn, the matter had not been hashed over. The lieutenant would have been willing enough to get Morley's ideas, and Morley would have been perfectly willing to listen to Flynn. But—they worked for different employers. Both served the public, but Flynn had his commissioner, and the newspaper man had his managing editor. Gingerly they exchanged tips, or favors, each praying in his heart that he would beat the other fellow to final solution.

Morley reviewed the situation. He was the best newspaper sleuth in the city, and he had attained that enviable rank by an uncanny knack of finding the weak link in a chain of events and pounding away at that link with remarkable patience. And the weakest link was always the one concerning which information might readily be obtained. There were four persons involved in the mystery—five, if he included the dead man who wore Endicott's clothing, carried Endicott's pocketbook, but who was not Farley Endicott; the woman who had telephoned Lieutenant Flynn; the servant of Endicott; the dead ex-convict; and Farley Endicott himself. These were the four persons brought together by tragedy, forming the ends or the middle of a chain of mystery.

Endicott could not be found. His only intimate friend, one Sam Whitney, had disappeared. No one remained who knew anything—and the reporters of the afternoon papers, judging by the late editions, had tried pretty hard to learn something of Endicott's recent doings—about Endicott's life of recent days or weeks.

The negro servant could not talk just now. The woman of the telephone was not accessible. And Breen was dead. But Breen had a record, a criminal record. Although he had not been in the clutches of the police lately, still— (Continued on page 22)

"Guy outside has some sort of tip on the Endicott story"

## A Challenge Accepted

**T**HE labor situation in Great Britain has reached a phase which excites the anxious interest of all the Allied nations. From time to time we have had intimation that a group of labor leaders affiliated with the internationalists were preparing to challenge the Government on its war policy and its peace objectives. These willful and headstrong men do not pretend to speak for the British public. They do not even pretend to speak for organized labor as a whole. They represent at most less than one-third of the working people of Great Britain. Yet so great is their assurance that they aim to compel the Government not only to make an immediate and specific avowal of its peace intentions, but to submit the proposal to them for approval! As an alternative they threaten to call strikes in the munition and other essential industries. The great strike of munition workers in progress during the month of July was but a prelude to the coming political demands, a kind of flourish and challenge, to boast the power they can wield if the demands are not granted.

LLOYD GEORGE apparently has determined, and not too soon, to meet this challenge standing up. Late in July he gave public notice that if the munition strike was not ended on a day named he would conscript all of the strikers of draft age and send them to join the army abroad. That is a "work or fight" order that will appeal to the burly intelligence of the average man who can see no reason why highly paid operatives should be exempt from service in the war or subject only to occasional and self-determined service when all the rest of the community is ruled by the arbitrary dictates of military necessity without privilege of appeal. And the same average man will not willingly concede the right of these labor leaders, few in number and with a relatively small following, to use the sacrifices of the troops at the front and the civilian population at home as a pawn in the game of domestic politics. At any rate, the Premier had only to make his announcement to send the "young hotheads" back to their work. Now their grievances, if they have any, will be adjusted by the Minister of Munitions. But the danger is not yet over, and will not be over while the ambitious leaders are able at any time they choose to level a gun at the Government and bid it stand and deliver.

## On This Side

**F**ORTUNATELY there never has been a powerful labor party in this country. Politicians who have "gone out after the labor vote" have found it an elusive and disappointing quantity, and have wept over the "ingratitude" of the workingman. The truth is that the American workingman, unlike the Englishman, refuses to be placed and kept in a caste, political or social. He properly leaves the business of collective bargaining to his representatives. But when he votes he votes as a citizen, not as a union man.

At the same time it cannot be said that the labor situation in the United States is satisfactory. There are still too many disputes, too many strikes and threats of strikes. Appeals to the patriotism of the workers have met with an amazing response in shipyards and steel mills. But in some quarters they have fallen on deaf ears. We read of a strike in an essential industry against the advice of the War Labor Board; of a threatened strike on the Great Lakes; it is even reported that a general strike will be called unless MOONEY is set free in California.

Most of the strikes end quickly. Most of the threats go up in smoke. They are openly condemned by the mass of union men. Yet they cause uneasiness and distrust at a time when these feelings are dangerous to the public welfare. How long will the agitators of the minority remain indifferent to sane advice from the moderate element? They ought to be able to guess the tendency of public opinion from the repeated suggestion that men of draft age who strike before submitting their claims to arbitration by properly constituted authorities be moved up to Class A and sent to the front. This suggestion undoubtedly springs from a knowledge of public sentiment to-day, and its drift.

COLLIER'S, with other friends of the unions, appeals to the discontented leaders to forgo their opportunities for immediate advantage and join with the rest of the people in generous contribution to the service of the country. They cannot pretend that labor has not been well treated by the Administration. There are complaints on the other side. Labor is more amply protected than any other

part of the community in its rights and privileges. It has been showered with compliments. It receives a rate of wages unheard of before. It sits in the Cabinet and rules most of the industrial boards of the Government. No one grudges the mechanic his prosperity. No one, with good sense, wants to curtail the legitimate power of the unions. But such a disparity as exists between the privileged workingman at home, who works when he likes and idles or strikes when he pleases, and the soldiers and civilians who are compelled to obey without dispute the orders from Washington is intolerable. It seems especially hateful that strikes should be going on and reports printed of slackness in even a small number of essential industries at a time when the lists of casualties at the front darken thousands of homes. As a paper maker in the army remarked when he heard of the strike in his trade: "This is a hell of a time to call a strike."

We say all this in a spirit of friendly admonition to a comparatively small but aggressive faction of American workingmen. The majority are committed heart and soul to the war. They have done wonderful things. But the leaders who have failed to comprehend the austere nature of the task set for the American people, and who are obstructing the military plans of the Government, should take heed of the signs.

Fortunately, the Government is not working entirely in the dark. Secretary of Labor WILSON is himself a labor leader. We shall soon know in which camp the Secretary of Labor stands.

## Balancing the War Ledger

**O**UR newspapers have now published, for the fourth time, their annual reviews of war history, the list of war declarations with dates, the list of principal battles on land and sea, etc., etc. The war review it would interest us to draw up (if any) would be no more statistical than the rest, but would include also a partial list of diplomatic triumphs and blunders, of politico-economic mistakes, and of politicians scrapped, in different lands, by MARS: all this to serve for future reference and leading. The costly tragedy of ignorant and half-hearted blundering by the Allies in their Balkan policy and Dardanelles adventure; the wabbling of Allied statesmen before the question: "Shall we permit socialist congresses, or discussion of our war aims?" the delay in the publication of those war aims (WILSON at last setting the example), the lack of foresight and intelligence in dealing with Russia, misled and misunderstood.

On the diplomatic page in the War Ledger we should give an enormous credit to our allies of Britain and France for their tact in dealing with America during the three years we took to "make up our minds." We should set down as against Allied intelligence the long delay in arriving at a unity of command under FOCH—gloriously justified; but we should not linger on this chapter, for the hesitation was natural, however foolish. We should recall the thrill that vivified the United States when the French Commission headed by JOFFRE and VIVIANI came to us in 1917. We should realize, in connection with the calling off of the April, 1917, offensive, when M. PAINLEVÉ was War Minister, and in connection with the pacifist campaign of 1917 and the near-treasonable machinations of former Minister MALVY, how vitally important it was, from the standpoint of the Alliance and of heroic France, that the early presence of some sort of an American army should serve that war-weary land as a counterirritant against the faint hearts. We should regard as highly important the French tour of Secretary of War BAKER in the spring of 1918; from that tour, and the German offensive of March, date the acceleration of the American effort, and especially of the transport of American soldiers, without which our entrance into the war would have proved a useless sacrifice.

And probably we should wind up our war review (not that we shall really write one) by quoting one of those soldiers' letters which we're so proud to receive; a letter like that of our friend CONNIE MURPHY telling MARY SULLIVAN that "it surely has been a hard game so far, but I have stood it well up to date. War is no cinch, but it's made us all realize what a good place home really is, and everybody's a little friendlier. Say, if the war hadn't happened the United States would have been a country only in name in less than five years. Now we're all united. Germany has hit all the curves so far, and she's knocked Russia clear out of the box, but we'll win the game even if it takes extra innings to do it!"

## One Newspaper Man Abroad

SOME ONE asked the Paris correspondent of the New York "Evening Post" if he had stayed in Paris "all through the war." "Which war?" countered the correspondent. For the "Post" man had gone through the siege days of '71 as well as the Taube days of 1914 and the Gotha nights and Big Bertha mornings of 1918. Very calmly, very sympathetically, very learnedly (being one of those rare Paris correspondents who has a classical "background" and also really knows France—not being a casual recruit from the sporting page or the police courts) the dean of the English-writing journalists of Paris goes on telling his paper in weekly or semiweekly letters what he sees and hears and guesses of the world news which Paris makes or exchanges. More than his colleagues, the white-bearded correspondent of the paper BRYANT once edited deals in reminiscence and casual anecdote; leisurely, and more often sage than fervid, he reports on things as they seem really to be rather than as readers a quarter of the way around the world would like things to be. But one of his recent letters was an exception; one felt in reading it that the veteran correspondent had unmistakably thrilled to the moment he recorded:

Suddenly, from the Madeleine to St. Denis's Gate—two miles along the Paris Boulevard which African monarchs long to see—there is a murmur rising to a roar, wave upon wave—"The Americans! The Americans!"

For an hour they pass, crowded into their motor wagons, with their motorcycles, side cars, rear cars, all the American automobile inventions, alongside and in between—all on their way to defend Paris. The men are tanned and fit. They smile wide and wave their broad felt hats over their close-cropped heads to the surprised crowd. Girls run up to them with roses and they stick the flowers in the barrels of their short, shining steel rifles. Onward they go, as a film at the cinema. Later we know that, through the warm afternoon, trains loaded with just such American soldiers have been passing over the belt lines outside the city. It was a wholesome thought to give Paris a sight of the new defenders.

For a newspaper man who for long years has been helping to make France better understood in America, and to bring the two republics nearer to one another, the chance to describe the events of that day in June, 1918, must have come as a truly great occasion. We know STODDARD DEWEY and we can appreciate the emotion underlying his description of a historic event comparable with GALLIENI's act in 1914 in leading the soldiers of the Paris garrison in taxicabs and sending them out to help win that first Marne victory which raised three names to enduring fame: his own, JOFFRE, and FOCHE.

## D'Artagnan Is Not Dead—

ONE of the soldiers' letters that we've seen comes from a soldier of the sea. Here's a paragraph:

Believe me, dear, the French think there is nobody like a marine. All the French officers salute a marine, from a private up. All they look for is the marine insignia, and up goes their hand in their odd salute. From here to the front the marine brings from the Frenchman's lips the cry of "Vive villa Américaine!"

D'ARTAGNAN is not dead—though he doesn't speak perfect French any more. Apparently he served a while on our Mexican border and now he's joined the U. S. marines!

## What's Wrong with the German Press

A MEMBER of the National Board for Historical Research, Mr. VICTOR S. CLARK, reports in the "Atlantic" on "The German Press and German Opinion." Some readers will be surprised to learn that MAXIMILIAN HARDEN is not the only German journalist who criticizes his Government. "The Berlin papers attacked the Prussian food administration last winter quite as savagely as any American papers attacked the mistakes of the War Department. Peace policies, economic measures, political reforms, and social movements are argued with vehemence and abundant facts. . . . Many will recall a dispatch to the effect that the President's January message was to be distributed over hostile territory by Allied airmen, and that the German Government threatened reprisals upon aviators captured while thus engaged. The truth is that the message was immediately printed in the 'Reichsanzeiger,' the official gazette of the Imperial Government, and was widely reprinted and commented upon in Germany."

On the basis of such incidents, it would be easy to exaggerate the "freedom" of the German press. An American avoids that temptation just as he avoids fooling himself into supposing that there is no intelligence at all in enemy editors or generals or politicians, and no news in their newspapers. There is even intelligent opposition in Germany to the censorship. Says the "Frankfurter Zeitung":

So long as censorship is considered indispensable, it should be limited to purely military matters. Above all, it should keep its fingers out of other things and cease its attempts to gag the organs of public opinion. Otherwise its effect is to discredit the press, both at home and abroad, and to raise doubts as to its independence. Confidence in the press is too important an asset for Germany to sacrifice to the blunders of censors.

## Another Ally of Ours

THE really capable historian of this war will not fail to note that in mid July, 1918, the far-spreading grain fields of Da-

kota, Minnesota, and Montana were invigorated by three days' rain. The clamorous rush of airplane, artillery, and ship manufacture got twenty times more space in the daily papers, but that timely rain means millions of bushels of wheat. The very clouds were on our side last month.

## Paths

OUT on vacation one sees that man's mark upon this earth has been made rather outside the city. Street pavements have no response for our passing and the crowd men mutually obliterate all trace of themselves, but in the open country the trails that our human life has blazed are everywhere. A path will ramble up over the ridges on a short cut to the neighboring village; little paths dodge in and out among the wayside woods, making ever so vivid a pattern picture of children on their way to school; other paths slope more directly down through meadow and lowland to the river banks where small boys, cows, and fishermen take to the water for their several uses. There's magic in any path at night and morning, sadness in those choking to an end in weeds, joy in those kept clean by the life that flows its way. In the scent and coolness of these dim enduring trails one feels again what we owe those whose feet are now set in flaming paths of battle along the Marne.

August 17, 1918

## A LETTER FROM FRANCE

(From Corporal Gertz of the field artillery to his brother in Indiana)

DEAR BROTHER FRANK:

You asked me some time ago to get you small souvenirs from the front, and yesterday I had the opportunity, for in a big air battle I saw a German plane falling to the ground a short distance from us, and I gave chase, and procured the enclosure. You may not know just what part of the machine it was, but it is a part of the rubber tire.

It will talk for itself, as to how the machine was on fire; and I may inform you that the occupants consisted of a captain and his assistant. The captain jumped from the machine, or maybe he fell when it was about a half mile in the air, and the other occupant, was still in the seat when it landed, but had his hand parallel to his forehead, and we are of the opinion that he committed suicide, as his pistol lay in the bottom of the machine. It was all I was able to procure, and I procured it under many difficulties, but as sure as I live, it came from a German airplane which was in battle above our heads, and downed amid flames.

The airplane itself looked as if it was a captured one, as it contained some American mechanism, also some English. The piece of rubber, when I received it, was fresh from the turn, but I suppose, by the time it reaches you, the odor will have evaporated. The tire was of German make, as German reading could be recognized on it. The Allies are sure superior in the air, for they are downing them mighty fast these days, especially the last few days in our neighborhood. Of course I was not allowed to go up to it immediately, as the machine contained bombs and machine gun bullets, also a camera which was not damaged in the least.

I am in the best of health.

Your brother,

LAWRENCE

## Style and Quality and—Economy

In this Maxwell Motor Car you find these three most desirable features combined.

Up to the minute in body design and finish ;—

Mechanically, the product of a great organization of specialists—engineers, metallurgists and production experts ;—

Its economy and its reliability, matters not of mere conjecture, nor of promise, but of officially demonstrated fact ;—

These are the reasons why today more automobiles of this model are in hands of owners than of any other comparable car.

For five years this chassis has been standard.

250,000 discriminating owners proudly drive and enthusiastically endorse your good taste, and your good judgment when you select a Maxwell for yours.

As long as the present price (\$825 f.o.b. factory) obtains, this beautiful, roomy, five-passenger car is wonderful value. Business car or roadster, same price.

In Canada the price for both models is \$1175, f.o.b. Windsor, Ont.

*Your Maxwell distributor will furnish you full A. A. A. Official data on that famous 22,022-mile non-stop test—44 days-and-nights running. The figures for time and distance; miles per hour and miles per gallon of gasoline are all World's Records*

**Maxwell Motor Company, Inc.**

Detroit, Michigan

# "THERE'S HITS IN EVERY BAT"

Continued from page 17

himself. He was such a bad shortstop that Bill Daniels played him only once. But his imitation of how Charlie Chaplin would imitate Douglas Fairbanks was a riot and brought out the crowds.

Bill was satisfied. The Buzzards had started a winning streak and in his heart he believed Arthur Schultz was the cause. In his interviews with the reporters, however, he pointed out the clever feats of quick thinking on his part that so often turned defeat into victory. About the only quick thinking Bill really did was to remember to carry out the game in the ball bag in the eighth inning. He wouldn't trust this important duty to anyone else. Since the fans knew how he felt about it, and realizing themselves that the idea had no little merit—as proved by exhaustive tests—they rather encouraged him and cheered him every time he started out of the lot with the game in the bag. Outside, soldiers and townsfolk welcomed his appearance with the bag and applauded as he ran from the gate across to his hotel, for when he appeared they knew the game was as good as won.

HENRY SCHULTZ sat at his desk, mumbling to himself. It had been a hard summer, a summer that had wrecked his nerves, a summer of disappointment piled upon disappointment. His boy had turned out to be everything Henry Schultz believed to be contemptible. And Henry Schultz blamed no one but himself.

His secretary laid a slip on the desk.

"Show her in," Henry Schultz snapped.

Dorothea Schultz's step was firm when she entered; her eye was steady. There was a flash of admiration in Henry Schultz's eye as he watched her come and take the seat across the desk from him. He had not seen her since the memorable night when he drove her and his boy from his home. Henry Schultz seemed to catch the flash of a thoroughbred in her movements, but his prejudice quickly routed such thoughts and he scowled.

"You sent for me?" Mrs. Arthur Schultz said quietly.

"Yes." He opened a drawer and drew out a large envelope which he emptied. A score or more newspaper clippings fluttered into a pile before him. He tossed the envelope aside and spread out the clippings. "This," he snapped, pounding the flat of his hand upon them, "is the result of your scheming!"

"I presume," the girl answered, leaning forward to look at them, "that they are from the sporting pages, telling of Arthur's work?"

"Work! Bah! His groveling, his clowning, his cheap, low babooning! An ass he is, deliberately, because he can earn money no other way. He is a beggar mimicking idiocy for money!"

"But he's a member of a baseball team. He plays—"

"Plays! Not baseball! Look at these notices! 'Schultz's Hobby Horse Imitation Feature of Buzzard Victory.' Here's another: 'Schultz in Mother Hubbard Pitches in Practice Game.' And this: 'Daniels Says Bonehead Schultz Brings Club Luck.'"

The girl smiled and scanned the clippings. "Have you the half-page article on 'Modern Court Jesters,' comparing Arthur with Touchstone? Oh, yes," she added in response to a snarl, "I see you have. Well?"

"I'm to blame," Henry Schultz admitted. "I know that. I gave him too much money to spend; I never handled him the way boys should be handled. Last winter he seemed to be getting on his feet, though. I figured he was going to turn out all right."

"That was when he met me," she smiled.

"I don't know when he met you. But I do know that you married him and encouraged him to dodge the draft. I thought if I cut off his allowance and made him go to work he'd get some sense into his head."

"Didn't you really think, Mr. Schultz," Dorothea said quietly, "that when you cut off his allowance he would leave me and come back to you?"

"I did," he confessed.

Dorothea let her arms rest on the desk and bent forward. "Mr. Schultz," she began, "how good an American are you?"

"There's another thing," he exploded. "As soon as Arthur married you he began running around with a lot of German swine who would like to have me assassinated because I am giving up every cent and every minute to help the United States win the war."

The girl nodded. "Well," she said, "what do you want me to do?"

"I want you to give my boy back to me. You could have helped him amount to something. Haven't

you any patriotism? You're Irish, aren't you? What are you, one of these anti-English Irishwomen?"

"What do you want me to do?" she repeated.

"I want you to get out of this part of the country. I understand you've been running over to see Arthur every Sunday. Leave him alone. Disappear. How much?"

Dorothea shook her head. "If I left, Arthur would follow me."

"He wouldn't know where you were."

"I'd tell him," she answered firmly. "Look here, Mr. Schultz. Arthur has failed, I admit it. He has failed. He has made great sacrifices—you'll know about them some day—and if you have in you the blood and the heart I think you have, you'll say he has tried to do the right thing. I'm working

finally saw her a few yards down, immediately back of the dugout. She had spied him, and when she caught his eye she smiled and waved a hand. He gave her a surly nod in reply.

He was suddenly startled by a cry for "Schultz! Bonehead Schultz!" There was no response. "Do the Charlie Chaplin!" the crowd cried. Bill Daniels looked toward the dugout and motioned. Arthur evidently made some answer not pleasing to Daniels, for the manager strode over to the bench and dragged Arthur into view. Bill kicked him viciously. Arthur turned a handspring and the crowd roared.

Henry Schultz clenched his fists. He was relieved when Arthur made a bow and hurried back to the bench. Evidently, Henry guessed, Dorothea had told Arthur that his father was to be there.

The crowd didn't need comedy to stimulate its interest after the game began, and Arthur Schultz dropped out of the picture until the Buzzards came to bat in the eighth. It had been a tight fight. In the fourth inning the Rabbits had got a man on third, but he died there. In the sixth Jimmy Morgan, the Buzzard second baseman, had reached third, but was caught at the plate trying to score on a short outfield fly. Those were the only instances in which base runners had passed second.

One run was all either side needed, one run and the pennant was theirs.

Two Buzzards were out and nobody was on base in the eighth when Bull O'Brien, the lumbering catcher, came up and took hold of a fast one and sent it up against the center field fence. It was a home run, by rights, but Bull got only as far as second. But when he reached there he was all tired out.

It would take nothing short of a long two-base hit to score Bull. A single would only put him on third. Thinking quickly, Bill Daniels called Arthur Schultz from the bench. There was one thing Arthur could do—he could run.

"Go out and run for Bull," Daniels said, slapping him on the back. He ordered out his pitcher, who was next at bat, and sent his substitute catcher to the plate. Here was the big game. A single meant the pennant. The crowd was going wild.

Even Henry Schultz sat on the edge of his seat. His son actually was taking a responsible part in a baseball game, out on second base, the man who, if he reached the home plate, would win a pennant.

THE pitcher for the Rabbits showed signs of uneasiness. The catcher and the first baseman went out and held a conference with him and when they returned to their places he took his time, threw—

"Ball one!" said the umpire.

There was another conference, and another ball. Three balls in succession the pitcher threw. It seemed to be all over for the Rabbits. The pitcher rubbed the ball in his glove. Then suddenly Arthur Schultz, who had been dancing around second base, let out a shrill whoop and dashed for third!

The crowd yelled in dismay and then changed to a shriek of delight—for the pitcher had been so astonished that he had thrown wild to third, and the ball went bounding into the stand, leaving Arthur a safe path to the home plate with the winning run. But in a flash the cries were those of terrible anger, for Arthur, yelling frantically "We win! We win!" continued his dash from third base—ignoring the home plate—straight to the dugout, seized the ball bag and fled for the gate in center field.

"The darn fool, he thought third base was the home plate!" somebody next to Henry Schultz yelled.

In a wild, mad mob the fans tumbled down out of the bleachers and sprinted across the diamond after the fugitive Arthur. They had bet all their savings on the Buzzards, and they wanted the lifeblood of the fanatic who had lost his reason and gummed up the game at the moment when victory seemed theirs.

As far as they were concerned, the baseball game, still a tie, was over. They were embarked upon a new game.

"Lynch him!" somebody cried.

Henry Schultz stood on tiptoe, holding his place in spite of men who crowded past him. With great relief he saw Arthur flash through the gate in the center field fence, twenty yards ahead of the nearest wrathful miner.

"He's got two ball bags!" exclaimed one of the few men who had not joined in the chase. "Where'd he get the other one?"

Mr. Schultz said hopelessly that he'd be darned if he knew. He felt a tug at his coat sleeve. He turned. It was Dorothea.

"Come quick," she ordered. "Get your car. This way. Around back."

## WHEN THE DEER COME DOWN TO DRINK

By Arthur Guiterman

*When the deer come down to drink,  
Their antlers shake the dark, wild cherries;  
The moss in which their small hoofs sink  
Is gemmed with scarlet partridge berries.*

*They glide where waves of bracken veil  
Some fallen forest king's disaster,  
Or Indian pipe are clustered pale  
On stems of moonlit alabaster.*

*The bucks with proud heads lead the way  
Through rocky glade and ferny hollow;  
The does, with dappled fawns that play  
As softly as their shadows, follow.*

*Among the oaks a squirrel chirrs;  
A porcupine—the lubbard!—lurches  
With rattling quills among the firs,  
A blue jay scolds among the birches—*

*Then all is still. A furtive mink  
Alone steals up through brush and cumber  
To watch the deer come down to drink  
And feed where water lilies slumber.*

with him; whatever he has done is the result of my influence. That was why I married him, because I knew what I could make of him."

"You admit it!" Schultz stormed. "You made him this contemptible joke of every penny newspaper!" He hammered his fist on his desk.

"Now wait!" There was a tone of command in her voice that Schultz instinctively obeyed. He settled in his chair. "The baseball season ends next Saturday. After Saturday, take him—if you can."

"If I once get a chance to talk to him—"

"Drive over to Meco. I think," she said slowly, "if you see him out on the field doing these things, you'll appreciate him more when the time comes."

WHEN Henry Schultz arrived in Meco in his motor car from El Paso the Buzzards and the Rabbits were on the field, practicing. It seemed as if all Arizona had come over into Mexico to see these nine innings which were to decide which of these two clubs had struggled for a pennant in vain.

Bookmakers were everywhere about the field, silver dollars clinking in the black bags that swung from their shoulders. The tiny rows of shelves, called a grand stand by courtesy, could hold only half of the crowd, but Henry Schultz managed to find a place on the lower row of the third-base bleachers.

To his right, extending back under the stand, was the dugout of the home team. The Rabbits were warming up on the diamond, and the Buzzards were on their bench. He leaned forward, trying to see Arthur, but the sides of the dugout were in his way. In front of the dugout was Bill Daniels watching a couple of his pitchers working out their arms.

Henry Schultz looked around for Dorothea and

YALE

## That "strongest" door in your house—

IT can be the weakest barrier to intrusion. That depends entirely upon the character of its locks and hardware.

The door that is equipped with a Yale lock and Yale hardware at once becomes something more than a means of entrance and exit. It becomes a safeguard for you and your people—a protection to property and life.

Wherever there is a place to be locked, that is the place for "Yale" whether it is a Yale Cylinder Night Latch to reinforce a doubtful door lock already on, or as the only lock; or a sturdy strong Yale Padlock for chests and cellars and other outside doors; or Yale Cabinet Locks for cupboards and drawers; or Yale Builders' Hardware for decoration and security.

And you can buy them all by name—simply be sure the trade-mark "Yale" is on them.

Other Yale products include  
Yale Door Closers, Travel  
Locks, Automobile Locks,  
Bank Locks and Chain Blots.

Canadian Yale & Towne Ltd.  
St. Catharines, Ontario

She led him down to the Buzards' dugout, through a little door and out of the park through a small gate in the fence. From across the line they could hear shouting and shooting.

"How can we save him?" Mr. Schultz exclaimed.

"He'll have to take care of himself," Dorothea said grimly. "Here. This way." They turned around the fence corner.

Standing there was a stocky man with a black mustache, holding tight to a man in baseball uniform.

"All right," said Dorothea to the stocky man. "Mr. Schultz," she smiled, "I want to introduce Mr. Daniels, until recently Arthur's boss."

Mr. Daniels swore loudly and writhed in the clutches of the stocky man.

"You ain't got no right!" Mr. Daniels declared. "This is Mexican soil."

"Quick!" Dorothea commanded. "Mr. Schultz, help. Take him to your car."

Without knowing why he obeyed orders, Mr. Schultz seized one side of the struggling Mr. Daniels. The stocky man took the other side, and they rushed him around to the front of the park where they dumped him into the back of Mr. Schultz's motor car, over which the chauffeur was standing guard. No one else was near except the soldiers. Everybody seemed to be surrounding the hotel over on the other side of the line.

The soldiers came running up. Dorothea ran to meet them. She fumbled at her belt. Something shone in the sun, and the soldiers saluted.

She hurried back. "Arthur's treed in the hotel," she said. "You beat it to El Paso with Daniels. I'll get the soldiers and get Arthur out and we'll come along."

"All right," said the stocky man. "Let's go," he said to Mr. Schultz's chauffeur. And with the protesting Mr. Daniels, still arrayed in his baseball uniform, between them, the stocky man and the bewildered Mr. Schultz sped on toward El Paso.

"YOU see it was this way," Arthur explained to his father late that night as he sat in the Schultz library, with Dorothea curled up on the couch beside him: "Dorothea had been in the Secret Service for a long time, watching telegraph messages. She promised to marry me if I would work for my country—"

"The United States," Mr. Schultz put in.

"The United States," Arthur nodded. "So I joined the Secret Service. They thought I would be valuable working among Germans. When you disowned us, that really was more than we hoped for"—he smiled—"it helped."

"Well, they wanted to get the goods on whoever it was that was carrying money and messages across the line somewhere near Meco. They were suspicious of Bill Daniels. So I volunteered. The only way I could get on his team was by acting a fool—I wasn't a good enough ball player. I wasn't much of a detective either. I couldn't get the goods on him."

"Nobody could," came from Dorothea, in defense. "He was the head of them all; the biggest German spy in the Southwest."

"Anyway, out on second base to-day, I got him," Arthur continued. "I happened to let my eye rest on the ball bag, underneath the bench. I saw that somebody was under the stand, pulling away a board under the bench and beside the bag. Then it came to me how they were getting the stuff back and forth across the line—in the ball bag, changing them when nobody was looking."

"So I forgot all about the ball game, ran in, yelled to Dorothea to get Daniels, and managed to grab both the bags, and I got away."

"And the stuff that was hidden beneath the linings of the bags," she said proudly, "was the greatest haul of German spy stuff they've ever made in this district."

"But it was you who captured Daniels!" Arthur said. "You and dad and the Secret Service man gave him the rush back across the line. It was illegal!"—he grinned—"but you got the reward."

"The reward?" Mr. Schultz asked quietly. "We get the real reward. It's Dorothea."

WHEN El Paso heard about it, El Paso rubbed its chin and said: "Arthur Schultz a hero! Well! Well! As Robert Louis Stevenson says: 'There's good in the worst of us!'"

What El Paso meant was: "There's hits in every bat if you only swing 'em right."

# *The Proof of the Pudding*

---

**T**HE present sensational popularity of Goodyear Pneumatic Cord Tires for Motor Trucks is in vivid contrast to the conditions of their development.

Several years ago, when we first equipped our own trucks with experimental pneumatics, they were a favorite target for ridicule and scorn.

Even in their crude state, however, these pioneer pneumatic truck tires disclosed such important possibilities as to hold us to their improvement and perfection.

The place they now occupy in relation to motor truck efficiency is the best proof that these possibilities have been realized in fact.

Today, Goodyear Cord Tires for Motor Trucks are serving in 250 American cities, with unexampled usefulness, economy and dispatch.

Their advantages in speed, cushioning power and the reduction of truck depreciation have been demonstrated beyond question in actual service.

Their capacity for increasing lubricant

and fuel mileages, for enlarging areas of profitable operation, for affording maximum traction under all conditions, are matters of indisputable record.

In all manner of safe-conduct rapid-transit, in both passenger and freight service, they are establishing new standards of competence and worth.

All the virtues of Goodyear Cord Tires for Motor Trucks that have been evident elsewhere, are spectacularly reaffirmed in our Akron-to-Boston motor transport experience.

Over a 1500-mile circuit, in summer and winter service, our seven-truck fleet is regularly plying on an average round-trip schedule of less than 8 days.

Shod with pneumatic tires, these trucks attain speeds in excess of 30 miles an hour, and even during 20-below-zero January weather they kept going when rail freight was stalled.

Such performance has a meaning for every truck manufacturer and user, so important that it cannot safely be disregarded.

## THE FLYING FISH

Continued from page 13

Morley was a cynic and had little faith in the ability or intention of the habitual criminal to reform. Breen must have kept in touch with his pals of the underworld. Some of them might know something. Morley threw away his cigar and left the Park Row restaurant where he had lunched.

**"HALLOWE'EN JOHN" DRURY** was a philanthropist. His private benefices were many, but inasmuch as they were extremely private, transacted though they might be on crowded street corners, it was to his public philanthropy that he owed his nickname. Once a year, on the last day of October, Drury gave a dinner to whatsoever of the city's forlorn cared to attend. It wasn't much of a dinner, but the down-and-outer is not fussy about quality; quantity is all that interests him. So Halloween John was beloved of the city's submerged, and annually hailed as a rough diamond by the city's press.

But a few, a very few, knew Halloween John for what he really was. They knew that his cheap saloon and restaurant—the same place in which he gave his highly advertised yearly dinner—was a place where a thief might exchange, for one-sixth its value, any article to which he might not be able to show a clear title. And these few knew that when a thief was highly desired by the police, Halloween John was not above giving information to the police.

But in the meantime he served his purpose. Morley had no scruples about using the man, despise him though he might. He entered his shabby place now.

"And how's the 'Planet' standing now, Mister Morley?" inquired Halloween John. He waved aside the reporter's proffered money. "This wan's on the house. Here's a go."

Morley sipped the flat beer. "The 'Planet' stands where it has always stood, John," he replied: "on the firm foundations of truth, honor, and—the news."

"And it's the last brings you to me, I'll wager," said Halloween John.

"Oh, I wouldn't say that, John," remonstrated Morley. "You know, you're the most interesting scoundrel I know. It's instructive to drop in here, to marvel at you, to wonder how you get away with it. If these poor tramps hanging around here knew—"

"You needn't be after tellin' them," growled Halloween John.

"I won't," promised Morley. "But I wanted to ask you about—"

"Nawthin' doin'," declared Halloween John. "I ain't had a regular 'gun' in here in six months. Nawthin' but petty-larceny birds, and—"

"Don't squeal till you're hurt," advised Morley. "Listen. You read the papers this morning? Yes? This man Breen—the one killed in Farley Endicott's apartment? Know nothing about him?"

"Beyant what the papers printed—he had a record, didn't he?"

"But not recent. Know anything about him?"

"Not a thing," avowed Halloween John.

"Sorry. I'd hoped you could give me a line on him. It's a good story."

"It is that," agreed Halloween John. "Have another drink, Mister Morley?"

Patently, Halloween John wished to change the subject. Morley shrugged his shoulders.

"Why doesn't Flynn want me to get anything from you?" he asked.

"Flynn? Sure, Mister Morley. I ain't seen the lieutenant, if it's him you mean, in months."

"Oh, well, any of his men, then. What's the idea? But it doesn't matter." He sipped the second glass that

Drury had set before him. He put the glass down and turned away. "Oh," he said over his shoulder, "I was up at Sing Sing last week. Did you know that Izzy Paralti gets out next month? Fact. Fourteen months off for good behavior. Izzy must have been mighty anxious to get out to behave as well as that. Told me that he'd been railroaded. If Izzy ever finds out who tipped the police off— Well, so long, John."

The saloon keeper walked along the bar, keeping pace with Morley. "For God's sake, Mister Morley, where do you get your dope? Flynn himself swore he'd never let a word be known."

"Flynn didn't give you away, John. I have a way of putting things together. But I never talk much. Sure you don't know a thing about Breen? Or has Flynn forbidden you?"

"Flynn nor any of his men ain't been near me. Why should they?" There was no customer in his

dress soon, even if, indeed, they had not already paid the place a visit. But, to find it out, he had not been compelled to promise further information to Flynn. As a matter of fact, it might very well be that the police had not yet discovered Breen's address. It might be that Halloween John was the only person who knew it, and that Flynn would not think of consulting Drury in the matter. For Drury was not the source of all knowledge. It was only a happy accident that had led Morley to the saloon keeper. The police might exhaust every other available source of

"Nix, mister," grinned the woman, "you don't softsoap me that way. And that boy is the livin' image of his father, and his father's a good man, but he never won no beauty prize. I guess you're a newspaper man, ain't you?"

Morley grinned. He had an infectious grin. He was not handsome, and in repose his face was too severe to be even good-looking. But when he smiled women and children liked him at once. "I hope I am," he laughed. "Got anything against newspaper men?"

"Not a thing, mister, but my husband said some of you gentlemen would probably be around, and for me not to forget that the price of meat goes up every day."

Morley's face sobered. "It certainly does, Mrs.—"

"Garley," she supplied for him.

"And if the 'Planet' could do anything to relieve the strain for the Garley family—"

"Honest to gracious, mister, you ain't got an idea what it costs to feed a man and three children. It's sumpum terrible."

"I believe you," said Morley.

"And if I should tell you what I knew, mister?"

She paused and looked at the newspaper man. Morley drew a bill from his pocket. Her glance shifted to the bill. She shook her head. Morley put the bill back into his pocket.

"Lemme have it, mister," she said hastily. "I'll tell you what I know, though it ain't so much at that. But Tom, that's my husband, he's night watchman in a factory downtown, and when he gets home mornin's there's usually sumpum to do

information before turning to Halloween John. Morley certainly hoped so.

A random shot fired in the dark! Morley had paid a visit to Sing Sing last week, and he had talked with Izzy Paralti; but Izzy had been rendered meek and mild by his confinement in Sing Sing, and had shown no dis-

position to wreak vengeance on whoever was responsible for his capture by the police. It merely happened that Morley had had, months before, a confidential chat with Isaac of the district attorney's office, and so knew that Halloween John Drury had furnished, or caused to be furnished, the evidence on the strength of which Izzy had gone to jail.

But Drury's expression had been too innocent when Breen's name was mentioned, and—Morley had Breen's address. That Halloween John had told the truth as to his knowledge of the dead convict, Morley did not believe for a moment. The saloon keeper had been too frightened, even for him, coward that he was. But there is such a thing as pushing a man against the wall. Halloween John could be visited again, later. Meantime—

THE same woman who had observed Leila Kildare visit Breen yesterday was hovering in her open doorway.

"You goin' to Mr. Breen's?" she asked. Morley paused. "I hoped to have a look at his place. Have you the key?"

"Yes, I got the key all right. Me and my husband look after the house for the owner, but there ain't anyone going to get in there, mister, except the police."

"Have the police been here?" asked Morley.

"They ain't been here yet, mister, but they will as soon as my husband gets downtown."

"Then you read the papers this morning, eh? Is that your son? What a handsome boy he is!"

"A girl gave me twenty yesterday for the address"

place just now, but Drury looked startled about him. He leaned across the bar.

"The God's truth, Mister Morley, is this: Breen was in here last week. He tells me that he has a scheme up his sleeve, that there's money in it, and—well, I let him have a few dollars to tide himself over."

"And the scheme?"

But Halloween John knew nothing of that—at least so he vowed and protested to Morley.

"But you know his address? No? All right, John, Paralti is very anxious—"

"Sure, I know his address, then. But you won't mention me to a living soul?"

Morley eyed the man curiously. "What's on your nerves, John? The killing of a broken-down ex-convict—where do you come in?"

"He was killed, wasn't he?" demanded Drury. "Killed dead as Judas, wasn't he? And this Endicott, whose place he was found in—he's dead, ain't he? And the nigger—he's dyin', eh? That's what's on my nerves. Them killin's."

Morley straightened out his sneer. He did not like treacherous cowards, and Halloween John was a treacherous coward. "Any idea who did it?"

"God forbid," said Halloween John.

#### Chapter XIV: A Road of Mystery

MORLEY, as he swung off a Third Avenue car, was well pleased with himself. There was no doubt, of course, that the police would know Breen's ad-

round this place, and he's half dead with sleep when he does turn in, and never notices the papers much, and I'm so busy with the children— Well, anyway, we didn't see a paper till just half an hour ago, and we read about this murder on University Place, and—leastwise, I read about it, and I wakes Tom up, and I says to him: 'I'll bet it's the Mr. Breen that lived upstairs,' and after he reads it he says he wouldn't wonder if I'm right, and I tell him to go downtown, and he says that he guessed he'd better, and that maybe some newspaper men would come along, and if they did there wouldn't be no harm in showin' them Breen's rooms, and then I tells him about the girl that calls here yesterday, dressed just like the paper says the lady what telephoned the police was dressed like, and Tom says that's sumpum would interest the papers, and he guessed he'd telephone them first, and I says he'd better not. Because, mister, the bulls might get sore, but if a newspaper man should come here and pretend like he was a detective, and I let him in, thinkin' he was one, the bulls couldn't blame me, and— But it'll cost another ten to get in Breen's room, mister."

Morley's hand was in his pocket immediately. At the outside he had only a few minutes before the police arrived, and there might be some clue in Breen's room that would give the 'Planet' the glory of solving the Endicott mystery.

On the way upstairs he questioned the woman as to the habits and friends of Breen. But beyond the fact that somehow or other, though apparently he did not work, the man managed to pay his rent, Mrs. Garley knew nothing of her erstwhile lodger. Nor could she tell more of the woman visitor than had the drug clerk who had watched her telephone Police Headquarters.

And Morley did not dare search the box that was in one corner of the room. To do so would lay himself open to charges by the police. How Flynn would enjoy putting something over on the sleuth of the "Planet!"

The room was practically bare. Poverty was written in its bareness. And yet the dead (Continued on page 24)

# Clicquot Club

## GINGER ALE

Just off the ice—eager to get at thirst. Who is the thirsty one? Let Clicquot Club show you how delightful a genuine ginger drink can be. Not merely relieves the thirst—it satisfies. Serve at mealtime, after theatre, at bedtime—any time when thirst bobs up in your throat. Clicquot Club Ginger Ale is made of purest cane sugar, juices of lemons and limes, Jamaica ginger and crystal-clear spring water. Safe and healthful for old and young. Buy by the case from your grocer or druggist, and keep a few bottles on ice.

# HEINZ Vinegars

57

**G**OOD vinegar makes a relish, sauce, or salad dressing taste better—and rarely gets the full credit it deserves. Poor vinegar often spoils the flavor—and rarely catches the blame. The difference in cost between the best and the cheapest is nothing compared to the wide difference in flavor.

We know from our own experience how much depends on the goodness of vinegar. For the delicious 57 we must have the best vinegars that can possibly be made.

So, we make them ourselves.

Into Heinz Vinegars go only the finest materials—clean, pure and wholesome. Into their making go the utmost skill and care—characteristic of Heinz methods.

Then Nature is put to work to add the necessary touch of perfection. Heinz Vinegars are aged in wood. Month after month they slowly mature and mellow until, more than a year old, they have an aroma and an exquisite delicacy and flavor that delights the most critical.

First we made the vinegars we need for Heinz condiments, pickles and foods. Now we offer them to those housewives who also want the best. Heinz Vinegars in sealed glass packages have become leaders among the 57 Varieties.

## Malt, Cider and White

## Uncle Sam—Employment Agent

*Continued from page 2*

work in another, for all employers are or will be forbidden to take on labor directly. He will have to go to the local representative of the Government Employment Service, and he will undoubtedly be asked to give good reasons why he left his previous employer. In England they tried to handle this by statute. The worker had to get a "leaving certificate" certifying that he had left with the consent of his employer, or a certificate from a local Government board that this consent was unreasonably withheld. But this was found to be too much in the nature of coercion, and the statute was repealed.

In not only this respect, but in all respects, our Government has profited by the experience of England. The chairman of our War Labor Policy Board was sent to England by President Wilson to study the English system before our system was put into effect.

### The "Clean Sheet" Days

**W**HAT has been described here is by no means the whole of the Government's machinery for dealing with labor during the war. There is space merely to mention the body which has been set up to deal with strikes. The one observation that can be made on this phase is that with us labor is more steadily at work and more contented than in any other of the nations at war. You read in the newspapers on occasional days of strikes here and there of a few hundred or a few thousand men. But by an ancient law of what constitutes news, you never read of the very many days which are marked by a clean sheet on the bulletins of the Taft-Walsh

Board, days when, throughout the length and breadth of this land, forty million workers toiled steadily from morning till night turning out the instruments for overcoming the Kaiser and keeping our whole economic machine under full head, with never a strike.

### On or Off the Job

**A**S to all the problems of society after the war, it seems to me a clue to the answer is to be found in some placards which the Department of Labor has issued to be hung in shops and factories. One series reads:

"After this war, only those who have helped win it will amount to anything."

"Since the beginning of the world, classes and peoples have won power as they have proved themselves to be necessary for the defense of the State."

Now ask yourself what class, after the war is over, will be looked upon as having in the greatest degree "helped win it"? What class will have most "proved themselves to be necessary for the defense of the state"?

Somebody who cares to do any figuring about politics and society in the United States after the war is over must take as the central, dominating factor the five million men who will have fought in France. Those men will compose by far the largest single group in our twenty or thirty million voters. It will be neither surprising nor unreasonable if their thought should be something like this:

"I saved this country and I want my piece of it; I fought for this country and we propose to have a good deal to say about running it."

## The Flying Fish

*Continued from page 22*

occupant of the room was involved with Farley Endicott, millionaire, in matters that—Morley shook his head. He must go back to Hallowe'en John and try to learn more of Breen. For the woman protested that she knew absolutely nothing of Breen.

Yet, as Morley started to leave, the woman remembered one more thing.

"Besides this girl, there was another visitor to Mr. Breen."

"Yes?" Morley encouraged her.

"Just after she left with Mr. Breen a swell man come up and knocked on my door. He wanted to know where Mr. Breen was, and I told him he'd had a lady call on him. He seemed pretty much upset about it."

"Describe him," said Morley.

"Well, he was slick-lookin' and wore good clothes—kinda sporty clothes. His coat was belted in, and his mustache was waxed. He looked kinda like a dago, but I wouldn't be sure of that."

"And that's all you can tell me? There's another twenty in it for you, Mrs. Garley."

**T**HE woman passed her hand across her forehead. Patently she was honest and was thinking hard.

"No other visitors? No friends? Nothing at all?"

"Well, he was a little behindhand with his rent a week ago, and I told him that he'd have to kick in, the landlord bein' hard as a rock, you know. And he promised it to me the next day, and I said that promises didn't help the landlord, and where would he get it, and he said I'd be surprised if I knew what swell friends he had. He said he had a friend stopping at the swellest private hotel in New York, whatever he meant by a private hotel, and that he'd get the money for me to-morrow. Well, he done it, and when I asked him did his swell rich friend give it to him, he looked kinda black and said no. And that's all, mister. Do I get the twenty?"

Morley paid her. It was not much that she told him, but, according to servants at the Wanderers' Club—so said the early editions of the afternoon papers—Mr. Endicott had been stopping at the Hotel Birmingham while his apartment was being made ready for him.

Morley hesitated. Keeping information from the police was not exactly within the scope of a reporter's duties. He wanted to seal the lips of Mrs. Garley with regard to this last bit of information, but—While, for another bill, she would probably promise to keep quiet, there was such a thing as

noblesse oblige. Flynn would not hesitate to play a shabby trick upon him; but, after all, Flynn served the public more directly than did the press. Flynn had a right to information, and Morley had no right to keep it from him.

So Morley left the building. From a near-by cigar store he telephoned his office.

"Just to let you know, boss," he told his city editor, "that I've been on the job since dewy dawn. I wonder if you hounds on the desk appreciate the work that a faithful slave like myself performs every day? It's a hard life, boss, and—"

Hanly, city editor of the "Planet," knew his Morley.

"How much have you had to spend for information, Rod? Why the camouflage?"

"Well, I've run up a nice little expense bill, at that, boss," chuckled Morley, "but when I'm exchanging the time of day, why jump on me with petty financial matters?"

"Because there's an auditor downstairs who demands results for expenditures," said Hanly. "And I don't want a million dollars spent unless the yarn's worth it."

"It is," said Morley without hesitation.

"Then the 'Planet's' bank roll is behind you. What have you got?"

"Oh, not so very much, but light may break by and by."

"Well, I've something that may help you. The Art Photo Company, on Thirty-first Street, telephoned in—at least its proprietor did. I've been trying to get you ever since. Says, he thinks, from the description in the papers, and the name, that he has some dope on this Breen person. I've been trying to get you at your house, but nothing doing."

"Dewy dawn was right, boss," said Morley. "Slept in Greenwich. Wanted to take a look at Endicott's body."

"Well?"

"It wasn't Endicott."

"Police know?"

"Had to tell them. They'd have found it out by now, anyway. Somebody would have happened along—probably some friend of Endicott's has been there already. Anyway—looks like a yarn, eh?"

"Rather," agreed the city editor. "And I got the Art Photo man to promise to keep his story until I got a man up to him. Was just going to send some one else. Go to it!"

He rang off abruptly. The Endicott mystery was a big yarn, a mighty big yarn, but there were other stories to be printed in the morning "Planet."

## How Many Tires Does *Your* Car Need To Go 10,000 Miles?

The above question is of direct interest to you. It makes no difference whether you are concerned about motoring economy for personal reasons, or simply as a principle of national conservation.

The average car (on the right) either heavy, or rigidly-built, or both—to go 10,000 miles, needs an extra set of tires, or eight tires in all.

The Franklin Car (on the left) to go the same distance—and further—needs only the four tires on the car, or half as many as the other.

There could be no clearer illustration of the timely economy of the Franklin Car; nor a more direct indictment of *unnecessary* motor car weight.

For it is excess weight that prevents the average heavy and rigid car from equaling the publicly-known Franklin tire-mileage. The action of the weight of an automobile on the tires is similar to a hammer blow—and the heavier the hammer, the harder and more destructive the blow. Heavy weight pounds out tires prematurely. And the heavy car owner, accustomed to paying for tire-mileage he doesn't get, accepts this as a matter of course—until he meets a Franklin owner.

For Franklin owners get a consistent delivery of 10,000 miles or more to the set of tires.

The reason lies in Scientific Light Weight and Flexible Construction. The Franklin weighs 2445 pounds—the right weight for a full-size five-passenger car. It also carries the minimum *unsprung* weight—weight *below* the springs, that contributes to the pound and shock tires must meet.

Franklin Flexible Construction—full elliptic springs, instead of the usual compromise type; chassis frame of tough, resilient ash instead of unyielding steel—is still another reason why tires on the Franklin get every opportunity to deliver the full mileage that is in them. This flexible construction reduces road shocks on the tires. There are no torque bars or strut rods to cause the rigidity that leaves tires unprotected.

These are facts of Franklin Construction that affect the whole performance of the car. Because of Scientific Light Weight, because of Flexible Construction, the Franklin is not only economical in tires, but it also gives a day-by-day delivery to its owners of 20 miles to the gallon of gasoline—instead of 10.

Think of these things—and decide whether any car that combines fineness with motoring economy such as this, is not worth your immediate inspection; especially in these days when waste in motoring is not going to be considered any more legitimate than waste in anything else.

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N. Y.

# PAIN

With the increasing need for the conservation of property, painting has changed from a mere luxury to a vital necessity.

Only paint that protects can serve this necessary purpose and the country's leading paint manufacturers and master painters agree that zinc paint offers the greatest durability.

For years The New Jersey Zinc Company has not only supplied all paint makers with a high-grade, unvarying quality of zinc, but has also performed a similar service for the manufacturers of rubber, brass, galvanized iron products, dye stuffs, and scores of other industries. It owns and operates its own mines, crushers and smelters. Its products and processes are the result of nearly 70 years of development.

THE NEW JERSEY ZINC COMPANY

55 Wall Street, New York

ESTABLISHED 1848

CHICAGO: Mineral Point Zinc Company, 1111 Marquette Building

Manufacturers of Zinc Oxide, Spelter, Spiegeleisen, Lithopone,  
Sulphuric Acid, Rolled Zinc Strips and Plates,  
Zinc Dust and Zinc Chloride

The world's standard for Zinc products

The proprietor of the Art Photo Company got down to business immediately Morley had introduced himself.

"Listen, friend," he said. "I used to work on a newspaper. Staff photographer. I know what photos, in a big story, are worth. And I know what inside stuff is worth too. Now, I got a picture, and I got some dope that can be printed. How do we dicker?"

"Exclusive stuff?" demanded Morley. "I know what paper pays the most. You work for it," replied the photographer tersely.

"Police?"

"I don't have to go to them. If they come to me— But you won't send them."

"Hardly," said Morley. "How much?"

"Well, a girl gave me twenty yesterday for the address of this man Breen. A hundred?"

"If I use anything you tell me—a hundred," agreed Morley.

"Fair enough. You'll use it all right. Listen!"

Morley listened. The girl who had telephoned Headquarters was, without the faintest doubt, the same girl who had visited Breen and taken him away from his lodging house, and that same girl had obtained Breen's address from this photographer. And the photograph itself, that Breen had had copied—Morley understood at once. Blackmail. It was

quite obvious. Afraid to send the original. Breen had had copies made. And some one else beside the girl in the case had known of the copies. A man had called and also obtained Breen's address; the same man, according to the photographer's description, that had called, too late, on Breen.

It was not hard to reconstruct part of the mystery. The photographer, in anticipation of this visit from a "Planet" man, had struck off a copy of the photograph. Morley studied it.

"Pretty old picture—the original?"

"Twenty years or so, I should judge," said the photographer.

BREEN was an ex-convict. This man in the photograph had been an old pal of Breen's. Or an old enemy. It didn't matter. What did matter was that Breen had had copies made. And certainly he had had them made to threaten the original of the picture.

He had mailed a copy of the photograph. Otherwise the original would have not been so hard pressed to find Breen's address. For surely either the girl or the man who had later called at Breen's address had been the emissary of the original of this photograph. Perhaps both of them had come from the threatened man? But that didn't seem quite reasonable. The girl had called on Breen, lured him to his death. But he must not lose sight of the fact that it was the girl who had telephoned Police Headquarters. Still, she might have lost her nerve afterward. In that case, what about the man who had obtained Breen's address? And why was Farley Endicott involved?

Morley was compelled to confess to himself, as he left the photographer's, that he had not gone very far on the road to solution of the mystery. If the mysterious man who had followed the girl to Breen's had in any way answered to the description of Endicott, there would be some sense in the jumble, but that man could not possibly be Endicott. He differed too greatly from the ex-fyer in the Lafayette Escadrille.

It was, without doubt, the most highly involved affair that had ever come to his attention. And, therefore, Morley was quite merry as he walked toward the Hotel Birmingham, the photograph of the convict carefully stowed away in a pocket. He even whistled. Newspaper work wasn't so bad when a chap had something like this to exercise his brain over.

But it would be more cheerful, he admitted, if there were something definite into which a fellow could set his teeth. "A swell, rich friend at the swellest private hotel in the city." That was the individual from whom Breen expected to obtain money, but from whom he had not obtained it.

Endicott had been stopping at the

Birmingham. That was different from the ordinary hotel in that it was more or less of a family hotel; exclusive too. It would correspond to Breen's description of the stopping place of his "swell, rich friend." Suppose Breen had been trying to blackmail young Endicott? Absurd, but—the photograph, the original photograph of the man in convict garb, had been taken some score of years ago. Endicott was a chap filled with proper pride. If his father— No, Endicott's father's history was too well known. But an uncle, say? Suppose that Endicott had had an uncle who had served a prison term? Might not Breen think that Endicott would gladly pay for the suppression of such news? And Endicott might have employed the girl to lure Breen to his apartment. But it didn't go down with Morley, his own reasoning though it was.

He was a stubborn chap, was Morley, quite certain of his own opinions. He had interviewed Endicott, sized him up, and nothing in the world would convince the newspaper man that Endicott was the sort of chap who would submit to blackmail. Besides, Endicott wouldn't send two persons on the same errand, and—

But he was at the Birmingham now. The head clerk knew him—there was hardly a hotel man in the city who did

not know Morley—and greeted him with a bantering smile.

"The Endicott mystery, eh? You're late, Mr. Morley. The police have come and gone, and all the other newspaper men. But there isn't a thing to tell you except that Mr. Endicott left here day before yesterday and that we have read of his unfortunate death last night."

"Uh-huh," said Morley. "Took his baggage with him, eh?"

"Why, yes," said the clerk. His eyebrows lifted.

"You've read the papers, you say. The man Breen—did he ever call upon Endicott?"

"Not to my knowledge," asserted the clerk.

Morley wheeled away. The solution to the puzzle, the putting together, even, of bits of it, was not to be done here. Then, on an impulse, he turned. "A swell, rich friend," the woman, Mrs. Garley, had said.

"Ever see anyone who looked like this?" he asked the clerk.

The man stared at the photograph. He shook his head.

"The Birmingham doesn't cater to convicts, Mr. Morley."

Stumped again! Still there remained Hallowe'en John Drury.

But that worthy benefactor of his fellow men did not recognize the photograph. At least, if he lied, Morley could not be certain that he lied. Even the threat of Izzy Paralt failed to wring from Hallowe'en John admission of recognition.

"Sure, I dunno every gun in the game. Mister Morley," he protested. "And this is a copy of an old photo, you say? Maybe this gun was a headliner when I was in me swaddlin' clothes."

"And you don't know that he's the man that Breen was blackmailing?"

"Sure, I've told ye I know nuthin' about Breen and his schemes. That's the last word out of me, Mister Morley, because it's the truth."

WELL, even though he had arrived at no solution, he had a mighty interesting yarn to write for the readers of the "Planet." And it would be a long story. He stopped at a telephone long enough to be assured by Lieutenant Flynn that Fabian's condition was still such as to render it dangerous for him to receive interviewers. And Morley knew that, tricky though Flynn might be, he would still keep his pledged word. There was no new angle to be "covered" to-night. He headed for the office.

He had written about half a column when an office boy came to him.

"Guy outside has some sort of tip on the Endicott story, Mr. Morley. Mr. Hanly says for you to see him."

It was Raoul, head waiter at the Birmingham.

(To be continued next week)

## Keep Him Smiling

Every housewife should consider the daily need of bran.

It is Nature's laxative.

Pettijohn's conceals that bran in a delightful dish, and makes it always welcome.

It saves dull days, breeds smiles, brings fitness. It cures drug-taking habits. You will never go without it if you try it for one week.

### Pettijohn's

A Flaked Cereal Dainty

80% Wheat Product including the Bran—20% Oats

A breakfast dainty whose Bakery makes 20 per cent unground bran

Pettijohn's Flour—75 per cent Government Standard Flour with 25 per cent bran flakes

Use like Graham flour in any recipe

Both sold in packages only.

## Three of Them

Continued from page 6

lay. A little heap of gray-black cigarette stubs. The window curtain awry where she had stood there during a feverish moment of the sleepless night, looking down upon the lights of Grant Park and the somber black void beyond, that was Lake Michigan. A tiny satin bedroom slipper on a chair; its mate, sole up, peeping out from under the bed. A pair of satin slippers alone, distributed thus, would make a nun's cell look respectable.

Over all this disorder the ceiling lights, the wall lights, and the light from two rosy lamps, beat mercilessly down upon the woman in the bed.

SHE stared, hollow-eyed, at Martha Foote. Martha Foote, in the doorway, gazed serenely back upon her. And Geisha McCoy's quick intelligence and drama sense responded to the picture of this calm and capable figure in the midst of the feverish, overlighted, overheated room. In that moment the nervous pucker between her eyes ironed out ever so little, and something resembling a wan smile crept into her face. And what she said was: "I wouldn't have believed it."

"Believed what?" inquired Martha Foote pleasantly.

"That there was anybody left in the world who could look like that in a white shirt waist at 6.30 a. m. Is that all your own hair?"

"Strictly."

"Some people have all the luck," sighed Geisha McCoy, and dropped listlessly back on her pillows. Martha Foote came forward into the room. At that instant the woman in the bed sat up again, tense, every nerve strained in an attitude of listening. The mulatto girl had come swiftly to the foot of the bed and was clutching the foot-board, her knuckles showing white.

"Listen!" A hissing whisper from the haggard woman in the bed. "What's that?"

"Wha' dat!" breathed the colored girl, all her elegance gone, her every look and motion a hundred-year throw-back to her voodoo-haunted ancestors.

The three women remained rigid, listening. From the wall somewhere behind the bed came a low, weird monotonous sound, half wail, half creaking moan like a banshee with a cold. A clanking, then, as of chains. A s-s-swish. Then three dull raps, seemingly from within the very wall itself.

The colored girl was trembling. Her lips were moving, soundlessly. But Geisha McCoy's emotion was made of different stuff.

"Now, look here," she said desperately. "I don't mind a sleepless night. I'm used to 'em. But usually I can drop off at five, for a little while. And that's been going on—well, I don't know how long. It's driving me crazy. Blanche, you fool, stop that hand-wringing! I tell you there's no such thing as ghosts. Now, you—she turned to Martha Foote again—"you tell me, for God's sake, what is that?"

And into Martha Foote's face there came such a look of mingled compassion and mirth as to bring a quick flame of fury into Geisha McCoy's eyes.

"Look here, you may think it's funny, but—"

"I don't. I don't. Wait a minute." Martha Foote turned and was gone. An instant later the weird sounds ceased. The two women in the room looked toward the door expectantly. And through it presently came Martha Foote, smiling. She turned and beckoned to some one without. "Come on," she said. "Come on." She put out a hand encouragingly and brought forward the shrinking, cowering, timorous figure of Anna Czarnik, scrubwoman on the sixth floor. She was the scrubwoman you've seen in every hotel from San Francisco to Seattle: A shapeless, moist, blue calico mass; her shoes turned up ludicrously at the toes, as are the shoes of one who crawls her way backward, crablike, on hands and knees. Her hands were the shriveled, unlovely members that bespeak long and daily immersion in dirty water. But even had these invariable marks of her trade been lacking, you could not have failed to recognize her type by the large and glittering mock-diamond comb which failed to catch up her dank and stringy hair in the back.

One kindly hand on the woman's arm, Martha Foote performed the introduction. "This is Mrs. Anna Czarnik, late of Poland. Widowed. Likewise childless.

## Cashing In On Increased Production

When the machinist and the foreman get together on production there are no regrets either from the standpoint of wage or output where Robbins & Myers Motors are the driving force behind both.

The work ticket tells its own story of the efficiency of the operating equipment. And the foreman well knows that equipment efficiency reflects itself in the attitude of the front office.

The R&M advantage is fourfold: to the workman, the house, the product, the customer. Each cashes in on production.

For twenty-one years Robbins & Myers have been making quality motors for the store, office, home and factory. They range from 1-40 to 30 horsepower. Whatever the motor need in these sizes, there is just the R&M Motor that meets it.

The line also includes specially built motors for electrically-driven devices such as vacuum cleaners, addressing machines, coffee grinders, washing machines, etc. A big demand for R&M Motors is met among builders of the better electrically-driven equipment. These concerns know

the advantage of matching a quality device with dependable operating equipment.

Thus, to be Robbins & Myers equipped has come to be a sure sign of unusual worthiness throughout. People seeking the utmost for their money look for this mark of value.

Power users interested in better motors—whether for the one-man shop or large factory—will do well to investigate the R&M line, the line that enables them to cash in on production through uninterrupted motor performance and low cost of maintenance.

Electrical device manufacturers find that Robbins & Myers Motors insure an operating efficiency in keeping with their own manufacturing ideals.

Dealers find R&M Motors and R&M Motor-equipped devices attractive to handle, from all standpoints of quality, demand, and the whole-hearted co-operation given at all times.

know everything that concerns the comfort of the guests in this hotel."

"Including hysterics in Six-Eighteen?"

"Including. And that reminds me. Up on the twelfth floor of this hotel there's a big, old-fashioned bedroom. In a half hour I can have that room made up with the softest linen sheets, and the curtains pulled down, and not a sound. That room's so restful it would put old insomnia himself to sleep. Will you let me tuck you away in it?"

Geisha McCoy slid down among her rumpled covers, and nestled her head in the lumpy, tortured pillows. "Me! I'm going to stay right here."

"But this room's—why, it's as stale as a Pullman sleeper."

"I'm used to it. I've got to have a room mussed up, to feel at home in it. Thanks just the same."

Martha Foote rose. "I'm sorry. I just thought if I could help—"

Geisha McCoy leaned forward with one of her quick movements and caught Martha Foote's hand in both her own. "You have! And I don't mean to be rude when I tell you I haven't felt so much like sleeping in weeks. Just turn out those lights, will you? And sort of tiptoe out, to give the effect." Then, as Martha Foote reached the door: "And, oh, say! D'you think she'd sell me those shoes?"

MARTHA FOOTE didn't get her dinner that night until almost eight, what with one thing and another. Still, as days go, it wasn't so bad as Monday. She and Irish Nellie, who had come in to turn down her bed, agreed on that. The Senate Hotel housekeeper was having her dinner in her room. Tony, the waiter, had just brought it on, and had set it out for her, a gleaming island of white linen, and dome-shaped metal tops. Irish Nellie, a privileged person always, waxed conversational as she folded back the bedcovers.

"Six-Eighteen kinda ca'med down, didn't she? High toime, the divil. She had us jumpin' yist'iddy. Some folks ain't got no feelin', I dunno."

Martha Foote unfolded her napkin with a little tired gesture. "You can't always judge, Nellie. That woman's got a son who has gone to war, and she couldn't see her way clear to living without him. She's better now. I talked to her this evening at six. She said she had a fine afternoon."

"Shure, she ain't the only wan. An' what do you be hearin' from your boy, Mis' Phut, that's in France?"

"He's well, and happy. His arm's all healed, and he says he'll be driving his ambulance again by the time I get his letter."

"Humph," said Irish Nellie, and prepared to leave. She cast an inquisitive eye over the little table as she made for the door—inquisitive but kindly. Her wide Irish nostrils sniffed a familiar smell. "Well, for th' land, Mis' Phut! If I was housekeeper here, an' cud have hothouse strawberries, an' swatebreads under glass, an' sparrowgrass, an' chicken, an' ice crame, the way you can, whinver yuh loike, I wouldn't be a-eat-in' cornbeef an' cabbage. Not me."

"Oh, yes, you would, Nellie," replied Martha Foote quietly, and spooned up the thin amber gravy. "Oh, yes, you would."

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

## How Package Goods Fit Into the "Work or Fight" Order

**I**N peace times a man may be justified in choosing his work where the hours are shortest and the labor lightest—but now he must give his energies where they'll fit in the best and accomplish the most.

The Government has not issued its famous "work or fight" order, however, because it does not believe that, within reason, a man's time is his own to save or squander as he will. The order was issued because a man cannot do this just now because of the acute shortage of man power. A man of military age has no right to waste his time in New York—when in a munition plant across the East River there's a vacancy existing in the ranks of the war workers.

The occupations of men and the essentiality of industries are under close scrutiny in these days of America's fight for world liberty.

\* \* \* \*

And now it may seem a long jump to you, but let's apply the "work or fight" order to certain things which are a part of our daily lives.

Every day you eat something that you buy packed in a box—oatmeal, crackers, sugar, tea, coffee.

How does the magnifying glass of war's needs show up the essentiality of these packages? Wouldn't it be better if these goods were sold "loose" and the time and labor spent in packing them applied to more useful purposes?

There's been a lot of porous thinking along these lines; hence this little talk to explain why every housewife can continue buying package goods with an easy conscience and an untroubled brow.

\* \* \* \*

Just around the corner from us is the huge red-and-white building of the National Biscuit Company. In order

to get the real facts about package goods we hurried around there the other morning with our little notebook.

It was not long before we discovered that we had come to the right place. It seems that the National Biscuit Company was one of the pioneers, if not the pioneer, in putting up package goods.

Biscuits were known to the Egyptians, the Assyrians, the Babylonians

edible condition as long as it remains in the package."

"Still," we persisted, "wouldn't there be a considerable labor saving if that packing were done away with?"

The man interviewed smiled as he took out a pencil and jabbed a few notes on a pad. "You'll grant that such products as crackers have to be packed some time," he said. "If they're not packed by us they're packed in the grocery store. Well, listen: Our packing machines, attended by one girl, pack about ten thousand packages a day. A grocer's clerk working at top speed couldn't accomplish more than fifteen hundred packages a day. In other words, the machine and the girl release the labor of approximately seven men. These men, if you wish, can be employed more productively molding bullets in Bridgeport or firing them in France."

So there you have it! In two vital ways, package goods answer war's demands. They help eliminate waste. They help conserve labor.

The full importance of this, however, is not realized until you multiply it by tens of thousands of packages; until you consider everything sold in packages, oatmeal, tea, sugar, and a hundred other products besides crackers.

It is advertising which has created the national demand for package goods so that the housewife in Portland, Oregon, buys exactly the same packages as the housewife in Portland, Maine.

And we want to close with this thought: If the man or woman in Vladivostok bought the same packages and brands as the man or woman in Petrograd; if the same machinery for the distribution of intelligence and of goods had been built up in Russia, as it now exists in America, that unhappy country would not be in the state of disintegration it is today.

*This photograph, loaned by the National Biscuit Co., shows how the modern food-packing factory conserves man power by the use of machinery and girls. Up the incline on the left travel 20,000 packages a day; later they are packed by another machine and girl at the rate of 10,000 a day.*

and the rest of those ancient peoples who were old when the world was young. Or, as the gentleman whom we interviewed put it, "Biscuits have been known for 6,000 years, but not until after 5980 of those years had passed were they put up in packages."

But we hadn't gone around there to dig into ancient history. On the contrary, we wanted modern facts.

"Don't bulk goods cost less than package goods?" we asked.

"When you take into consideration the waste on food that is sold in bulk," he answered, "you'll find that package goods nearly always cost less. Crackers as sold from the doubtful depths of bin and barrel grew soft and soggy. But every cracker sold in a package, because of the packing, is in fine, crisp,

## Our First Victory

By James Hopper

More than a Million Every Week

# KING "8"

## The "High Water" Mark of Motor Car Construction

The latest King—Model F—is more than a car—more than a machine—it is an achievement; the car you *knew* would come some day.

See it; ride in it; feel the swelling power that climbs the steepest hills, or throttles down its giant energy to worm a way through crowded traffic,—and does it all in "high". That is *utmost flexibility*.

Dash over the open road—there's "express train" speed in the King for sport or emergency—or glide along, silently as a canoe on a quiet stream, resting your mind and nerves. Do it all with a marked saving in tire and "gas" expense. That is *true economy*.

Rest in the roomy luxury of the great seats, and consider how such spaciousness

and comfort is carried on a 120 inch wheel base—8 inches more turning play than most big cars. That is *efficient designing*.

And, when you've bought the car, back of you stands the pioneer organization that made it; originators of many features now considered essential in automobile construction, able and willing to help you for all the years that the car shall last. That is *real service*.

Prove these things for yourself by a demonstration and you will surely own a KING.

FOURSOME

TOURING CAR

SEDAN

KING MOTOR CAR COMPANY, DETROIT

*"The Car of No Regrets"*

*Mail-power!* Salesmanship focused in an envelope—must help to release man-power for the days of the war. And better letters will help to make better business—now *as never before*. Your representative travels, not for three cents a mile, but a thousand miles and more for three cents—when Mimeographed. ¶ ¶ You don't know what the Mimeograph can do unless you have seen the *new* Mimeograph. It easily turns out five thousand *beautifully printed* letters an hour—at *smallest* cost. Diagrams, designs, forms, blanks, bulletins, tags, etc., at the same rate. The Mimeograph is doing great work for American business today. Let our representative show you how it will help in your selling—and other work. Or get booklet "M" from A. B. ## PERSHING

*Posed in Paris for S. J. Wolff, Collier's artist with the American Forces*

# OUR FIRST VICTORY

BY JAMES HOPPER—PART I

COLLIER'S SPECIAL CORRESPONDENT

ON May 27 the Germans began their second great effort of the year with a drive against the Allied lines between Soissons and Rheims. On the following morning, May 28, the American force, a little west of Montdidier, attacked and by frontal assault took the village of Cantigny. Cantigny thus becomes the name of the first battle fought by America in the big war, of the first battle fought by America in Europe. It is the name of the first village taken by Americans in this war, of the first village ever taken by Americans in Europe. What follows is the story of Mr. Hopper's personal adventures in that battle. —THE EDITOR.

AT the beginning of it all—I see it now—was a “hankering.” Ever since the beginning of the war I had been tormented by a “hankering.” A small demon was within me who kept whispering: “But going over the top, what does it feel like?” I gave little attention to the small demon. Whenever he became too troublesome I slammed him carelessly on the head with a platitude as with the flat of a board, and he would roll down into the cellar of me and be quiet. Soon, however, I would hear him again whispering. “But going over the top, what does it feel like?” he whispered. I gave little attention to him. I didn’t think he could ever get me.

Add to this the fact that I had very badly managed my affairs. Knowing that the attack was going to take place, I had wandered for several days among the batteries in search of an observation point from which it might be viewed, then had wasted time vacillating as to which of three or four such points I should choose, then in vacillating as to whether I should go to any of them or simply watch the returns come in at divisional headquarters. And all the time, besides, I had wondered whether I should do any of these things whatsoever, and not some other thing—I didn’t know just what—more violent and new (I suppose the little devil was at work there). Result: With the attack staged for tomorrow at sunrise, I was standing to-day at sunset without a plan, without a provision, caught napping. The observation-post idea had proved no good: all my army friends were telling me that from an observation post I should see only smoke and get only gassed. On the other hand, it had been decided that in the deep cellar of divisional headquarters there would be room for only one correspondent. The others would get the bulletins from him—nothing dramatic here. I stood near divisional headquarters at sunset, listening to this and sweating. The battle was starting in twelve hours, and it was starting without me. I was scooped, euchred, fished!

## “Will You Take Me Along?”

IT was then that, using my wits—an extremity to which all lazy men are brought at last—I thought of the colonel of the divisional machine guns. I had gone on an expedition with him a month ago, one jolly night bespangled with 150’s and 210’s; he was a good friend, and his headquarters were in the village. I went to see the colonel. I found him eating his dinner, alone and hurriedly. His hair was combed neat and slick, his face was rosy with a late wash—he was clearly going somewhere. I asked him where. He jerked his chin in the direction of Cantigny. He had a post of commandment there, a dugout, close to the lines—

young Lieutenant C., his adjutant, had been working at it all day. Could the affair be seen from there? I asked. He said no; the P. C. was dug into the hill, but it was into the side of the hill opposite that facing Cantigny. He munched a while, then added: “But maybe if a fellow crawled to the top of the hill, by lying on his belly at the top, he could see something.” I said: “Will you take me along?” He said: “No.”

He said it politely, but still it was no. He explained that he was sharing the dugout with an infantry colonel, that the dugout was small, that it would be greatly crowded, and he did not think he had the right to bring me up there. I did not insist. It was more reasonable not to go, anyway, and since Fate had decided the thing for me, well and good. But I asked where Lieutenant C., his adjutant, was. He was still up there at the P. C. He had seen to the digging of it, and was finishing up. He was coming back here to-night, then going out again with provisions. Then he’d stay there with the colonel till the show was over. I felt the little demon stir in his cellar.

The colonel went out into the night. I knew a part of his way—along heavily shelled roads, through two stumps of villages in which gas lay pooled—with the end of it a troubling mystery. And so I watched him depart with sad envy, because I was not going, and also with a fat, comfortable sense of security, because I was not going. I went back into the little house (it was all shored up with trees, the ceiling thickened and strengthened with cement and sandbags) and sat by the fire with the sergeant major till Lieutenant C. came in. He came in reeling with a combination of fatigue, grip, and gas; he came in shouting for food and a bath. Soon I heard him splashing in an inside room; then he was at the table. When he had finished eating I questioned him—the same questions I had asked the colonel. At first his answers were the same. The

post of commandment was very near the lines, but dug into the side of the hill opposite Cantigny. I wouldn’t be able to see anything from there. A silence, then he went all bright. “But a fellow could crawl to the top of the hill, and lie on his belly up there, and look right down upon the whole thing. That’s where he was going to go if the boche threw gas. He wasn’t going to stay in that P. C. (gas runs downhill and collects in holes). He’d rather stay up there and take the shrapnel and the H. E.’s!” He went on with a description of the position. It was all so simple and so clear. You crawled up a little ways—and there you hung, above a battle. Immediately I had a vision, thus:

It was altogether too tempting. “Will you take me along?” I cried. He looked me straight in the eye; he grinned. “I’ll be tickled to death!” he said. Whoof! I sat down. Here it was, all settled. I was going up there.

It was all settled, but everything was not settled within me. Everything rather churned there. We were to leave at eleven; there were two hours to wait yet. We sat by the fire, smoking. It was an open fire—how pleasing it would be to sit here all night and go to divisional headquarters for the returns at dawn! Young Lieutenant C. sat and smoked, trying to regain strength for the toll to come. I watched him covertly, and plotted. I wasn’t engaged so much in deciding whether I should go with him or not; I was hunting words for some plausible and not too embarrassing excuse not to go. The hands of my watch moved slowly. Finally, though, they were a quarter to eleven. Young C. arose. He put on his belt; he put on his overcoat. He slipped on his gas mask; he put on his steel helmet. So far I had not moved. I sat still by the fire as though I had not noticed him. I waited a little longer—and I knew now what he was going to do. That boy was possessed of all the finest points of an exquisite tact—he wasn’t going to mention my promise to go with him at all! I need not go, and I need make no explanation; I was safe. Then I felt myself go to my feet. I rose, faced him, and said: “Well, old boy, do you want me to go with you?” He looked at me as he had done the first time, and, smiling with undeniable welcome, answered: “Yes, really, I’d be glad to have you along.” Immediately he followed with a qualification, i. e.: “But, of course, I don’t want to advise you to go.” It came too late. To my horror, between the two sentences in that second, I had heard myself say: “Well, I’ll go.”

## Mask Misery

SO I put on my belt, my trench coat, my gas mask and helmet, and together we went out into the night—just the way I had seen the colonel vanish before. But we went in a Ford, out to the battle in a little Henry Ford. The moon, just past full, was up at tree height, but

we carried, of course, no lights, and the groups of men we passed, and the low-rumbling convoys, were dim. As we came to the village of R., in which the Germans had been dropping gas shells, we put on our masks, and immediately, through the goggles, the vaguely moonlit night became one of impenetrable blackness. I had an English respirator with which one breathes through a rubber tube held between the teeth, but our driver, and the runner sitting by his side, had French gas masks, which allow free play of the maxillaries, and they were making free use of this opportunity all the time. "Look out, look out for that truck!" the runner would rasp; and the driver, wildly swerving, filled his mask with sulphur—"Blanky-blank-blank-blank, stop that yelling at me!" Past the village we took off the mask and ran free for a moment. Then I got a dreadful whiff—a sickening perfume of banana, pineapple, and orange, rising fast to a pungency that had no name. I gave a shout of warning, put on my mask—and the thing would not work. I pulled and pulled at the tube between my teeth, and got no air. I had held my breath while putting on the mask: I knew I needed a new one very soon; I worked desperately at the tube, straightening it, twisting it, pinching and releasing it—no air came; I was going to die. I was just on the point of tearing the mask off, for a breath of anything that might be outside (I was like a diver about to remove his helmet and rock in the whole sea) when at the last possible moment I saw where the trouble lay. Because of the provisions in the car my knees were hunched up high; the bottom of the box, which in an English respirator contains the neutralizing chemicals, lay on my lap, and the valve through which the air enters the box and thence the tube was smothered in the folds of my trench coat—of course I was getting no air! Thus can one die a glorious war death in a Ford! We ran out of the gas in a little while and came to the place beyond which we could not go with a car. Camouflaging ours by the simple expedient of running it into brush, we unloaded it and then sat it back, keeping one man with us. The two runners which were to meet us here had not come, so we went on, carrying boxes under our arms, on our shoulders, on our heads. It was hard work; we sweated. Besides our burdens we had our overcoats, our helmets, our gas masks, our canteens, our musettes; every hundred feet we had to stop, and then we caught, full, dreadful whiffs of air from the cemetery of X., churned by boche shells.

Yet in some indefinable way it was good to be here. The mystery of the hour mingled with the mystery of the place. It was midnight; the full moon was up. We were going along the bottom of a little draw; immediately to our right was a low hill on the other side of which was the enemy, and constantly, above the brow of this hill, his magnesium rockets came peering with their strong white flashes. Our feet trod a land arid, crumbly, and pitted with past shell fires; every now and then small groups of men passed us, silent, erect, and vague, their khaki melting into the moonbeams, their slung rifles black—our infantry, percolating thus into their position of assault.

At length we arrived at our post of commandment. It was, as young C. had said, a short tunnel dug into the base of the hill. Behind it, still farther in, was that of the colonel commanding the infantry. By its side was an artillery P. C., then another dugout for the operators of the telephone exchange to which came the wires of all the units—the foot of the hill looked like a rabbit warren. The excavated earth had been thrown up before the entrances in a rampart, and inside

of that, filling the space, clogging the dugout entrances and overflowing out into the open ground, men slept in blankets, shelter halves or without cover, on their sides, their bellies, on their backs,

© Committee on Public Information

At the post of commandment, receiving a message for an artillery barrage

hunched or sprawled or plaited one into the other, all sleeping profoundly. Within our dugout one candle burned upon a board spread with maps; the colonel slept in its shadow, just beneath the telephone. He slid out of his sleep, immediately alert, and rose as we entered. I came in sidewise, with Lieutenant C. as shield, shrinking as small as possible and wondering what greeting would be mine.

The greeting proved satisfactory. The colonel saw only C. at first, and a blur behind. But when he had recognized the blur he said merely: "Well, I'll be d—d," with great cordiality, and grinned—and I knew I wouldn't be thrown out to the boche.

their way to the positions of attack. The boche was shelling the back areas leisurely. You could hear clearly the shells passing over us—whhee, whhee, whhee, whhee—on their way to the roads, the cross-roads, the cantonments, the billets—the places from which we had come. Meanwhile we were getting very little—just a few shells, that fell somewhere to our right, and others which, coming in sudden small squalls between long intervals of quiet, fell into a field straight ahead, increasing still, if it were possible, its strange resemblance to a scape seen in the moon. From the trenches there came not a sound. It was what is called at the front a quiet night. Once, when we were all three in the dugout, sitting on the floor, scrunched up against the wall, I thought I smelled gas (I have discovered in this war that I have an extremely good nose for poison gas and all other perils). The others disagreed with me, and, disagreeing, began to sneeze. We went outside, and all the men stretched there, in all the postures of abandon beneath the moon, were coughing and sneezing in their sleep—a strange thing to see. One of them turned over, raised his head, sniffed. "Hell," he mumbled contemptuously, "it's only some of that fool sneeze gas," and immediately was asleep again. The colonel and the lieutenant were sniffing and listening. The shells which had been falling to the right had now a queer sound. They went through the air with a sort of liquid vloo, vloo, vloo; they burst with a fake, false sound, like that of the fire-crackers which in our childhood we called "punks." "They're throwing gas at us, all right," said the colonel. "It's the lachrymal," said the lieutenant in the tone of a connoisseur. A sleepy voice from the ground ascended to us: "Those don't kill a guy, do they, lieutenant?" "They do if you get enough of them," the lieutenant answered, but the questioner had regained the land of Nod before the answer had fallen back to him. We stood listening a little longer. Then the shells to the right took on once more the good solid sound of the high explosive, and a little cool breeze, sliding up the draw, blew the noisome vapors away.

### The Whole Show

AT about three in the morning I decided I must do some reconnoitering—still with the idea in mind of finding a place from which I could view the attack. I had for guide Lieutenant C.'s simple and alluring description—the hill, the top of the hill, me on top of the hill, the battle beneath me; I started out confidently. I followed the shallow valley for one hundred yards till clear of the dugouts, then turning to the right went straight up. There was first a very steep bank, about thirty feet high, up which I had to claw my way on all fours. I thought this was the hill young C. meant, and that I would find myself looking down the other side immediately. But that wasn't it at all. From the top of the bank the hill still rose, less steep, but with no end in sight. I went on. But the farther I went on the less the place fitted the description I had of it. I was skirting the edge of a wood, and the ground continued to rise ahead of me. Finally I came to some dreadful shell holes. Each was big enough to take in a house, and they were so close that the lips of one overlapped the lips of another. I was all alone, the light of the moon changed common things into strange shapes, a weird silence lay in this little corner—and there were the shell holes, extraordinarily eloquent of what had been and what might be. A sudden fear gripped me, and I sneaked back to the P. C.!

I remained within the dugout a little while—but I couldn't keep still, my watch was galloping so fast toward the moment. As I stood in front of my cave, Colonel E., who was in command of the infantry, came out of his lair. "What are you doing here?" he asked as his eyes lit on me, then immediately, with eagerness: "If you want to see the whole thing, go right up the top of this hill. There's an O. P. [observation point] there from which you can see the whole show!" He was pointing up the same hill from which I had just so precipitously descended, but into the depths of the wood I had skirted. I was delighted; this was just what I wanted. I did not ask the colonel (Continued on page 28)

The attack was to begin at four-forty-five with the regulating fire of the massed artilleries. At five-forty-five this was to become the destructive fire, and at six-forty-five the infantry was going over the top. I passed the remaining hours of the night in and out of the dugout. Within, to the wavering light of the guttering candle, the two officers napped in turn, answered telephone queries, or recapitulated over their maps all the dispositions already made. Outside there was the moon. Sleeping men sprawled about the mouths of the caves; mysterious and silent groups trickled by on

# ON THE EDGE

AS far as Jeanne's personal life was concerned, what little was left of it ebbed and flowed to the daily rhythm of the mail. She felt it begin to sink lower with the fatigue of preparing and serving the lunch for the six noisy children, always too hungry for the small portions, so that at the last she divided most of her own part among them. It ebbed lower and lower during the long hours of the afternoon when she strove desperately to keep the little ones cheerful and occupied and at the same time to mend and bake and darn and clean and iron and carry out ashes and in coal, her long slim pianist's fingers reddened and roughened till they bled, because cold cream was far too costly a luxury. It sank to its stagnant lowest during the tired end of the day when the younger children, fretful with too much indoors, disputed and quarreled; and when, as she prepared the evening meal, she tried to help the older ones with their Latin declensions and Greek verbs so that they might be worthy sons of their father. And oh, the nights, the long nights, when she woke again and again, dreaming that she saw André wounded, dreaming that some one called to her in a loud voice that he had been killed at the head of his men.

But after midnight she felt the turn of the tide. In less than twelve hours there might be a letter. She dozed, woke to make the round of the children's beds to be sure that they were covered, and noted that it was three o'clock. In seven hours she might have news again. She slept, and woke to hear the church clock clang out five, and knew that if she could but live through five hours more—

IN the morning the countless minor agitations: the dearly rising in the cold; the smoky kindling of the fire; the hurried expedition for the milk through the empty streets, dripping with the clammy fog of the region; the tumultuous awakening of the children, some noisily good-natured, some noisily bad-tempered; the preparation of the meager breakfast in the intervals of buttoning up blouses and smoothing tousled hair; then, as school time approached, the gradual crescendo of all the noise and confusion into the climax of the scampering departure of the three older ones, blue-nosed and shivering in their worn, insufficient wraps; the gradual decrescendo as she dressed the thin, white bodies of the younger ones, and strove to invent some game for them which would keep them active and yet allow her to do the

morning housework—all these tossing, restless waves were the merest surface agitation. Beneath their irregular, capricious rhythm she felt physically the steady, upward swelling of her expectation as the clock hands swung toward ten.

Till then she knew nothing, nothing of what might have happened during the portentous night behind her, for every night, like every day, was portentous. There was no calamity which was impossible. The last four years had proved that. Anything might have happened since the last news had come in from the outer world—anything, that is, except the end of the war. That alone had come to seem impossible.

And yet, in spite of that great flooding tide of her expectancy, when the ring at the door finally came, it always gave Jeanne an instant's violent shock. Her heart flared up like a torch with hope and fear, its reflection flickering on her thin cheeks as she hurried to the front of the house and, her delicate work-worn hands shaking, opened the door on Fate.

First her eye leaped to see that there was not the official-looking letter without a stamp which she had received so many times in her bad dreams, the letter from his captain announcing that sous-Lieutenant Bruneau—no, it had not come yet. She had another day's respite.

She could breathe again; she could return the white-haired postman's "Bon jour, Madame Bruneau."

Next, even on the days when there was a letter from André, she tore open the Paris newspaper and read in one glance the last communiqué. After this her hands stopped shaking. No, there was no specially bad news. No horror of a new offensive had begun. Then she could even smile faintly back at the tired old face before her and said, in answer to his inquiry: "Oh, yes, all pretty well, thank you. My own are standing the winter pretty well. But my brother's children, they have never really recovered from the nervous shock of that dreadful experience of bombardment, when they lost their parents, you know. Of course none of the six are as plump or as rosy as I would like to have them; Michel is growing so fast."

"You ought to thank God, Madame Bruneau, that they are too young. There are worse things than being thin and white."

"Yes, yes, Monsieur Larcide," she apologized hastily for her unmerited good fortune compared to his. "What news from your sons?"

"Still no news from Salonique. A letter this morning from Jules's surgeon. They are not sure whether he will ever be able to walk again. The wound was so deep—an injury to the spine."

A wordless gesture of sympathy from her, a weary shifting of his heavy letter bag, and he went on to the next door, behind which another woman waited, her hands shaking, and beyond that another one, and then another.

IF it was to be a good day, if there had been a letter from André, she opened it hurriedly and read it in one look, even though the children clung clamoring to her skirts, even though the fire smoked and threatened to go out. Then she set it carefully in the bosom of her dress and put on the faded caps and patched wraps and darned mittens to take the children out for their outing, while she did her marketing. They were too small to leave alone, even for half an hour.

During the painful experience which her marketing always was she felt warmed and sustained by the letter tucked inside her dress. Everything cost more than the month before, twice as much as the year before when her income was the same minute sum as now.

But André was alive and unharmed.

She looked longingly at the beefsteak which the older boys needed so much, her own children, and bought instead the small piece of coarse pork which must make a stew for them all, those other children of her blood whom the war had thrown on her hands.

But she had a letter from her husband in her bosom.

She priced the cauliflowers, sighed, and bought potatoes, and less of them than she had hoped to have, the price having gone up again. She was horrified to find that rice cost more than it had, an impossible sum per pound, even the broken, poor-quality grade. She would try macaroni as a substitute. There was no macaroni, the woman clerk informed her. There was none at all, at any price. Jeanne turned to another item on her list. The doctor had said that the children absolutely must have more fruit in their diet—fruit! Well, perhaps she might be able to manage prunes. They were the cheapest fruit—or they had been.

"Prunes, Madame Bruneau? They are only for the rich." She named a price which made Jeanne gasp.

She calculated the amount she would need for one

portion each for her big family. It was out of the question. She was really aghast, and appealed desperately to the woman clerk. "What do you do?" she asked.

"We do without," answered the other woman briefly. "But your children? Growing children can't be in good health without some fruit."

"They're not in good health," answered the other grimly. "My Marthe has eczema, and the doctor says that Henri is just ripe for tuberculosis." Her voice died.

Jeanne closed her eyes during the instant's silence which followed. The woman clerk shoved aimlessly at the sack of dry beans which stood between them. Then they both drew a long breath and began to add up together the cost of Jeanne's purchases. She took out her pocketbook, paid soberly, and went on to the baker's.

Here a girl weighed out for her with scrupulous care the exact amount of bread allowed for the family, and took the bread tickets along with the money in return. At the sight and smell of the fresh-baked bread the children began their babbling, begging clamorous demand which Jeanne dreaded almost more than anything else. She winced away from this daily pain, crying out, trying hastily to stop them before the tears came: "No, no, my darlings, you can't have any now. No, Jacqueline, don't tease auntie! Annette, dearie, you know if mother lets you have any now there will be just that much less for you at lunch and dinner. You know I can't give you any of what belongs to the others." She was imploring them not to ask her for the food she could not give them. Anything but that! The daily repetition of this poignant little scene was intolerable. If she could only leave them at home, could only spare them that daily ordeal of the visit to the bakeshop where their poor little heads were turned at the sight and odor of all that food. Not to have bread to give them!

SHE was almost on her knees before their shrill, insistent demands when she felt her husband's letter crackle against her breast, and stopped short. She was on the edge of losing her head, like men after too long shell fire when they walk dazedly straight into danger. She knew better than this! The tragic manner would never do for little children who cannot live and thrive save in gaiety and lightness of heart. She was only making a bad matter worse.

She summoned all her strength, put her hand on the letter in her bosom, and burst resolutely into a hearty laugh: "Oh, children, just see that funny picture of the little kitten! He's chasing his tail, do you see, round and round and round. Annette, do you know how he feels! See, I'll hang this string down your back, and you try to catch it by turning around quickly. See, the faster you turn the faster it gets away from you. Maurice wants to try? Well, we'll just hurry home, and I will give you a piece of old red curtain cord, and you each can have a tail and be a little kitten. And when the big ones get back from school you can show them how to chase tails. Won't they laugh?"

They were safe in the street by this time, the bakeshop forgotten, the loaf in the basket hidden, the children looking up, laughing through their tears at Jeanne, breathless, pouring all her vitality into her cheerful face and bright voice, so that there was not enough left to keep her knees from shaking under her.

Back to the house quickly, lest the wretched war coal, half black stones, smoking sullenly in the cook stove, should go out in their absence. The invention of the curtain-cord tails was still valid, even after the pork had been put on to cook with the potatoes. The children were still playing, still unexacting. Jeanne would have time to read her letter.

She put the paper-thin potato parings to cook in an old kettle for their three hens, who occasionally prevented them with a priceless fresh egg; and, wiping her cold, wet, potato-stained hands (was it possible that those hands had ever played Beethoven and Debussy?), took her treasure out of her bosom and unfolded the double sheet, warm still from the warmth of her body.

This time she read it slowly, taking in, absorbing,

to the last cell of her consciousness, every one of those words, written by candlelight, underground, to the thunder of shells exploding over the abri. They were plain, homely words enough, rambling, unstudied familiar phrases, such as husband and wife write to each other when they have shared their daily life for many years and still try to go on sharing what may be left to them of days in common.

IT had rained, as usual, all day long, but the new trench boots had kept his feet almost dry. Yet he was ashamed of the price she must have paid for them—she, straining every nerve to buy food to keep the children well. He was a man, a grown-up, and the war had done for them forever. Let him shift as best he could. Everything ought to go to the children; there would be little enough. But they must have the best chance we could give them. Whoever else was responsible for the war, certainly the children had nothing to do with it. And they must be the torch bearers. Did she remember how he had always wondered why no musician had ever composed music on that theme? He could conceive such a noble symphonic poem called "The Torch Bearers." He had wondered all day if the coal had finally arrived at Méru. It went beyond his imagination how she could manage at all, the days when the coal supply was so low. In their little underground abri they had a stove—yes, a real stove. It had been left there by some American ambulance men who had used the abri before them. So they were really warm, part of the time, and occasionally almost dry. But the wood they were burning—it made him sick. It was what his men tore out from the ruined village houses near which the trenches ran. Of course it could never be used for houses again, but when you know what it is to have a home of your own, and how it grows to be a part of you, it is not much fun to put parts of other people's houses into your stove. No, he did not need any new socks. He did not need anything; she need not go on trying to slip in some new luxury for him out of her impossibly small budget. Did she remember that poor Dury, the youngest of his men? He had been shot yesterday; a stray ball, not meant for anybody in particular—such a silly way to be killed. And now there was the letter to write to his mother. Heavens,

snapping at him, and you know your brother cared enough sight more for Jacqueline than for him. Don't you blame yourself. Take it easy!"

Jeanne laid the letter down with a little exclamation, half a laugh. How ever did André know she did not love the little nephew who reminded her so of the sister-in-law she had never been able to love? She had not thought that anybody could guess that the child to whom she was always the gentlest was the one—and here was André, quite casually as usual, walking into her most secret places! How he knew her! How he knew the meaning of her smallest gesture, the turn of her most carefully worded phrase! How near he was to her! How there was no corner of her life where he did not come and go, at ease, and how she welcomed him in, how she rejoiced to feel him thus pervading the poor, hurried, barren inner life of her, which had bloomed so richly when they had lived it together. How married they were! That was, after all, an achievement to have wrested that glory from so horrible a thing as life had come to be. Let the heavens fall, she had known what it was to be one with a noble human soul.

She stood up, her thin face glowing, her tired eyes shining, as they always were after reading André's letter. It was the only moment of the day when she felt herself wholly alive.

THIS was the high tide of her daily life, poor, scanty trickle of life it was, even at its best, compared to the fathomless deep surge of the fullness of the days before the war, days when it had seemed natural that André should be there always, that they should profoundly live together, that there should be some leisure, and some music mixed with their work, and warm rooms and clothes and food as simply as there was air to breathe.

A whiff of acrid coal smoke in her face, a walling cry from Maurice, who had pinched his finger, a warning half-hour stroke from the kitchen clock—she came back to the present with a start and strove loyally to use for that present the little renewal of strength which came from a momentary vision of the past. She changed the drafts of the stove, stirred the stew, and, gathering the weeping child up in her tired arms, began to make a funny non-

sense song, purporting to be sung by the hurt finger. Her voice was obliged to pass through a knot in her throat, but it came out bravely, and in a moment the children were laughing again, their thin faces turned toward hers like little pale flowers toward the sun.

Then there was the table to set, of course in the kitchen, since there was no coal for another fire in the cold house. How Jeanne suffered from this suffocating necessity to do everything in one small room! It made an intolerable trial of every smallest process of the everyday life, to prepare food, and eat it, and play, and wash, and study, and bathe the children, and dress and undress them—they were like pigs in a sty, she often thought, working feverishly to keep a little order and decency in the room which seemed to her fastidious senses to reek stiflingly of the effluvia of too-concentrated human life.

As she worked she felt, like an inward bleeding, the slow ebbing of her forces. The good moment of the day had come and gone. There was nothing to look forward to now till the mail of the next morning.

And this was a good day, one of the best, when there had been no special

activity on the front, when the daily letter from André arrived on time. But what of the days when the communiqué announced laconically: "Heavy artillery fire between Fresnes and Villers-Raignault"? (André was stationed at Fresnes.) Or worse, when the great offensive began, when all personal letters from the front were stopped, when day after day the communiqué announced: "Violent fighting all along the Champagne front."

The feeble, tired old mail man, shuffling on his rounds, was a very snake—(Continued on page 24)

JOHN FINK

André put his hand on the sleeping boy's forehead and looked down at him silently

how he dreaded the letters written to the parents of men who died or disappeared! He hoped little Maurice's throat was better. What a sickly child that poor kid was! He was evidently one who would have to be nursed along all through his childhood, and since the war had killed his parents, it fell to his poor aunt to do the job. And then— "Now, see here, Jeanne darling, don't kill yourself over that little boy because you feel so guilty at not loving him more. He's not a lovable kid. His own mother, poor nervous thing, never could keep from

# TRENCH HUMOR

BY WILLIAM SLAVENS McNUTT

COLLIER'S SPECIAL CORRESPONDENT

A SHRAPNEL shell banged in the air near by. The white smoke puff trembled and changed shape in the light spring breeze; the echoes boomed back from the encircling hills. Another and yet another. The echoes ran together, and the noise of the explosions sloshed up and down the valley in irregular waves, a confusing flood of sound.

A dozen or more of us were sprawled out lazily on ground and bench before a poste de secours tunneled into a side hill. On the wooded ridge immediately above us were our front-line trenches and across the shallow, open valley the German advance positions.

A corporal rolled his head lazily around until he was able to watch the shrapnel smoke puffs, and yawned noisily, stretching his arms above his head in a slow gesture expressive of physical content. "Wonder what ails the Old Man to-day?" he said idly. "The old rascal acts peevish. You don't reckon some of our boys been over in his back yard devilin' him? Into his chicken coop or somep'n?"

"I hear he's out hi-diddlin' around the other night in the rain an' gets rheumatism in his wooden leg," a private chipped in. "They say it's pesterin' him so he can't get no sleep an' he's gettin' grouchy. I dunno nothin' 'bout it: that's what they tell me."

A lieutenant stretched out, face down, raised himself on his elbows, put his chin in his palms, and grinned at me. "You've heard about the old wooden-legged guy across the way, haven't you?"

I had not.

"He's the boche division opposite us," he explained, raising his voice a little as the noise of the shrapnel bursts increased. "We don't know his name, but he's a little old guy with a wooden leg, and he's a kind of a caretaker over there. He looks after the trenches and goes up and down the line at night sending up flares."

"He was in the war once, that old guy," a sergeant explained gravely. "He got his leg shot off, so they sent him down here to take care o' the trenches. I think the Government give him the job as a kind o' reward for havin' been in the fightin'."

"I hear the Kaiser's give him a deed to the place for lookin' after it while everybody's away at the war," another private observed. "I dunno; that's what I hear."

A stretcher bearer drawing a drink from a hanging canvas water bag joined the gossip. "His wife's a hellion," he said.

A private rolled up to a sitting position, his eyes wide with surprise. "Is he got a wife? I didn't know that. I thought from the way he acts he's an old bach' an' hated women."

"Sure, he's got a wife," the stretcher bearer continued. "That's what makes him so touchy. You know the other mornin' when he put that barrage over on us? Well, how that come was this: He was out at night in the trenches, like he always makes his rounds, you know, goin' from place to place settlin' off flares an' shootin' some o' the guns, an' all such, an' when he gets back home in the mornin' his foot an' his wooden leg's all covered with mud, see? Well, just as he gets to the door o' his house—just before he's ready to go in—one of our seventy-fives lands alongside him pretty close, an' he ducks in quick to get under cover, see? He's so flustered he don't stop to wipe his foot an' his wooden leg on the mat outside, an' when his wife turns around from fryin' the supper to have a look there's bocoo mud on her kitchen floor that she's just got done scrubbin'."

She tears into the old boy wide open, an' keeps gassin' him all day long, an' he don't get his sleep, so that night he's mean in his mind, an' he blames it all on us 'cause we pester him with a shell after his night's work's done an' make him forget to wipe off his foot an' his peg, an' that's how he gets in wrong. So he goes peggin' around that night from one place to another shootin' off everything he's got at us."

"I wonder if we couldn't fix it to have the ole

woman come over an' mend up our clothes?" a private speculated. "I'm out with a raidin' party the other night, an' we got orders to establish contact with the enemy. All I do is establish contact with bocoo barb wire! I go out all het up an' ready to die for my country an' be a hero, an' all happens to me is I get plastered over with mud an' all scratched up till I feel like a match box. My pants is tore somep'n scandalous!"

"Don't blame the Old Man for that shootin' that's goin' on now," a private who had seemingly been asleep through all the controversy came warmly to the defense of the mythical peg-legged adversary.

playin' with the guns," a corporal observed. "Seem to've let up. Dawggone! I wish they wouldn't be so stuck up an' offish! I wish they'd come on over an' pay us a little visit. I like to open one up an' see what makes him act so. You reckon they got some little dingus or other inside of 'em different from the rest of us!"

One quality of the American soldier aids greatly in making him the excellent fighting man he is—his sense of humor. Having fought as a hero, he takes his relaxation as a clown. Persistently he kids the war, the boche, his comrades, and himself. If the boche remains quiet for a few days, he fabricates

Above—Mess time in a front-line dugout. At left—It looks like a stray storepipe, but is really a trench mortar

© Committee on Public Information

"Then's his nephews firin' off them guns."

"Is he got nephews too?"

"Sure. They been fightin' in the Great War, an' they got tired, so

they give 'em permission to come down here an' visit with the Old Man an' get rested up. They claim we make it almost as tough down here as it is up at the war, an' they're sore about it. They figure fightin' down here like we do is worse'n bombin' hospitals or cuttin' up women an' children. They claim that before us Americans come down here this was all a nice, quiet rest camp where a poor soldier could get his sleep. They claim there wasn't a war till we come along an' broke the peace, an' now look at the world! It's in a terrible state. Ain't a place left for a Heinie to take his comfort. That's why they're doin' that shootin'."

"Ah, well," the stretcher bearer sighed hopefully, "we'll be goin' up to the war one o' these days."

"They can't ship us too quick to suit me," a corporal growled.

There was an earnest murmur of assent.

"You said something!"

The lieutenant laughed. "Shall I tell you about that kid that writes home about how he always wanted to cross the Atlantic? A lieutenant I know was censoring mail, and he came across this one: 'All my life,' the kid writes to his folks, 'I've had the most intense desire to cross the Atlantic. Ever since I can remember it's been my ambition to cross the Atlantic. Here I am in France and, believe me, my ambition is still unchanged. I'm just as eager to cross the Atlantic as I ever was.'"

"I guess the Old Man's nephews must 'a' got tired

some fantastic legend like the tale of the little old one-legged man across the way to account for the comparative inaction, relaxing his nerves in a bath of nonsense that leaves them refreshed and ready to meet the shock of the next emergency. His sense of humor, his persistent will to josh everything and everybody at every opportunity, is a splendid asset. This war is too serious to be taken seriously at all times, by those who are really in it.

The sergeant rose and yawned.

"I'm going down into the ice house," he said, referring to his dugout, "and pack a couple o' hours' sleep into my system. If the Kaiser comes while I'm asleep, have him wait for me."

## Breakfast Pills

"WANT to take a little run up through the trenches?" the medical lieutenant asked me.

I did. We went up a steep wooded hill and into a communicating trench. In places the ditch was roofed over with barbed wire thickly laced on a skeleton of timbers. Frequently we were obliged to stoop to pass under this protecting roof. Had it not been for my steel hat, I would have been many times a casualty within ten minutes. Time and again that blessed hat banged jarringly on timber or musically on sharp-toothed wire. One can play quite a tune with a steel hat on barbed wire. The little melody my hat was executing as it scraped along under the wire was hauntingly familiar, but I was unable to place it. Then a shell exploded reasonably—or rather unreasonably—near by, and I at once recognized the metallic strain. It was very plainly "Home, Sweet Home." Yes, indeed!

We came at last to a dugout in a front-line position, and the lieutenant there commanding piled up to greet us. He was a blond, blue-eyed, chunky youngster, a master at laughter and war. He had been wounded in a raid several weeks before, and this was his first day back in the line. (Continued on page 22)

## The New Draft

WHAT is the "fighting age" and what are its limits? Is a man apt to be a better soldier at twenty-one, thirty, or forty? How old were the guardsmen in "Twenty Years After"? PORTHOS had reached a goodly age when he hurled (with one hand) the barrel of powder into the ranks of his enemies. JOHN BURNS of Gettysburg was seventy-one. Fiction and history both attribute great fighting powers to men of years. There were old as well as middle-aged men at Bunker Hill and Lexington. There must have been a large number of regulars and National Guardsmen over thirty-five in the divisions that fought the Prussian rear guard to the death north of the Marne a few weeks ago. We know of men in the forties who would stand the strain of a campaign better than many youngsters. But they are not numerous, and it is not likely that the War Department, in raising the age limit to forty-five, contemplates sending these venerable persons to the front, no matter how ardent they may be to spear or bomb the fleeing Germans.

It is true that there is no fixed border line for middle age, but there is a general and well-established area. The aged only flatter themselves when they say that "old age is more confident and courageous than youth." It is more confident and courageous in speech, but not every man can be "a Scipio or a Maximus, with stormings of cities, with battles by land and sea," "practicing rapid marches, dashing on a foe, hurling spears from a distance, or using the sword at close quarters." A man who is too old for baseball is too old for fighting. The number of individuals over thirty-five likely to see active service will be small. Even if they have the physical strength, they cannot possess the nervous resistance either for the adventures of the battle field or for the tedium and distress of a winter campaign. It is still to the youth of the country that we must look for victory. They alone have that blessed "sense of invulnerability" of which our gifted contributor, JAMES HOPPER, felt flashes when he went over the top at Cantigny and, armed only with the implements of his writing trade, captured a score or more of battle-weary Germans. It is this characteristic of sturdy, well-nourished, nimble, iron-nerved youth that made our men such terrible fellows to the Prussian Guard at Château-Thierry and Seringues.

## The Middle-Aged Young Men

WHAT will be done with the older men? The Government will not follow the amiable policy of the Germans in placing their "volunteers"—middle-aged men and boys who were exempt from compulsory service—in the first lines, where they were pretty sure to be killed or captured. The number of bald-headed, nearsighted, nerve-shattered prisoners—professors of languages, botanists, entomologists, theologians—taken in the early days of the war led the Allies to the false conclusion that German man power was exhausted. Our men of thirty-five to forty-five will not be required—and they will not be permitted, we hope—to get in the way of men who can march twenty miles in a day and then attack the enemy. Even France with all her pressing need of fighting men seldom puts soldiers over thirty-eight into the actual line of battle. Among other sacrifices, our old stagers will have to deny themselves the joy of combat. But places will be found for them, not without honor. They will release for more active service younger men who are now employed in the office and routine work of the army and navy. They can be as useful in the commissary or the ordnance; they can draw up orders, buy horses, or serve in the intelligence bureaus as well as men of thirty-five. They will do their part—and an excellent if modest part it will be—in the army of 5,000,000 men which our Government with wise opulence of its powers has determined to throw against the now shaken forces of Germany.

It is to the other end of the draft extension that the country must look for the mass of its new combatants. Objection has been raised to the drafting of young men of eighteen, but in the end we feel sure General CROWDER will have his way. The opposition stands on sentimental, not practical, grounds. Young men of eighteen or nineteen are malleable; they learn quickly in a school which they enter eagerly. Thousands of them joined the marines and were among the "first to fight." LLOYD GEORGE speaks with wonder and pride of the fighting of British boys in their nineteenth year after six months' training. But General WOOD is convinced that four

August 25, 1918

months' hard training in this country and six weeks in France is enough to make first-class soldiers of our youngsters.

The country must not expect a sudden and theatrical termination of the war merely because our program is to place an enormous army in the field. Such a war as this does not take a lively course. The report of the capture of the Crown Prince is still premature. But men and munitions and the reawakened American determination, to go steadily on and do a thorough job, will tell in the end. More confidence ought to be created among the Allies, more dismay in the hearts of the Germans, by the new draft than by the recent military successes of the troops in France. Its effect on this country cannot be overestimated. It places the full services of a great majority of able-bodied men at the disposition of the Government. It ties them up directly with the winning of the war. The mere act of registration, in a sense, makes soldiers of them, not merely interested spectators of the unfolding of the great drama. The country will be all the better, the struggle made all the shorter, by the general appreciation that all that the nation possesses is drafted for the war.

## L'Avenue du Président Wilson

JUST as a matter of history, it may be worth noting what none of our newspaper correspondents abroad got round to reporting. That is the fact that it was a French socialist, Comrade FIANCETTE, who introduced in the Municipal Council of Paris the resolution, signed by all his fellow socialists of the council, for naming a street of Paris after the President of the United States. "The war," said FIANCETTE, "which has produced so many acts of sublime heroism, has not been very favorable, in our old European countries, to developments in the domain of Thought. The courage and sacrifices which the war has lavished would thus run the risk of having been in vain if one voice had not been raised in the torment to tell the way of the harbor of peace toward which all humanity looks." Perhaps it was because the socialists were so much for the resolution that certain reactionary members of the Municipal Council showed ill temper about it; anyway, it was voted unanimously in the end, and the Avenue du Trocadéro became the Avenue du Président Wilson, and the Paris Municipal Council greeted that President's "noble figure" in "rendering once again homage to the illustrious Chief Executive and to the great people of the United States."

## Beginning To-Day—

THAT the fourth issue of the Liberty Loan, coming in October, is to be for at least \$6,000,000,000, twice the amount of the third loan, is striking evidence of the Administration's confidence in the American people and its new spirit of team play. And the Government is perfectly right to count upon the nation's sending these \$6,000,000,000 over the top to back up the 2,000,000 men of our army who will be in France by the time the loan campaign is finished. Just as the fighter must train for his part, however, so must we civilians train for ours. We must train ourselves in thrift. We must train to save. And we must start the training now.

## Russia

A RETURNED life insurance man, writing in the "Economic World," etches this picture of Russia's revolution:

But in all the talk nothing about the country or its honor. Among the hundreds of banners, afloat and carried in procession, one seldom, if ever, saw "Long Live Russia." It was always "Down with this," "Down with that," or "Hail to this," "Hail to that." Never "Hail Russia." The national flag, the national hymn, were cast aside. Patriotism was extinct.

"The yellow dog was loose in the land," continues the life insurance man, and a corporation friend of ours added when we showed him the article: "Yes, and that's the soil TROTSKY and LENINE sowed to the thistles of anarchy." Probably neither of these statements would seem judicious to President WILSON, who is one of the few Americans who haven't forgotten that misrule, spoilsmanship, and czarism prepared the soil for the sowing of LENINE and TROTSKY's thistles. A country is, after all, very much what its rulers make it—whether its rulers are crowned heads or the mob.

## Pershing's Apache Scouts

ONE of the several highly important things LUDENDORFF didn't foresee when he put on the market a new style of warfare last March—incidentally borrowed after true German fashion from the French of NIVELLE and the British of BYNG—was how directly this

# Editorials

new, open warfare played into the hands of our contemptible little American army. To be sure, in the Ludendorff program the Americans, who could never get across the Atlantic and who couldn't fight if they did, supposedly did not count; but whatever LUDENDORFF really believed of the Americans when not speaking for publication, it is certain that LUDENDORFF did his best to make them count sooner than most of us expected. That happened when the German General Staff abandoned trench warfare for open battle.

Ditch warfare is a dirty sort of business, but it is a highly complicated and mathematical and standardized process. What we legitimately had to fear when we thought of the appearance of our troops on the battle line was the long time that Americans would need, not only to learn, but to unlearn. They would have to unlearn the traditional native "zip," the personal daring, the high spirits of Americans playing a game, and reduce themselves to clockwork. A good many of us read with mixed feelings how hard it was to keep the men of our first contingents from outrunning orders. In trench warfare outrunning the predetermined "objective" may be almost as bad as not attaining said objective. There was good reason for apprehension of what would happen when American dash ran up against German machinery. Then LUDENDORFF removed all fears by coming out into the open.

That it should have been our own divisions which marched shoulder to shoulder with MANGIN's poilus in the first heartening Allied effort of nearly a year, that it should have been our own contemptibles which went through the German line, which beat off counterattacks, which recaptured villages after they had been lost, is due largely to the fact that FOCH's blow against the Marne salient began with complete surprise instead of the painfully mathematical preliminary bombardment. The follow-up was a matter of fighting in streets, forests, and on river fordings, instead of across a gridiron of perfectly plotted and registered trenches. American imagination, initiative, and pluck were given full play. PERSHING's Apache scouts, after working effectively against VILLA, found a welcome opportunity against the German General Staff.

## The Spirit and the Truth

DOROTHY CANFIELD told us, in a story we printed several weeks ago, about the furlough of a French soldier in the devastated region where they're fighting again. When we printed "The Permissionnaire" it seemed to us one of the truest and best stories the war had produced. DOROTHY CANFIELD's story in this week's COLLIER'S is called "On the Edge." It deals with a rather more sophisticated couple than Sergeant NIDART and his wife PAULETTE, but we can't help thinking it equally good. We in America talk about war denials and sacrifices; read "On the Edge" and you will find out what the reality of sacrifice can be like, and what (after four years of it) is going on behind the smile of France. To say that a certain story is true—meaning that the events happened in real life in the same sequence—is not to say anything very important; but these stories by DOROTHY CANFIELD are true in a more real sense than that: they are true because their reader has seen into the hearts of men and women; because, with her, love and understanding are one.

## 'Ware the Wolf Bureau!

THE common noun "truth" has so frequently in the course of history been seen in the company of certain small adjectives that it has become habit on spying the adjective to assume also the noun. Thus there are hard truths, and bitter truths, and plain truths, and brutal truths, and most of us have too easily fallen into the belief that because something is plain, or hard, or bitter, or brutal, it is likely to be true. Even after four years of instruction in German morality, the habit occasionally peeps out. Because the German physiognomy is woefully plain, because the official German vocabulary is hard and bitter, because the emanations from the Berlin press bureaus are so frequently brutal, there is now and then an inclination to wonder whether truth doesn't lurk behind. Well, it doesn't.

Put it another way. Lies are the refuge of the victim and the slave. The master and conqueror is under no compulsion to lie. And since the Prussian walked, even before the war, as a conqueror, with ramrod backbone, and clicking heels, and rattling saber, it seemed absurd that he could ever be under the need of fibbing. Only the fact is that the Germans have lied in their official communiqués, as in their White Books.

The point is of importance. For some time we have been reading our casualty lists. They will grow longer with time, but they will never be as long as the Germans will make them out to be. Already the mobilized German press has spoken of American cannon fodder. Soon they will have us bleeding white. They will go on publishing stories like the following:

"An American prisoner captured on July 29 said that of the first battalion of the 110th Regiment only thirty were left and no reinforcements had arrived since that time."

The comment on this is suggested by Colonel REPINGTON: "The German claim that they had disposed of 600,000 of our men by April and had captured

1,500 of our guns was an absurd exaggeration which Americans can safely divide by two." As times grow harder for the Germans it may be necessary to divide by more than two.

## Keep That Garden Growing!

EARLY lettuce, peas, string beans, etc., are now only pleasant memories; their once tidy rows grown to towering weeds. But that gives you no license to quit the garden patch for this year. The war continues, our soldiers and sailors and allies must be fed, and there are other autumn crops besides tomatoes and pumpkins. Talk to the nearest seed-store man and find out what can be done on your land between now and Christmas. There are varieties of spinach which can be planted in late August, covered with straw as frost threatens, and eaten pretty well into the winter or carried over for an early start next spring. Mother Nature differs from most of us amateur gardeners in that she never sleeps on the job, and very seldom loafs. How far the coldest weather suspends her operations depends upon the protection her handiwork receives. There is a lot of good growing temperature left yet in this year 1918, and it is for us to use it to the utmost advantage. "Work while they fight" is the only motto that leaves a civilian with any self-respect at all. Time and the need press.

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

## Apropos of What King George Said to Mr. Hoover

IT was on the veranda of one of those fashionable hotels on the New Jersey coast where the only indication of the war is an occasional airplane buzzing overhead and the gray wool and clicking needles in the hands of the women. Two of these women sitting in their easy-chairs apart from the others had evidently plunged into one of those sudden and violent friendships which a vacation at the seashore seems so readily to nourish.

Said one of them: "I'm so glad to get away from housekeeping even for a short time. It's so difficult to get along with all those substitutes they're making us use instead of wheat. Fortunately, I stand in pretty well with Thompson, my grocer, and when I go marketing in my flivver I can get him to slip me an extra five pounds of white flour into the car without anybody noticing it. Then he charges it on the bill as something else, like washing soda or prunes."

"Well, my grocer isn't as agreeable as that," said her friend, "and it makes me furious that I have to buy all that silly cereal stuff every time I want a little white flour. At that, I can only get a limited amount. I don't see what difference it makes if you or I use a little more or less. And now we're put back on sugar rations again. It's a shame! My husband has such a sweet tooth. He's got to have four lumps in his cup of coffee. I can't see that the extra two lumps make any difference."

The discussion about their wrongs had heated them somewhat, and they changed the position of their easy-chairs so that the

ocean breezes might blow more directly upon them.

And yet that very day there appeared in the newspapers an item showing what remarkable things the women of America, fortunately so unlike these two, had accomplished by their food savings. Hoover, you will remember, appeared before King George of England. The King had sent for Hoover so that he might thank him for the great voluntary effort of the American people which had, he said, "supplied Great Britain with the vital margin of food which enabled her to pass over the winter."

Think of it! Dig into the real meaning of those cold words "the vital margin of food." The difference between health and sickness, the difference between hope and despair, the difference between the energy of accomplishment and the gnawing bitter desuetude of slow starvation.

And the food that America has saved has been a stream of life flowing not only into Great Britain, but also into France, and Italy, and the other Allied countries—a stream of life for men, and women, and little children.

And who can tell how much the food that America has sent overseas has had to do with our recent glorious successes between the Aisne and the Marne?

It seems miraculous that at such trifling sacrifice we could do such tremendous good.

\* \* \* \* \*

For, as you look back upon the rationing we have had to undergo, can you remember any real sacrifice in the way of giving up? Any man or

woman who complained because of bread that wasn't quite white or sugar that wasn't quite sufficient should be sent to the trenches for a while so that the realization of what war really is might come to them.

The very substitutes offered in place of the rationed foods were often more palatable than the originals.

The large national advertisers were quick to seize this opportunity, not only to save such food as wheat, but to enable America to save without suffering. They not only changed their products to conform to the Food Administration's requirements, but through the machinery of national advertising they were enabled to tell millions of people about these new requirements.

Their advertisements not alone urged the saving of wheat, but showed what could be used in the place of wheat. And it is always easier to get a man to stop doing or eating a certain thing when you give him something else to do or eat instead.

And this we believe is a splendid illustration of the value of the national advertising machine which has been built up to such an extent that it functions throughout the country—an illustration of its value at all times, but especially in war times.

It enables the United States Government and any large producer of foodstuffs or anything else to speak directly and forcefully to the consumers of the entire nation.

Advertising is a means of reaching the entire thinking population of the United States with the least expenditure of time, money, and man power.

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

## CHAPTER FIFTEEN: EMPRESS OF MEXICO?

ILLUSTRATED BY F. R. CRUGER

McCord smiled. His smile developed into a malignant chuckle. "It is humorous, my dear. You yourself, being fair-minded, will admit the absurdity of pitting your woman's brains against mine." His lips lost their mirthful twist. His voice grew harsher. "Did you think, my dear, when you decided to prove treacherous to me, that I would permit the plans of years to be jeopardized because of a girl? My dear, you are important to me—very important. It is my intention to make you my wife. What has happened—your treachery—it matters nothing. Perhaps it is all for the best. It has shown you what sort of man I am."

"It has indeed. A murderous boast."

His glance became pitying. He shook his head.

"In time of war, to speak of murder," he scoffed. "But this will pass, Leila, my dear. You are young, and you have youth's ambitions. It is not granted to every small-town girl to be shown a throne!"

"You are serious?" she asked.

"You mentioned the unavoidable—shall we say, erasing?—of certain persons who stood in my way, my dear." He leaned back in his chair, that seemed so huge because his body was so frail. "Does it seem to you that I would take the necessary risk involved in that—er—erasing unless there was something great at stake?"

She shuddered. He leaned forward again.

"Listen, my dear. In every generation there is torn one who must lead. It is inevitable. It is ordained from the beginning that such a one shall be first among his fellow men."

"And you are he?" Hope might fail her, but courage never. She made no effort to hide her amused contempt.

"I know; I know. You are thinking that I am insane. Well, I will not deny that. According to the puny standards of the day, a man who dares greatly for himself, dreams greatly for himself, is a madman. Napoleon was that sort of madman."

"And died a prisoner," she reminded him.

He took up the gage eagerly. "And do you know why, my Leila? Because the whole world was arrayed against him."

"As it is arrayed against every criminal."

"Criminal? Because of that photograph you saw? You are hopelessly small-town, provincial, my Leila. You judge the great by the standards of the little. And yet I do not condemn you for that attitude. From great affairs one turns for rest and solace to the woman who dreams not too much. It is because you are yourself, Leila, that I have chosen you."

She sighed. Against his intense egotism it was useless to tire herself out with protests.

"And yet," he went on, "one wishes to be understood. You, Leila, misunderstand. You think in terms of police rules, when I think in terms of governments, of nations. It is wrong to kill, therefore I am a murderer. Yet, if I sent armies into the field—what then, my Leila?"

"There is a difference," she told him.

HE shook his head. "No, my dear. The men who serve me are soldiers as truly as those who serve upon the battle fields of Europe. For I, Leila, I whom you see seated here, am the ally of one of those warring powers of Europe. No? You hesitate to believe me? My dear, I am Harmon Rayde."

He said it as though he were stating that he was ruler of the world.

"You have heard of Harmon Rayde?" he asked.

"Who has not heard of him? As the lowest sort of traitor—"

He laughed. "A head is raised above the mob, and cowards hurl epithets. Oh, my dear—but let it pass. To know that I am Harmon Rayde is to know that I do not speak lightly, is it not?"

"When you speak of thrones?" she jeered.

"When I speak of thrones," he asserted. "My dear, the world knows of me merely as a figure that moves in the dark. But across the ocean my great ally knows me as the ruler of a nation. Have you ever wondered, my dear, at the turmoil that exists in the nation to the south of us? Have you ever wondered that another Diaz does not appear there, to rule with an iron hand? My dear, that other Diaz lives; he rules. Because my great ally is not ready for me to strike I do not rule openly. I put up a puppet, and the puppet is knocked down. But when the moment comes—"

"And you are an American?" she queried.

He threw his hands wide. "I am a citizen of the world, and—you will grow, Leila. You will live

with me, and you will learn. Such petty things as national boundaries—you will look beyond them. You will know that a man, a real man, a man fit to lift himself above the herd, knows no such thing as nationality. I offer you a throne, Leila. I do not want you to answer me now. I understand your feelings. But they are childish feelings. When you have had time to think—"

"Please." She stayed him with up-lifted hand. "I want you to know, Mr. McCord, that before you even talk with me, I must be assured that Mr. Endicott is unharmed?"

"So? To make terms, eh? And if he is unharmed?"

She could think of no ready reply.

"If Endicott is allowed, in my own good time, to go free, you will consider my offer?"

This talk of thrones, of "great allies"—he was an insane, wicked old man. But to make a promise even to an insane, wicked person is yet—to make a promise. "After I am certain that Mr. Endicott is free, then I will at least consider what you have to say," she told him.

"Equivocation!" He laughed. "Ah, well, it does not do to be angry too long with that which one loves. Ah, Leila, to-day is my triumphant hour. To-morrow, when the United States not only is at my mercy, but knows that it is at my mercy—what is a life more or less? Endicott will be able to do me no harm. And yet, if I thought that you cared for him—"

She colored. "I know him so slightly."

"And yet he risked so much! But we shall see, my Leila; we shall see."

It was a new McCord. All the venomous malignity remained, but there was a triumphant merri-ment that was strange to her. He talked like a madman, and yet—Harmon Rayde! Even a "provincial, small-town girl," as he had called her, knew that if newspaper report were one-tenth true, not even the submarines of Germany were more dangerous to America than Harmon Rayde.

She held her features calm, but she was glad when a knock sounded on the door, and McCord left her alone. If only she had told the police everything! It would have meant Endicott's death at the hands of McCord, but what did her capture mean but the death of Endicott?

If the wondering porter at the Bellevue would report her abduction! But would he think it was abduction? Oh, she was a silly, footloose girl, to have thought that unaided she could cope with Harmon Rayde!

And even if the porter had noticed her struggle—She had driven up to the Bellevue, had entered the restaurant, had eaten there. She had had no quarrel with her companion, the alert-eyed young man who had represented himself to be a newspaper man, but who was one of McCord's followers, lying in wait for her at the Greenwich mortuary, as any but a conceited girl would have known.

Indeed, the waiter who had served them would probably have decided that they were close companions, so earnestly had she talked to the man. For she had decided to tell everything to this newspaper man, gain his help, his advice. Later she remembered something familiar in his walk, as he left the dining room ostensibly to telephone to his paper. Now she knew that he was the man whom she had seen under the arc light in University Place last night. His mustache was gone, but he was the same man. And McCord called him "Benchley."

Little dapper man! She might have known that his features spelled dishonesty. But he had been so plausible! Well, it was not until she noticed that

her car had been dismissed, and that a closed car was waiting to take them into town, to the "Planet" office, that she had suspected

"It is not granted to every small-town girl to be shown a throne!"

anything. Then, seeing another man inside the car, she had drawn back. But her companion had urged her into the car. And the porter who had bowed them out the Bellevue door might well be pardoned if he had not realized that abduction was happening before his eyes. For she had been too surprised to scream, had resisted only slightly, and—she was captive to McCord.

Though death itself were the price exacted from him by McCord for attempting to aid Leila, Endicott would not reproach her. She knew this. And knowing it she—But how could one tell? Besides, she mused, as McCord had said, she was a provincial, with provincial ideals, and in the provinces a woman is not supposed to think about a man until the man has unmistakably shown that he is thinking about her. Unless she surrendered to McCord, Endicott would die. And even if she did yield to McCord, how could she be certain that Endicott would be spared?

And then she forgot herself, forgot even Endicott. McCord was Harmon Rayde, and he boasted of empire. It was all very well to think him insane, but across the ocean a maniac, lustful for power, had hurled a whole world into war. McCord had said that this was his triumphant hour. Could it be possible that he really did have the United States at his mercy? And if this incredible thing were so, was not she to blame?

### Chapter XVI: Wrecked

AT a signal from the host the last servant tiptoed from the room. In the same moment laughter and chaffing died away. Every eye was turned upon Burchard Penlow. From his place at the head of the great table, that was dwarfed by the immensity of the hall in which it stood, Penlow surveyed the gathering. It was his big moment, the big moment of his life.

Penlow had begun life, business life, as an office boy. At thirty he was a bank president. At fifty he was one of the richest men in the world, and one of the most generous. Now, at sixty-five, retired, practically, with an honorable life behind him, a life that had included a term in the United States Senate and an ambassadorial post in Europe, Penlow was facing the great moment of his life.

Around his table sat diplomats, financiers, great soldiers. And to him, a private citizen, they lent their eyes and their ears. He rose to his feet. He laid his hand upon the shoulder of the diffident, blushing youth who sat at his right.

"It was not, as you all know, for purposes of entertainment, gentlemen, that I brought you here this

TRADE MARK REG.

## The Thrift Car

# Model 90—Just What A Car Should Be

American families select their favorite automobiles for one or more of five reasons:

*Appearance, performance, comfort, service or price.*

One car may be famous because of its number of cylinders, another for its body design, another for its low price—

And so it goes until you come to Model 90 and then you discover this important fact back of its 100,000 now sold:

Model 90 has been purchased because it *combines all five* of these essentials for complete satisfaction.

True, in many cases its quality *appearance*, big-car stylish design, and distinctive color scheme primarily influenced purchasers.

Again, in many, many cases it is the *performance* of Model 90 that makes it first choice. As a matter of fact, performance is its major virtue.

Its 32 horsepower motor, the perfected fruit of years of experience, is a "giant for power and a miser with fuel."

It is not only the things Model 90 *does*, but the *way* it does them, that makes Model 90 owners so enthusiastic—

The way it consistently meets every driving need day-in-and-day-out, through congested traffic, over steep hills, in fair or bad weather, and for short or long rides, proves its adequacy for every motor ing need.

Then, too, it is so very simple, convenient, and easy to handle. It has a handy arrangement of everything for its control, narrow turning radius, and an easy operating clutch that is especially appreciated by women drivers.

A large number of Model 90 owners when asked the reason for their choice have mentioned *comfort* first.

When you have inspected this car and driven and ridden in it, you, too, will understand why comfort accommodations have contributed so much to Model 90's fame.

It has a spacious interior, a tall man can stretch his legs, five adults can ride without cramping, the seats are wide and the upholstery deep!

Then there is the buoyancy with which it travels, due in a large

measure to its rear cantilever springs, large tires, and scientific distribution of weight.

*Service* is not listed among a car's specifications, and by service we do not mean the service the car gives alone, but the service that the dealers and factory behind the car are ever ready and able to give.

Behind Model 90 stand nationwide service facilities of the highest order, quick, competent, courteous, and at reasonable cost. No matter where you tour, Overland service is accessible at your beck and call.

In making a survey of the reasons for the popularity of the Model 90 car, seldom has its moderate *price* been mentioned first—

Yet, even if it were lacking in some of the five advantages it *does* combine, its price still would warrant its great popularity.

And today, above all else, a car must be *economically* efficient.

*Five points of Overland superiority:*

**Appearance, Performance,

evening. That the spies of our enemy across the ocean might not suspect our real purpose it has seemed that the distinguished visitors from England and France were merely resting from their arduous labors. But our real reason is this young man whom I now present to you, and who will tell you, more clearly than I am able, the purpose of this gathering. You have all met him, but I introduce him to you again, Mr. David Wrightson."

Young Wrightson turned to his host.

"Mr. Penlow," he said, "dismisses too lightly his own part in my being here. If what I have to show you gentlemen to-night has any practical value—and I will stake my life, my soul, that it has—it is due to Mr. Penlow. For I came to him penniless, with only a dream to justify my intrusion, and—Mr. Penlow has made the dream real."

**T**HERE was muffled applause. Penlow had served his country; had given civilization—though his was not the brain to conceive it—the weapon whereby barbarism was to be forever defeated. It mattered not that another would receive the applause; he had served.

"The world faces to-day—has faced for three years—a condition that menaces all that we hold dear, a weapon in the hands of an unscrupulous, piratical foe that cannot be challenged. You gentlemen, of course, know that I mean the submarine."

"Six months ago I conceived a weapon that would counteract the activities of the underwater boats, that would destroy them. I went to Mr. Penlow. He listened to me, and—Gentlemen, I won't go into technical details, but I will show you!"

Penlow was no fool. It was unbelievable that this slim young chap who spoke so confidently had accomplished what he said, but—Dayton, Ohio, an American town, had given two American boys to the world, and those two boys had conquered the air. Skeptical the visitors were, but it was noticeable that none of that gathering of fifty distinguished men spoke as they followed their host and young Wrightson from the great hall. For the past few days members of the Allied Mission and men prominent in the political, military, and financial life of the United States had been visiting the Penlow Farm. They had noticed—though only a few had known the reason—that one immense building was fenced off from the rest of the estate and carefully guarded. All were to know the reason now.

For their host and Wrightson led the way, through a long corridor, low-ceiled, to this building. A guard opened wide doors, turned on hundreds of electric lights, that were mirrored in a placid pool, at least two hundred feet long, and half as wide. Attendants—heavily armed, it was noticed—led the guests up short flights of stairs, to a narrow balcony that ran around the edge of the pool. Like schoolboys watching an aquatic event between trained athletes, they leaned over the balcony railing, straining their eyes at some bulk that lay on the bottom of the pool. The silence was broken by whispered questions that died away as Penlow raised his hand. But it was not Penlow who wished to speak. It was young Wrightson. He stood on a little platform projecting over the pool at a distance of two feet from the water. He spoke in a low voice, but the acoustics of the great arched building were excellent and, even with its nervous tremors, his words were clearly distinguishable.

"We have had to do this on a small scale, gentlemen," he began. "For the Government to have aided me would have been foolish. For I had nothing but a mess of figures. I had nothing practical. But Mr. Penlow believed in my dream, and—"

He shook off his nervousness. With a slim forefinger he pointed. "That shadowy mass there, gentlemen, is a model of a submarine. It is lying perdu on—may we call it—the ocean bed. So the enemy submarines lie when destroyers are cruising overhead."

"Now, there is only one way in which the submarine lying on the bottom, or cruising along below the surface, can be located. That is by airplane. Flying above the surface of the water, one sees further into its depths than when sailing on its surface. The airplane, seeing, can attack in only one way. It can drop a 'depth bomb,' trusting that this latter will explode near enough to the enemy submarine to destroy it. But it is not certain. The submarine cannot ordinarily attack the submarine because it

cannot see its enemy. But if the submarine—our submarine—could fly in the air, locate its prey, and, like a bird that swoops down upon a fish—"

"Good God!" ejaculated a grizzled old chap who wore a navy uniform.

Wrightson looked up at him.

"You see"—he smiled wryly—"why I did not go to the Government. It was too absurd. But it has been done, gentlemen."

His voice lost its scholarly intonations: "Kelly, Purdue, Hathway!"

Three men, in working clothes, joined him on the platform. Wrightson spoke to them swiftly. They moved toward a great double door.

"Where's Munoz?" demanded Wrightson.

"Ain't he here, sir?" countered one of the men.

Wrightson whirled on the platform. "Munoz! Munoz!" he called.

A man dressed in the Penlow livery answered:

The great moment of Burchard Penlow had become the triumphant hour of Curzon McCord!

"He hasn't returned, sir. I'm quite sure. His valet said that he'd not been around to-day at all, sir."

"Not around?" Wrightson's nervousness returned, intensified. "But where has he been?"

"I kinda wondered, sir, orders bein' so strict. But his valet said you'd given him permission to go into town yesterday—"

"For an hour, yes," snapped Wrightson. "He was ill. Wanted to fill a prescription. He didn't come back yesterday?"

"Anything wrong, Mr. Wrightson?" Penlow called.

The inventor wiped perspiration from his forehead. "Why, no, sir, except that Munoz, my assistant—chief mechanic, you know—he isn't here."

**T**HE sturdy old man in the United States naval uniform voiced the suspicion of everyone: "Honest?"

Wrightson smiled. "It isn't that, sir, that I fear. Munoz—I'd stake my life on him. Portuguese. My father was a ship captain. Brought him from the Azores twenty years ago. Munoz is all right. Besides, there is but one copy of the plans of my invention. And I have that copy here." He tapped his breast. He smiled. "It's just—unaccountable. But unimportant. The men here can do anything that he could do. And I won't keep you waiting, gentlemen. Just a moment."

At his signal the three men swung open the double door. They drew aside and let Wrightson precede them into a room. Those opposite the opened door craned farther over the balcony rail. They could distinguish little, however. And even as they strained their eyes there came a buzzing, and those opposite the door involuntarily dodged.

For a flying machine, different from anything yet that had made men marvel, moved, propelled by the blades that had buzzed in their swift revolution, through the door. It did not hesitate; it rose, at an angle, directly into the air. It shot toward the balcony, lifted, rose almost vertically toward the great arched ceiling, turned, dived down, and almost stopped twenty feet above the pool.

"Levitation," cried a French savant.

Wrightson, only head and shoulders visible, smiled a negative. "Not quite. Counteracting propellers enable me to keep in the air practically without motion. That's all." He bowed to the storm of applause that swept the building. He lifted one hand. "Wait, please," he begged. "So far I have shown you nothing but an improved airplane. But—"

He was a better doer than teller. He disappeared inside the fish-shaped machine, whose planes were hardly greater, proportionately, than would have been the fins of a twelve-foot fish. It was the scant size of these planes that had made the savant cry "Levitation!"

He pulled to a door over his head. And, though there were glass portholes in the sides and bottom of the machine, they were thick and rounded, and the onlookers could not see through them. The machine burst into flight again. It rose almost to the ceiling.

It hovered. Its occupant—they knew that he was demonstrating what would occur in the North

Sea when the Allies should be equipped with these machines—located the model submersible on the bottom of the pool. Headlong the machine dived. Ten feet from the surface its dive became a slanting approach. At an angle of forty-five degrees it entered the water. Straight toward the sleeping submersible it swam, paused above it, and—the demonstration, as far as the assembled guests were concerned, was over.

They hardly noticed the machine come to the surface, glide to the platform.

"One hundred of those machines, and there won't be an enemy submarine left!"

"Can't see the blamed thing come. Right on top of 'em, leave your bomb, easily equipped with torpedoes, twenty times as large—"

"And a battleship! What price a Hun battleship?" It was a British naval officer speaking now. "Sights her from the air. Approaches, dives, torpedoes her—"

**I**T was into this hubbub that young Wrightson emerged from the cockpit.

"What do you call her, Wrightson?" cried one of England's greatest statesmen.

The inventor grinned. "I

think of her as the Pacifier," he replied. "But she's named the *Flying Fish*."

It was the end, within a comparatively few months, of the war. So everyone present felt.

Penlow, modestly in the background, smiled at the ovation tendered the inventor. And, because he was in the background, he was first to notice the stranger in the main doorway. Penlow knew every man about his place. A spy could so irrevocably wreck the plans to end the war. "You!" cried the millionaire. "Smeeth! A stranger—"

The stranger fired—from his hip—with the deftness that spoke of long practice; he fired at the millionaire. Penlow took the bullet in his shoulder. Wrightson, hearing the shot, turned. The intruder fired again, and the young inventor pitched forward on the little platform.

There was one moment of hesitation. In surprise attack even the bravest pause a fraction of a second, to gather scattered wits. Then there was a rush down the stairs, to attack the half dozen more strangers who, armed with automatic pistols, had crowded through the doorway. What hundreds more might be behind them no one paused to reckon.

But the advance guard was too late. Three bombs struck the floating *Flying Fish*. As the guests charged through the open door there were none to resist them. The intruders had fled, leaving behind them two sorely wounded men and the burning wreckage of the invention that was to pacify the world. The great moment of Burchard Penlow had become the triumphant hour of Curzon McCord!

(To be continued next week)

# TORBENSEN

## INTERNAL GEAR TRUCK DRIVE

### To Motor Truck Engineers:—

Here you see clearly the basic design of Torbensen Drive. It is elementally like this in all sizes, though, of course, individual parts in each size are designed specifically for the work they are intended to do.

Look particularly at the design of the I-Beam—the patented construction that has given Torbensen Drive its leadership. See the very small gear reduction at the differential, and the very large one where the jack-shaft pinions mesh with the internal gears. This accounts in part for the light weight of Torbensen Drive.

Close examination of this Torbensen rear axle shows how carefully excess weight has been eliminated without in any way affecting strength.

There are many things about Torbensen Drive that are extremely interesting from an engineering standpoint.

We will gladly supply blueprints of any size axle from  $\frac{3}{4}$ -ton to five tons, free and without obligation. Kindly request them on your letterhead.

TORBENSEN Drive is made to last. Every owner gets a **GOLD BOND GUARANTEE** that the I-Beam axle and spindles will last as long as the truck, and the internal gears at least two years.

### To Motor Truck Users:—

The drawing below is an intimate view of Torbensen Drive. Engineers can see from it instantly why Torbensen Drive has become the undisputed leader in the truck rear-axle field.

Its mechanical features give Torbensen Drive 45 per cent greater road clearance—which makes the truck less likely to stall on bad roads and in snow.

The patented I-Beam—particularly—makes this Drive very strong—at the same time keeping it much lighter in weight than other types of equal capacity. This light weight increases rear-tire mileage about 20 per cent, saves gas and oil, and cuts repair costs to the minimum.

In every way, Torbensen Drive has proved itself the essence of economy and reliability—and the evidence lies in its very extensive use. There are now fifty thousand Torbensen Drive axles in service.

The iron-clad Torbensen Gold Bond Guarantee makes unfailing rear-axle service certain. Torbensen Drive is the only rear-axle drive that is definitely guaranteed.

# THE EVOLUTION OF ARMAGEDDON

BY W. BEACH THOMAS

CORRESPONDENT IN FRANCE FOR THE LONDON DAILY MAIL

FOR the 1918 offensive the German High Command prepared, as their papers said, an "irresistible formula" for "the last battle of the war," as they meant it to be. The formula used by the Allies in 1917 appeared sufficiently complicated and terrific. Very reluctantly and after long delay, the Allies were forced—partly by the gibes of the enemy—to employ the two most repellent forms of warfare, gas and liquid fire; and they added many more legitimate and strictly military inventions. So it came about that the Germans fell into their own pit.

Their defeat at Arras, as at Vimy—one of the most glorious battles of the war—was driven home by a host of new and old forms of terror. The British used for the first time "Thermit," a form of shell that lets drop a cascade of atoms of molten metal. The falling fragments were so brilliant that at a mile or more distant they resembled a firework display, and their splendor was hardly dimmed even by full sunshine. The "Thermit" was only rivaled in spectacular aspect by the "Golden Rain," which was one of the many rocket signals for the artillery. The British used also shells, or rather cylinders, of burning oil, that blazed with crimson fury along the line of German trenches, disappearing into an impenetrable murk of sepi smoke. These and other trench-mortar shells were all clearly visible to both sides in their course through the air. I know nothing more portentous than to watch fifty or sixty of such cylinders tower up, twist over and over like a flock of tumbler pigeons till they reach their summit; and then descend like wild ducks that have reached their feeding ground. For a second or two after they touch ground nothing happens—they just vanish. Then you would say that the mouth of Hell had suddenly opened.

These and other cylinders containing poison gas are all thrown by trench mortars; and this trench artillery, as it is now called, has reached such proportions that I have known it to drown completely the sound of the bigger artillery, until both have been quenched by the intolerable rattle of the machine guns, being used in mass for barrage purposes as well as on direct targets. Explosive tubes for breaking barbed wire were used. Armed motor cars of an older type, as well as tanks, followed up the infantry. Airplanes flew low, using Lewis guns and light bombs, against both infantry and gunners.

## Chemical Terrors

THE Germans had these and some other weapons and methods of attack to choose from when they prepared their new attack; they decided that chemical means were on the whole more effective than mechanical means. Defensively they relied largely on smoke. Around their own guns they erected "smudges" or stoves for emitting dense smoke, in order that their artillery (which had been knocked to pieces in last year's battles) might lurk in decent obscurity. Next they prepared great quantities of smoke bombs and smoke shells to hide the advancing infantry in case the spring mists did not arrive. It was said at the beginning that this war would be fought in a fog, and it is true in a chemical sense that every battle is fought in a deeper fog. The coming of this fog is an amazing spectacle. In the midst of a fair scene suddenly explode a number of shells that you might think were the ordinary shrapnel bursts which are a continuous feature of the battle front all day and every day. But in this case you

will see no wicked little flash or spark, and instead of a quick dispersal of the smoke, fantastic forms grow rapidly in the air and reach out downward and sidewise. A common shape is the likeness of an octopus with growing feelers or tentacles, thin and airy in substance, and an opaque body swelling rather faster than the feelers, and at last quite absorbing them. In a few minutes the whole landscape vanishes behind it. The fog of

and the weather is obscure enough, the attack is launched; the waves of infantry advance, usually in five lines. Some, but not nearly all, carry the old standard tools: guns, bayonets, and bombs. (It is curious that the old practice of shooting the rifle from the hip during an advance has been resumed on both sides.)

Some carry squirts, for clearing out dugouts, some wire, some "stink bombs." In the German attack two

pieces of apparatus were more or less new. The first was the small flame thrower, which has been much improved since its first appearance. Though I have seen British flame throwers used both in practice and in action, we have shrunk from their general employment. The best will carry over 100 yards, emitting a scarlet flame of great breadth and height, so hot as to char even a stony and grassless surface. But the favorite German flame thrower is much smaller and is manhandled. Its range is short, but it has an equally destructive flame. The instrument has been manufactured in great quantities, and is now a quite common addition to the soldier's burden. The bearer needs an extra dose of courage—if he is hit, he is instantly calcined—and in the case of the larger machines, the effect of a shell is much the same as if a dump were

hit. And the danger begins even earlier than this in the history of the flame thrower. I think the most pitiful of all the letters I have read during the war was the account given by a German mother of how certain girls of their little country town had been shriveled

to cinders owing to an accident in the "fire-making factory." Throughout the letter ran, like the motif of a Greek tragedy, the continuous note of terror lest lawless vengeance prepared against others even during peace should inevitably devour its authors.

## Guns and Shells

SUPPOSE the attack to have been successful, how was the next obstacle to be overcome? The chief instrument on which the German High Command relied for this second stage of the offensive was an adaptation of a British invention. The

best of the small trench mortars used last year was known as the Stokes. It can shoot so fast that four shells will be in the air at the same time; and they explode with almost the power of a field-gun shell, though they are nearer two than three inches in caliber. The Germans appear to have built a mortar somewhat on this model with this difference in structure, that it could be carried (Continued on page 28)

The soldier who operates a flame thrower needs an extra dose of courage—if he is hit he is instantly calcined

war has indeed descended and begins to complicate every issue. From sheer alarm, if for no other reason, machine-gun bullets and shells are always loosed in myriads into that mysterious cloud, lest it should contain a bellyful of fighting giants. Imagine the picture (and I give it without exaggeration—indeed, exaggeration is beyond my powers) of the task of the giants, in khaki, blue, or gray, if they happen to be following the cloud. It is probable that gas shells are being ruined on them as well as shrapnel and high explosives and bullets. They must all don the gas mask, which is an apparatus not easily managed and apt to obscure vision, even if the glass can be kept clean. Possibly the sun is not yet up, so that the men must face a triple gloom: the obscurity of twilight, the confusion of their masks, and the mass of artificial smoke.

So much for the more or less negative side of the combat. Offensively the German High Command divided the attack into two parts. The first problem was how to overcome the immediate trench system in front. The second and harder problem, which happily they did not quite master, was to supply the advancing infantry with weapons capable of breaking through other trench or shell-hole defenses. Chemical warfare of a peculiarly repulsive nature was again preferred by Ludendorff for the first stage of the onslaught. The Allied trenches and gun emplacements were soaked with gas, chiefly the new mustard gas, which is a purely German concoction. While this soaking process is going on, shells with fuses so sensitive that they explode immediately on contact are fired at the wire. When that is cut to small strips and the enemy is thought to be sufficiently gas-soaked

REPUBLIC FOR SERVICE

## Why Does Republic Build the Most Motor Trucks?

**F**IVE YEARS AGO the first Republic Truck was completed in a little shop where the total output for the first year was but 54 trucks.

Last year Republic produced and sold more than twice as many motor trucks as were produced and sold by the next largest maker.

How was this leadership achieved so quickly? Why does Republic build the most trucks?

Simply because the quality that has been built into all Republic Trucks and the service they have given to their owners created an endless chain of demand for more trucks of the same dependable kind. And the Republic factories grew to take care of the demand.

Concentration is another reason for Republic dominance. Republic factories build nothing but trucks. Republic engineers concern themselves only with trucks and trucking problems. The whole resources and energies of the institution specialize

on perfecting truck design and truck performance.

Every part that goes into a Republic Truck must be the best that experience and experiment have been able to discover. The Internal Gear Drive, used on all Republic Trucks, transmits 92% of the motor power to the wheels—from 12% to 26% more than any other form of drive.

There's a Republic Truck for every business need. Seven models in all, ranging from the  $\frac{1}{4}$ -ton Republic Dispatch to the big, 5-ton Model V, designed to withstand the severest strains of heaviest hauling. 1300 Republic Service Stations in over 900 principal centers of the United States keep Republic Trucks working at top notch efficiency.

Whether your truck problems are those of a merchant, manufacturer, contractor, farmer or any other line of business, the experience of the World's Largest Builders of Motor Trucks will prove of interest and value to you.

## TRENCH HUMOR

Continued from page 11

"Some of the boche got in here last night and tapped our wires," he informed us, giggling.

I looked at the chaos of down timber and barbed wire all about us and marveled that a man could possibly get through there in the dark, much less locate and tap a telephone wire.

"Oh, they know this war game," the lieutenant assured me, still laughing.

"They know it better than we do, eh?"

"Sure. They've been at it all their lives."

"Do you think we can learn it well enough to handle them?"

The lieutenant stopped laughing and stared at me in surprise. "Why, certainly! It doesn't take us a lifetime to learn a thing. The boche isn't doing anything to us that we're not doing to him."

Then he laughed again and called my attention to a monster shell that stood on end at the entrance to his dugout. "See this pill they sent over to help us digest our breakfast?" he laughed. "It's a dud, of course. But if it had exploded when it hit we wouldn't have had any bother with our food."

Thus does fear of the raving Hun depress the American.

We climbed on through communication trenches, making for another front-line position. The American batteries had begun handing the boche a little mid-afternoon hate, and the sky above was noisy with the intermittent grumbling of their passage. The sound of their passing overhead is exactly like that of a fast train grinding over a track that has many curves. There is the shoving grind of the wheels as they take a curve, the pulsing, easy pur of the straightaway, and then again the grumbling grind as the flying flanges bite into another turn. One gets the impression of a series of aerial tracks arching above over which small and incredibly swift trains of destruction are whirling to their terminal in the German lines.

### Educate or Kill

WE found our way through a confusing system of deserted trenches to a front-line position on a wooded hilltop, and there, on guard, we came upon a group of boys, all from a small inland town that I well know. It is a little town on a prairie. It has a small, red frame railroad station, one main street on which are all the business houses, one high school, a coal and lumber yard, and a grain elevator. Most of the residents are retired farmers. It is an event when anyone moves away from that town, and a similar occasion of importance when anyone from outside the immediate district moves in. It has one opera house, usually dark, where comes an occasional small road show and where the lyceum entertainments and lectures are given in winter. In the summer, in a near-by grove, the Chautauqua provides verbal food for thought and some musical and comedy stimulant for a few days. I know the muddy little swimming hole where every one of those boys learned to dive and tread water.

A little more than a year ago that town and its people were as peaceful as moonlight, secure in their provinciality, and but slightly troubled by the war that raged in another world. To-day they read the casualty lists with fearful eyes, and the postman's mail sack is heavy with letters from France. To-day the boys who learned to tread water in that muddy little old swimming hole are standing competent guard in a front-line trench on the western front in France, calmly facing history's most powerful and barbarous military power, and dealing with the life-trained boche better than blow for blow. Each of those boys is a typical American, which is to say that an ancestor had at some time fled from some one of the countries now at war to escape the identical injustices that, cumulative and fused into a definite evil idea by Germany, are responsible for Armageddon.

One of them, a slim, very young, blue-eyed chap, took me aside. "Say, listen, tell me something," he said very seriously. "How do the folks back home feel about this thing now? Do they know we got a war on over here?"

I told him something of the awakened spirit of the country.

"Well, that's fine," he said fervently. "You know when we left nobody seemed to have much idea

about how big a job this is. Since I've been here I've been thinking that if they could find out all there is to do they'd turn in an' back us up right."

Are the people back home awake? Hardly a man I talked with but brought that up. And the wistful, anxious way they ask the question! It was worth while to be able to answer it in the affirmative!

On the way back we stopped in at a line lieutenant's dugout. "Nothing much doing now," he apologized. "Would you be able to stay over until this evening and watch the book agents work?"

"Book agents?"

"Propaganda," the line lieutenant explained. "Pam-

phlets they pick for scout work. The other one is a slight, rosy-cheeked, blue-eyed youngster only a little over five feet. He could put on short pants and ride half fare without question on any road in America. That's the type they pick for scout work.

While we were at dinner a runner came in.

"Thus-and-So reports three Germans makin' their way toward G. C.," he reported. The major ordered certain people to be told of the presence of the Germans, and the runner departed.

"A., you see if you can get in touch with those three fellows when you go out to-night," the major said between bites, speaking to the physically abbreviated member of his Mutt and Jeff scouting duo.

"All right, sir," said A., also between mouthfuls—"I'll try and run across them." As casual as that.

The meal over, I turned in in the bed belonging to the smaller of the two scouts. He was somewhere out in No Man's Land with a grenade in his hand silently paging the three Germans.

A little before three o'clock in the morning he turned me out. He was wet and weary. The tall scout had risen and was putting on his clothes.

"See anything?" he asked his comrade casually as he wound his putters.

"No," said the smaller of the two, slipping out of his tunic. "Not a thing doing."

The tall scout said he'd see me later, and departed. A liaison officer came for me, and with him I walked out, through the first light of the coming dawn, to the trenches to watch stand-to.

The trenches that had apparently been deserted the afternoon before were lined with silent, alert men standing on the fire step with their rifles resting on the parapet before them. A trench mortar began banging rapidly from its emplacement near by, and almost coincident with its first roar a bird in the trees overhead started its morning song. The roar of the gun didn't stop the song. That was a bird of the battle field, and no doubt it would feel uneasy if quiet prevailed. We could see the trench bombs whizzing through the air, turning swiftly end for end in their flight. I stepped in to the gun emplacement and watched the crew work. It's a sweet job. The gun is just a short iron barrel that looks very much like a stray piece of stovepipe set at a certain angle. It is muzzle-loading. That's what makes firing it a sweet job. A man takes one of the bombs and chucks it down the muzzle. The propulsion charge is in the bomb itself, and the jar of striking the breech sets it off. A man throws it in, but it throws itself out. A rule of the game, I believe, provides that the man who drops the bomb into the short barrel must get his hands out of the way quickly, to avoid deflecting the missile from its course.

### Gone to Breakfast

THE bombardment ceased, and there ensued a perfect illusion of peace. Not a gun in all that battle area disturbed it. For more than an hour we lounged on the ground behind the trenches or squatted on stumps and talked of many things, among which war was not included. We spoke of the world as it had been and would be. There was no reference to this ghastly, stupid interim of war.

It was full day when I returned to the battalion headquarters. While I was at breakfast there the tall scout who had been dressing himself that morning when I got up ambled in and took his place.

"See anything?" he was asked.

"Oh, nothing much. I didn't see a soul. I found this on a table in a dugout over there. Some of that propaganda stuff we shoot over. Some Heinie had been looking it over."

"Guess the old guy with the wooden leg had gone home to get his breakfast," some one suggested.

"Probably. It's an awful job for an old one-legged man. They ought to give him a boy to help out."

A car was waiting for me. I said good-by and went out to it. The guns were at it again, both boche and American, and the sky overhead was streaked with the rusty, grinding sound of their passage. It had been a very quiet day and night in that sector. A communiqué covering the period would probably read: "There is nothing to report."

Mr. McNutt's next article from France will appear in an early issue.

## SUN WORSHIP

By Marion Patton Waldron

If I should seek a god for myself,  
I would choose thee, Sun.  
I have no need of the terraced temples  
Of Babylon,  
I who worship with answering fire  
As men had done  
Ages before the gates of Persepolis  
Were begun.

Come, magnificent! Lave my white limbs,  
Beautiful one;  
Heal me with honey and spur me with wine  
Till I leap and run;  
Strike, till I fall, till I swoon in ecstasy,  
Blind me and stun;  
Fill me with thee, fill me and fructify,  
Sun!

phlets and such like. We're going to shoot some over later on this evening."

"You shoot pamphlets over to them?"

The lieutenant nodded. "With the trench rifles. We're either got to educate 'em or kill 'em."

Truly, it's a queer war! We spank 'em with H. E. and shrapnel and then shoot over a few plain facts in the hope that those who have sense enough to read may have sense enough to run while the running is good.

### Paging Three Germans

IT was near sundown when I left. I went back to battalion headquarters and had dinner with the major and his staff. There I met his two scouts who do patrol work in No Man's Land and investigate and report on the living conditions in the German trenches. One of them is a huge fellow, some six feet four, and built in proportion. That's the

## Big Increase in Porcelain Efficiency

*2½ Times the Resistance  
to Breakage from Shock*

**H**OW to make porcelain for spark plug insulation, offer greater resistance to shock and vibration!

Ten years of original research work and the three-thousand-four-hundred-and-fiftieth experiment, revealed the secret.

# Williams' Shaving Cream

—or on your  
brush if you  
prefer

## Cream

**W**E have taken the rich, moist, soothing lather of Williams' Shaving Soap and put it into a tube. You simply squeeze a small bit onto your face or your brush and quickly work up a big, thick, cream-like lather.

As the lather piles up, softening the beard, holding its moisture throughout the shave and leaving the skin soothed and refreshed, you realize that there is a difference between just a shaving cream and an efficient, reliable, old-time shaving soap in cream form.

Use shaving cream if you prefer your shaving soap in that form, but for the sake of your personal comfort be sure that the cream you use is Williams'.

### Four Forms of Williams' Shaving Soap

Send 20c. in stamps for trial sizes of the four forms shown here. Then decide which you prefer. Or send 6c. in stamps for any one.

The J. B. WILLIAMS COMPANY  
Dept. A, Glenside, Pa.

After the shave of the bath you will enjoy the comforting touch of Williams' Face Powder. Send 6c. for a trial size of the perfume you prefer. Violet, Carnation, English Lilac or Rose.

crowned horror to the dry-eyed women, waiting and hoping and dreading to see him come. Always there were cases of hysteria at such times; old Madame Vielé, who shrieked out suddenly in the market place that she had seen her son fall dead before her; Marguerite Le-maire, who, returning from Paris on the night train, had found her husband in the compartment with her, had kissed him, held his hand, wept on his breast—and suddenly she was alone, with the train rushing on through the darkness to Méru, where she was met by the news of his death.

**A**T such times Jeanne braced her shivering limbs and throbbing nerves to steady rigidity and bore her burden as though she had the strength of eternity in her heart. Scraps of phrases from André's letters came before her eyes, as voices speak to tranced saints. As she worked she saw, written before her: "Whoever is responsible for the war, the children are not." Or again: "We are all evil creatures, God knows, and our motives must be mixed in this war because they are mixed in everything else. But with whatever of virtue there is in me, I am fighting for what I think best fit to survive in the world I wish my children to inhabit." Or again, for her own comfort: "Dearest darling Jeanne, the very powers of hell cannot take away from me the ten years of supreme happiness you have given me."

The days went by, one, two, three, four, five, with no letters, with no words at all beyond the steady advance of the Germans. The nights went by, the long, long nights, not black and empty, but filled with dreadful lightning visions of what might be happening, even at that instant, as she lay in her bed. Jeanne felt no fatigue, no hunger, no consciousness of her body at all, at such times. It happened once, after one of these long, numb days, that she cut her hand deeply, and did not know she had done it till she saw the smears of blood on her skirt. Her first thought was that it was the only skirt she possessed and that she must not spoil it with her blood, because there was no money to buy another.

It was that very evening, after she had tied up the wound on her hand and was beginning to undress the younger children, interrupting herself frequently to help Jacques with his Latin, that she heard the front door of the house open and shut.

She went as cold as ice. Her heart stopped beating, her hair stirred itself on her head. It had come. Some one had brought a telegram with the bad news.

She put the children on one side, quietly opened the kitchen door, and stepped out into the cold twilight of the hall.

André stood before her, a shadowy figure in the obscurity, pale, unshaven, mucky, smiling, a strange, dim, tired, infinitely tender smile. His arms were outstretched toward her.

For a moment—a long, silent, intense moment of full life—she knew nothing but that he was there, that she held him in her arms, that his lips were on hers. Nothing else existed. There was no war, no danger, no fear, no wonder how he could have come. There was nothing in all her being but the consciousness that they were together again. She was drowned deep in this consciousness; the blessed flood of it closed over her head.

Presently the door of the kitchen opened, and the littler ones trooped out to find her. They could live but so few moments, those littler ones, without sucking at her vitality.

She fell at once into the happy confusion of the usual leave of absence, crying out to the children: "See, see, papa has come! See, Uncle André is here!"

It seemed to her the children were singularly apathetic, not instantly molten joy as she had been. The younger ones were even a little shy of him, who was, after all, an unknown man to them; and more than a little jealous of him, who came to share with them their naman, their auntie, the source and light and warmth of their exacting little new lives. It seemed to Jeanne that they looked even more queerly at him this time than usual, and that there was in the sidelong glances of the older ones an element of strangeness. Their father was becoming a mere legend to

## On the Edge

Continued from page 3

them, she thought with a painful contraction of her heart.

She found herself talking a great deal, in a quivering, excited voice, gone back to her old exuberance of expression. It seemed to her that she finally asked André how it could have happened, his coming, and that he explained across the children's clamor that his regiment had gone down to the gates of hell in the offensive and that what was left of them had been given a twenty-four hours' leave of absence.

Oh, yes, she understood with no further words, she who knew by heart every way of communication between his sector on the front and her door; he had reached Paris by the 3.20 train, had hurriedly changed stations, had caught the 4.40 train out and reached Méru at twenty minutes of seven. And oh, she had not been at the station to meet him! But of course he had not had time to telegraph. So, if it were only a twenty-four hour leave, he would need to take the midnight train back. He had come so far, so far, for five hours with her.

She thought this all out while flying to get him some food, to open the can of meat, preciously kept for just such a golden chance, to heat the potatoes which were left, to set Jacques to grinding some coffee—real coffee, such as they never used—to uncover the sacred little store of sugar, wide, to his hand! And at the same time to talk to the children. How unresponsive children are, she thought; how quickly they outgrow whatever is not immediately present. It is hard to remember that four years, so long in the life of a child, is all eternity to a young child; his utmost imagination cannot compass it. She said all this to André, to explain the children. How absurd to try to explain them to André, smiling his deep understanding of them and of her, far deeper than she could ever fathom!

Then she was driving them all upstairs to bed, leaving the kitchen to André, the big tin bathtub and the clean underclothes which she had always ready for the first ceremony of every return from the trenches. Only there were more hot water! But she always let the fire go down toward night, to save coal. For her there was no need of fire. She could put a blanket around her shoulders and wrap her legs in a rug of an evening as she sat writing her letter to André by the poor light of the one lamp, filled with war kerosene, which smoked and glimmered uncertainly.

She hardly knew what she was doing as she hurried the children into their beds in the cold rooms. Hurry as she might, there were six of them; and many, many of the priceless, counted-out moments had passed before she ran down the stairs, as madly as any girl racing to meet her lover.

André was there, at table, washed, shaven, a little color in his lean, deeply lined cheeks under their warlike bronze. When he heard her step flying down the hall, he pushed back from the table and, his napkin across his knees, a good light of laughter in his eyes, he held out his arms to her again, crying like the traditional bridegroom:

"Alone at last!"

**S**O it began on the light note, that incredible good fortune of their evening together, she perching on his knee, watching him eat, filling his plate, pouring out more coffee, talking, laughing—yes, really laughing as she only did when André was there en permission. When he had finished she cleared the table, made up the fire, recklessly putting in lump after lump of the sticky, resinous coal and opening all the drafts. They sat down together before the stove, beside the surly ill-conditioned lamp, and their tongues were loosened for much talk—light, deep, sad, hopeful, brave, depressed, casual, tragic. They poured out to each other all the thousand things which do not go into letters, even daily ones. She heard of the unreasonable irritability of his captain, and the plain, restoring good faith of the old colonel; the heroism of the men, the cowardly slinking back to a clerical position at the rear by young Montverdiere, the son of their depute. He heard of her struggles with the boys' Latin and mathematics, and with the little ones' alphabet: "Just think, André, Annette, the obstinate little thing, will not admit that B's name is

## The Test of Time Is the Only True Test

IN SELECTING a motor truck you naturally desire to eliminate, so far as possible, the element of uncertainty.

FOR DEPENDABILITY is the prime requisite in a vehicle that is to play so important a part in your daily business.

THE MOTOR TRUCK WILL either conserve or waste a lot of valuable time, depending upon whether it will be always on the job or only intermittently.

THE VERY WORDS Reo and Reliability have come to be regarded by motorists as synonyms.

AND THAT REPUTATION could only develop from many years of use and continuous, consistent performance.

THIS REO "SPEED WAGON" was the pioneer of its type.

IT HAS THEREFORE seen more years of use.

UNCHANGED in any important detail or unit from the very inception of the model, its reputation rests not on brief trials in individual cases, but on several years of service in hands of thousands of owners in hundreds of different lines of business.

SO, WHEN YOU SELECT a Reo "Speed Wagon" for your own particular work, you do eliminate all element of risk and of speculation.

YOU OBTAIN A MOTOR TRUCK the quality, the dependability and the Low Upkeep of which are known quantities.

EQUALLY ADAPTABLE to city, suburban and rural service—to country roads and mountain trails as to city streets—this pneumatic-tired Reo has proven its stamina in all parts of the world and in almost every class of carrying.

DEMAND, ALWAYS GREATER than the output, is now still more insistent—due to War Speed which calls for speedy truck haulage.

SO THE ONLY WAY to be sure of getting a Reo is to see your Reo distributor at once and place your order.

TODAY won't be a minute too soon.

## A Quart a Day For a Child, They Say

**A Noted Food Authority Says:**

"No young person can be expected to thrive on less than a pint of milk daily. And a quart is the right amount."

### Multiply Its Goodness By Floating Puffed Grains in It

Milk is a cheap food. It is a complete food when whole-grain is served with it.

It is an essential food for young folks.

To all it is the one indispensable food.

Here is the way to make the milk dish vastly more delightful—a way which millions use.

Float Puffed Grains in it—sometimes Puffed Rice, sometimes Puffed Wheat, sometimes Corn Puffs.

The Wheat and Rice are whole grains puffed to bubbles. They are steam exploded to eight times normal size. They are thin, airy, toasted morsels, with exquisite nut-like flavor.

Corn Puffs are corn hearts puffed in a like way.

All taste like food confections. But the purpose of puffing is to blast every food cell—to make digestion easy and complete.

These are the best-cooked grain foods in existence. So the greatest food a child can have is some Puffed Grain in milk. And the proper daily allotment is all that a child will eat.

#### Like Puffed Nuts For Breakfast

For breakfast serve with cream and sugar, or mixed with any fruit—each morning a different Puffed Grain.

Also use like nut meats as garnish for ice cream. Also as wafer in soups.

### Puffed Rice

### Puffed Wheat

### Corn Puffs

All Bubble Grains

B. She says it is 'loof' and she knows it is because she dreamed it was—haven't children the most absurd ideas?"

She spoke out with a Frenchwoman's frankness of her moments of horror, of despair, of doubt of the war's meaning, of revulsion from the industrial system which had made the war possible. There deep answered deep; he brought to her the venomous hatred of war which fills the trenches to the brim: "It is not glorious; it is infamous. I am not a hero; I am a murderer. But there are worse things. It would be worse to have peace, with the German ideas ruling the world. No, every one of us would better die than allow that to happen. Yes, I have had too—who hasn't?—moments of doubt, moments when the horror of our stupidity was too great, when I have thought that any other way would be better than war. But not since the Russian affair, not since the Germans marched into defenseless Russia. Russian children will be brought up in German schools, to form a new generation of Germans. I would kill my children with my own hands before having them added to these ranks. No, since Russia there seems no other way but to go on to the end, and to make that end an end to war forever." The worn phrases, dubious and tarnished on the facile tongues of public orators, repeated there in that dimly lighted room by that worn man and suffering woman, became new, became sacramental.

THEY clung to each other for a moment again, and gradually felt the tension of the spirit melt away in the old cure of simple bodily nearness. His cheek against hers—at the sensation she became just a woman again.

She stirred, she smiled; she told an amusing story of their queer old neighbor; she interrupted herself to say reproachfully: "But I do love little Maurice! I don't love him as I love the other children, but just because of that I love him more, because I pity him so."

"That," he said with conviction, "must be true because nobody but you would be capable of such mixed language and emotions."

She had laughed at this and, remembering suddenly that she had a box of cigarettes for him, jumped up to get it. He was amazed. Where, in Heaven's name, had she been able to get cigarettes in France in 1918? Ah, that was her little secret. She had her ways of doing things! She teased him for an instant and then said she had begged it for him from an American Red Cross camion driver who had stopped there to get water for his radiator. The recollection brought to mind something painful, which she poured out before him like all the rest. "Oh, but, André, what do you think the woman in uniform sitting by him said? Of course she couldn't have known that I understand English, but even so—She looked at me hard, and she said: 'These heroic Frenchwomen people make so much fuss about, I notice you don't see any of them turning out to run cars or distribute clothes to refugees. Much they bother themselves for France. They stay right inside their comfortable homes and do fancy-work as usual.' Yes, she said that. Oh, André, it hurt! I was ashamed that I could be hurt so cruelly by anything but the war."

This led to talk of America. "All our hope is with them, Jeanne. You mustn't mind what one woman said—very likely a tired woman too, fretted by being in a country where she doesn't speak the language. All the future is in their hands, and, by God, Jeanne, I begin to believe they realize it! They are really coming, you know; they are really here. I see them with my own eyes, not just doctors and nurses and engineers and telegraphists, as at first, but real fighting men. They are in the sector next to ours now. They fight. They fight with a sort of exuberance, as though it were a game they were playing and meant to win. And they all say that their country is back of them as France is back of us, to the last man, woman, and child. They're queer fellows. They remind me a little of our Normans and a little of our Gascons, if you can imagine the combination. Whenever there is a difficulty they have a whimsical, bragging little phrase, that they draw out in their sharp, level voices: 'Never you mind; the Yanks are coming.' It made me smile at first, at their presumption, at their young ignorance. But there is something hypnotizing about the way they say that jerky un-

lovely phrase, like the refrain of a popular song that sticks in your mind. It sticks in mine. 'The Yanks are coming!' The Russians have gone, or rather the Russians never were there, but 'the Yanks are coming!'

Jeanne had been looking at him hard, scarcely hearing what he said, drawing in a new conviction from his eyes, his accent, the carriage of his head. "Why, André! you are really hoping that it may end as it ought!" she interrupted him suddenly. "You are really hoping—"

He nodded soberly. "Yes, my darling, I really hope."

He was silent, smiled, drew her to him with a long breath, his arm strong and hard about her. They might have been eighteen and twenty again. "And I know," he whispered, "that you are the loveliest and the best and the bravest woman in the world."

The tears ran down her cheeks at this—happy tears which he kissed away. When she could speak she protested, saying brokenly that she was weak, she was helpless in the face of the despair which so often overcame her, that she was perilously poised on the edge of hysteria.

"Ah, who isn't near that edge?" he told her. "Not to go over the edge, that is the most that can be done by even the strongest in these days."

"No, no," she told him. "You don't know how weak I am, how cowardly, how I must struggle every day, every hour, not to give up altogether, to abandon the struggle and sink into the abyss with the children."

"But you don't give it up," he murmured, his lips on her cheek. "You do go on with the struggle. I always find the children alive, well, happy. You weak! You cowardly! You are the bravest of the brave."

The clock struck ten.

They went upstairs hand in hand to look at the sleeping children and to try to plan some future for them. Jeanne told of her anxieties about Michel, the oldest, who had silent, morose fits of brooding. "He's old enough to feel it all." The littler ones only suffer physically.

André put his father's hand on the sleeping boy's forehead and looked down at him silently, the deep look of strength and comprehension which was like the wine of life to his wife. She thought it was a benediction to the boy which no priest could better. André took his watch out of his pocket and laid it on the table. "See here," he said, "I'm going to leave this here for Michel when he wakes in the morning. I only use the old wrist watch nowadays. It may please the little fellow to know I think him big enough to have my watch."

"He'll make it a talisman—it's the very thing!" she agreed, touched by his divining sympathy for the boy's nature.

They roamed through the cold deserted rooms of the much-loved little home, unused because of lack of fuel, but the wan, clustering memories were too thick even for their tried and disciplined hearts. They went back into the smoky kitchen, shivering.

The clock struck eleven.

As it struck twelve, Jeanne turned back from the door, the lamp in her hand, the last echo of his footsteps faint in her ears. She stood for a moment, trancelike, staring at the yellow flame of the lamp, her eyes wide. Already it seemed impossible that he had been there. She felt horribly, horribly tired, hardly any other sensation but that. She went upstairs, undressed rapidly, blew out the light, and lay down beside little Maurice. She slept with him, that she might be sure to watch over him carefully enough, fearing that she might not rise in the cold so readily for him as for the others. Almost at once she fell into a profound sleep.

SHE woke with a start, to find herself standing up in her nightgown in the darkness, on the cold floor, in the middle of the room, the cold, damp wind blowing in on her from the black opening of the window. And at once she knew what had happened—knew it as though some one had just finished telling her.

André had not been there at all that day. He had been killed, that was it, and her intense longing had brought his spirit straight to her for a moment, and all the rest she had imagined.

Staring into the darkness, she saw it all with perfect lucidity. That was

familiarity; others I had stumbled on in my wanderings of the past week—new batteries, everywhere, which had sprouted overnight like mushrooms in pretty woods, in hollows, along roadsides, in village streets, camouflaged. They were, of course, altogether invisible to us now; it was the western horizon we searched. And promptly at the appointed time came the first shot—from the west, a silken, tearing, whistling sound, which seemed to travel a long time, then passed overhead, and turned to a hard and abrupt explosion on the plateau above and behind us. Another followed, another, twenty, thirty—the air was soon filled with a great whistling clamor, though the work held still, in some indefinable but clear manner, a character of reserve and observant precision, of something formidable in leash. At the same time, as if a curtain had been raised, the morning came to its full light—a perfect morning, a light blue sky dappled here and there with very delicate white clouds—and again from the west, but from the high depths of it, the planes came winging. The slanting light gave them a waferlike thinness; you looked at one, then suddenly knew there were three; looked at three and suddenly knew there were nine—there were squadrons of them. They came, broad-winged and leisurely; some had bright pennons hung out; they gave to the morning an extraordinarily festive air; it was as if we were at the beginning of a great holiday. We looked at each other and smiled; we half expected to hear bells begin to ring.

### We Laughed Like Pools

MEANWHILE we were watching for the German return. It was an anxious moment, for we had been raided twenty-four hours before and had lost two prisoners. If those two men had not held silent, in spite of brutal boche pressure, in a minute batteries removed from the emplacements we were shelling would hurl back a storm of steel. We watched curiously, and soon knew that our boys had held true. The boche seemed to be well smothered. He was shelling, as far as we could see, in only three places. First of all, to the left, he was throwing shrapnel on the Villers-Tourville road. At regular intervals a shell burst with the characteristic shrapnel c-r-r-r-rump; a gray-black cloud took swift form and hung suspended above the road. High explosives were falling on the fields before our dugout and into the shallow vale leading from them back to the first-aid stations and the rear; we saw groups of our infantry, caught out there in the open, scatter and run for cover like quail, and in spite of our concern for them could not help laugh, for with the beginning of the action we had all mysteriously become happy, foolish boys. Then, to our right, an empty field, with no one and nothing in it whatsoever, was being most furiously shelled. Big 150's were hurtling into it in squalls. You could see each projectile strike the earth, as if in a gigantic game of bowls, and immediately a great geyser rose in the air, black and massy at the base, yellow at the center, gray and white and plumed at the top—just such fantastic formations as one sees in popular illustrated weeklies and does not believe true.

For an hour this regulating fire continued in a smooth, unbroken sheet, then at five-forty-five it leaped up several degrees in the scale of violence, and held there. An invisible roof of dreadful sound was above our heads, made of the warp of screeching trajectories; our ears told us of it so imperiously that whenever we looked up and found we could still see the sky it was each time with a fresh surprise. Beneath this storm of incredible uproar, thinking of the boche at the receiving end, we looked at each other, smiling happily. We invented a game. The day before, wandering through the woods back there, I had come upon a French battery of ———. I recognized its voice now in the multitudinous clamor. At regular intervals one of its shells started from over there, near the horizon; it came majestically, with leisure, ripping slowly the silk of the sky from end to end. I told the others, and, standing close, we amused ourselves picking this iron string out of the stupendous lyre of the massed artilleries. We would listen to the shell coming from far, far, a long, long time, coming a little flat-wheeled—wwhhee, wwhhee, wwhhee, wwhhee, wwhhee. Over our heads it became a banshee screech; we looked at each other in delighted anticipation. Another mo-

ment, and—b-l-b-o-o-o-m!—with a sound three times as heavy as any of the other explosions, she burst somewhere behind us where we knew was the boche. Then we opened our mouths wide and laughed like fools.

The answering fire was not changing much. Still, on the empty field to the right, two hundred yards away, the heavy concentration, the incredible geysers rising high; still, on the flat before us, and the shallow valley beyond, shelling also now and then the entrance of our dugouts, squalls of high explosives; still, on the Villers-Tourville road, the shrapnel, with its c-r-r-rump and its high cloud. But we were having some casualties. A lieutenant of engineers, passing, said: "We've had two of our officers killed." A little later word came that a shell had fallen in a quarry, killing and wounding many men. I saw stretchers passing along the small valley that led to the first-aid stations. Beneath the vastness of the spectacle, though, both bearers and borne looked small, like toys, and we were held from giving much heed to what was tragic by the strange joy which was in our hearts. Several times I had run out into clear and climbed the steep bank beyond the P. C., to look up the hill to the plateau on top. And now, as I repeated the performance, I saw the French tanks go into position. They rushed up there, out of a wood, through brush that was a tender green, tearing and trampling, then deployed, and were still. Each had the tank of a rhinoceros, but was painted a reptilian color. I rushed back to the colonel and told him what I had seen, and asked him if he didn't want to see it. He did, and we ran out. We made a dash for it, climbed the bank, stuck our heads above it—and there remained only one tank. The others had moved out of our line of sight; I can't describe my disappointment at showing the colonel only one tank when I had promised him twelve. But a new squall of boche projectiles was raining. We slid down the bank and ran back to the protection of the rampart which had been raised in front of the dugouts. We were just within it when a shell burst hard above our heads. Our heads went into our necks, our necks into our shoulders. A rain of twigs, of clods, of stones tinkled down upon our helmets; we sprinted into the P. C., giggling like children caught in the sprinkle of a hose. "To h— with your tanks!" cried the colonel.

### In Five Minutes

BUT once more my watch was galloping toward a fateful hour. It was now six-thirty. In fifteen minutes we were going over the top, and I had not yet decided what to do. Should I go up into the communication trench so obligingly offered me by that young lieutenant earlier, or should I look for another observation point, or should I do neither of these things and simply stay where I was, to follow the attack from beneath, as it were, subterraneously, from the cellar? I did not know, and, what is stranger still, I felt an invincible repugnance to thinking about it. I did not know what I was going to do, I was not thinking of what I was going to do, but there was rising within me like a tide an assurance more and more complete that I was going to do something. Something—I did not know just what—but something. I went out again to listen to the bombardment. A new sound sprang into it to which the heart answered with hammer beats—the terrific flat-tongued tat-tat-tat-tat-tat of hundreds of machine guns. But the colonel was at my elbow inviting me to breakfast. "Come in and have some breakfast," he was saying. "Oh, I don't want any breakfast," I answered, almost peevishly. I was absorbed in that singular joy which had taken hold of me with the beginning of the action; I felt a bit—well, as though I were being asked to have breakfast before communion. But he insisted, and I went into the dugout with him. "Come, grab a plate and a cup," he said. "But in ten minutes we're going over the top," I objected. "What of that?" he said. "Have some breakfast," he added heartily, and sank the patent opener of his knife into a tin of preserved pears. Squatting amicably, he, young C., and I breakfasted. I remember swallowing three canned pears whole, as if they had been oysters—but I couldn't stay still. "We're going over in five minutes," I said, and went out once more.

## THE NATION'S MILK

## The Country Came to Town

Not so many years ago herds of cattle were driven through city streets; and housewives waited for their milk supply to be drawn from cows in front of their homes.

Imagine that today—a herd of cows ambling down Fifth Avenue, Michigan Boulevard, Tremont Street.

Gail Borden foresaw in 1857 the enormous value of a pure, dependable milk supply. His genius made possible the preservation of milk—to his vision is due the

distribution of Borden Milk Products the world over.

Wherever milk is needed—for babies, for the table, for cooking—there is a Borden product, pure in quality and convenient in form, backed by the Borden name. In metropolitan centers and at the out-of-the-way cross roads, grocers and druggists can provide you with Borden's Milks. They will tell you that the Borden name on milk is a guarantee of purity and quality—that Borden's is the nation's milk.

## Jerusalem Regained

1099—GODFREY DE BOUILLON      1917—ALLENBY

**B**ACK from the Holy Land, home from the Crusade, came the adventuring nobles, squires, and men-at-arms, by devious ways, perilous and slow. In castle halls and village inns they told their hero tales of Jerusalem's first capture; and it is from scattered fragments of song and legend that we must piece together our picture of that crowning triumph of mediæval chivalry.

Yesterday a soldier of Britain set the flag of the Empire over the Holy City's temples, mosques and battlements. And close on the heels of the news came photographic confirmation as precise as Allenby's own uncolored reports to the War Office

Thus today does history record itself while in the making, almost automatically. Largely because of photography, today's hero tales can never recede into the mists of folklore; the story told by photographs remains authentic, even through another thousand years.

That which photography does for the historian is but a part of its work, not only as an art, but as a science of record contributing vitally to all science. And the Eastman Kodak Company, like a great university because of its many co-ordinating departments, tireless laboratory research and frequent additions to the equipment of science—constantly renders the world a real institutional service.

## What's the answer when you get so much fun out of smoking;

*when you come out of the water or off the road and fire up a jimmy pipe or roll a makin's cigarette—and feel like you must sing out: "Oh Boy"; when, you sit up late o'nights to get in that extra-little-puffing; when, the go-to-it-again listen hits you before you're out of the sheets and you want to tell a thousand men what you know! What's the answer, what's the answer? That's smoking!*

Gee, it beats-the-breakfast-bell how Prince Albert does wallop joy into your smokesystem like every day was Christmas! And, just slip a mental-mem behind your left ear that P. A. jogs at the joy-jolt-job every minute by the clock, passing out Prince Albert fragrance and flavor so lavishly you'll wish you had been born twins so you could draw double-rations. P. A. quality certainly turns the taste-trick!

For what ails your smokeappetite, go to P. A. like it was your leetle ole pay check. And, don't take anybody else's word, but

cash in yourself on the fact that Prince Albert can't bite your tongue or parch your throat. That's cut out by our exclusive patented process. No matter how fussy your tongue may be, P. A. will handle it as gently as summer breezes biff the little flowers!

All you ever hankered for in smokes is yours-in-a-hurry quick as you connect with a tidy red tin of Prince Albert! Might reel you off a couple of yards about how P. A. punches-in-smoke-sunshine, but words haven't been invented that really express Prince Albert's satisfying qualities. *Get that information direct!*

Prince Albert is sold in toppy red bags, tidy red tins, handsome pound and half-pound tin humidors—and—in that clever, practical pound crystal glass humidor with sponge-moistener top that sure enough keeps the tobacco in such perfect condition.

# "AMERICA'S ANSWER"

*Second U. S. Official War Feature*

## See our boys go over the top at Cantigny!

**G**ENERAL PERSHING himself sent to this country the material included in "America's Answer"—the second Official Government War Film.

See our boys building a 3-mile pier in a French port; assembling American locomotives, baking bread—each loaf stamped with the company's trade-mark.

See huge heaps of Yankee shoes being salvaged—quantities of worn out underwear being put in shape for our boys by motherly French women; American motor trucks swung off ships and freed from their crates by Austrian prisoners.

See American soldiers going over the top at Cantigny—the French tanks and flame-throwers in action—the capture of German prisoners.

This stirring war film is a fitting sequel to "Pershing's Crusaders," which is now appearing in thousands of motion-picture

theaters throughout the country. If it hasn't been shown in your town, ask your theater manager to get it.

ANOTHER feature-picture every American will surely want to see is "The Bridge of Ships"—a two-reel film telling a graphic picture-story of the ship-building achievements of the U. S. Government.

Also look for the Official War Review, a digest of current activities of the American, French, British and Italian troops on the Western Front. Shown each week at your favorite theater.

Is YOUR BOY over there? Or perhaps your brother or husband? Do you want to see how he is living—what he is doing and how he is doing it? His life in the new environment is vividly portrayed in these impressive war films prepared by Uncle Sam for the folks who have to stay at home.

"Thrilling"—  
"Colossal"—  
"Wildly Enthusiastic"—

### New York Sun

"Beside real films of this sort, efforts of cinema directors, however thoughtfully conceived, pale into comparative insignificance."

### New York Times

"The music, the tableau and almost every scene of the film brought forth cheers."

### New York Herald

"One watching that picture feels that he is actually in the battle."

### New York Telegraph

"There is a thrill in every foot of film."

### New York Journal of Commerce

"Given before an audience which was wildly enthusiastic."

### New York Commercial

"Portrays as no other medium has yet depicted the colossal magnitude of our war preparations. Many questions are at once made clear in the thrilling picturization."

### New York American

"Really this is a representative picture, in which the fathers, mothers, families, and friends of American soldiers may rejoice."

The exposition of Captured War Trophies will be held in the leading cities of the United States. Watch for announcements.

# TO THE PRESIDENTS Of America's Largest Concerns:

What happened when one concern met war-time conditions by reducing  
the price of its standard product from \$100 to \$49

By Burton Wynne

**T**HE new Oliver Plan has been the most discussed sales policy of recent years. It is revolutionary—but only so, as applied to typewriters. Its principles are founded upon long-practiced and successful ways of distribution.

It is called the most liberal offer—yet to skeptics it sounds "too good to be true."

It heralds a day of universal typing.

I know the new Oliver Plan, as I knew the old. I sat in at all the discussions. We knew the sensation this plan would create. Yet all the time we wondered why others had not acted along these obvious lines.

For years \$100 was too much for a typewriter, even as fine as The Oliver No. 9. The facts and figures were condemning.

It costs money to maintain a force of thousands of traveling salesmen and agents—salaries, commissions, traveling expenses. And numerous large branch houses are also expensive.

And then came the "dark forces" in typewriter competition. They demanded their toll. In all, custom made it cost \$51 to sell an Oliver.

Another shackling influence, as sinister as high cost, was the public conception that typewriters belonged solely to business. The channels of distribution had become static.

Yet millions of people are logical users. Thousands of teachers, for instance, thousands of farmers, even thousands of school boys and girls.

But instead of going after this new business, routine had brought on an era of con-

*This is a time when business men should exchange ideas. It is a time, if ever, for closer co-operation. So here is an account of the unusual plans of The Oliver Typewriter Company—how it adopted radical ideas, how it won a larger market. What this Company has done may guide others, so that the manufacturers and the public alike may profit.*

centrated effort. Needless replacements were more common than new users.

The new Oliver plan has overcome these two grave handicaps, taking a risk that few concerns would care to assume. And it has won!

The plan has been in effect since March, 1917. With this Nation's declaration of war it was one of the first harbingers of thrift.

Sales have increased amazingly. "Self-selling" appeals as much to the user of 100 Olivers as to the individual user.

The \$100 Oliver now sells for \$49—the identical machine, brand new. And note the easy way to buy, as shown below. Who can resist? Who can conceive a fairer way?

What concern, what individual can willfully insist on yester-year's costly ways of selling?

Were you to read the thousands of letters I have just gone through, you'd realize what this plan means, not only to the giant concern using many Olivers, but to the far-away user who has hitherto toiled at longhand.

I note particularly a letter which ends "Best wishes for your plan from a little country merchant and chicken rancher."

It is signed by C. K. Fossum, of Harstine, Washington.

He also says: "This is my first experience in operating a typewriter. The only instruction I have had is the little book you sent with the machine. And now I am sure I can write three letters on this Oliver to one with a pen. I expect some folks won't believe this, but if they could see me ticking off these few lines they would be convinced."

I quote this one letter from the pile because it typifies the revolution now taking place in the typewriter world.

It shows better than abstract statements just why Oliver has won a new and broader field.

It breathes the spirit of friendship which every concern covets, the thing of which success is made.

The *how* and *why* of the Oliver Plan—too long to tell here—may be found in a booklet, "The High Cost of Typewriters—The Reason and the Remedy," sent free, if you mail the coupon.

And below is the Oliver, The Plan, and The Coupon. Note the simplicity. The coupon is primarily for individuals who wish to take advantage of the free trial and installment plan, rather than for big concerns. To the latter we suggest writing for details as to our allowances for used machines or present equipment.

Thousands will now cut out the coupon and send it. How about YOU?

Canadian Price \$62.65

## This Is The Oliver

### Some of the Leading Users Are

U. S. Steel Corporation, Pennsylvania R. R., National City Bank of N. Y., Diamond Match Co., Hart, Schaffner & Marx, Columbia Graphophone Co., Baldwin Locomotive Works, Montgomery Ward & Co., and others of equal rank.

Over 600,000 Olivers Sold

## This Is The Offer

### Was \$100—Now \$49

The Oliver is now sold direct. The needless expense of many thousands of salesmen and agents has been eliminated. Costly branch houses in many cities have been closed. All roundabout ways are abandoned. The buyer is his own salesman.

Thus we save for you the amount it used to cost to sell an Oliver.

The coupon at the right brings you an Oliver for free trial. Use it as if it were your own. Keep it or return it.

Send no money. If you keep it, pay \$3 per month until the \$49 is paid. If you return it, we even refund the transportation charges.

That is all there is to our simple plan. The Oliver must sell itself. You must decide. No one need influence you.

If you want to know more about the Oliver, note that the coupon will bring you a complete catalog and our book, "The High Cost of Typewriters—The Reason and the Remedy." It is free.

## This Is The Way

Note that the coupon brings EITHER the free trial Oliver or further information. Check whichever you please. By being your own salesman you save \$51.

THE OLIVER TYPEWRITER CO.,  
1028 Oliver Typewriter Bldg., Chicago.

☐ Ship me a new Oliver Nine for five days' free inspection. If I keep it, I will pay \$49 at the rate of \$3 per month. The title to remain in you until fully paid for.

My shipping point is .....

This does not place me under any obligation to buy. If I choose to return the Oliver, I will ship it back at your expense at the end of five days.

☐ Do not send a machine until I need it. Mail me your book—"The High Cost of Typewriters—The Reason and the Remedy," your de luxe catalog and further information.

The curious and complex mechanism, Eddy's "Typographer," was patented in 1850 by Oliver T. Eddy of Baltimore, and was one of the earliest of writing machine inventions. It was about the size of the old square piano, and probably required the expert services of printer and mechanic to operate it. An experimental model was constructed, but the machine did not meet practical requirements.

SOME sixty years after Eddy invented his "Typographer," a little writing machine stepped into the gap between the heavy office typewriter and the pen—and made good. It was called "Corona."

Compared with a piano or even a thirty-pound commercial typewriter, Corona is a mere featherweight, for it weighs but six pounds and folds into so small a compass that it may be carried anywhere. Furthermore, Corona is so simple in design that it can be operated by anyone, without instruction. Yet, with all its simplicity and lightness, Corona stands up under the severest requirements—makes good even in army field work, a particularly arduous and exacting service.

And Corona has made good, for it surely meets the real need of a compact, portable, *personal* machine—one that, because of its ease and simplicity of operation, tempts the owner to do much of his work in typewritten form, whether at home or away. And especially has this little pioneer made good because of the efficient organization behind it—an organization which, first of all, made Corona mechanically right.

Measure Corona's success by its reputation, or by its growing sales—a hundred and fifty thousand, to men and women in all walks of life—or, if you like, by the evidence of its big, new, modern home, a factory already producing more than two hundred machines a day.

If you don't know Corona, its story will interest you. Let us send you the booklet.

## THE BIRD OF SERBIA

BY JULIAN STREET

ILLUSTRATED BY HERBERT PAGET

"HERE'S a queer item," remarked the man at the window end of the long leather-covered seat, looking up from his newspaper and apparently speaking in general to the other occupants of the Pullman smoking compartment. "There's a dispatch here announcing the death from tuberculosis of that Serbian who shot the Archduke of Austria at Sarajevo. It seems he has been in prison ever since. I thought he had been executed long ago."

Four of us, strangers to one another, had settled in the smoking compartment at the beginning of the journey from Chicago to New York, and as we had been on our way nearly an hour it seemed time for conversation.

"They didn't execute him," replied a man who sat in one of the chairs, "because he was under age. It's against the law, over there, to execute a person under twenty-one. This boy was only nineteen."

"The law wouldn't have cut much figure over here in a case like that," replied the first speaker.

"Perhaps not," returned the man in the chair, "but respect for law is one of the few benefits that seem to go with autocratic government. I don't find that dispatch in my paper. May I borrow yours?"

The other handed over the journal, indicating the item with his finger. "I had almost forgotten that fellow," spoke up a third traveler. "The rush and magnitude of the war have carried our thoughts—and for the matter of that, our soldiers too—a pretty long way since the assassination occurred. Yet I suppose historians, digging back into the minute beginnings of the war, will all trace down to the shot fired by that Serbian."

"That's what the paper says," returned the one who had begun to talk. "It speaks of 'the historic shot fired in Serbia' as the thing that fired the world."

"And in doing so," declared the man who had borrowed the paper, "it falls into a popular error. The shot was not fired in Serbia, but in Austria-Hungary, and the boy who did the shooting was an Austro-Hungarian subject."

"But that doesn't seem possible," interposed the man who had spoken of the historical aspect of the case. "If he was an Austrian subject and did the shooting in Austria, how could Austria make that an excuse for attacking Serbia?"

The other looked from the window for a moment before replying.

"It was one of the poorest excuses imaginable," he returned. "Autocracies

can do those things; that's why they must be stamped out. As you said, historians will trace back to the assassination. It so happened that I was over there at the time and got a glimpse of what lay back of the assassination—microscopic, unclear forces of which historians will never hear, yet which seem peculiarly suitable in connection with Austria's crime. But I had better not get to talking about all that."

As though in indication of his intention to be silent, he closed his mouth firmly. It was a strong mouth and could shut with finality. Everything about him expressed strength and determination mixed, as these qualities often are in the highest type of American business man, with gentleness, good nature, and modesty. I liked his looks. He was the kind of man you would pick out to take care of your watch and pocketbook—or your wife—in case of emergency. I wanted him to go on talking, and said so, and when both the other men backed up my request, he began in a spirit evidently reluctant but obliging:

"FOR some years before the outbreak of this war," he said, "I represented a large American oil company in southeastern Europe, where we had a considerable market. My headquarters were at Vienna, but my travels took me through various countries inhabited by people of the Serb race, and I found it advantageous to learn to speak the Serbian tongue, both for business reasons and because I enjoyed making friends among the people. In order to practice the language and form some knowledge of the people, I made it a custom, when traveling, to stop at small hotels used by the Serbs themselves, in preference to the more cosmopolitan establishments; or, where the small hotels were not clean, I would sometimes take a room with some Serbian family."

"In Bosnia there was one very attractive little city to which I was always particularly glad to go. It was a place of thirty or forty thousand inhabitants and lay in a lovely, fertile valley among the hills; and you may judge something of it by the fact that the Serbs coupled the adjective 'golden' with the town's name. Not one American in a thousand—probably not one in a hundred thousand—had ever heard of the place then, yet it was the capital of Bosnia. The Austrian governor of Bosnia had his palace there, and the life of the place was like that of some great capital in miniature. One thing about

the town which interested me was the way in which its people and its architecture reflected Bosnian history. In the first place there were many Serbs there, the more prosperous of them dressing like conventional Europeans—except that the fez was worn by almost all of them—and living in low, picturesque Serbian houses, with roofs of tile or flat stone shingle; the rest peasants in the Bosnian costume, who came in from the outlying agricultural regions. But also there were Mohammedans—leftovers from the days of Turkish dominion—and the town had

of impressing visitors—and perhaps also the inhabitants themselves—with the 'benefits' of Austrian rule—as though palaces, parks, pavements, and prostitutes were sufficient compensation to the Serbs for the racial unity and freedom which have been denied them, first by one nation, then by another."

"But," some one broke in, "up to the time of the present war, didn't the Serbs have Serbia?"

"The present kingdom of Serbia proper was inhabited by Serbs," returned the other, "but the Serbia we know is only a small part of what was, long

ago, the Serbian Empire. Since the fall of the empire, in the fourteenth century, it has been the great ambition of the Serbs to become again a unified nation. Bosnia was a part of the old empire, but was conquered by the Turks, and later taken over by the Austrians. The story I am about to tell you shows, however, what an enduring race consciousness the Bosnian Serbs have maintained.

"OUR district manager for Bosnia lived in the town of which I have been speaking, and when I first went there he took me to a small but particularly clean and attractive hotel, run by an Austrian Serb. As

is usual in small hotels in Europe, the proprietor's family took part in the work of running the place; and as I used to stay there frequently, sometimes for two or three weeks at a stretch, I soon came to know them all well. As the years passed I became really attached to them, and there were many signs to show that they were fond of me. Michael, the father, exercised general supervision—though he was not above carrying a trunk upstairs; Stana, the mother, kept the accounts and superintended the cooking, which was excellent; the two daughters worked in the kitchen and sometimes helped wait on table. Even the boy, Gavrilko, the youngest member of the family, helped after school with light work, though he studied hard and was not very strong. I often sat with them at their own family table at one end of the dining room; I called them all by their given names, and addressed them with the 'thee' and 'thou' of familiarity.

"When I first knew Gavrilko he was twelve or thirteen years old. His father, though of pure Serb blood, had acquired, with years and experience in business, a certain resignation to the existing order of things. He had seen several wars and revolutions, and as he grew older had begun to think that peace under Austrian domination was better than continual conflict, whatever the cause.

"The boy Gavrilko was, however, more like Stana, his mother. Stana could grow old, but the flame in her, the poetry, the mysticism, and above all the Serbian racial feeling, never diminished. Gavrilko learned the Serbian folk stories and songs at her knee; also he learned from her Serbian history, which, under Austria, was not taught in the schools; for the Austrians have long desired to crush out Serbian racial feeling.

"Gavrilko and I became great friends. He was hungry for knowledge and never tired of asking me about the United States and our freedom, free speech, and free opportunity—all of which, of course, seemed very wonderful to one growing up in a decadent, bureaucratic empire, made up of various races held together against their will. In return I gathered from Gavrilko a considerable knowledge of Serb history and legend—and you may be sure that, in what he told me, neither the Turks nor the Austrians came off very well. Even as a lad he always referred to the Austrians as *shvabs*—a Serbian word meaning something like our term boches—and by the time he was sixteen he had promoted them to be *prociets shvabs*, which may be freely translated as 'damned boches.'

"FOR a long time I took his strong anti-Austrian utterances lightly, considering them the result of boyish ebullience of spirit, but as he grew nearer manhood, and the fierceness of his feeling seemed to increase rather than diminish, I became concerned about him; for it is no wiser for an Austrian Serb to call the Austrians *shvabs* than it would be for an Alsatian to call the Prussians boches.

"As Gavrilko grew up, his passionate racial feeling disturbed me more and more, though, of course, I sympathized with it. I determined to make an opportunity for a serious talk with him on the subject, and to that end suggested that he go with me to the neighboring hills for a couple of days' gunning; for Bosnia abounds in game.

"Gavrilko proved to be a very good shot. He would shoot wild pigeons, grouse, and woodcock from the hip, and he even brought along a pistol with which he could hit a hare at a considerable distance. These exhibitions of skill were, however, accompanied by remarks which did not make it easier for me to broach the topic upon which I wished to speak to him. When he would hit a pigeon he would exclaim: 'There goes another member of the Hapsburg family!' or: 'That one was a *shvab* tax collector!' or, mock-heroically, 'So much for you, you nobleman of brilliant plumage with a *von* before your name. The peasants will not step out of the road and bow down before you any more!'

"'Look here, Gavrilko,' I said when we sat to rest upon a fallen tree, 'you have your home here, so why not make the best of a bad bargain, and be like the rest of the young fellows?'

"'You think I am not like them?' he replied. 'That is only because you do not know them as you know me. Every *womche* who is a worthy descendant of the race that fought to the death at Kossovo—the Field of the Black Bird—is of the *comitajia*. We younger fellows are to be *comitajia* also. We have our meetings in the same *kafana* where the others meet to make their plans. When we are a little older they will take us in and we shall all work together.'

"'But, Gavrilko,' I protested, refusing to be put off with a jest, 'to be concerned in a revolution would be the worst thing that could happen to you.'

"'No, not the worst thing. Worse than being a Serb and joining in a revolution would be to be a Serb and fail to lift a hand in the struggle for freedom.'

"'Revolutions,' I said, sententiously, 'do not pay, Gavrilko.'

"'But since when has that been so?' he countered quickly. 'There was, for instance, the French Revolu-

minarets and other architectural signs of the Turk. And last there were the Austrians—the Austrian governor, Austrian soldiers in uniform about the streets, Austrian minor officials everywhere; and in new buildings, parks, and boulevards, Austrian taste. For, after taking Bosnia, under the Treaty of Berlin, in 1878, the Austrians, knowing well that their governing policy was criticized, went to some pains to beautify the Bosnian capital, with the object, it is commonly understood,

"'I wish it were already dead!' she exclaimed petulantly"

lution. Did not that pay? And there was the American Revolution. Surely that paid! And there was the revolution of Serbia against the Turks. That is paying too! His luminous black eyes, so like those of a wild deer, snapped as he spoke. Then his expression changed quickly to one of amusement over my discomfiture, and he added with a little laugh: 'I have an American friend—a gentleman who manages the business of a large oil company over here. He can tell you, as he has me, of the benefits of the American Revolution and of American freedom. I promise you that some day you shall meet him face to face—let us say to-morrow morning when he is shaving.'

"It seemed to me that I had taken an unfortunate line with him there, so I tried another.

"Well, then, let us put it on selfish grounds. There is no great reason why you, personally, should be dissatisfied. You have good prospects in your father's business. The thing for you to do, in the natural course, is to marry and settle down. And certainly a man who has a sweetheart such as yours hasn't any business in a *comitajia*; for such things lead to prisons and executions, not to domesticity.'

"What makes you think I have a sweetheart?" he demanded, flushing.

"Haven't I seen Mara?" I returned.

"Well, what of it?"

"If you can resist Mara," I told him, 'you have more strength than I would give you credit for.' And it was quite true, for Mara, who lived next door to the hotel, was a beautiful young thing, and they were much together.

"Mara is a flirt," said he.

"What matter," I returned, 'so long as she flirts most with you?'

"But does she like me best?" he mused. 'There is this fellow in the Government railways who comes as often as he can to see her. He has the advantage of being a connection by marriage, and is very handsome. Really too handsome for a man. I am glad he does not live here all the time.'

"You have the advantage of living next door," I encouraged. The one thing that might interfere is this idea of yours about being one of the *comitajia*.'

"Still," he protested, shaking his head doubtfully, 'a man's first duty is not to the woman he loves, but to the race he loves, because both she and he belong to it. You know our old song?' And he sang there in the woods:

*"Douchko, my soul, I love thee second best;  
Thou art the dearest part of Serbia to me;  
But after all thou art but a part, even as  
I am a part;  
And it is Serbia, always Serbia, that to-  
gether we love most!"*

"Consequently I was much relieved to see, as I returned from time to time, that the boy-and-girl romance between Gavrilko and Mara was naturally and charmingly developing into something more mature.

"When, in the summer of 1913, I arrived for one of my periodical visits, Gavrilko came rushing to my room, and seizing both my hands told me that he and Mara were now betrothed. He was then eighteen and she seventeen—for you understand, of course, that these dark South Europeans develop younger than our people do. Both families were pleased, and I felt that the dangers I had feared for Gavrilko were past, and was duly thankful. I went out and bought a necklace for Mara, and when I gave it to her, she and Gavrilko made me clasp it around her neck, and he said to her, very seriously: 'Yes, and our dear friend shall be the godfather of our first child. Is it not so, Mara douchko?' And Mara, taking me by the hand, told me it was quite true, and that she was going to love me as much as Gavrilko loved me, and that, moreover, they were going to have hundreds of children, and that every one of the children should love me too. It was all indescribably naive and pretty until Gavrilko unfortunately added: 'Yes, our children will love you, and they will love us, but most of all they will love the idea of a free Serb race.'

"At that a cloud passed over Mara's face.

"Oh, Gavrilko!" she cried impatiently, 'shall we never hear of anything but the Serb race? Is there nothing else in the world? Must that come before your thought of your friend, here—indicating me—before your thought of me, of the children we hope to have, of everything? Must you have Serbian freedom on your bread in place of cheese, and in your glass in place of wine? Sometimes I think your eyes shine more brightly when you speak of our race than when you call me *douchko*—my soul. I ask myself, is it indeed the soul of Mara that he loves, or is it the soul of the race?'

"Mara, my dear child," I put in, 'I believe you are jealous.'

"Of whom, pray?" she demanded, turning upon me and flinging her head back proudly.

"Not of an individual," I answered, 'but of a people.'

"Perhaps it is true," she returned with a shrug. 'Well, what of it?'

"Only this: that a woman with nothing more concrete than a whole race to be jealous of is in no very sad plight.'

"But I tell you I demand to be loved for myself!" Mara flashed back.

"Gavrilko sighed deeply, as though at the hopelessness of making her understand his point of view. Then, mournfully, he hummed:

*"Thou art the dearest part of Serbia to me;  
But after all thou art but a part, even as  
I am a part;  
And it is Serbia, always Serbia—"*

"But Mara would not let him finish.

"Enough!" she cried. 'I detest that song! You know how I detest it!'

"Gavrilko looked at me and shook his head. 'Oh, these women!' he exclaimed. 'What they do to one!'

"Then, gazing reflectively at Mara, he added in the tone of one attempting (Continued on page 19)

# FOUR TICKETS TO PARADISE

BY OSCAR GRAEVE

ILLUSTRATED BY CLARA ELSENE PECK

SINCE that momentous August of 1914 we have become accustomed to the downfall of kings. We read in our morning's paper of the abdication of a throne with no more interest than we give to the weather report

and certainly not with anything like the distrustful avidity with which we attack the puzzling details of the new income tax. And yet when the masked and panoplied hosts of autocracy have all given way before the swift rush of khaki-clad democracy there will still be left right here in America a hundred thousand little kings.

For each head of a business is an autocrat, each office is in itself a kingdom arranged according to a plan that won approval before the days of Charlemagne. There is the king and his court; there are his favorites and those powerful but not in favor; there is the small gentry of clerks and stenographers forming the outer fringe, and sometimes, far away, there are the serfs and vassals, hewing wood and drawing water, delving in mines, toiling in factories. And you will have to exhaust the whole purple roster of history to find a greater variety of kings than we have here—rulers who are weak, and rulers who are strong; rulers who are kind and paternal, and those who are cruel and rapacious; rulers whose ways are an inspiration to the writers who love to prattle of the golden rule in business, and rulers whose methods it would be far better to bury beneath the grime of centuries.

IN the large office of the powerful firm of advertising agents, Fairweather & Linn, Inc., the indisputable favorite was Miss Marjorie Browne. She was the private secretary of A. Price Fairweather himself, and she knew far more of the ins and outs of A. Price's life than even the portly gentleman in question. And she commanded his kingdom with a downright thoroughness that would have put to shame the tactics employed by the Pompadour or Du Barry or Nell Gwyn or any of those dear, brazen hussies of ancient days. On strictly moral grounds, too, Marjorie had every right to put them

to shame. Not, of course, that she would have succeeded. They were, it is understood, a shameless crew. But the point to be made clear is that A. Price Fairweather had an imposing wife and two more than imposing daughters, who ran with a high hand the social affairs of a suburban community on Long Island, and there was no need for Mrs. Fairweather ever to bother her stately and carefully marcelled head about Marjorie. Not in that way. Let this be understood at once.

Marjorie had gained her power by being able to think a little faster than anyone else in the Fairweather & Linn office—not excluding Mr. Fairweather. In fact, she did much of his thinking for him. This suited him perfectly, for it left him a great deal of time to swell around at directors' meetings and wave a large black cigar and talk in vague and beautiful terms of prestige and influence and impression.

IT was a bright Monday morning in February. Marjorie stood beside A. Price's desk while that great man contemplated her as one does a very efficient waitress ready to scribble down a delectable order—with approval, with satisfaction compounded of good humor and great expectations.

"There's nothing very important in the mail this morning, Mr. Fairweather," she said briskly. "Nothing except a letter from the American Tire Company complaining about the advertisements we have submitted them lately. It's signed by the president."

Mr. Fairweather's good humor, at best rather a transitory element, immediately vanished. Grumbling unintelligibly, he held out his hand for the letter and read it while the cloud of disapproval settled itself irrevocably upon his Roman features.

"Who writes this copy?" he demanded.

"Elwood Wickes."

"Is he any good on other accounts?"

Miss Browne hesitated, knowing that to cite Elwood Wickes's failures would be like signing his death warrant.

"What else?" growled A. Price Fairweather inexorably.

"Well, we tried him on Kwick-Shave, and he fell down; we tried him on Hiawatha Silks, and almost lost the account." Again she hesitated, but Mr. Fairweather's "Yes?" insisted that she go on.

"Then we put him on catalogue work, and he wrote a description of Eastern Motors that necessitated the recall of the catalogue. As a last resort we gave him the American Tire Company account."

"My God! What a record!"

"Will you have to let him go, Mr. Fairweather?"

"Let him go!" cried A. Price Fairweather ominously. "We ought to have him drawn and quartered."

Picture the scene and you'll understand how much like a kingdom it is. Here you have the very inmost chamber of the monarchy: Palatial; glass and mahogany; a view through crystal-clear windows of the turrets and towers of New York over which wisps of white steam gyrate against the intense blue of the sky. And at his desk the autocrat, A. Price Fairweather, his cigar smoldering, regarding with knit and dangerous brows that fateful letter on the heavily embossed letterhead. Beside him his favorite, Marjorie Browne, that alert type of young business woman. And in an outer office—in effect, miles away—a little round man sits, gazing peacefully at the pad of blank paper before him, hoping for an inspiration which doesn't come, wondering meanwhile somewhere at the back of his mind how he's going to get the money to send Matilda to a sanitarium for a sorely needed respite from household cares and the insistent demands of little Matilda and little Elwood and the very small Jackie. And yet, despite this unanswerable question, fairly placid, nibbling happily on the end of a pencil, entirely unaware that in the inner office at this very minute his doom is being pronounced! Sob stuff? Oh, certainly! But the kind of sob stuff that you're apt to find in real life any day around any corner where unwittingly you may happen to venture.

"We'll let Wickes go on Saturday with a week's pay," said A. Price Fairweather. "Don't forget to send him to me on Saturday morning."

He made it a rule not to dismiss a man without speaking to him personally and giving him a bit of sound, fatherly advice. If there was one thing that A. Price liked better than anything else, it was giving fatherly advice. He was a rank sentimentalist, and he thoroughly believed that his parting admonitions had saved many a wayward young fellow and put him back on the path of industry and rectitude.

MARJORIE was not surprised at A. Price Fairweather's ultimatum in regard to Elwood Wickes. Wickes had proved woefully inefficient. It was regrettable, but it was also inevitable.

Marjorie, you know, was almost irritatingly efficient herself. But, most decidedly, she was not one of those straight-up-and-down, sexless creatures whom we usually associate with the obnoxious word "efficiency." Marjorie was ridiculously pretty in rather a boyish fashion. She had nice brown hair with a tendency to crinkle, kept severely in check,

Clara Clifton Pack

however, by binding it tightly around her small shapely head, and she had the kind of eyes which are so difficult to describe—eyes of a lustrous sheen, and turquoise-gray in color. Sometimes there were slightly blue shadows beneath those eyes and a slightly drawn expression about her firm lips which might indicate that she was worrying about her job. But she wasn't. She never was. The chances were that she was thinking about Adele, her fluffy young sister, who was passing through the most dangerous age of schoolgirl flirtations. Marjorie had to look after Adele. She was the head of that small family and the main support, and the breadwinner and all the rest of those things which sound noble and praiseworthy until you have to assume them at an age at which you should be going to dances and matinees or playing basketball or doing any one of a hundred things more desirable than breadwinning.

Perhaps, more rarely, that worried look was caused by John Casson, who insisted upon waiting for Marjorie. He'd been waiting so long that Marjorie had conscientiously tried to discourage him. But he refused to be discouraged, and it did not seem fair to keep him in a state determined but rather pathetic. Marjorie had decided that she couldn't marry anyone until Adele was in a fair way toward earning her own living. Certainly, although he was perfectly willing, she wasn't going to inflict Adele upon John Casson. She knew Adele too well. Not even her love for her foolish little sister could hide from Marjorie Adele's petulance and willfulness and her extravagant demands for pretty clothes and trinkets.

No, Marjorie Browne had traveled no royal road to her present influential position with Fairweather & Linn, nor any primrose path. And the way she had traveled had left its marks upon her. She gazed out upon the world clear-eyed and sane. She was not sentimental about things. She believed that a man—or a woman—should receive what he earned, no more and no less. And if a man failed he must expect to take the consequences.

All this explains how Marjorie Browne felt toward Elwood Wickes. She was vaguely sorry for him, but she felt that Mr. Fairweather had been eminently just in his decision. Wickes had failed, not once, but several times, and in the relentless game of business he deserved no further consideration. And yet a certain pity for him haunted her. He was so—so futile! From the very start he had showed so little ability. He had been engaged immediately after the first call of the draft had taken so many of the brightest, the most alert and most eager young men from offices. There was a dearth of good copy men. So they had engaged Elwood—and regretted it ever since.

Marjorie passed his desk more than once that day, and a little contempt crept into her regret. For the first time she passed Elwood Wickes was lying back in his chair and tossing a small paper weight up and deftly catching it again in a preoccupied and amiable manner. The second time he was reading a sporting extra under the supposed protection of his desk drawer, pulled out for the purpose to act as a shield. Evidently not the least consciousness of his fate had come to him. "The poor thing!" thought Marjorie. "I guess he deserves what's com-

ing to him." And she put him in the background of her thoughts and, in time, would have forgotten all about him. Elwood Wickes in due course would have joined that crowd of shadows who have worked for the great firm of Fairweather & Linn and failed.

But Tuesday of that week happened to be Lincoln's Birthday. And Lincoln's Birthday happened to be one of those mild, sunny days that interrupt occasionally the icy spell of February and beguile people out into the parks and the open streets.

One of John Casson's ways of showing his determination in regard to Marjorie was by appearing inflexibly every holiday and dragging her away from the cares of her small apartment in West Sixteenth Street and the petulant demands of Adele.

ON this particular holiday he dragged her as far as the Casino in Central Park, where they had an extravagant and delightful lunch. After lunch they wandered in desultory fashion around the winding paths until they came to a small bridge over a pond in which some hardy ducks were sailing around on the muddy water, fringed with broken ice, and doing acrobatic turns by sticking their heads beneath the surface so that their bodies stood vertical in a manner that showed plainly enough that February and ice and snow made very little difference in their ducky young lives. As John Casson and Marjorie stood there watching these acrobatic ducks a small party of four came around the bend and out upon the bridge—a short, round little man with three children in tow looking for all the world as if he were a duck of larger breed with his flock of little ducklings waddling after him. When he saw Marjorie he beamed and raised his hat, and she recognized, to her dismay, Mr. Elwood Wickes.

Now, children, it sometimes seems, betray more glaringly than anything else the state of their parents' exchequer. For parents will bedeck their children more extravagantly than they deem it good taste to bedeck themselves; velvets and furs, laces and feathers, will be inflicted upon the children, while parents must be content with sober cloth and plain hats. And, on the other hand, parents will darn and patch and patch their children while their own last year's dress goes untended and their overcoats are left straggly as to cuffs and collars.

As little Matilda and Elwood and Jackie were presented to Marjorie and John Casson (if you can call it "presented" when all they did during the ceremony was squirm more tightly around and between their father's legs), Marjorie saw plainly enough the darning and the polishing and patching that had

gone on here—sometimes without result, for little Matilda's velveteen coat was almost beyond the point of any more darning and little Elwood's shoes were visibly parting where sole and vamp should by rights be most thoroughly joined.

"Are they all yours?" asked Marjorie with a slight gasp.

The short, round little man beamed more broadly. "Yes, indeed! And they're a great crew too. Never give their daddy a minute's peace when he's got a holiday like to-day."

"Where's Mrs. Wickes?" asked Marjorie.

Rather a chastened look came over his face. "Well, you see, Mrs. W. isn't as well as she might be. I like to get the children out of her way for a while so she can lie down and get a little nap. It's pretty hard work for a woman with three healthy kids like ours and having to do her own work, and all." His face lighted up with a sudden inspiration. "Why don't you come home with us and see Mrs. W.? She'd love to meet you and—the gentleman. We're going home now—just came around to give the kids a peek at the ducks. We just live a step from here. My wife will probably have a cup of hot tea waiting for us, because she was so afraid we'd get cold out. Really, Miss Browne, she'd love to meet you."

Marjorie Browne looked at John Casson, who in turn tried to shake his head at her without having Mr. Wickes notice it. But on an impulse Marjorie said with decision: "Yes, we'll be glad to go with you, Mr. Wickes."

TOWARD the upper end of Central Park on the west side there is a sudden break in what the real-estate people like to call the great desirability of the neighborhood. The tall white apartment buildings, the stately brownstone houses, yield to a few noisy blocks of barefaced tenements where a sprawling mass of humanity runs and shouts and gossips and carries, without disguise or affectation, its beer can to the corner saloon. It was to one of these tenements that Mr. Wickes led them.

"It's not very nice, Miss Browne," he assured her. "Not that I'm ashamed of it, for it has its advantages. It's nice for the kids because they can play in the park instead of in the streets. Matilda and I are planning to move to the country somewhere as soon—as soon as we can make arrangements."

They climbed three flights of stairs, and Mr. Wickes, opening the door with his latchkey, ushered them into a front parlor. "I'll go back and tell Matilda you're here," he said. He hurried back, and little Matilda and Elwood and Jackie, after gazing at Marjorie and John Casson for a disconcerted moment, wheeled as if with one accord and fled after their father.

Whatever the patches on the children's clothes

had failed to tell, that little parlor made plain. It revealed the whole story. Evidently, once upon a time, there had been a certain pretentiousness, a spick-and-spanness about its department-store paintings and its rose-plush installment furniture and ornate lace curtains. But the pretentiousness had vanished before the onslaught of that determined band of small children. The wall paper bore the marks of small grubby hands; the furniture betrayed its essentially veneered character through many a scratch and gash.

Marjorie gave one glance around the eloquent room and, leaning toward John Casson, said in a desperate whisper: "John, he's going to be fired Saturday. What can I do? I don't believe he's got a cent to live on until he can get another job."

Before John Casson had time to answer this impassioned appeal, Mr. Wickes returned with a frail little woman with light fluffy hair and a deprecatory manner. She was no sooner introduced than she murmured something about a cup of tea and retired once more to the rear of the apartment.

Meanwhile Mr. Wickes seated himself, and immediately the three children precipitated themselves upon him. Little Jackie sat on his lap, little Elwood found an unsteady seat somewhere between his knee and his foot, and little Matilda hung over the back of his chair. All three, from these various vantage posts, regarded Marjorie Browne with a solemn and unwavering stare. "It was almost as if they knew their father's troubles and held me responsible for them," she confessed to John Casson later.

Mrs. Wickes presently returned with a pot of tea, cups, and a plate of buttered toast. And while they ate and drank a rambling conversation was carried on. But all the time Marjorie Browne sat there talking and smiling pleasantly, another part of her mind was desperately racing for a solution of Mr. Wickes's problem. And suddenly she saw that there was something that mattered more, infinitely more, than pleasing the American Tire Company with copy, that mattered more than either the most absolute efficiency or competence. And that something was a little decent human kindness.

OUT of that tangle in her brain a sudden vision leaped clear—a picture. It steadied her.

"Mrs. Wickes, I have a friend who occasionally gives me theatre tickets," she said. "I was wondering if you and Mr. Wickes and the children could use some tickets for the Hippodrome next Saturday afternoon?"

Mrs. Wickes clasped her hands. "Oh, it would be like tickets to Paradise for the children!" she exclaimed. "But only send us four, Miss Browne. I can't go out for a while—no excitement, says the doctor. There's nothing really the matter with me, but I'd better not go. Elwood can take the children. They'll love it."

Marjorie nodded. Her plan was developing rapidly. "All right. I'll have the tickets for you, Mr. Wickes."

"Four tickets to Paradise," Matilda certainly described it! cried Mr. Wickes. "That'll be splendid, Miss Browne, and I bet I'll enjoy it more than the kids do."

The kids on their part gave no sign of enjoying it at all. They were still engaged in their steady and engrossing study of Miss Browne, and they were not going to be beguiled from that engaging pursuit by the promise of tickets to a place they had never heard of. It was with their disconcerting stare still fixed upon her that Marjorie arose and, together with John Casson, made her farewells.

"What's the idea?" asked John Casson when they were safely out in the street. "Why the tickets for the Hippodrome? Are they just to ease the shock when the big blow falls on Saturday?"

Marjorie showed him a sparkling and triumphant face. "No, I think I've got it! But I'm not going to tell you my plan to save Elwood Wickes until it's proved a success."

"But if it prove a failure?" he asked soberly.

"It can't prove a failure!"

"Well, I'll buy those four tickets to Paradise."

"No, you won't, John. I'm going to buy the most expensive ones I can. Perhaps if I have to go without lunch for the rest of the week on account of them I'll feel a little better about this whole thing."

"It isn't your fault, Marjorie."

"I suppose not. But I agreed with Mr. Fairweather that Elwood Wickes deserved dismissal. The poor man's never really had a chance. How can you expect him to do good work when he had all that responsibility at home to worry him without sufficient salary even to grub along on? I blame myself for condemning him without knowing any of the conditions."

The very next morning Marjorie stopped for tickets at the Hippodrome.

Elwood Wickes jumped up enthusiastically when he saw her enter the office a little later. "It was awfully nice of you to come and see us yesterday afternoon, Miss Browne," he said. "Matilda certainly enjoyed it. I wanted to be sure and tell you, because Matilda herself is a little shy. We're not used to much company. Three kids take an awful lot of time and looking after. And Matilda told me to tell you how much she appreciates it about those tickets, but not to bother if it's too much trouble."

"I have the tickets, Mr. Wickes."

Mr. Wickes's bland blue eyes glistened. "That's great! For my part, no matter what Matilda says, I was afraid you wouldn't get them. I'm glad to take them from you as long as you get them free," he ended with a happy chuckle, fondling the bits of pasteboard which Marjorie handed him.

Marjorie leaned toward him with abrupt intensity. "Look here, Mr. Wickes, this is what I want you to do: Bring the kids down here to the office with you Saturday morning. I'll see that they're kept busy in the girls' rest room so that they won't bother you or the other men. We'll give them pictures to cut out and pencils and pads. Miss McCook, who's in charge of the rest room, loves children, and she used to be in kindergarten work. She'll keep them happy. Then at noon when we close you can take them to one of those dairy lunches before you go to the Hippodrome. That will give your wife a whole day of rest."

He looked at her admiringly. "Say, Miss Browne, if I could only get you to manage my affairs, I wouldn't have to send Matilda away for a rest cure."

Marjorie gave him a curious glance. "So you have to do that too?"

The shadow fell upon his face again. "Well, the doctor said I should do it. You know what doctors are." He ventured an unhappy attempt at jocularity. "Why, they'd be apt to tell me I ought to spend the winter in Florida or something like that."

"But even if you could send Mrs. Wickes away, what would you do with the children?"

"That could be managed. Matilda has a sister who could look after them, but—" That unfinished "but," Marjorie saw, left much unsaid, and she rather admired little Wickes for leaving it unsaid. She saw that, after all, he had a sturdy spirit of his own, and she decided to warn him.

"Has anyone spoken to you about the American Tire Company account?" she asked.

He showed alarm immediately. "No. Why?"

"They weren't altogether satisfied with that last lot of copy you prepared for them."

His distress was so painful that Marjorie rose to new heights of prevarication. "Oh, it

have little Jackie if it hadn't been for that food. I could write eloquently about that. I certainly could!"

Marjorie gave him a searching scrutiny. "I wonder if you could!" she murmured abstractedly.

But low as was her murmur, he caught it. "Wonder if I could! Certainly I could. I'm sure of it! I could do a big job on that copy."

Marjorie's determination was fired by his own. "Well, maybe you'll get a chance to write that copy!" And then, over her shoulder: "Now, don't forget to have the children here early Saturday morning."

Later that day she said to A. Price Fairweather: "Have you decided who is to handle the American Tire account?"

A. Price Fairweather shook his head.

"Why don't you put Mr. Levering on it?"

"He's got more to do than he can handle properly. I spoke to Bates about him. It seems Levering is all tied up with the Morse's Food account."

"I know a man who can handle that."

"Who?"

"Elwood Wickes."

A. Price Fairweather frowned ominously. "Say, what are you trying to put over on me?" he asked at last, and his tone was curt. "It's settled that Wickes is going Saturday."

Marjorie did not argue the point. But she had succeeded in her object. That was to plant the idea that Wickes might be able to handle Morse's Food.

ON Saturday morning, of course, Marjorie herself got down to the office before the usual hour. She was early enough to witness the entrance of Elwood Wickes and his brood. In fact, she was hovering around the door waiting for them, and immediately upon their entrance she took charge of little Matilda and Elwood and the very small Jackie. At first a serious obstacle presented itself. The children showed a determined and thoroughly organized and unanimous reluctance to leave their father. The very small Jackie particularly screwed up his face in a most ominous fashion and opened his mouth wide in a preparatory fashion. The worst of it was that unexpectedly A. Price Fairweather too had arrived early that morning and was seated at present in his mahogany-and-glass office with the door open. But Miss McCook, the girl who had charge of the rest room, was also hovering around waiting for the three little Wickeses, and she arose splendidly to the occasion, at the crucial moment when Jackie opened his mouth wide, by quickly shoving in a large soft lump of molasses candy which, by some fortunate miracle, she had ready in her hand. The very small Jackie was taken by surprise; he was effectively gagged; he was reduced to a state of bulging, round-eyed wonder! And before he could recover he was spirited away to the distant rest room. As for little Matilda and little Elwood, they were so engrossed in what had happened to Jackie, and especially in the molasses-candy part of his adventure, that they followed willingly enough. And once in the rest room it was a simple matter to keep them enthralled with soap bubbles and picture books and exquisite things which you cut out of paper and hung in long strips all over the rest room's walls.

ON Saturdays the office of Fairweather & Linn, Inc., closed at half past twelve. Beginning at twelve, on that particular Saturday morning, things began to happen rapidly.

Immediately after the hour Miss Browne laid a pile of typewritten letters on A. Price Fairweather's desk. "Well?" he asked. (Continued on page 28)

wasn't much of a complaint. Don't let it worry you. I just wanted to put you on your guard."

"I do hope it isn't serious, Miss Browne. It would hit us pretty hard if—oh, well, as you say, I shouldn't worry about it until I know the complete story." He looked at her with the swift caution of one about to make confidences, and then plunged breathlessly: "I don't like the accounts much I've had to write since I've been here. I can't get into the spirit of them. Now, if they'd only give me something like the Morse's Food for Infants account! Why, I know all about that. Matilda brought up all the kids on Morse's Food. I honestly think we wouldn't

She shared the entire Wickes colic better skelter within

# "You Will Do Your Work on Water"

"U. S. Marines Rushing the Can" is the title of this picture. The can, however, we hasten to add, contains nothing but water. If the chap on the left doesn't watch out, he's going to walk right off the edge of this page, and then the can won't contain anything

VIVELA, FRANCE.

DEAR JOE: Well, Joe, I guess by now no doubt you are on your way over to help make the war a success, hey? If you ain't, you should be, because you sure joined the army at a busy time, Joe. You ain't got a idea of what you're missin' by not bein' over here, Joe; it's the greatest show on earth and has been runnin' four years without even missin' a matinée. Also, Joe, as them actor guys says, we're "knockin' 'em dead," hey? I joined the thing as nothin' but one of the chorus, but now they have give me a speakin' part, so you can see they is a great chance of advancement over here. In fact, Joe, you not only got to the top, but over it!

Well, Joe, can you imagine me bein' a officer? This here war has certainly done a lot for me, and I ain't in no hurry to have it called off. I figure if it will only last about four more years I will have been promoted to full charge of the U. S. army, not that Gen. Pershing ain't class or nothin', and I will also have saved up enough dough to retire and never pitch another baseball, except maybe for cigars at Coney Island.

As I rumored in my last letter, I am now nothin' less than a full-fledge A No. 1 second lieutenant, and I got these babies salutin' me over here till a innocent bystander would figure I was King of Peoria or the like. The other officers in our company—or I should say my company now, hey?—is tickled silly because they can meet me on even terms, where before they couldn't get familiar with me on account of me bein' a doughboy and them only bein' lieutenants and the like. We are all little pals together now, Joe, and our captain does nothin' but throw out his chest every time he sees me, because he figures he put me over. You and me knows better than that, though, hey, Joe?

Well, Joe, I certainly feel sorry for them Germans now, because if I could of did what I done to them guys when I was only a doughboy, what d'ye think I'll be able to do as a second lieutenant, hey? But no kiddin', Joe, I got a swell job, and I'm gettin' a great deal more dough. If I told you what my wages was from now on you would only say I was a liar, and then I'd have to knock you cold the minute you landed in France. If I done that, Joe, I understand it would cost me my job, because a officer ain't allowed to wallop a private and vice versa. I must find out the minute I get a chance who I am allowed

to wallop and get away with it, because a man can't never tell when it might come up.

If we should meet up with each other when you get here, Joe, I'm sorry to say that you will have to be very respectable to me and not call me "Bugs" or "Lefty" or "Ed," etc., or nothin' like that. I am your superior, which, of course, ain't nothin' new to you, and I have got to be called "Sir" and "Lieutenant" no matter if we have knowed each other for years. Even if my old man got familiar with me, Joe, I would be forced to throw him in the guardhouse. If you should forget yourself and slap me on the back or the like, well, Joe, they would start in by hangin' you at 5 a. m., because we're loaded to the neck with discipline over here.

I have got a swell uneyform now, made to order by a tailor, with a bar on each shoulder, and I am all sunburned from standin' in the sun, so's the trimmin's will dazzle the eye. I had to buy the whole layout out of my own pocket, Joe, and the suit was only the beginnin'. Joe, a private gets everything free, but I guess they figure a officer is so tickled at gettin' his commission that for about a week he's gonna go around and spend money like water, and why shouldn't the Government cash on it? The captain gimme a list of the equipment I would need, and, Joe, after lookin' it over I figured that the U. S. had signed up for about six more wars after we have won this one and they was gonna keep me on steady to take part in them all. Before I got done shoppin' here and there I have blowed in \$400 American money and me only a second lieutenant. I bet Gen. Pershing must of set himself back about \$4,000,000, hey, Joe?

Instead of a sword, I got a little trick cane which is knowed as a swagger stick, and you couldn't maim a gnat with it. The officers ain't allowed to carry swords no more, because it is hard enough as it is to get the Germans to stand up and fight against us Americans, except when they got ten guys to our one, and if we ever come at them with swords, why they would no doubt run all the way to Berlin, and we aim to carry 'em in on stretchers. But all comical jokes to one side, Joe, I don't see what good this swagger stick is, and if I can't have no sword I would rather carry a bat or somethin', hey, Joe?

Well, Joe, our captain called me to one side the day I got my commission and gimme a long talk on maintainin' discipline and the like. He claims

I have got to forget all about whatever friends I got in the company among the doughboys while on duty and see that I get properly saluted and so forth. Then, Joe, he calls out all of our company which ain't on leave or tryin' out the Red Cross and tells 'em I am now a officer and also how I come to be made one. He winds up by sayin' that any guy which does what I done has got the same chance of risin' from the ranks, and when he got through they was cheers, either for me or the mess call which come at that time.

I am goin' over to the quartermaster's department to grab off some things for my new uneyform when I run into Red McClure, which is a corporal and a auction-pinochle hound and comin' back from leave of absence.

"Hello, Ed!" he sings out. "How are they comin'?" "Ed bell!" I says, standin' very stiff and lookin' stern like nobody but me can. "Come to attention, you big stiff; I am now a second lieutenant!"

"Ha, ha!" he says. "So the squareheads has gone and gassed you, hey?"

Joe, I wanted to bounce one off of his chin, but I remembered that there is one pleasure which is denied me since I have become a second lieutenant.

"Come to attention, Red!" I says, holdin' myself in with the greatest of difficulty, "or the result is on your own head!"

"You'll probly get the guardhouse when the captain finds you're takin' dope!" he says, and starts to walk past.

Joe, this guy is a old pal, but I have took a oath to uphold the discipline of the U. S. army, and what can a man do? They is four doughboys passin', and I yelled out to them. Joe, they come arunnin' and gimme a first-class salute, which I give back.

"Take this man's arms," I says, and, Joe, I am as serious as tuberculosis. "Take this man's arms and place him under arrest!"

"Yes, sir!" says the doughboys, all salutin' together like a vaudeville act.

Joe, Red McClure's eyes is poppin' outa his head till you could of hung your hat and coat on either of 'em. The doughboys frisks him of his gun and come to attention again. Joe, they is waitin' for me to give a order what to do with Red, and I am up against it. They is no doubt that he has committed a terrible crime by tryin' to kid a officer, but he is also a old pal and I don't know what to do, on the

level. "Well, Joe, I stand there thinkin' and I see them doughboys watchin' me close on account of knowin' it's my first day on the job as second lieutenant, so I got to make up my mind quick. These is war times, Joe, and friendship has got to give way to duty, as the guy says.

"Take this bird out and shoot him at sunrise!" I says. "And may the Lord have mercy on his soul!"

Joe, it is a hard thing to do, but discipline has got to be had, hey?

Well, Joe, Red gets as pale as the mornin' milk, and the doughboys give a gasp, but I let forth a terrible frown and they march him off without further ado. I felt pretty bad, Joe, because it is a nasty thing to send a fellow man to his death, especially Red McClure, which, when I come to think of it, owes me thirty-two bucks from a auction game before I become a officer. The more I thought about it the worse I felt, because I could hardly go in to a guy I had ordered killed and ask for that thirty-two. So, Joe, I went up to the captain and asked him if I could see him a minute.

"What now, Harmon?" he says.

"Well, sir," I says, "they was a guy failed to show me proper respect and the like, so I have him hurled into the guardhouse."

"Quite right!" he says. "We'll have him court-martialed and—"

"Thanks!" I says. "But they ain't no need of that, sir—I had him shot!"

"What?" hollers the captain. "You had who shot?"

"I ain't one to tell on nobody," I says, "so if it's all the same to you, sir, I won't mention his name. I think he's been punished enough, hey?"

Joe, the captain gimme a glare, but a grin got the best of him.

"Lieutenant," he says, "tell me all about this."

Well, Joe, I did and before I got through his face is all red and he's havin' trouble with a bad cough. He walks around the tent with his back to me and I asks him if I can't have Red McClure let off easy this time with about six months in the guardhouse and fined a year's pay or the like, provided he ain't already faced a firin' squad. The captain says he thinks Red is still alive all right, because they is quite a lot of red tape to go through with any more before a man can get executed in the U. S. army on account of Gen. Pershing bein' very strict on havin' everything just so. Well, Joe, I felt very glad to hear that, because I would of always had Red on my mind if they had of shot him on my say-so, apart from the thirty-two he owes me. So I asks the captain if I can't have Red let off, because when I come to remember I didn't have any second lieutenant's uneyform on when he failed to salute me, and like as not he thought I was kiddin' about bein' a officer.

The captain says if that's the case I can let Red off with a severe reprimand, whatever that is, and hereafter before sentencin' guys to be shot to consult him about it. Outside of that, he tells me again to maintain the strictest dignity at all times, because a officer must let nobody get familiar with him on account of the effect on the men. You know some of them guys would walk up to Pershing and say: "Hello, Gen!" if Red had got away with it on me.

Well, Joe, I got on my full second lieutenant's uneyform fin'ly and I'll tell the world fair I'm a knockout in it! I start over to the guardhouse and by the time I got there I got cramps in my arm from returnin' salutes to doughboys, which has heard what I done to Red and ain't takin' no chances. Red is all gloomed up and you can hardly blame him when for all he knows he's gonna be led forth and shot. When he sees me in my full uneyform he give a gasp like all hope is gone and I have come again to reek some more vengeance on him. It didn't make him feel no better when the doughboys on guard begins salutin' me right and left and only quit when I told 'em, on account of gettin' kinda sick of it.

Well, Joe, I couldn't help feelin' sorry for him when I thought of how close I come to sendin' him to his grave, let alone lovin' that thirty-two bucks, so after I have bawled him out to a fare-you-well and made him salute me a few times I had him turned loose. Joe, he was tickled silly and claims he will never forget me for what I have done. Joe, I don't know whether he meant havin' him thrown in the guardhouse or turnin' him loose; that guy is tricky.

I then go over to see Jeanne, this here million-dollar doll which is likewise my femme, or, as the ignorant would say, wife. Well, Joe, all the way over whenever I meet any of my old pals among the doughboys you ought to of seen them habies look at me in my brand-new second lieutenant's uneyform.

It was comical to see them start to holler somethin' at me and then break off short and come to attention when they seen I was a officer, the while lookin' like Heavens knows what'll happen next. Joe, it is great stuff to have a lot of guys salutin' you day and night and my chest is out from here to Lenox Avenue, and why not?

Well, Jeanne give one look at me and throws herself around my neck.

"Ma chérie!" she gasps. "What have they make of you now?"

"I am nothin' less than a second lieutenant!" I says, "and, Jeanne, you gotta lay off throwin' your arms around me in public, because it's against the dignity of the U. S. army!"

Joe, with that I takes away her arms, when all the time I would of give my left lung to kiss her. but a officer has got to give up them kind of things.

She backs away and looks at me for a minute

"Edouard!" she says. "Is it then that you love not me, Jeanne—no?"

without sayin' a word, Joe, only them maddenin' lips of hers is tremblin' like a rose in a slight breeze and her face gets as white as my collar ought to be accordin' to regulations.

"Edouard!" she says. "Is it then that you love not me, Jeanne—no?"

"Well, I wouldn't go that far with it," I says, flickin' off a speck of dust from my sleeve. "It's a case of I love my wife, but, oh you commission! The minute we get in the house I'll kiss you till you yell for mercy, but in the public eye I gotta be careful, otherwise the privates would run wild. I come near havin' a guy shot just now for not salutin' me and—"

"You would have me, Jeanne, shot?" she says, her eyes openin' till each one was the prettiest saucer I ever seen in my life, or you either.

"Let us hope it won't come to that," I says, very stern, "but—"

"Mon Dieu!" she says, and with that she made a funny little noise in her throat and began to weep.

Joe, as I have no doubt told you before, Jeanne looks better than \$500 a week would look to a chorus man, and when she smiles she'd make Rockefeller forget about the oil business. When she weeps—oh, boy! Say! This dame would make the Kaiser get that trick whisker shaved off, provided she asked for it!

Well, I am only human, Joe, even if a second lieutenant and I lasted about two seconds, new time. I throwed my arms around her right out loud in public, and, speakin' about whether I loved her or not—well, we got that all fixed up anyways!

I hope they was no officer higher than me, if that's possible, which seen me and will maybe report me to Gen. Pershing, but if such is the case, Joe, I can't help it. I was married a long time before I was a second lieutenant and, discipline or no discipline, a guy can't change his habits overnight, as the Eskimo says in Hades.

Well, so long for the time bein', Joe. I have got to go out now and give some orders right and left so's the doughboys won't forget I'm a sure enough officer. Kindly excuse the blot on the bottom of this letter, which was caused by Jeanne leanin' over and kissin' me while I'm writin'. Joe, she is so proud of me right now, with my new commission and the like, that she wouldn't trade me for peace!

Yours truly,

Second Lieutenant EDWARD HARMON, A. E. F.  
(Meanin': "Ain't Ed Fine?")

VIVELA, FRANCE!

DEAR JOE: Well, Joe, I have just got a letter from you, and, judgin' by the date, you must of gave it to a rheumatic snail to bring over. If it takes as long for my letters to reach you as it did yours to get here, you ought to get this one about the time Billy Sunday opens up a gin mill on Broadway. The army mail service will never get pinched for speedin', Joe, but they's no use kickin'; I guess them birds has their hands full. Anyways, that's the only thing about the U. S. army which is slow; hey, Joe?

I was glad to see you had put some news in your last letter instead of fillin' it up with a lotta stuff about what time you got to go to bed and get up, etc., at the trainin' camp. I have went through all that myself, and that information is about as interestin' to me as the price of tomato sundaes in Shanghai. But, Joe, anything that's takin' place in New York, South Bend, or Jackson, Miss., is hot stuff to us over here. We don't care if it's the account of a false-alarm fire or whether Broadway is still lookin' like a steal from No Man's Land, on account of them not bein' able to decide whether to run trains or six-day races in the new subway. As long as it's news from the *Etats Unis* we set it up!

We hear that everybody from the age of reason up to 100 and over has either got to get in the army or grab off a job in a shipyard or the like. Well, Joe, that's fine, but I must say I'm sorry it's gonna ruin the noble game of baseball. I admit them big huskies ain't got no right to cavort around on a lot for money, while we guys is over here tryin' to shut out the Kaiser, but at the same time, baseball is a good thing over there right now because it helps take people's minds off of the war and prevents 'em from bein' all gloomed up. Some of them big stiffs they got playin' there now is so rotten that I'll betcha the fans can't think of the war or nothin' else while watchin' 'em. But, Joe, I hope they get all them slackers and the like whose motto is "See America First!" and won't come over and

give us a hand. They oughta ship over a coupla loads of them I. W. W.'s, and, believe me, them babies would work and we'd make 'em like it! We got a lot of I. W. W.'s over here as it is, only in this here case, Joe, them letters stands for "I Want Wilhelm!" We'll get the big hick too!

Well, the kiddin' is all over for the day now, Joe, and I'll tell you a couple of things which happened since I last wrote. I have had a fair to middlin' excitin' time, though without gettin' wounded no more or any further promotions, neither of which is my fault.

They is another second lieutenant and me is sent into Paris again on somethin' special, which they ain't no use in my writin' here on account of the censors all feldin' .1000. Nothin' gets past them babies, Joe! Well, this other guy has got U. S. R. on his collar, which means "Uncle Sam's Right" or somethin'. He claims he got his commission in Plattsburg, N. Y., and I says I didn't know we was also at war with New York State, which never done nothin' outside of goin' Democrat. Then he says they's a officers' trainin' camp there and he was one of the first to graduate. But outside of that, Joe, he's the same as me, only not as good-lookin'. You know, Joe, I have got to be such a handsome dog since I come over here and got wed, etc., that even the French colonel which pinned the war cross on me couldn't resist kissin' me; on the level!

Well, this guy asks me if I got my commission at West Point, and I says no, on the West Front and I never been up the Hudson farther than 135th Street and then I was in a taxi. Joe, he looks me over carefully, and after that he pays me a great deal of respect, because, Joe, I am a old warrior now and he was just ripe from this Plattsburg place, if they is any such burg.

They was a war's correspondent furkin' around the camp at that time, Joe, (Continued on page 25)

# THE LAST CRUISE OF THE U-77

BY JAMES B. CONNOLLY  
COLLIER'S STAFF CORRESPONDENT

MUCH has been written of U-boat life in this war, but most of it has been written from the outside: this is from the inside—the cold professional record of one week of dodging death.

This log is rendered as found, except that names of men and numbers of U-boats are changed; also the language, when too cryptic or technical, is turned into easier English.

When these U-boats return from sea they enter Zeebrugge and on through the canal to Bruges, where they lie in a calm, safe basin—safe from all but airplanes—until it is time to go to sea again. Our log keeper tells of the taking aboard of stores and a cargo of mines at Bruges, of their passing back through the canal to a mooring at Zeebrugge. Then he goes on:

## Diving and Dodging

MAY 28.—At ten minutes before midnight I was called to go on watch. At 2 a. m., as per orders, I had the captain called. At 3 a. m. we found the gap in the harrage and passed out to sea. At 3.55—five minutes before my watch was up—I saw three large English destroyers, the nearest one not more than 600 meters away. The sea was smooth. Only that the moon was setting behind a cloud, they would surely have seen our periscope. I decided to risk staying up. To break out of water inshore when not compelled to is an unnecessary risk.

MAY 29.—Slept until within five minutes of my morning watch. I always sleep much during my first twenty-four hours at sea. Too much excitement, too much entertaining. I was about to relieve my alternate at the periscope when he energetically gave the order to put her under. We dived quickly and, under full power of storage batteries, ran her on a changed course. My alternate, as he moved toward his bunk, explained that he had seen two buzzards (seaplanes) not more than 700 meters above him. Before he had finished telling of it we felt the explosions of four bombs—two and two they came—but not dangerously near.

I ran her for an hour and a half under her batteries before I thought it prudent to come to the surface. We were not allowed to stay up long. Two more buzzards—doubtless the same two—were hovering not too far above. I lost no time in shifting course after we were well under. We waited for the depth bombs. They came—one, two, three, four—two of them too near for us to enjoy. It was an hour and a half before I felt like coming up again. When we did emerge I noted with a pleasant feeling that the sea was clear. Also the air. Within an hour, however, we had to dive in another hurry. I had gone off watch and so did not see what it was, but later, when I inquired, was told it was another buzzard. After lunch I put in a good sleep and so missed seeing the U-81 when she passed with Captain Müller hailing us. Later we passed the U-91.

MAY 30.—I tried to sleep during the 12 to 4 a. m. watch, but did not make out very well. We were off Havre laying mines when we thought for a time we were caught in a net. During my watch, 4 to 8

a. m., we steered for Calm Roads to lay more mines, but ran ashore on the way. Our oil engines got us off, luckily enough, with only two small fishing vessels to take advantage of our trouble. They made off inshore, where we knew they would be sure to report us, so we gave up the idea of going ahead with any mine laying there.

After breakfast we sighted a convoy. It was at such a distance that we felt safe from their lookouts. We dived for attack. Twenty minutes later we got in a torpedo on the leading ship of the convoy, a 5,000-ton ship, but destroyers and patrol came rushing down from the north. We submerged and went off. Soon after coming on for the afternoon watch I sighted four destroyers. I dived without wasting time, and at once began to steer erratic courses. We felt one explosion. They must have dropped more than one, but one was all we knew anything about. Half an hour later we came up. It was a clear, sunny afternoon, altogether most pleasant, until four English destroyers of the K class appeared to starboard. We submerged. We stayed under forty minutes and then proceeded under half speed to dump a few more mines off Cherbourg.

MAY 31.—During the midwatch (12 to 4 a. m.) we laid six mines off Cherbourg, where it is to be hoped they will be of use. From 4 to 8 a. m. I slept. While I slept we dived once to escape a destroyer (large English). Four patrol boats were also sighted, but my alternate evaded them without having to dive. My watch was quiet and pleasant, though somewhat wet. It is always pleasant to put in a full daylight watch without having to dive.

The afternoon watch was not so quiet. At 1.10 we dived to avoid a destroyer. We stayed under thirty minutes. At 2.20 we had to dive again—

probably the same destroyer hunting us. We steered irregular courses for more than an hour, but heard no explosions. At 5.30 we had to submerge again—two patrol boats this time.

At 8.15 we sighted a convoy and at once dived for action. It was under a bright moon, and Orwens Light only a few miles ahead. We got our first steamer quickly, but it was 10.25 before we got our second one. At 11.45, while charging batteries, another steamer hove in sight, but before we could work into position she saw us and ran off.

JUNE 1.—The midwatch had been a busy one, so they told me when I came out to take the periscope for my watch. At 12.20 they had to dive to escape a destroyer. Up in half an hour, but diving almost at once to attack two steamers, each escorted by a destroyer. The torpedo was in the tube, but they could not get in a shot. They left them and came to surface. Soon a destroyer was sighted dead ahead, and almost at the same instant two small schooners and a steamer to port. Made ready to attack steamer, but as we did so she saw us and, making Morse signals, hiked off at a speed which was too much for us. All this happened fifteen miles off St. Catherine's, in the bright moonlight. After it was all over—as I came on watch, that is—we turned and headed for Havre, running on the surface with one engine and recharging batteries with the other.

On the run to Havre we had to dive to avoid a destroyer coming up on our starboard bow. At 10 a. m. we dived to three drifters and a destroyer on our port bow. Things were happening too fast for our ease of mind. At 11 a. m. the captain said a little sleep for all hands would do no harm, so down we went. At 40 meters we found bottom, and there we stayed in comfort until supper time.

After supper, resuming our course to Havre, we dived to avoid being seen, and of course reported by, a sailing vessel. When next we came up there was a steamer in plain sight. We fired a stern torpedo at her, but did not get her. Thirty minutes later we got a chance at another steamer, but the first officer, who was doing the pointing, reported the torpedo as going wild. The captain did not like that. It might be defective torpedoes—but it might be something else. Another good sleep would do us no harm, he said, so down we dropped, and lay on bottom for six hours.

JUNE 2.—We came to the surface in oily-smooth water, and were about to charge batteries when along came a destroyer. We submerged. When we came up, after three hours, there were five drifters outside of us. Too many for us they were, so we slipped inshore. Then came a French cruiser, evidently with her lookouts on us. We submerged. Two explosions followed, but too quickly for the cruiser to have been there to drop them—probably from some buzzard which we had not noticed. We lay low, and at a depth of 20 meters proceeded under three-quarter speed until we felt we were safe away from there.

We came to the surface and for five minutes saw nothing. Then came a destroyer. We submerged. When we broke water again (Continued on page 20)

## "What We Learn from the American Press"

**WHAT** follows is translated from the leading French weekly—read in every city of France and the world—"L'Illustration":

To-day, while the soldiers of the A. E. F. are gloriously shedding their blood on our battle fields, no one doubts any longer the reality and efficacy of America's aid. But the strong will to victory which animates our allies, the bending of all their energies toward this one aim, is revealed to us by a reading of the periodical press in the United States.

There, above all, one must seek the manifestations of American opinion: the daily press, with its lavish headlines and sensations, is essentially an organ of news. It is in the multiple magazines, monthly or weekly, of which some, like *COLLIER'S*, print a million copies, which distribute to the American public the basic articles which at once guide and reflect opinion.

It has changed its tone, this press, in the year and more since the United States has been at war. At the outset it was full of enthusiastic demonstrations and wonderful promises thrown off with the smiling cocksureness of resolute force. But time passed, and at every step rose new, unforeseen difficulties. Should the original program be abandoned? No. The American is no man to yield to discouragement. He grits his teeth, tightens his muscles, and comes back to the charge with full consciousness of the task's difficulties. The American press no longer smiles at these difficulties; it realizes them, names them, underlines them, and even exaggerates them to make surer of getting the best of them. It wants the public to know also the measures the Government must take to conquer them. It gave praise unreservedly; now it discusses and weighs. And criticism is good when it is inspired, as is this criticism, by one desire and one only: to win the war.

"The fact that the newspapers of this country are no longer shutting their eyes to disagreeable facts is," *COLLIER'S* tells us, "a healthy sign—a fighting sign. When a newspaper takes great pains to find out exactly what is going on behind the scenes and then says what it thinks about the situation in certain language, the public may rest assured that that newspaper is in the war."

Yes, mistakes have been made, the periodical press tells us; there has been too much backing and filling. Certainly the President has everybody's confidence—he can have dictatorial power if he likes. But let him give a care to the men around him! Let him make sure of their efficiency! Let him call to his side able and energetic men. . . . For the time for investigations has passed: it is time for action. The shock of the German offensive has echoed through America like a tremendous alarm bell: for God's sake, hurry up!

This comment is worth having, for "*L'Illustration*," besides being the most charming of pictorial publications, is much alive to what is going on in the world, and when it discusses political affairs is apt to give expression to the keenest political thought in France. Besides, it is far enough away from the American scene to see more clearly than those whose eyesight is disturbed by the dust of the actual contest with official Washington. *COLLIER'S* professes no merit except that it declined to join in the approving chorus of the daily papers during the summer and autumn of 1917 when the genial press agents were putting out "literature" better suited to the prospectus of a circus or moonlight excursion than the entrance of this country into the most terrible war in history. It printed the facts whether they agreed with the advertisements or not.

The year has seen a great change at Washington. It is a matter of little importance what agency brought this about. The professional "booster" is as mute as his professional nature will permit him to be. The serenades have ceased. The brass bands are playing in front of marching troops. The President, in the words of "*L'Illustration*," has "given a care to the men around him." He is "calling to his side able and energetic men" even if he hasn't turned out all who are weak and listless. The honesty of advisers is no longer questioned, because their advice is founded on experience and expert knowledge. "Naive criticism" is not invited. The tone of Congress is altered. Senators and representatives now discuss war measures, not the principles underlying the war. *LA FOLLETTE* is silent while the guns speak. *GOETHALS*, *RYAN*, *SCHWAB*, and others who were recently in eclipse or exile are doing the work for which, by training and knowledge, they are equipped. We can hear *LLOYD GEORGE* without resentment when he says: "Considerable American forces had been expected by spring. As a matter of fact, on March 21 [1918] there was only one American division in the line. There were three or four divisions behind the line which were brought up after the attack." Now there are nearly a million and a half American soldiers in France and Italy, and perhaps 300,000 or 400,000 in the actual fighting or among the reserves in readiness for battle. It is not an "expeditionary force"—we dislike the term—it savors of both weakness and condescension—but an American army, fighting an American war, and well prepared spiritually and materially for its high enterprise.

### As to Reckoning Wages

**THESE** rates of pay that one sees published in the papers when strikes are being headed off or settled are usually stated as so many cents per hour. You have to figure wages that way when

reckoning the respective costs of various articles made or services rendered. But the worker's interest is in the amount he earns per year, since he and his family have to live through, just as the corporation does. There might be less friction in the relation of employer and employee if this method of figuring pay did not make arithmetic so complicated and so important. Endless questions of detail now arise as to waiting time, hours not used, special hours, etc., etc., and the sea lawyers on both sides are always working up grudges against one another. Can anything better be done under modern conditions? Can workers be employed by the year with annual total earnings guaranteed to each and, possibly, a bonus for better work or a share of the company's prosperity in good times? Would hiring by the year give steadier employment without any danger of serfdom? Can the average workman learn enough book-keeping so as to be able to believe the truth about his employer's financial condition? These are hard questions, but there is no royal road out of industrial unrest, and to treat labor primarily as a factor in cost does not lessen that unrest, and never will.

### Why, Josephus!

**SECRETARY DANIELS** stood at the end of "No Man's Land," to all appearances bare except for here and there a few clumps of grass or hillocks of clay.—*Pittsburgh "Press."*

### For Man and Beast

**TO** get work out of horses one must give them a chance to rest and to keep clean. Farmers have known it for some time, and now the changes of war are spreading the same truth into other fields. The social-betterment experts publish the squalid facts as to living conditions in the slums behind the Chicago stockyards and along the blind back alleys of Chester, Pa.: If men are going to do their best in driving rivets on the Delaware or in putting up beef for our armies, they must have lodgings that would not sicken an animal. Getting the vermin out of the spruce logging camps took the sting from a deal of the I. W. W. agitation in the Pacific Northwest. British seamen face the submarines with even more of their traditional dogged courage because their new standard cargo ships have cabins and bunks for the crew, not crowded up under the bowsprit, but decently spaced in the main hull. "Adequate housing for war workers will cut down by 50 per cent or more the enormous labor turnover experienced at all war plants, with consequent elimination of waste time," writes the Philadelphia correspondent of the New York "*Evening Post*," reporting on the program of the shipbuilders. When the New York street railways took on women conductors it became necessary to have some sort of places where they could wash and eat lunch without being driven to the corner saloons. Now that attention is forced to these facts, and men in charge turn their minds to them, they are coming to find that plumbing facilities and fit places for eating and for sleeping, and recreational resources, are the bedrock basis of good work. The horrors of war will teach us to cure some of the horrors of peace.

### The Thunderer Mends Manners

**ROUND** about July 4 the London "*Times*" printed as part of one day's news the item:

General Booth of the Salvation Army telegraphed on Independence Day to President Wilson as follows:

"Permit me, on behalf of the Salvation Army in the Allied nations, to express our humble gratitude to Almighty God for the exalted friendship to which this day bears witness. Even the catastrophe of the war will prove a benediction if out of it should come a lasting union of the peoples of the English-speaking world, for the peace of nations, the freedom of the oppressed, and the brotherhood of all under the banner of Christ."

One point we note here is the fact that the "*Times's*" old-time quotation marks round the word general in "General BOOTH" are entirely missing. Is that one effect of the "*Times's*" Northcliffe ownership—or is it a development of this war somewhat to popularize generalships, or is it, perhaps, that all the world now sets greater store by the Salvation Army: which all the newspaper correspondents in France join in praising for nobility of service?

### A Disentangling Alliance

**THE** presence of a million and a quarter American soldiers in France leads a Paris correspondent to note that they would make a city population above that of any American city except three. Obviously, too, they are unlike city populations in being all men—

# Editorials

practically all of them able-bodied men. Here is matter to ponder on. Already the Entente looks to Americans in France as the hope of its great cause. Instead of the foreign entanglements GEORGE WASHINGTON feared for America in alliances we are become "other people's disentanglers." As "The New Europe" puts it:

"Lafayette, nous voilà!" said General Pershing to President Poincaré, and coined thereby a fine historical epigram. General Pershing could just as truly have said "Nous voilà!" to us. America is coming to France, but is coming back to England. The United States has learnt that the romance which, ever since its existence, has centered around the struggle for independence is not incompatible with that other romance of common blood and common ideals. . . . The task before us is to work out a League of Nations for the World, and in this task we shall have the precious help and counsel of America.

## Who Did Say It?

NOTE that the learned "New Europe" unhesitatingly attributes the poetic saying "Lafayette, nous voilà!" to the commander in chief of the A. E. F. The British weekly even states that the commander in chief addressed the epigram "to President Poincaré." All early accounts we have seen of the incident agree that the words were spoken at the Picpus Cemetery, in Paris, where a wreath was laid by the Americans on LAFAYETTE'S tomb (July 4, 1917). But some historians—including HEYWOOD BROWN—give the expression to Colonel STANTON of Virginia. Can nobody under the rank of general make a speech worthy of going into the history books?

## On Dressing Up

WHEN KEATS was particularly blue he bathed and put on clean and pleasing garments. R. L. S. lightened his hours by wearing queer hats. LOUIS XVI, last of the Bourbons before the Deluge, realized that History had cast him for too great a rôle; therefore he made up as a watchmaker, while his Austrian Queen dressed herself in milkmaid's costume, and tripped to the little Trianon of Versailles. So did TOLSTOY, weary of What Is Art and of philosophy, garb as peasant, expose feet to the outer air, and make shoes for his surprised (and probably ungrateful!) tenants. Not easily is lost the youngster's love of "dressing up." Not wholly juvenile is the charade, and not for Newport only the amateur theatricals.

Sometimes we incline to think that sages have neglected that Psychology of Clothes which CARLYLE, at least, appreciated, and, in his "Penguin Island," ANATOLE FRANCE. Certainly man insists upon dressing for his part—or for some one else's. And London's "New Statesman" stands authority for the fact that politicians, churchmen, and warriors have given the far from frivolous subject of dress much more attention than they (or, in general, their wives) ever gave to poetry and ethics. In the past there have been more synodal enactments on clerical costume than on any topic else. Even the heroes of 1918 consider dress—taking the theme to heart: "There has been friction in the British Air Service, it is reported, owing to the fact that naval airmen have been forced to wear khaki. According to the newspaper reports, khaki was undermining their esprit de corps."

Let no one smile. He who challenges the elements should have Last Word as to his habiliments. If all the world's a dressing room, who would deny the airman, knightliest of modern soldiers, his privilege of turning tragedy into a costume play?

## A LETTER FROM FRANCE

(From a Massachusetts boy to his father on the farm)

DEAR FATHER: Where I was stationed before moving to this front, the people were haying. They have fine horses, but queer rigs. All the wagons, even to the two-wheeled dump carts, have brakes and old-style "Deering" mowing machines. They put a strap around the horse's neck and fasten it to the yoke and hitch the inside chain to the opposite whiffletree. If the machine clogs, they never back up; just clean it out, crack the whip, and away the horses go. The French hay rakes are just the opposite of ours. They keep the foot on the lever except when they want to dump the hay. I have ridden on one. It is good to get onto the old job again. The scythes are like our hush scythes. When they haven't a grindstone, they pound out the nicks in the scythe with a hammer and iron and then smooth it up with a bit of rock.

You ought to see the way they drive pigs. They use dogs to help. And when a shepherd takes his sheep out to pasture he goes along the street and blows a horn and every one turns out their pigs and sheep. The shepherd has a long-lash whip and drives them like cows. It takes a Frenchman to crack a whip.

There's a wheelwright whom I watched working when I hadn't anything else to do. He liked to have us around because we helped him and that saved him money. I saw him put a rim on a wheel. He got the lumber and sawed it out by hand on a band saw worked by two handles. He was two days and a half at it and certainly did a swell job. He got forty francs (nearly \$8.00). We boys helped do his haying.

People live in groups of stone houses and drive out to their farms to work. Each village has a church with a tall spire; approaching a village you always see the spire first. The people all wear hobnailed shoes to work and everybody works.

Lots of love to all,

JOHN.

## One Sort of Vacation

IN a Philadelphia newspaper that excellent talker, CHRISTOPHER MORLEY, prints an essay on conversation, and calls it "What Men Live By." It is pleasantly done, and during the hot season it is as ice clinking in a tall tumbler to read of the best week in the Quaker philosopher's gay life—

in which we did nothing but talk. We spent it with a delightful gentleman who has a little bungalow on the shore of a lake in Pike County. He had a great many books and cigars, both of which are conversational stimulants. We used to lie out on the edge of the lake, in our oldest trousers, and talk. We built up a complete philosophy of indolence and good will, according to Food and Sleep and Swimming their proper share of homages. We rose at ten in the morning and began talking; we talked all day and until three o'clock at night. Then we went to bed and regained strength and combativeness for the coming day. Never was a week better spent. We committed no crimes, planned no secret treaties, devised no annexations or indemnities. We envied no one. We examined the entire world and found it worth while.

Now, this is not a safe program for all ages, at all times—so long as Provost Marshal CROWDER is in the ring. But (in the right company) such a vacation would wonderfully refresh us, and would stimulate too.

## Talk and Be Glad!

IT was a sad thing for the world, writes our Philadelphia essayist, when it grew so busy that men had no time to talk. For war talk is not talk: it is, in general, argument, and argument is as far below conversation as steam trawling is beneath fly casting. But though it is of a truth sad that the world has lost talk, the fine art (if indeed it has lost it), it does not follow that good talk really makes a happy home. "From every manor, house, and cabin," writes JOHN BUTLER YEATS of his native land, "ascends the incense of pleasant talk; it is that in which we most excel. With us all journeys end in talkers' meeting; 'we are the greatest talkers since the Greeks.'" Yet Ireland has not been the happiest of lands—although Mr.

YEATS says "we even like our enemies," on the ancient principle that it's better to be quarrelsome than to be lonesome.

## Talk—and Silence

CHRISTOPHER MORLEY'S notion is that:

Very often conversations are better among three than between two, for the reason that then one of the trio is always, unconsciously, acting as umpire, interposing fair play, recalling wandering wits to the nub of the argument, seeing that the aggressiveness of one does no foul to the reticence of another. Talk in twos may, alas! fall into speaker and listener; talk in threes rarely does so.

And "there is only one rule for being a good talker: learn how to listen." Good talk is so rare that the good talker is likely to degenerate into a paid or unpaid monologist; but monologue is not good talk. There cannot be good talk without responses nor yet without brief intervals: interludes that correspond with the time it takes to clear away dishes between courses, and lay a fresh cover, and bring on nuts and raisins, or the incensial coffeepot. The silent places, the spacing and sympathy of them, are the setting for the jewel of talk. He knows conversation at its deepest and best who understands JAMES JOYCE when he writes: "Stephen paused, and, though his companion did not speak, felt that his words had called up around them a thought-enchanted silence."

# THE FLYING FISH

BY ARTHUR SOMERS ROCHE

## CHAPTER SEVENTEEN: PRISON STRIPES

ILLUSTRATED BY F. R. GRIGER

"NOW, don't be excited, please," begged Morley. "The police haven't questioned you?"

"But no, monsieur."

"Well, just because you happen to think of something that might interest them is no reason why you should be jailed because you come here first. Take it easy. And don't break into French. Now, then, from the beginning, please."

"I have told you, monsieur. Monsieur Endicott is breakfasting—alone. A lady enters. Miss Kildare, niece of Monsieur McCord. She advances to Monsieur Endicott."

"Moi, I do not think they are acquaints. But Monsieur Endicott arises; they speak; they breakfast together. Then enters the uncle—of a harshness, his face, monsieur. He does not like to find his niece with the young gentleman. She make them acquaints."

"Monsieur McCord is seated. A page calls the name of Monsieur Endicott. He pretend not to hear. Then he arise and leave the room. He stop and speak with me."

"My name, Raoul," he say, 'is Arnold Hoban. You do not understand? That is not necessary. My name is Hoban.'"

"Yes. Go on," urged Morley.

Already the mystery began to clarify itself. The girl was friendly to Endicott. And her uncle—

Abruptly, bidding the man wait, Morley went to the art department of the "Planet." There he procured the photograph that he had purchased that day from the Art Photo Company.

Breen, according to Mrs. Garley, had a rich friend at a private hotel. The clerk at the Birmingham had denied knowing the original of the photograph, but Raoul had linked the girl with Endicott, had linked her with an elderly man. He showed the picture to the head waiter.

"Monsieur McCord," averred Raoul. "Of a certainty. Much older he is now, but—it is Monsieur McCord."

"Why didn't the clerk recognize him?" demanded the reporter.

"I come to that, monsieur," said Raoul. "At the moment I think it is an affair of gallantry; that the uncle object to the attention of Monsieur Endicott. Though why anyone should not like his niece to be won by one who has risked his life for la belle France—" Raoul shrugged his shoulders. It was incomprehensible.

"And you don't think, now, that it was such an affair?" queried Morley.

Again Raoul shrugged.

"I do not think about it at all, monsieur. But, at the time, it looked like that. But now—with murder—I do not think about it. It is not understandable."

Morley smiled wryly. For Raoul had said something.

"Well, after he spoke to you? What then?"

"He left the dining room, monsieur. I notice him at the desk in the office. I am curious, monsieur, naturally. I go to the desk after Monsieur Endicott has left, and—well, I notice that he has 'checked out,' and that Monsieur Arnold Hoban has registered. I inquire of the clerk, and he tells me that attending to one's own affairs is profitable. And so I dismiss the matter from my mind."

"There was a special dinner at the hotel last night, monsieur. Supper, I should say. It began after the theatre and ended not until dawn. So that I was at my home, sleeping until late this afternoon, and do not read the papers. It is not until I reach the hotel that I am told of the death of the so gallant Monsieur Endicott, and while I am being told of it you arrive and question the clerk. I have seen you at the hotel, monsieur, and know who you are. It occurs to me that, as the police have not visited me, I have the right to go to a newspaper—I come to yours, monsieur."

"Quite right. Always do that little thing," grinned Morley. "Go to the police afterward. And this picture—it is the girl's uncle, you're certain?"

"Positively," declared Raoul.

Morley drummed on his knee with his slim fingers.

"I think that I'll go uptown with you, Raoul," he announced.

THE night clerk at the Birmingham turned the least bit pale when Morley quietly asked for a private interview. However, he invited the newspaper man into the inner office and closed the door.

"Well, what can I do for you?" he asked.

"Shielding murderers is a pretty serious offense," said the reporter. "You'd better come through—clean. Now"—and he lifted a forefinger—"don't try to bluff me. Not, at any rate, until you see how much I know. For instance, the day clerk denies knowing this man. Do you?"

He produced the photograph of the man in prison stripes. The clerk wet his lips.

"On the level, Mr. Morley, we didn't have any idea that we'd get in bad. Mr. Endicott was a good patron of this hotel, been here years ago, and stands so well. It was a little thing to do, but when we read of his murder— Well, the day clerk and myself, we didn't want to lose our jobs, and—the management might have objected to what we did."

"Just tell me what you did," advised Morley.

He listened carefully to the tale of the registering of the nonexistent Mr. Hoban.

"And now what had I better do?" asked the frightened clerk.

"Why, you'd better telephone the police," advised Morley. "They can't do anything to you. But if you don't tell them now, it might be serious."

Then he left to begin again his delayed story for the morning paper.

IT was a mighty good rule to play exactly on the level, he mused, on his way downtown. Not that there had been anything particularly wrong—certainly nothing immoral—in the clerks' accepting money from Endicott for altering the register, but it was something of which the management would not have approved, to which the management would seriously have objected. And by doing it the clerks had laid themselves open to an unpleasant hour with the police.

But he had more important things to worry over than the riggings—for withholding information for a brief while—that the police would give the two clerks. It was too bad that Flynn would have to know all that Morley knew, but, after all, what he had learned had been through no superior acumen of his own.

The "Planet" was a newspaper; newspapers paid for the news. Therefore the photographer, Mrs. Garley, and Raoul had put information in the way of Morley that accident might have caused them to put in the way of any other newspaper man.

It was up to Morley to be grateful for his luck, and to try to add brains to luck.

"Something new?" the night editor asked him when he reached the office. "Hain't left word that you had started your story, but I don't see any signs of copy."

"New lead," answered Morley briefly. He looked at the clock, then started once again to work. But it was not work at his typewriter. First there were other things to do. One was to send a telegram to Gallipolis, Ohio. The clerk had shown him the register, and Leila Kildare was registered as being from that town. The other was to search the "morgue" for some information concerning Curzon McCord, the uncle of Leila Kildare.

But there was no clipping envelope under the name Curzon McCord.

Morley sat down at his desk. He reviewed the tangle from the beginning, reconstructing it as well as he could.

Farley Endicott, noted amateur sportsman, wealthy, returns from France, where he had been wounded while flying. He goes to the country, supposedly to recuperate from his wounds. Returning, he—according to servants at his club, later verified by the register of the Birmingham—goes to a hotel, while his apartment is being put in order.

Yesterday morning, at breakfast, Endicott is accosted by a girl, one Leila Kildare. The Kildare girl, according to her description, is the girl who called on Breen, took him away—to Endicott's apartment, doubtless—and who later telephoned the police, advising them to go to that apartment.

Apparently Endicott does not know the girl. The entrance of her uncle interrupts a tête-à-tête. Leaving the girl, Endicott bribes the head waiter, stating that his name is Hoban. He then bribes the clerks of the hotel to falsify the register so that it will seem that Endicott has left the hotel, and that one Arnold Hoban is stopping there.

Samuel Breen, an ex-convict, has copies made of an old picture. That picture is the photograph of Curzon McCord, uncle of the girl who accosted Endicott. Breen's only reason for having the copies made must have been the reason of blackmail.

Endicott disappears from the hotel. McCord leaves the hotel too, and his baggage is merely taken to the railroad station, according to the clerk. The girl leaves the hotel. Later, she calls upon Breen—

But this was running around in circles. Morley's brow creased. Before he got this far, let him settle matters that occurred previously.

For instance: What was the cause of Endicott's action in attempting to hide his identity? Had Endicott been other than what he was, a solution would have been simple. The girl had mistaken him for another man, and, that he might continue a chance acquaintance, Endicott had professed to be the man she took him for—Arnold Hoban. If the response to Morley's wire to Gallipolis stated that a person named Arnold Hoban really lived there, Morley would be reluctantly compelled to admit this possible solution. But he refused to admit it now. Endicott simply wasn't the sort to permit a girl to make a

mistake. If she had thought him another man, he would have enlightened her at once. Endicott was a gentleman.

Then why the Arnold Hoban business? Morley's brow grew more wrinkled. The girl, according to Raoul, and to the night clerk, had been a sort of secretary to McCord, her uncle. McCord was an ex-convict, a dangerous man, as several murders had proved—that is, if McCord were responsible for the murders. But Breen had been slain, and Breen had evidently threatened McCord, so it was fair, for the moment, to assume that McCord was responsible for the killings.

Suppose that the girl, acting as her uncle's secretary, knew the sort of man that he was, and had appealed to Endicott? That sounded reasonable. Endicott was a chivalrous sort of chap, just the one to aid a girl. It fitted in with what followed too. Grant that this was so: grant that the girl had appealed to Endicott, what followed became understandable.

Endicott would naturally have pretended to be an old friend of the girl. To avoid suspicion, he would pretend to have come from the same town as the girl. He would register as from that town. Then the girl would have looked up the man who sent the photograph to her uncle.

But why wouldn't Endicott have done that? Why would he leave this business to the girl? But that question couldn't be answered now. He must go ahead with his reasoning without trying to understand.

The girl, then, had taken, or sent, Breen to Endicott's apartment. Breen was McCord's enemy; at any rate, his blackmailer. That the girl had lured Breen to Endicott's place to be murdered was a hypothesis that entered Morley's mind to be instantly rejected. Endicott wasn't that sort. He would aid in no evil.

Endicott, then, was helping the girl. But, in some way, her uncle had found it out. The man who had traced Breen to his address after the ex-convict had departed with the girl might be an emissary of McCord. Certainly either the girl or the man had come from McCord. It would be unreasonable to suppose anything else.

And then—the killings! McCord was the one to fear Breen; ergo, Breen was the one to fear McCord. Or, putting it differently, because McCord was in danger of some sort of exposure, the man who held the threat over him feared his vengeance.

THE girl did not wish McCord to know Endicott for who he was. That was quite patently the reason for Endicott's assumption of the name of Arnold Hoban. But when McCord learned that the girl had taken Breen to Endicott's apartment the game was up. McCord had sent his men to the apartment.

This was all very well, but he was forgetting something. He was forgetting that the girl had telephoned the police and told them practically nothing. Why had she withheld the reasons behind these killings?

And then it came to Morley. Endicott had not been killed. But a man dressed in his clothing had been found dead. Why? Because Endicott had wished to blind the police, to pretend, a murderer, that he was himself dead?

Morley shook his head. If Endicott could possibly be a murderer, this theory might do. But, having met Endicott, Morley would not credit such a theory. The men who killed Breen had held Endicott prisoner!

That explained the girl's failure to give the police more information. She had hoped that the murderers would be caught red-handed, but if they were not, she did not want them to know that she had informed on them. At least she did not want the police to know too much, lest Endicott be jeopardized.

Morley might be a thousand miles out of the way, but he was willing to bank on it that he was guessing close to the mark. The false Endicott in Greenwich—that body had been placed there, with Endicott's pocketbook in the clothing, to deceive the police, to make them refrain from search for Endicott.

But Endicott himself—mentally Morley cleared him from complicity. He was a victim. And he was the victim of—whom? If the reporter should show this picture to Flynn, he would lose a good story;

but without knowledge of who the photographed ex-convict was, his good story lacked point. Flynn would give it to the other newspaper men, but—Flynn ought to have it, after all.

AND as he reached this point in his reasonings the telephone on his desk rang. It was Flynn.

"Just a word, Morley. The coon servant is conscious. You can see him. But he don't know much. I'll give it to you now if you want."

"Go ahead," grunted Morley.

"Girl named Miss Kildare sent Breen to the apartment. Before this Mr. Samuel Whitney had been there. Endicott had been captured by a guy named McCord. Fabian tried to trace McCord's trunks. Failed. Came back. Taking care of Breen when bell rang. Men came in and knocked him out and killed Breen. Doesn't know any more than that. Ain't safe to question him further. He's kinda low still. On the level, what do you make of it? Sounds like a pipe dream. I've had men up at the Birmingham, and a couple of clerks from there been to see me. You saw them first, though. What do you make of it? Endicott, a guy like that, horn-ing into the affair, changing his name? Tell me, Morley."

Flynn's voice was pleading. If Morley was puzzled, the lieutenant of detectives was mystified. He had not put things together as Morley had done.

"May I go over your Rogues' Gallery, lieutenant?" asked the reporter. "After that I may be able to tell you."

"Nothing doing. I know. That photograph of the convict. The Art Photo people didn't tell me they'd sold a copy to you. I might have known it, though. I've been over the gallery. No one like it there. Old-time stuff. Another State, I think. But you know who he is—he's the uncle of the girl Endicott was talking to—the same girl that phoned here last night. Morley, what do you make of it?"

"You don't know who McCord is? On the level?"

lowe'en John gave you that? Do you think he knows this McCord?"

"I don't know, but he was a bit too innocent—and scared."

"Give me two minutes with him," said Flynn grimly.

"And I'm in on it," announced Morley.

"Fair enough," said Flynn. And his voice did not sound grudging.

For Flynn was up against it; his chief had talked with him again this evening, and it had been a sorely perturbed lieutenant that had left the commissioner's office.

Jealous though Flynn might be of Morley, this was a time when he had to put jealousy from him. Unless he wished to lose his berth as head of the Detective Bureau, he must solve the Endicott mystery, and this he realized would take more brains than he possessed.

It was a humble man that left Headquarters to meet Morley at the saloon of Hallowe'en John.

### Chapter XVIII: Suppressed News

IT was a story! Confronted by the lieutenant, threatened with all sorts of exposure—exposure that would have meant his death at the hands of the denizens of the underworld whom he had betrayed to the police—Hallowe'en John had admitted that he knew the identity of the original of the photograph of the ex-convict.

"For, John," said Lieutenant Flynn, "I know you. I know you never lent a dollar in your life without you had good security. If Breen told you anything, he told you everything. You've admitted that he said he had a scheme. Now, he may not have told you who was goin' to be the victim of his scheme, but I don't believe you. Now, John, a man pays sooner or later for bein' a liar. You're a liar. You may be tellin' the truth now. But if you are, I'm sorry for you. For I'm goin' to tip off the right people that you're a stool pigeon, and Gawd help you, John. What's this guy's moniker?"

He touched the photograph. And Hallowe'en John weakened.

"Harmon Rayde, lootnant. But for God's sake don't gimme away. He's killed Breen, and—"

For the third time Morley sat him down before his typewriter. It was almost eleven o'clock, and he had less than an hour and a half in which to catch the presses for the first edition.

But it was a story! Harmon Rayde—the great, almost mythical, international crook and spy—was the murderer of the Endicott mystery. Leila Kildare—the mysterious girl in the story—too! Just the thing to give it the necessary sex filip. Too bad, though, that her name must come out, that a decent girl must be subjected to notoriety. For a telegram from Gallipolis described her as one beyond reproach. Still, she figured in the mystery, and whether it was her fault or not, a newspaper man can't be sentimental. Besides, publication of the story might induce her, were she still free to do so, to tell the whole truth, to come forward and denounce the man who had employed her as his secretary.

It was a corking story. Morley told himself for the twentieth time. And he was writing it well too. If only he could descry some reason for McCord's—or Harmon Rayde's—employing the girl in the first place! The Gallipolis telegram said that Curzon McCord had posed as an old friend of the orphan Kildare girl. He loved her! That was it. For why should a crook want an honest girl as his secretary? Loved her!

Well, and his face dropped a bit, he must leave this deduction out of his yarn, but it would do; it would do. And the other papers would have so very little on it. He was swinging into his introduction, writing against time, when his desk telephone jangled.

Impatiently he answered it.

"Hello, hello!"

"Mr. Rodney Morley?"

"Yes. Who's this, please?"

"Robert Colroy talking."

"Yes." Morley knew the name, recognized the voice now.

"You knew, of course, Mr. Morley, that I'd withdrawn from private business."

"Certainly."

(Continued on page 24)

Morley read the most important message since the declaration of war

"On the level. And, without sending that picture all over the country, I don't see a chance—"

"How about Hallowe'en John?" asked Morley.

"Where does he come in?"

"He told me Breen's address."

"Oh-ho. So that's how you beat us up there. I hand it to you, Morley. You're some guy! Hal-

# BUSINESS IN WAR TIME

*A page edited by the Business Department  
of Collier's, The National Weekly*

## Are You in Favor of the N.T.M.?

**T**HE question of a National Trade-Mark has been so much discussed in business papers of late that now it is familiarly known by its initials—the N. T. M.

At present there is a bill before Congress "to authorize the adoption, registration and protection of a national trade-mark to distinguish merchandise manufactured or produced in the United States of America and used in commerce with foreign nations."

It will be remembered by faithful readers of Collier's that four years ago we started a vigorous campaign to remove the prejudice against goods made in America and show the folly of the snobbish preference for certain products simply because they bore a foreign name or label.

At that time, with President Wilson advising us to observe strict neutrality, there were very few who dreamed that we would ever be at actual war with Germany. Yet Collier's first page in its "Made in America" campaign, published on October 3d, 1914, contains words which now seem prophetic:

"Those of us who have been buying all we could abroad will have to get things here or go without. The war enables us to raise many of our purchases to the dignity of a patriotic act, and at the same time to serve our interest better.

"This war is going to furnish a liberal education to Americans in the superiority of their own products.

"When the American public realizes the true situation it will respond wholeheartedly. Manufacturers of woolens, silks, cottons, glassware, cutlery, dyes, toys, hats, perfumes, toilet goods and other things we have persistently imported will for the first time have a

market that approaches its full possibilities."

It was in response to the Collier campaign that, some time in the winter of 1914, the Detroit Chamber of Commerce originated a plan for distinguishing "Made in U. S. A." products by a uniform trade-mark. And this live organization also offered a prize of \$500 for the best design for such a trade-mark.

Now, four years later, the campaign has at last borne fruit and there is an actual bill advocating the use of a national trade-mark now awaiting the decision of Congress.

The proposal to use a National Trade-Mark, however, has not met with unqualified approval. Certain leading manufacturers, owners of their own trade-marks which through heavy advertising and high standards of merchandise have become favorably known and popular in foreign markets, feel that it would be unjust to them to allow any manufacturer of any grade of merchandise to compete with them under the general National Trade-Mark of "Made in U. S. A." "What is the use of all our years of effort in establishing ourselves in these foreign markets," they ask, "if anyone else can come along and compete with us on equal grounds because he is licensed to use the same general trade-mark?"

The Department of Commerce answers this objection in a special bulletin. The manufacturer who has already established his trade-mark abroad will get the National Trade-Mark as additional protection. This will mean a great deal after the war. For Germany will be desperate for business—and, in the past, Germany has not hesitated

to imitate and burglarize private American brands and trade-marks. But it is hoped that the National Trade-Mark will be protected in some way so that this cannot be done.

In addition to this, the Department of Commerce goes on to say, that only those manufacturers whose merchandise deserves the National Trade-Mark will be licensed to use it. It will be a mark of honor, of superior goods, and recognizable as such.

There are of course many points to be settled before the National Trade-Mark is decided upon. The manufacturers who through initiative and the merit of their products have already established themselves in foreign markets deserve some measure of protection. At the same time, there are national trade advantages in a National Trade-Mark.

Perhaps the French way, as a writer in "Printers' Ink" says, would be the best way for us to adopt. The French National Trade-Mark is to be under the control of a committee of manufacturers instead of the Government. Only those manufacturers whose products pass a severe quality test will be permitted to use the trade-mark and then not only the National Trade-Mark but also the names of all manufacturers entitled to use it will be widely advertised in foreign markets.

But out of the cloud of discussion which at present obscures the subject of a "Made in U. S. A." trade-mark one fact stands clear: The war has acted as a forcing plant in getting Americans to recognize the merit of goods made in their own country and in broadening tremendously the after-the-war markets for American goods in foreign countries.

And after the war, remember, we will have ships enough to carry merchandise "Made in U. S. A." to every corner of the earth—whether, in fact, nationally trade-marked or not

# THE BIRD OF SERBIA

Continued from page 7

to be philosophical: 'Well, when a little female looks as angelic as my Mara, naturally we expect her to think like an angel too.'

"At this Mara's anger departed as quickly as it had come. 'There!' she exclaimed, flinging her arms about his neck and kissing him upon both cheeks. 'There spoke my own dear Gavril! Poor Gavril! What have I been saying? You know I love the Serbs no less than you do! You do know it, don't you? Well, then, say so!'

"'God forbid that I should believe otherwise!' answered Gavril, kissing her in return.

"As I left them I thought to myself that with Mara's temperament, to say nothing of the 'hundreds of children' she promised him, Gavril's married life would not prove monotonous, whatever else it might be. When, in the course of the subsequent fall and winter, I saw them again, they seemed as happy as a pair of wild birds.

"Arriving at the little hotel in the early part of June, 1914, I found them all full of plans for a great fête to be celebrated on Vidov-dan—Kosovo Day—June 28. This day might be called the Serbian Fourth of July, but it partakes also of the character of our Memorial Day, for it is the anniversary of that tragic event in Serbian history, the Battle of Kosovo, in which the Turks defeated the Serbs in 1389, leaving the entire Serbian nobility dead upon the field. That is one reason why Serbia has no nobles to-day. 'Kosovo' means 'the field of the black bird,' the *kos* being a black songbird. But this was to be no ordinary celebration of the holiday, for in the Balkan War of the two preceding years Serbia had consummated her independence and humbled the Turks, and a part of the Serbian racial dream was thereby realized. Mara, Gavril, and their parents united in urging me to return for the festival, and before departing I agreed to do so.

"TRUE to my word, I arrived several days ahead of time. Gavril had not returned from the academy when I reached the hotel, but Michael and Stana gave me a warm welcome and produced the costumes they were intending to wear, and I remember that Stana said I ought to have a costume too—that even though I had not been so fortunate as to be born a Serb, they proposed to adopt me.

"'But you should see Mara's costume!' she exclaimed, when I admired hers. 'It is a true Serbian dress, very old, which came to her from her great-grandmother. Such beautiful embroidery you never saw.'

"That made a good excuse for me to go and see Mara, whom I found sewing in the little garden behind the house. The costume, which she showed me, was indeed beautiful, and I admired it in terms which were, I hope, sufficiently extravagant to please even a girl as exacting as she.

"While talking with her I observed a bird cage hanging on a hook by the window and, never having noticed it before, asked if she had a new bird.

"In reply she merely nodded, without looking up from her work.

"I strolled over and looked at the bird.

"'Why,' I said, 'this bird appears to be a *kos*, Maro.' Probably there was a note of surprise in my voice, for the *kos* is like our starling and is not supposed to live in captivity.

"Her eyes filled with tears as she looked up at me. 'My relative who is employed in the railway caught this bird a few days since, placed it in a cage, and presented it to me. And if he is a handsome young fellow, am I to be censured for that? I am not his mother nor yet his father. I did not make him handsome! And even so, what is a little bird, to make words and black looks over?'

"'You mean that Gavril is annoyed?'

"'Since this bird came,' she returned, 'I have heard of nothing else. He begs me to let it go. He insists that it will die. He says the man who gave it me is cruel and that I am cruel too.'

"'Then why not release it?' I suggested. 'It is dying in the cage, Maro.'

"'Let it die, then!' she cried, and burst into a flood of tears.

"'Now, Maro,' I urged when the paroxysm had abated, 'what is all this about?'

"'Well,' she gulped, wiping her eyes, 'a girl must have a little character, must she not? She must make up her own mind occasionally about some little thing! Is not that true? Is the man she loves to tell her when to draw in her breath and when to let it go again? Is he to tell her when to wink her eyes? Is she to cease to think and do only as he thinks?'

Here came this—with the I desired it not. vrilo, black a storm out of ordering me to I wished to do but as my caught it and I felt I should him. Besides,

and knows a great deal, being in the Government railroads. And what did he say? 'Maro,' he said, 'you do as you wish. If you wish to be a little fool, humor this boy. He is spoiled. He has everything as he desires it. They say you are to marry him. Very well. But if you think always with his mind, and hold no ideas of your own, I tell you you will make a wife no better than one of those stupid Turkish women.' . . . That is why I determined to retain the bird. There is a *kos* in every second tree. Well, then, is it not better that this one die than that my soul shall wither? Why should I be called Mara if I shall no longer be a separate being, but only Gavril in another body?'

"As she finished, we heard Gavril calling her name from the street, and a moment later he came in through the garden gate.

"I saw at once that he was agitated.

"'So you have come!' he cried, seizing my hands. 'But, alas, my friend, it is in vain! You have heard the evil tidings!'

"'You mean about—?' I had almost said 'about the bird,' but fortunately he interrupted, exclaiming:

"'Yes, about the festival.'

"'What tidings?' demanded Mara.

"Gavril threw his arms above his head in a gesture of helpless fury.

"'Those proclate shvabe!' he burst out. 'They issued an edict only an hour ago, forbidding entirely our festival of Vidov-dan!'

"'No!' cried Mara, dismayed, half rising from her seat.

"'Yes. There shall be no celebration—not for the Serbs. Nothing! Attempts to commemorate the anniversary will result in arrest. It is announced that in place of our festival there will upon that day be extensive maneuvers of the Austrian army and that Grand Headquarters will be here in our city. We are given to understand that the Archduke himself will come and hold the review. Could anything be devised more to insult us upon our national holiday? Oh, of what vile tricks are not these accursed shvabe capable?'

"'I am surprised,' I said, 'that the Archduke would be party to a thing of this kind, for it is

young men miserable bird. Then came Gavril and angry like the mountains, let the bird go. as Gavril said, relative had given it to me first speak to he is older

understood that he is pro-Serb. Certainly his wife is a Slav.'

"'The more shame to her, then, for marrying him,' said Gavril, with a shrug. 'He is the spawn of an autocrat who is in turn the spawn of generations of autocrats. Scratch them and they are all the same. They play the game of empire—the dirty game of holding together, against their will, the people of seven races in Austria-Hungary; grinding them down, humiliating them, keeping them afraid. No man, no group of men, should have such power! It is medieval, grotesque, wicked!'

"'More than that,' put in Mara, 'it is unwise. They take a poor way to gain favor with us Serbs. For my part, I do not think it safe for the Archduke to come here.'

"'And there, my mila,' he declared, with a shrewd, sinister smile, 'your judgment is perhaps better than even you yourself suppose. I hope he will know enough to stay away. Otherwise he may indeed become indisposed after his arrival.'

"'What do you mean, Gavril?' I asked.

"'That the air of this place is not good for Austrian royalties just now,' he said. 'It is Serbian air. There are the germs of freedom in it, and such germs are more dangerous to autocrats than those of *kuga*—cholera.'

"'Be frank,' I urged. 'Do you mean that the Archduke's life is threatened?'

"'It is known,' he replied, 'that the governor has received warning letters. The Archduke is advised not to appear here on our holiday. One understands, moreover, that the Austrian secret police concur in this advice. Which shows that the filthy beasts are not so stupid as they might be.'

"'Assure me, Gavril,' Mara broke in, 'that your comitajia has nought to do with this threat!'

"'Long ago,' he answered, 'I promised you that while you love me I will not actively participate in anything violent. You may be sure, Maro, mila, that I shall keep my word.'

"'You keep your word always,' she replied, 'but these threats disturb me and I gain comfort from your reassurances.'

"GAVRIL walked slowly over and looked into the bird cage.

"'You are certain, then, that you do requite my affection?' he asked her over his shoulder.

"'You are well aware,' she said, 'that I worship you.'

"'Would that I were as well aware of it,' he returned, 'as that I am nothing to be worshiped.' Then after a pause he added: 'If you do love me, why not release this poor bird? See how wretchedly it huddles. Its eyes are becoming dull. It will surely die. How can we Serbs talk of freedom for ourselves, yet hold this wild creature prisoner? And of all birds, a *kos*—the bird of Kosovo! Permit me to open the door of the cage, Maro. Let us celebrate the Serbian holiday by liberating the poor *kos*. Shvabe cannot prevent that, with all their edicts.'

"Mara looked black.

"'The holiday is not yet here!' said she.

"'When the day comes,' he answered, 'the *kos* will be dead.'

"'I wish it were already dead!' she exclaimed petulantly. 'I wish I had never seen the accursed thing. It has brought me only sorrow.'

"'Then,' I interjected, 'why not let it fly away?'

"'I have told you both,' she answered angrily. 'This means more to me than the life or death of a bird. It is a symbol. I have the feeling that if it were to fly away all my will power would fly with it.'

"'And to me also,' returned the boy solemnly, 'this means more than the life or death of a bird. And likewise to me the *kos* is a symbol. It should be so to every Serb. Think of Kosovo! This is a bird linked with our racial aspirations. If we free this one, we may, perhaps, ourselves deserve freedom. Otherwise, what do we deserve? Do we merit more than we ourselves give?'

"Having witnessed Mara's agitation when she first told me of their differences over the bird, I would now have stopped Gavril could I have signaled him, but he was engaged in putting some green leaves through the door of the cage. As he finished speaking, Mara rose, dropped her sewing upon the ground, and bursting into tears ran into the house.

"'Maro, mila!' Gavril cried, attempt-

GOODYEAR  
AKRON

# *The Solid Tire's Best Field*

**T**HE two major types of Goodyear Truck Tires—Pneumatic Cords and S-V Solids—find their greatest usefulness in separate and clearly defined classes of service.

The best field for the solid tire is on trucks operating in restricted areas, carrying coal, sand, lime, cement and similar dense and heavy loads.

For short hauls, through congested traffic, where slow speeds are necessary, the solid tire unquestionably serves economically and well.

The essentials of a good truck tire employed in such service are long tread wear, freedom from chipping and cutting, and resistance to separation from the base.

The experience of users shows that Goodyear S-V Solid Truck Tires

embody these essentials in an extreme degree.

They wear long and persistently, defeat ordinary abrasion and damage, and by our advanced manufacturing process tire and base are fused into an almost indissoluble unit.

The best proof of their merit is their performance in actual service, where mileages up to 20,000 on country routes and 40,000 in city usage are not uncommon.

Goodyear S-V Solid Truck Tires are subject to constant and intensive testing under our own auspices, that no opportunity for betterment may pass unimproved.

This affords the motor truck user yet another firm assurance of the quality and efficiency of the Goodyear Tire he buys.

ing to catch her; but the door slammed in his face.

"He was white as he turned to me. 'Tell me,' he cried in a tone childlike and baffled, 'can anyone understand the ways of woman? . . . I believe,' he said reflectively, 'that if one could but understand Mara, one could understand all the riddles of the ages.'

"I left Gavrilko in the garden. At dinner that night he was not with us. I did not see him again until next evening, when I came upon him whispering with three young men upon the stairs. As I passed them they became silent, nor did I like the nervous smile with which Gavrilko greeted me. On the day following I saw him go into a *kafana* with the same youths. I think he also saw me, and from the haste with which he moved into the little café I gathered the impression that he was avoiding me.

"On the day before the maneuvers I cornered him after luncheon. Clearly he was keyed to a highly nervous tension.

"'Gavrilko,' I said, 'do not tell me anything you do not wish to. I have no desire to pry into your affairs. But I beg you to remember Mara and your promise to her, and not to become entangled in any rash escapade.'

"For a moment he stood looking at me without answering. It was as though he was carefully formulating a reply. Then he said:

"'I have remembered. I have positively refused to participate in certain matters in which I have been pressed to become active. At this moment that is all that I am enabled to say.'

"'It is all I desire to know,' I said. 'Tell me, what of Mara?'

"'All is well between us,' he returned, 'so long as one mentions not the bird.'

"LATER I found them together in the garden. Mara was, as usual, sewing. While I sat and talked with her, Gavrilko started picking fresh leaves to put into the bird cage. Mara, who had been telling me how, upon the morrow, the Serbs were to leave their shutters closed all day, so that they should not see the Austrians, ceased to speak as Gavrilko began gathering the leaves, and watched him narrowly for a moment.

"'Gavrilko,' she said, 'please put no more leaves into the cage.'

"'Why not?'

"'Because it is not well for him. He has been pecking at the leaves and I think they poison him.'

"'No,' said Gavrilko.

"'Yes,' she insisted. 'He appears miserable to-day.'

"'But naturally!' returned the youth. 'That is not new. He is dying. See how he is huddled with closed eyes in the corner of the cage.' As he spoke he plucked another leaf.

"Mara's expression became ominous.

"'If he should die,' she said in a quavering voice, 'it will be because of the leaves which you have given him!'

"'Impossible,' Gavrilko replied. 'Does not a bird live among the leaves?'

"'I tell you,' she exclaimed, 'I have asked the old bird man about it. He says some leaves are good and some are not. He is coming this evening to see the *kos* and give it medicine in its water.'

"I was relieved when Gavrilko pressed the point no farther, but dropped the fresh leaves on the ground. Feeling that a situation had been narrowly averted, I thought best to leave them together.

"That evening, as I was walking toward the hotel from the square at the center of the town, I saw him coming out of the *kafana* with several of the youths I had come to recognize as his friends. He joined me and we walked along together. At Mara's garden gate he halted, saying: 'Let us enter and see the poor bird.'

"'No, Gavrilko,' I said warningly. 'It is not the bird we go to see, but Mara.'

"'So be it,' he replied. 'Let us then visit Mara.'

"Mara was not in the garden. Gavrilko called her name. She answered from the house, and a moment later came out to meet us.

"As she emerged I saw her glance at the bird cage. Then she gave a startled cry.

"'Look!' she wailed. 'The *kos* is dead!'

"It was true; there lay the bird upon its back among the dry leaves at the bottom of the cage.

"For a time we stood in silence, regarding it through the bars. I knew that Gavrilko and Mara were filled with emotion, and for my own part I was surprised to discover how much the death of the bird seemed to mean to me. When, a day or two before, they had spoken of symbolism in connection with the *kos*, I knew what they meant, but did not feel it; yet now I felt it strongly, as though I myself were a

Serb, with a Serb's vision and superstition. It was not a dead bird that I saw, but a climax in a parable—a story of scriptural flavor, fraught with uncanny meaning.

"Gavrilko was the first to speak.

"'Poor *kos*,' he said in a low, tragic tone. 'It is free at last. It was written that it should not be captive when to-morrow dawns.'

"'What do you mean?' demanded Mara.

"'I told you it was destined to die unless you let it go,' he answered gently.

"'And as I would not let it go,' she retorted, 'you

Gavrilko lies. Gavrilko killed the *kos*. He is a murderer. I hate him!'

"'Ah!' he exclaimed. 'You give me the truth at last!'

"'Yes, the truth!'

"'So much the better that I know in time!' cried Gavrilko, and without another word he ran frantically from the garden.

"As for Mara, she seemed almost on the brink of madness. I do not know how long I remained there trying to reason with her, calm her, make her see the folly and danger of what she had done. By the time her passion had abated the late June twilight had settled over the town. Presently I heard the garden gate open, and a moment later a venerable Serb appeared.

"'Wait!' Mara said to me. 'Now you shall learn that I was right!'

"Then, to the old man, she said: 'You are too late to cure my bird, but you are not too late to tell me from what cause came its death. Look at this leaf that was placed in its cage. Is not that the henbane?'

"The old man took the leaf, inspected it, and shook his head.

"'No,' said he. 'Let me see the bird.'

"'It lies there in the cage.'

"He opened the cage door and, reaching in, removed the little body.

"'Ah,' he said, 'a *kos*. Do you not know, my child, that birds of this species cannot long survive captivity?'

"Mara hung her head.

"'I have heard it said,' she answered in a low voice.

"'To imprison wild birds is cruel,' remarked the old bird man. 'These birds, in particular, are the Serbs of the air. They are descended from birds that saw the field of Kosovo. They desire only to be free.' Then, as Mara did not reply, he said: 'Bring a light.'

"She went into the house and emerged with a lamp, placing it upon a table near the door. The old bird man sat down beside the table and, holding the bird near the light, brushed back the soft plumage of its breast, much in the manner of peasant mothers whom one sees, occasionally, searching with unpleasant suggestiveness in their children's hair.

"'Look,' he said, 'the bird would have died of these, even had it survived captivity. It is covered with animalcules. In a cage it could not rid itself of them as nature enables free creatures to do.'

"LOOKING at the bird's breast, Mara and I could see the deadly vermin.

"'Give me a spade,' said the old man. 'I will inter the bird here in the garden.'

"Mara indicated a spade leaning against the wall. Then, turning with beseeching eyes to me, she seized both my hands, and said in a low, intense voice:

"'Go, I pray you, and find Gavrilko! Tell him that I implore his forgiveness. Say that I love him better than all the world and ask only that he come to me at once.'

"I went directly to the hotel and to Gavrilko's room. He was not there. No one about the place had seen him. I then went to the *kafana* which I knew he patronized, but the proprietor declared that he knew nothing of his whereabouts. Through the remainder of the evening I diligently searched the town, going to the houses of all his friends, but nowhere could I find a trace of him. Obligated at last to acknowledge myself defeated, I returned to the hotel. Several times during the night I arose and stole to his room, but daylight came without his putting in an appearance. Early in the morning I went again to the *kafana*, but though I learned there that the Archduke had arrived the

night before with his wife and his suite, and was housed at the governor's palace, I got no word of the missing boy. Wherefore, after breakfast, it became my unpleasant duty to go to Mara, inform her of my failure, and comfort her as best I might.

"She looked ill and terrified. I wished that she would weep.

"Thinking perhaps to find him in the central square of the town before the Archduke, the governor, and the other officials set out for the review, I was moving in that direction when there came to my ears the dull sound of an explosion. Continuing on my way, I encountered as I rounded the next corner a scattering crowd of men, women, and children, running toward me, in the street.

"I asked two or three of them what had happened, but they ran on without reply. Presently, among them, I saw one of the youths with whom I had several times seen Gavrilko, and him I seized by the coat, demanding information.

"'Let me go!' he cried. (Continued on page 28)

## CAGES

(To B. Iden Payne)

By MARION PATTON WALDRON

He wandered free in the forest  
And heard the thrushes sing,  
And saw the tanager dartle,  
Shaking his golden wing,  
And furry ones, panting and curious-eyed,  
And every wilding thing.  
He walked with joy in the forest  
Till he came to a break in the trees,  
A huddled house and two caged swallows  
Sick to fly forth at their ease,  
And he cried: "I would have no cages—  
Cages are not for these."

Where men have found shelter in cities  
He wandered free and wide,  
Now with the guests at the revel,  
Now with the beggars outside—  
All of them moving with fetterless tread;  
"Beautiful people!" he cried  
Till he came to a place of granite  
Where creatures shut in a pen  
Beat their souls out against the bars;  
Broken, he stared, and then  
Thundered: "Away with cages!  
Cages are not for men!"

desired that it should die, in accordance with your prophecy! Yes, that is it! You made it die! You placed the leaves of henbane in its cage and killed it!"

"You are excited, Mara," he returned. "You must know that I desired the poor bird to live. Let us dig a little grave here in the garden and bury it, and cease to speak of it until we are calmer. We are overwrought—both of us—because of the bitterness of to-morrow. Where is the spade?"

"Do not touch the *kos*," she commanded. "It shall not be buried yet."

"Why not?" I interposed. "It will be better for us all."

"The old bird man comes this evening," Mara flung back. "He will look at the bird and know that Gavrilko has poisoned it with henbane."

"But, Mara," I returned, "Gavrilko has said that he did not. You know that he is truthful."

"His words mean nothing!" she cried. "Am I not a Serb? Do I not read the meanings in events?"

## Grandfather's Clock

That is what generation after generation named this beautiful time-piece, this beloved heirloom, this love-wrought furniture held as a priceless family relic for over two hundred years. Its worth beyond money. Its associations the very life of the immortal dead who created its beauty and service for us to treasure and to keep.

Have you a Grandfather's Clock? What is there more lovely as a work of art, or more useful as a gift to enshrine the family pride, to be a perpetual memorial of home and name for your children and their children's children?

Waltham has kept alive upon this continent the enduring, simple beauty of these Old World and Colonial masterpieces.

A Waltham Grandfather's Clock is made with the same care, given the same distinction as a work of art, enshrines the same grace of architecture, and is even a more perfect clock, in accuracy and workmanship,

than these glorious old examples which illustrate our page.

It is because the Waltham horological standards are so high, so inventively creative, so embracing of all that is best in clock and watch making in the past and in the present that the fame of Waltham Clocks and Watches has gone to the uttermost ends of the earth.

Your dealer can tell you about the Waltham Grandfather's Clock. From him you can purchase it or a Waltham Watch that will give you that distinction in beauty and accuracy of time-keeping associated with the name of Waltham all over the world.

# WALTHAM

THE WORLD'S WATCH OVER TIME

## THE FLYING FISH

Continued from page 17

"You did not know that I had joined the Government's Secret Service staff?"

Morley was impatient. "Why, no, Mr. Colroy. Looking for a little publicity?"

"Hardly. You're writing a story about some recent activities of Harmon Rayde. I've just left Lieutenant Flynn. He told me."

"Well?" Morley's voice was combative.

"Close up your typewriter, Mr. Morley, please. You're drafted."

"What do you mean?" demanded the reporter.

"That no newspaper must print a line letting Rayde know that the police are after him for anything. Put your managing editor on the wire. Mr. Morley, and I'll convince him that it's all right."

"Convince him that it's all right to suppress the biggest beat in years? Begin by convincing me, Mr. Colroy," cried Morley.

"I will. I said that you were drafted. Flynn has told me about you, Mr. Morley. And I know your work too. The Government needs you."

"Get down to cases," cried the exasperated, almost weeping, Morley. For a beat is the newspaper man's pet pride, and to have one taken from him is hurt beyond words.

"Burchard Penlow's place was raided to-night," said Colroy. "The plans of an invention that will win the war for America and her allies were stolen, and the model machine wrecked. Penlow was shot, and so was the inventor, Wrightson. The attackers escaped. That's a story, isn't it, Mr. Morley, much bigger than the Endicott mystery, yet you won't print it. It would not do to print such a story."

"Certainly not. It would encourage the enemy. But what has that to do with the Endicott mystery?"

"Who would know of the invention, of the demonstration to-night? What spy would be most likely?"

"Rayde!" breathed the reporter.

"Exactly. Mr. Morley, I was telephoned from Penlow's place shortly before nine. At nine-thirty I examined the ground. Munoz, Wrightson's first assistant, was missing. Also Wrightson had by then discovered that the only copy of the plans extant was missing. You see what that means. Wrightson thought that he had copies in his wallet, but they were fakes. Munoz disappears—with the plans."

"And you're—er—drafting me to help find him?"

"Not that. We've found Munoz—dead."

"Where?"

"In the Greenwich mortuary. Wrightson, frantic though he was, maintained his belief in Munoz's innocence until he examined his plans. That was ten minutes after I'd arrived there. I immediately telephoned Lieutenant Flynn, giving him a description of Munoz. Flynn said it tallied with the description of the man supposed to be Farley Endicott, now lying in the Greenwich mortuary. I sent one of Wrightson's men over there by machine. He telephoned that it was the body of Munoz."

"I telephoned Flynn again, and he gave me the developments of the Endicott mystery. He told me of what you had discovered, and Flynn is preparing a story which will be given to all the papers. The editors will be asked, on patriotic grounds, to print it. It will state that the police are convinced that the Endicott murders were committed by a band of lower-class criminals, burglars. No hint of the activities of Harmon Rayde will appear."

"And so, Mr. Morley, will you come over to Headquarters now? We need your brain with us."

Morley hung up the receiver. He walked over to his night editor.

Begley, the night editor, was old in the newspaper game. But once in his life had anyone seen him the

least bit perturbed, and that was on the occasion when the news of the sinking of the *Titanic* began sifting over the wires. Even the outbreak of the Great War had left him cool, his mind alert to news values. But to-night, as Morley approached him, Begley was plainly disturbed. He was bending over some sort of document, and he started as Morley's footsteps sounded close to him. His hands went protectively over the paper on the desk.

"Love letter, boss?" asked Morley.

He raised his eyebrows as Begley the stoic, Begley the imperturbable, actually colored. At any other time Morley would have had some fun with his chief, but to-night was an extraordinary occasion. Briefly he repeated his conversation with Colroy.

Begley heard him through. His lips tightened. He wet them with his tongue.

"Morley," he said, "you've done

ter threat, of deadly purpose, that made it doubly menacing.

"Morley," said Begley, "this came by special delivery an hour ago. The managing editor isn't down to-night, so I got it. And it's—It's got me, Morley."

"It seems to have got you before you knew what I had to tell; what Colroy just told me."

Begley nodded.

"Harmon Rayde," he said, "has been a sort of myth. But a few of us—The owner of the 'Planet' was minister to the Argentine seven years ago. He's told me, more than once, that the most dangerous man on earth, barring the Kaiser, is Rayde. The boss knew of certain things that were pulled off in South America that would make juicy reading, but were better suppressed. It makes me—Morley, should I print this?"

The reporter stared at the night editor aghast. "Print it? In God's name, why?"

"The 'Planet' establishment represents four million dollars," said Begley succinctly.

"But this invention that Colroy mentions—Rayde has only the plans. He can't begin attacking the country to-night, Begley. You're nervous, old man."

"He managed to invade Penlow's place, didn't he? And he's pulled one or two other mysterious tricks, hasn't he? What's to prevent him, even without the new invention, destroying this building?"

"Boss!" ejaculated Morley. "Besides, if Colroy wants secrecy—"

Begley shrugged his shoulders. "Oh, I'm an old woman, Morley. I—I'm scared. War—even the kind the Germans make, bombing defenseless cities and that sort of thing—a man can stand that. But the stab in the dark, the bomb in the cellar—that's the sort of thing Rayde hints at, and—"

"And that's just the sort of thing we have to fight, Begley," said Morley. "That's part of the German way of making war. We sacrifice lives to hold them back, to defeat them. Property should be sacrificed as willingly. If the 'Planet' belonged to you, would you be afraid?"

Begley shook his head.

Morley smiled. "Well, I hardly think that a man like our owner, who has shown his patriotism a score of times, would feel differently, Begley. Of course you won't print it!"

"Of course not," said Begley. He reached for a piece of paper and began writing on it. "My resignation," he said.

Morley stared. "What do you mean?"

"Why," snapped Begley, "when the owner of the paper telephones in that he understands we have a communication from Harmon Rayde, lets me read it to him, and then orders me to print it—"

"So that's it," said Morley. "I don't believe it."

"Meaning—"

"Not you, but—it couldn't have been the boss."

"I know his voice."

"Ring him up," counseled Morley.

But the servant who answered the telephone stated that the owner of the "Planet" was in bed, that he had been in bed since shortly after dinner, and that he had not talked over the telephone with anyone since he came home at five in the afternoon.

"Rayde!" said Morley.

Begley heaved a sigh of relief. "It didn't seem reasonable, but—the boss's voice—" He shrugged his shoulders. "All advertising," he chuckled, "must be arranged for at the business office. Run along, Morley, and good luck to you."

Morley ran along. But as he did so he wondered. There was no denying the brains of Harmon Rayde. Superhumanly cunning, but insane. Only an insane man would issue such a proclamation, would want it printed. But a little cold chill ran down his spine. Insanity renders a person none the less dangerous, and if Rayde had the place to build the machine whose plans he had stolen to-night—

(To be continued next week)

"I inquire of the clerk, and he tells me that attending to one's own affairs is profitable"

a lot of good work for the paper. I don't mind telling you that the 'Planet' has usually owed you a lot more than your salary at the end of each week.

"But you haven't worked for the salary, have you? There's been behind your work the willingness to—oh, damn it, Morley, I can't stop over, and I won't. But Colroy wants you for Government work, eh? To find Harmon Rayde. Well, Morley, if you ever used the brain God gave you, use it now. Read this!"

HE drew his hands away from the paper which they had been shielding. Morley read. It was an ordinary typewritten letter, scarcely half a page long, but what it said made it the most important message since the President's declaration of war.

It was addressed to the managing editor of the "Planet," and said:

The "Planet," with the other papers of New York and the country, is hereby notified that Harmon Rayde has announced a state of war between himself and the Government of the United States. Aware that the United States Government will not make public this state of war, Harmon Rayde informs the "Planet" that he expects the newspapers to give the matter publicity.

That was all. Arrogant, grandiose though the note was, there was behind it a note of sinister

## From Baseball to Boches

Continued from page 12

and the captain asked us to take him in to Paris with us so's he could get a eyeful of inside stuff to write for the center to throw away, so we brung this guy along as a mascot. A war's correspondent, Joe, is a seagoin' reporter which is sent over by a U. S. newspaper to pester the officers, take a chance on his life without gettin' no credit for it and telegraph back the box works of all the battles. Joe, if they ain't no battles they telegraph back the result anyways, so's to play it safe. Most of the good ones comes right down into the dugouts with us and works out as hard as a soldier, only instead of havin' a gun they got a typewriter.

Well, this bird which come along with us wasn't a bad guy at all, Joe, and he ure was on the job. He asked us all inds of questions and we give him all inds of answers, but if he knowed we was kiddin' him he took it good-natured. He claimed he was gonna send his paper a picture of me and a article on what I ave did and they would print it, not hat I care anything about publicity or he like. Joe, his paper is called the Associated Press, and when it comes ut with my picture I wish you would et about a hundred copies of it and end one or two each to a list of people I will put at the bottom of this letter. Not that it's anything to me, Joe, but his guy has been a regular feller and I hink it's no more than right for me to elp him sell his paper. Joe, you better et two hundred copies, because I have ut thought of some more guys I want o have see that picture and I hope they sell my name right.

WELL, goin' in on the train, Joe, we start to ride this war's correspond-  
ant, but he give back as good as he got. He  
wanted some inside dope for his paper.  
I told him that only the week before  
we had captured the Crown Prince bare-  
anded and he was now actin' as a  
aiter for Gen. Pershing. I asked him  
to swear he wouldn't say where he  
heard this, because they was savin' it  
as a surprise and I would no doubt get  
urnt at the stake if it come out that  
I give it away. Joe, he looks at me for  
a minute and then he puts away his  
notebook and leans over. He whispers  
that we couldn't of captured the Crown  
Prince, because just before he left New  
York the Crown Prince was caught  
dinin' in the subway at Times Square  
and they had him on exhibition in Cen-  
tral Park where anybody that bought a  
Liberty Bond was allowed to throw cus-  
tard pies at him. Joe, no doubt this  
is was kiddin', but let me know if  
there's any truth in that, will you?

We finally got into Paris, and after tendin' to our business the war's respondent immediately wants to 'ag us to a joint called the Ambassador's Theatre, where they are puttin' in American show. Well, Joe, I says ey is no use of us goin', because they n't none of us ambassadors and we're l liable to get throwed out. Besides, seen these so-called American shows

seen these so-called American shows  
Paris before and they are the same  
the American bars, bein' as much  
to the United States as Iceland  
re Hades. Them guys argued me into  
though, and we is ushered into the  
ree worst seats in the house in back  
a pole where we couldn't of seen  
thin' if we had a X-ray in each eye.  
re whole thing turns out to be in  
rench and I ain't got no idea of what  
em actors is ravin' about. I don't  
ink I had nothin' on them, Joe, be-  
use they carried on like they didn't  
ow nothin' about it either. The  
y's correspondent hisses in my ear  
ad he's satisfied the show is rotten  
ad let's beat it, but this trained officer  
om Plattsburg claims he knows  
rench like Ty Cobb knows baseball  
ad he'll tell us all about it.

Well, Joe, it didn't improve none with him tellin' it, and that ain't no lie! It was all about spies and bullets and killin' Germans and *Vive la France*, and the like. We had just come from that and this here shop talk was gettin' on my nerves. I wanted some relaxation and started to go out when the Plattin' guy, which acted like he was a pper for the show or somethin', says wait for the next act, because they as three guys gonna get killed in it. Says I'll stick if one of them guys is a bird that wrote the show, and the ar's correspondent lets out a idiotic e-haw right at a sad part. Well, Joe, I was treated to a lot of hisses and gys looks and with that we bent it.

burg guy says they is a ball game due to be played outside of Paris between teams from the Y. M. C. A. and the Red Cross and maybe we can get to see that. "That's if you care anything about the game of baseball," he says to me. Joe, can you imagine this bird askin' me if I care anything about baseball, when I was the biggest thing in it for years?

The war's correspondent gets a bad case of the hystericals. "Ha, ha," he says. "Why, this is Ed Harmon, the—"

"What was your college?" says the guy from Plattsburg.

"I went through a lot of 'em," I says. "The Athletics, Yanks, Detroit, St. Looney, Wash—"

"By Jove!" he butts in, "I do remember you now. You used to pitch for the Philadelphia Americans, didn't you?"

Well, Joe, naturally I begin to swell up. Away over here in France they have heard of me pitchin' for the Athletics, even if I only lasted three weeks with them tramps. "Yeh," I says. "Did you ever see me work?"

"Only once," he says. "It was against New York and the score was tied in the ninth inning with two out when you came to bat."

"Yes?" I says, stickin' out my chest and motionin' the war's correspondent to move in close so's he won't miss hearin' what a knockout I was.

"Well," says the Plattsburg guy, "you came up and fanned with the bases full and I've never forgotten the way the crowd roared you!"

Joe, I thought this war's correspondent would die from laughter, and I got so sore I would of bust 'em both in the nose if it wasn't against the rules of the U. S. army!

"You never in your life seen me fan with no bases full!" I hollers. "And you couldn't of seen me fan when the Athletics had the bases full."

"Because," I yell, "in all the time I was with 'em, the Athletics never filled no bases nowhere!"

Well, Joe, that shut him up.

We got a taxi and was drove out in state to where the ball game was carded to take place. Well, Joe, it was some ball park and the guy that laid out the diamond must of bet somebody that a game of ball would never be played on it. If he did, he wins easy. The grass was so high in the outfield that it looked like they was only six men to a side, because you couldn't see no outfielders once they got in position. Anything hit past third base was good for at least a home run and, for all the guy they had as umpire knowed, more

The game had been allowed to go as far as the eighth innin' when we arrived on the scene and the score was 18 to 15 in favor of the Y. M. C. A. The Red Cross pitcher wasn't so terrible at that. He had a speed ball and a ugly drop, but the support he got wouldn't of kept a movie queen in lip rouge for a week. The guy that was doin' the hurlin' for the Y. M. C. A. must of come originally from Borneo, because he was the wildest thing I ever seen outside of a zoo. He walked every other guy that faced him and beamed the ones in between. They was only one ball player on the two teams and that was the guy that arranged the game. He played out in the box office.

Me and the Plattsburg guy and the war's correspondent got mixin' around with the Red Cross bunch and it ain't long before it's public property who I am. The Red Cross manager asks me if I would pitch the last innin' for 'em, includin' comin' to bat, because the winner of the game gets the majority of the receipts and they want to make a showin'. If they can prove they'a enough interest in baseball over there to get money for bandages and the like, they'll be allowed to play some more games. Well, I says I'm willin' if the Y. M. C. A. will stand for it, and much proved to be the case. I took off my coat and got into a sweater, Joe, to strike a blow for the Red Cross.

**W**ELL, Joe, the first Y. M. C. A. guy that faced me fanned the breeze on two outshoots and somebody must of slipped a horseshoe and a couple four-leaf clovers in his pocket, because he hit the third ball right on the seam. The pill sailed away up in the air right over third base and would of been a easy cut even if a one-armed blind man had been under it and if this infielder would of stood still it would of dropped right in his pocket. But, Joe, this bird is thinkin' what a tough war this is or

**It's great old sport if  
the shells are waterproof**

Those drizzly days when the game flies low and fast—that's when you get real shooting. On such a day have you ever had a fine shot go winging out of range while you tugged at a wet and swollen shell? Then you know the value of waterproof ammunition.

The Black Shells will not swell from a wetting. Prove it. Place a handful in water for half an hour. Get them wetter than the bottom of a rain-soaked bough-house. Then try them in your gun. They'll chamber, fire and eject as if never touched by water.

**WHICH WILL SUCCEED**  
—the one who occupies ALL his few minutes with the daily paper, or the one who, like Abraham Lincoln, is mastering a little at a time the few great books of the ages, a knowledge of which is one of the essentials of true success?

What are these few great books—biographies, histories, novels, dramas, poems, books of science and

travel, philosophy and religion that so delightfully "picture the progress of civilization"?

Dr. Charles W. Eliot, from his lifetime of reading, study and teaching—forty years of it as President of Harvard University—has answered that question in the

Every well-informed man or woman should at least know something about this famous library. The booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of liberal education" and so arranged it that even "fifteen minutes a day" is enough.

The booklet contains Dr. Eliot's own plan of reading explained by himself—and all you have to do is ask for it, because we want every Collier reader to have the advantage of the inspiration and entertainment there is in this chatty little "guide book to books."

Truly it is the most valuable little book of its kind ever written. It shows how to select a library without waste or worry, what books are worth while and what are not. Here is Dr. Eliot's best advice to you on just how and what to read.

Every Collier reader—and more than a million will see this issue—is therefore invited to have a copy of this handsome and entertaining little book. We shall be as glad to send you a copy as you will be to have read it.

something and the ball hit the ground in back of him. By the time he has it where we can play with it again the runner is on second, grinnin' at me like a wolf. I fanned the next two on pitched balls, Joe, and left this scashin' hyena flat on the bag.

WELL, Joe, then we come to bat, and the Plattsburg guy says that it's easy, but the only two times he's seen me play ball I was a loser. You know that this did to my goat, Joe, so I says I bet him twenty bucks even that we can't. As the Y. M. C. A. had a three-run lead on us and only half an innin' to go, this looked fairly safe to him and he takes me up. Well, Joe, I am the fourth guy in the battin' order and I run over and tell the first three guys up to make the Y. M. C. A. pitcher either walk or bean them, but get on a base somehow even if they have to steal it and then I'll come up and win the thing. I told 'em not to try and hit 'em, because this pitcher was as wild as the Kaiser and would walk 'em all.

Well, Joe, every one of them boneheads tried to murder the pill and one of 'em even swung twice at wild pitches. They didn't let nothin' go by, but the Y. M. C. A. pitcher was through for the day and they all get on base. The first guy singled, the next one walked, and the third beat out a bunt. Well, there's the bags as full as Sing Sing and none out. I come up to the plate whistlin' gayly and we only need three runs to tie and four to win. As I'm walkin' up, the Red Cross captain tells me not to hit the pill too hard and try and keep it in the infield. I figured he was kiddin' me and naturally I got me sore, so I picked out the first one and gave it everything I got. Oh, boy!!! Joe, that pill shot on a line right out into center field and went to sleep somewhere in that tall grass.

Well, they all start yellin' and I fished around the bags in back of them over three guys like I was goin' for a motor. Joe, we get four runs and win yiled up, when the umpire runs over to the plate and begins wavin' us back to the bases. "Foul ball!" he bellers.

Oh, boy!!! "What d'ye mean foul?" I hollers. "That was the cleanest hit you ever seen on a ball field! Why—"

"No arguments!" he says. "I'm um-

pire here. The rules says that any ball hit into that tall grass in the outfield counts as a foul and—"

Joe, the other three guys wags their heads and starts back to the bases.

"That's right!" says the captain of our team. "We only got one baseball, and they're hard to get over here. So we made up a rule when we started in that any ball hit into the tall grass was a foul, to keep the players from losing the ball with long hits. I told you to keep it in the infield!"

"You told me to keep it in the infield, with three guys on base, hey? Don't you wanna win this game?"

"Well, of course, we'd like to," he says with a pleasant smile. "But we can win or lose a ball game most any time, whereas if we lose the ball, we can't play. Now if you had bunted—"

Joe, just then one of the outfielders comes runnin' in and rushes over to third. These guys that was on the bags has been hangin' around listenin' to the argument and the fielder puts the ball on one of 'em a mile from the bag.

"Out!" hollers the umpire. The third baseman whips the pill over to second and nails the other guy.

"Out!" hollers the umpire.

The third guy starts beatin' it for first, but the ball was waitin' for him.

"Out!" hollers the umpire. "Game over. Y. M. C. A. wins. You fellows knew the rules and had no right to be off your bases!" He turns to me. "That makes the three outs," he says.

"Four out!" I snarls, throwin' down the bat.

"How do you make that?" he says.

"Them three boneheads and me! I'm out too. I'm out twenty bucks!"

Well, Joe, I paid off the Plattsburg guy, which was delighted, and the war's correspondent claims the thing is rich enough to send to his paper. I think I'm entitled to half what he gets for it, hey, Joe, because I was responsible for the play. On the way back the Red Cross captain says if it hadn't of been for me they would of prob'ly win it! Can you beat that? Yours truly,

Second Lieutenant EDWARD HARMON.

(Joe, in my next I will tell you about a big battle us and them marines was in and which we win on the bit.)

(To be continued)

## H. C. WITWER

FRANK CONDON, the California humorist, says that, on one occasion when he was in New York, the subject of this sketch invited him to take a motor trip to Philadelphia. Condon knew something about Witwer's ways with a motor car, but against his better judgment accepted the invitation, foolishly hoping that Witwer had mended those ways. "It's a new car," said Witwer. "I want to try her out."

They started at noon. Noon found them already leaving Newark behind; at dusk they had

passed New Brunswick. As strange mishap piled on mishap, Condon grew more exasperated, while Witwer's spirits rose. At last, somewhat past midnight, the car gave a final sagging groan and dropped by the wayside, just as a drizzling rain changed to a downpour. "Gee! A great little old trip, isn't it?" laughed the driver, leaping gayly from his seat and crawling underneath to investigate. Condon's reply cannot be written here. Witwer could not understand why Condon's thought had turned to shelter, food, and bed. Abandoning his comparison as a hopeless proposition, Condon tramped through seven miles of mud to Trenton, leaving Witwer tinkering with the car—perfectly happy. The trip was a great success (according to Witwer) and he made a magazine story out of it that bought a new machine.

THAT'S Witwer. He likes trouble. The more trouble he has the more fiction he writes. When he came back from Europe, where we had sent him to gather impressions for "From Base to Boches," he entertained us for

hours with the story of his tragically funny adventures. More things happened to him in two months than happen to an ordinary mortal in a lifetime, and most of these adventures have been woven into the letters of Ed Harmon. The mishap with the taxi, for instance, in which the driver, each time he wanted to make a point in his argument about the fare, jumped back in his machine and started the meter going, happened to Witwer and Irving Bacheller, whom Witwer (never having been in Paris before) was showing the sights of the metropolis. The London air raid is another incident in the "Speed King's" European career that happened to Witwer himself. In short, Witwer is Ed Harmon—more or less—and his wife, he is proud to say, is the original of Jeanne.

Witwer began to commit what he calls "assault on white paper with the intent to thrill" in 1916. He got \$5 for his first story. Since then he has written many short stories, three novels, four movies, and says: "I have as many plays in my trunk as any boiler maker in the country." Before he started writing he was successively and unsuccessfully an advance agent, a salesman—movable and stationary—a reporter, an editor, a private secretary, a dispenser of soda and a drug clerk.

Hundreds of letters have come in to us and to the author commenting on "From Baseball to Boches"—so many that Witwer has asked us to thank the correspondents here, because he is absolutely unable to write them all personally as he would like to do.

**High Class Agents To Handle New Pearl Paint-** ing. C. H. May of Liberty. Nothing like it. No competition. Easy sales. Big profits. Exclusive territory. Culture Art Co., 111 Westerville, O.

**Sell Underwood War Pictures On Contracts With** retail stores and national advertisers, for weekly service. We have 1000 war scene pictures, various descriptions. Liberal com. Edmont Morris Co., Printing Trade Bldg., New York.

**Help Pay The Increased Cost Of Your Traveling** expenses by handling our up-to-date Pocket Size Map. Live wire salesman can clear up from \$500 to \$1500 daily. Canfield Mfg. Co., 245 Broadway, Chicago, Ill.

**Salesmen: Get Our Plan For Monogramming** Autos, traveling bags, etc., by transfer method. Very large profits. Monotype Accessories Co., Randolph, Ill.

## Of Interest to Women

**1000 Women Wanted To Sell National Dress** Gowns, Milks, Waistings, etc. Ready to learn. The "National" Dress is the best. Newest grade. Big commissions. prompt delivery. Our plan will appeal to you—Write To Day. National Dress Gown Co., Dept. 111, Newark, N. Y.

**Wanted Ten Bright Capable Ladies To Travel,** demonstrate and sell our new goods to established dealers. \$25.00 to \$50.00 per week; tailors' fare paid; weekly advance for traveling expenses. Address at once Goodrich Dress Company, Dept. 22, Omaha, Neb.

## Where to Go to Live

**Michigan's Best Hardwood Land. 10 to 100 A.** \$15 to \$25 per A. Small payments. Free insurance. Farm advisors. R. R. law with sale. Pine, spruce, stock, fruit land. Town schools, churches, markets. The booklet from Swigart Land Co., 12341 1st Nat'l Bldg., Chicago, Ill.

**We Will Build You Your Home On A Rich Farm** within twelve miles of Jacksonville and you can pay for it at the rate of \$5.00 monthly. Write today for full particulars. Joe Heights Co., Jacksonville, Florida.

## Book Bargains

**100,000 Second Hand Books For Sale Cheap. 25c** up; some cost \$1.00 new. Medicine, Science, Philosophy, History, Fiction, Religion, Engineering, Cyclopedia, etc. Improve mind; self educate yourself; Send for big Catalogue. McArthur, 219 So. Dearborn St., Chicago, Ill.

## Engraving and Printing

**Wedding, Social Or Business Engraving Direct** from the Engraver at a 25% discount. Samples on request. Regent Engraving Shop, 39 Taylor St., New Haven, Conn.

## Business Service

**Incorporate In Arizona. Least Cost. Greatest Ad-** vantages. Incorporation completed in one day. Stock made full paid non-assessable. Complete of over \$1000. 1240 car bank. Standard Incorporating Co., Box 4-K, Phoenix, Ariz.

## Coins, Stamps, Post Cards

**We'll Pay \$2.00 For 1904 Dollar, Free! 10c For** 1913 dollar. \$1.00 for 1914 dollar. \$1.00 for 1915 dollar. We want thousands of coins. We offer up to \$100.00 for certain dates. Send us now for our Large Illustrated Coin Circular. Numismatic Bank, Dept. C, Fort Worth, Texas.

## For Auto Owners

**Free Interesting Book On Automobile Economy:** repairing, tire upkeep, increasing mileage, etc.; invaluable to every owner. Offer gorgeous rubberman, dealer. American Auto Digest, 2130 Palmer Bldg., Cincinnati.

## Personal

**Old Film Teeth Bought. We Pay Up To \$25.00** per set of broken and old and big gold crowns, bridges, jewelry, silver and diamonds. Cash at once—guaranteed up to 15 days for owner's approval of our offer. United States Smelting Works, Inc., 205 Goldsmith Bldg., Milwaukee, Wisconsin.

**Free To Writers—A Wonderful Little Book Of** money making ideas, suggestions, ideas; the A B C of successful story and play writing. Absolutely Free. Just send dress Writer's Service, Dept. 22, Auburn, N. Y.

## Agents Wanted

**Hydroponic—Insects Clean Flies, Save Gasoline,** Conserve Carbon and Is Easy To Sell. For all cars. Money-back guarantee. Have attractive proposition for energetic and responsible agents. Write for free literature. Pilestedt Mfg. Co., 200 W. Lake St., Chicago.

**Agents—We Have One Of The Best Paying** agency propositions in the U. S. If you are not making as much as \$100 a month write to Dorothy Cullery Co., 40 Bar St., Canton, O.

**\$2.95 For Men's Made-To-Order Pants—Worth** \$6.00. Sample free. Money-making offer for agents, part time or full. Write today. Chicago Tailors' Association, Dept. 2452, 515 So. Franklin St., Chicago.

**\$10 to \$15 Per Day Handling New Household** articles. Big war time sales. Offer free. Territory giving fast. Whitequick Box Co., Dept. W-32, Arden, N. Y.

## Hauls You Out Of Trouble

The need of a reliable towline, like the Texas's need of a gun, may never come—but better be prepared. It's tireless standing by a crippled car. Had the next fellow snap on your BASLINE AUTOWLINE and you're off. Safe because the patented malleable hooks can't loosen. Superstrong—it's Yellow Strand Wire Rope. At dealers, \$4.95 east of Rockies.

**POWERSTEEL AUTOWLOCK—** a safeguard against theft—also made of Yellow Strand Rope. A sturdy spring lock secures the loop. At dealers, \$2.25 east of Rockies.

**POWERSTEEL TRUCKLINE—** ram- ply strong for any loaded truck in trouble. Write for literature.

## The Bird of Serbia

Continued from page 27

"Some one threw a bomb into the Archduke's carriage! They are arresting everyone. Get away!" And he tugged violently to escape my hold.

"Have you seen Gavrilo?"

"Not to-day."

"Is the Archduke dead?"

"No. He warded off the bomb and it exploded beneath the carriage which followed. For God's sake, release me!"

"I did so, and walked on toward the square. Halfway down the block I met some Austrian police. After questioning me briefly they let me go, whereafter I questioned them. The horses drawing the second carriage had been killed, they said, and some officers of the archducal suite injured. The Archduke, however, insisted upon continuing to the review and would presently pass. They advised me to return to my hotel.

"I had hardly reached my room when I heard a bugle and the clatter of hoofs outside. Going to the window, I saw mounted men of the Royal Austrian Guard advancing around the corner. Behind them, between double rows of cavalry, came several landaus, carrying outriders, and driven by coachmen in white wigs and knee breeches. As the first of these vehicles came nearer, I saw that the occupants of the back seat were Francis Ferdinand, Archduke of Austria, heir apparent to the throne of Austria-Hungary, and his morganatic wife, the Duchess of Hohenberg.

"The shutters of most of the houses were closed, but in a few windows I saw faces, and there were scattered knots of people on the sidewalks, closely watched by the policemen who rode ahead on horses and bicycles. As the archducal carriage came along, hats were raised, and once or twice I heard faint cheering, which the Archduke and his consort acknowledged, he by touching the visor of his helmet, she by inclining her head.

"As their carriage came below my window and I saw the expression of descending good will frozen on both their faces, and thought of the constant apprehension there must be behind those polite masks, it struck me as amazing that a man and woman could be found, in these times, to play the royal part.

"As I was thinking thus I saw a dark-clad figure dart out suddenly from somewhere on the sidewalk, below, pass swiftly between the horses of the body-guard, and reach the side of the royal carriage. Some of the guardsmen leaped at once from their horses and there was a dash of policemen toward the man, but before anyone laid hands upon him he raised one arm, as though pointing accusingly at the Archduke and his Countess, and there followed, in swift succession, two sharp reports.

"I saw the royal pair fall forward.

Simultaneously the carriage stopped and was at once surrounded by an agitated group of soldiers, policemen, and servants; while another and more violent group pressed about the individual who had fired the shots, beating him as they swept him away, down the street. Before they had gone a dozen yards, however, a high official, who had jumped out of the second carriage, ran up and directed them to take the man to the sidewalk. This brought the crowd in my direction, and it was only as they turned toward me that I caught a glimpse of the face of their prisoner. As I had dreaded, it was poor Gavrilo."

FOR a moment all of us were too thunderstruck to speak. Somehow the picture he had given us did not seem to be that of an assassin, as one imagines such a man.

"You mean to say," asked the man by the window slowly, "that this very boy you've been telling us about was the one who shot the Archduke?"

"Yes," said the other, "he was Gavrilo Princip of Sarajevo."

"Good Lord!" exclaimed the third.

"The boy who brought on the war!"

"As we were saying earlier," returned the one who had told the tale, "historians will doubtless trace the beginnings of the war to Gavrilo's shot. Certainly Austria used the shot as her excuse, alleging that a plot to kill the Archduke had been hatched in Serbia—which was absolutely untrue, for Serbia was afraid of nothing so much as of giving offense to Austria, knowing well that Austria was only seeking a pretext to pounce upon her, precisely as she had earlier pounced on Bosnia and Herzegovina, annexing them."

After a thoughtful pause he added: "Poor Gavrilo! I am glad to know that he is free at last. Like Mara's starving, he was not one to live long in a cage. And it is perhaps because I was so fond of him, and also because Austria's excuse was so transparently despicable, that I shall always go behind the shooting in thinking of the beginning of the war. As I conceive it, it was Mara's anger that released Gavrilo from the promise which, otherwise, would have withheld him. And it was the death of the caged starling that brought on her anger. And it was the animalcule that caused the bird's death."

"That is," put in the man by the window, "you prefer to trace the war down to such a small beginning as the death of that caged bird?"

"Rather," replied the other, "to a still smaller and more repulsive beginning—to the vermin which destroyed the bird. It seems to me I see them always crawling through the explanations, apologies, excuses, war messages, and peace overtures of the Teutonic autocrats."

## Four Tickets to Paradise

Continued from page 2

Her expression showed not the least understanding.

A. Price's eyebrows met in a bushy black tangle. "You haven't forgotten, have you?"

"Forgotten what, sir?"

"I told you to send Elwood Wickes to me at twelve o'clock."

"No, sir, I haven't forgotten."

Marjorie ran to fetch Elwood Wickes. "Mr. Fairweather wants to see you," she said breathlessly.

The little man paled perceptibly. Before he had recovered from his confusion Marjorie grasped his arm firmly. "Now, listen to me," she said earnestly. "You're to take the children in with you. Shove them all in first and follow after. Be sure they get in first. And say to Mr. Fairweather that you understood he wanted to see you, and as the children had just come down—get that!—just come down—that you thought it a good opportunity to show him what a fine family you had. Don't let him talk. Talk yourself! As hard and fast as you can! Tell him you want to handle the Morse's Food account. Tell him why. Tell him as you told me."

Mr. Wickes looked a little sick. Out of the staggering ruin into which he was sinking he tried to pull himself together, tried to speak with a pitiful stab at dignity. "I don't understand—"

"It doesn't matter whether you understand or not!" interrupted Marjorie. "Do exactly as I say. Think of your wife and those three children of yours—and do as I say!"

Marjorie took him by the arm and led him down the long corridor which led to the mahogany-and-glass office. They only stopped long enough at the door of the rest room to gather in the three little Wickeses, from whose countenances and clothes every trace of molasses candy and bananas and cookies had just been meticulously removed.

Through the sedate and astonished office of Fairweather & Linn, Inc., moved that extraordinary procession—Marjorie leading Elwood Wickes, the two of them driving before them somehow, squirming and reluctant, the three Wickes infants.

With the final effort of a will which was tottering Marjorie threw open the door of A. Price Fairweather's office, gave Elwood Wickes a reassuring slap on the back, and whispered: "Go to it!" Then, without announcement of any sort, she shoved the entire Wickes coterie helter-skelter within.

Her own desk was immediately outside that door. Into its chair Marjorie fell and buried her face in her hands.

AN interminable ten minutes passed. At last the door opened, and the Wickeses, young and old, emerged. There was a dazed look on Elwood Wickes's face as he drove his flock before him. Frightened, afraid that her plan had proved a dismal failure, Marjorie was preparing to run after him to question him—if necessary to console him. A peremptory voice halted her: "Miss Browne, step in here, please."

The ruler of that little kingdom, breathless, disheveled, mottled, pointed an accusing finger at her. "You thrust that orphan asylum on me!" he cried. "Wickes would never have had the courage or the brains to do it all by himself. No, you engineered it. And what do you mean by it?"

Marjorie did not answer him directly. She asked: "Did you dismiss him?"

"Dismiss him!" He gave a gesture of both despair and disgust. "How could I dismiss him with that regiment of brats climbing all over him? Don't you think I have a heart?"

Marjorie gave a sigh of relief. "I think he may make good on something."

"On the Morse's Food account? I suppose you gave him that idea too?"

"No, that was his own. Did he talk about it?"

"Talk about it! I never heard so much talk condensed into ten minutes. No wonder I didn't dismiss him. I didn't have an opportunity to open my mouth. But what I want to know is what you mean by putting something like that over on me? Look here, young lady, you're on delicate ground when you try to run this business for me."

Marjorie wisely decided that it was one of those times when it is better to remain silent. And after regard-

ing her frowningly for a minute or two, A. Price Fairweather shrugged his shoulders, thrust a hand into his trousers pocket, and produced a roll of bills. "Wickes told me among other things how these Hippodrome tickets had been given to you," he said. "Given to you! Poppycock! Well, I might as well pay you for them and make a complete job of my idiosyncrasy."

Marjorie held up a detaining hand. "Oh, no, please don't do that. Let that be my share. But tell me what reason you gave for wanting to see Elwood Wickes this morning. You had to give some reason."

A. Price Fairweather, who had given some signs of being restored to good humor, immediately frowned again. He glowered. His fist came down on the desk with a resounding thump. "You're right!" he cried. "I did have to give a reason. I'm a blooming ass. But I had to say something. And what I did say was that his salary was to be raised five dollars a week."

"That'll help," said Marjorie musingly. "What do you mean it will help?"

asked A. Price Fairweather.

"Why, I have the most extraordinary and foolish idea," she answered. "I have an idea that Elwood Wickes will make good this time."

## The Last Cruise of the U-77

Continued from page 13

we were eight miles off Barfleur. Between there and Cherbourg I had the periscope and saw several small steamers. I bore down on one, but when I had overhauled her I saw that she was too small, besides being in ballast, and so I let her get away. There was another steamer well worth a torpedo, but I could not overhaul her. No luck all day.

JUNE 3.—At midnight we laid a course to the eastward. The weather was then beginning to make for the worse. At 5.15 a. m. we changed course to avoid a destroyer. At 5.30 we changed course again, to dodge a trawler.

My 4 to 8 a. m. watch was a wet one. The seas broke regularly over the conning tower. When my alternate came off watch at noon he said he was fed up on standing watch and watch in weather like this. It grew too rough for us to do much, even if anything should come our way, so the captain ordered a drop to bottom. At 44 meters we thought we would be comfortable. But not so, at least not on the spot we picked. We rolled so heavily that two hours of it was all we could stand. We moved farther south, and by and by found a quieter rest in 36 meters. We lay there until midnight, which gave us seven good hours' sleep.

JUNE 4.—Came to surface at 12 a. m. Headed for Havre. Weather better. Arrived off Havre at 5 a. m. and cruised off the harbor, avoiding destroyers and trawlers by changing course on the surface. In weather rough as this they have to be almost on top of us to see our periscope. We dived once to get out of the way of a patrol boat which acted as if she might have seen us. There seemed to be nothing moving out of Havre, so after three hours under we broke water and headed for Barfleur.

Bad weather and the endless dodging and diving had made long watches for us lately. My alternate looked at me wearily when he was going off watch to-day. "It is a miserable existence," he said as he turned me over the periscope. I agreed with him, but added that it was our job, and what was there to do but make the best of it? At 2 p. m. we intercepted a wireless from Cherbourg reporting our presence at several places and giving exact position—49° 42' north and 0° 27' west—at 11 a. m. Time for us to have a care.

At 7.45 p. m. we intercepted a wireless which told of the sailing of a convoy. We dived

and stood in to head them off. At 9 p. m. we sighted them where we expected to, but did not bag a thing. Two days now of no luck.

### Six Feet Into the Air!

SO ends the log, but not the story of the U-77. The foregoing facts are attested by high officialdom. What follows has only personal authority. It was told by a man who should know, talking across a table in a London hotel one bright night last fall with searchlights playing on clouds, barrage guns banging over roofs, and German raiders dumping bombs all over the lot.

"Speaking of bombs and raiders" (so he began), "over on the French coast a U-boat had been cruising carelessly. At least thirty big and little ships of war had caught sight of her in a space of three days. They went after her wake."

"Now, while they were after her here is what was happening in the U-boat—all circumstantial evidence, but listen to the dope and see what you think of it. A man died aboard the U-boat. And a dead man in a U-boat! No worse place in the world for a dead man to be lying around. They had to get rid of him. But how to get rid of him without going to the surface, opening up conning tower or after hatch, and maybe get caught at it? Well, there was one way. They shot him out of a torpedo tube. Now, when a torpedo is shot from a tube it travels on and on at a level—for miles sometimes before it comes to the surface. But a dead man won't act that way. He has no gyro or air gadgets inside him to keep him going. When they shot him out of a torpedo tube he went straight out for a little way, and then he began to shoot straight up."

"Our group of destroyers were standing around waiting for a U-boat's periscope to show. It was a bright moonlight night, and the look-outs were not missing a thing. They saw this object shoot six feet into the air."

"Man, in a flash it was general quarters with six destroyers going ducked up to the spot. They found a dead man wrapped in a blanket. The U-boat had never a chance after that. She had to be somewhere about. They shot bombs all over the place. It was in shoal water, and when they thought it was all over they dragged bottom."

"The U-77 was there. Later they raised her. This log, among other things, came out of her."

# MAXIMILIAN HARDEN

ONE MAN WHO DARES TO TELL GERMANY THE TRUTH

BY KARL H. v. WIEGAND

A RATHER small, dark, wiry, nervous-looking man of fifty-six years, with the head and features that instantly mark him as a "thinker"; a deeply serious face of extremely sensitive cut characteristic of the artist and idealist; deep black eyes in which smolder intense fires; a high forehead surmounted by a crown of thick, heavy black hair touched with silver; a gentle, deliberate, reserved manner, with a touch of that dignity and courtesy usually associated with the trained diplomat—that is Maximilian Harden, the irrepressible critic of the Kaiser's Government.

In the many hours that I spent with Maximilian Harden in his modest little cottage during six years' association with him, it always was difficult for me to realize that this little man—as simple, unassuming, and modest as our Colonel House, who formerly was known as "der kleine Harden" (the little Harden)—was the man who dared the might of government in time of war. A private citizen who has never held public office, controlling no press except a small weekly and with no distinct political party behind him to give him power and influence, denounced by the ultrapatriotic elements as a "traitor," Harden has scored and scored his Government for its policies and conduct of the war and defied the Kaiser, the Government, the censors, and public opinion. Harden's arraignment of Germany's conduct of the ruthless submarine war in his famous "If I Were Wilson" article is in the Congressional Record. What other critic in this war has dared use such language in denouncing the acts of his government? Occasionally the iron heel of the military censor descended upon Harden, but the moment it was removed he was up again brandishing his lance more fiercely than ever. Aside from the Kaiser himself and possibly Hindenburg, no man in Germany is as widely known by name in this country as is the German champion of President Wilson; none is as favorably known. Of his personality, however, little is known in America. His stepson, by the way, is interned at Fort Oglethorpe, Ga. (he was in the employ of the Hamburg-American Line).

## Bismarck's "Pupil"

MAXIMILIAN HARDEN comes from a Polish family in Posen. His father's name was Witkowski. He was the proprietor of a large textile mill. Through unfortunate circumstances and reverses he lost practically all his property. Young Witkowski left home at an early age, went on the stage, and took the name Maximilian Harden.

As a young actor Harden played in various towns and cities in Germany and also in Switzerland. In the late eighties he came to Berlin to seek an engagement. There he met Fräulein von Schabelska, a Russian star, at that time the favorite with the theatregoers in the Kaiser's capital. She persuaded him to take up journalism, and induced Paul Lindau, then leading theatrical manager in Berlin and publisher of a weekly magazine, "Die Gegenwart," to put Harden on the staff of that magazine. Soon there appeared a series of reviews, criticisms, and articles in the weekly and other publications of so unusual a style and point of view that they began to attract general attention. They were signed "Apostata."

Harden began his career in Berlin a little more than a year before the youthful Emperor, William II, on March 18, 1890, dropped overboard Germany's greatest pilot of the ship of state, Prince Otto von Bismarck. In the war of words that followed this political sensation, barrels of ink were spilled. Harden threw himself into the inky swirl of the political whirlpool on the side of Bismarck and against the young Kaiser. The "Apostata" champion of Bismarck came to the

attention of the youthful Emperor. It was then that he first felt the thrusts and lunges of Harden's acid-tipped pen lance. "Apostata" also drew the attention of the Iron Chancellor. He read some of the biting articles. He wanted to meet his fierce champion. Harden one day, to his surprise, received an invitation from Bismarck to come to him at Friedrichsruh where he had retired in deepest bitterness against the young Kaiser.

From that day Maximilian Harden's career was made. He became Germany's leading political writer and critic. With his frequent trips to Friedrichsruh, he acquired the reputation of being Bismarck's confidant. This gave his weekly magazine, "Die Zukunft" (The Future), which he founded in 1891, a comparatively large circulation. His political articles, written, it was believed, under the tutelage of Bismarck, were widely sought and read, not only in Germany but in France, England, Russia—in fact all over Europe. Harden remained in the closest touch with Bismarck until the latter's death.

Harden's association with Bismarck let him in on many political and state secrets and gave him a deep insight into the life and personality of many high personages not only in Germany but also in other countries in Europe. The general belief in those years that Bismarck had confided much in his "pupil" made Harden envied, hated, and feared. Dramatic emphasis was soon to be laid upon that belief. Harden began a series of scathing attacks on a clique of perverts around the Kaiser known as the "Round Table." Prince Philipp zu Eulenburg, the Kaiser's closest personal friend, a man whose furtive eyes betokened nameless fear, was the head of the clique. Harden's caustic pen burned as he intimated unprintable things close to the throne. Berlin was thunderstruck at the daring of Bismarck's pupil. Finally the young crown prince, as Harden himself told me, carried a copy of "Die Zukunft," containing the scarcely veiled accusations against members of the court and high military officers, to the Kaiser and demanded an investigation or the arrest and imprisonment of Harden. The Kaiser could not believe such infamous charges against men and officers immediately around him. Harden was arrested and placed on trial. He protested that he did not wish to produce the proof because it would disgrace Germany. That was looked upon as a mere subterfuge. Seeing that otherwise he was about to be convicted, Harden offered to produce the evidence substantiating his charges. The Berlin court denied him the right. He was found guilty and sentenced to prison. He appealed. While the appeal was pending two Bavarian newspapers charged that Harden had been bought off with one million marks (\$240,000) not to produce his evidence against the Kaiser's favorites. Harden brought action for libel in Munich against the two Bavarian editors. In their trial the Bavarian court did what the court in Berlin had refused: namely, permitted Harden to introduce his evidence. It was a bombshell. It proved to be the greatest scandal in the history of Germany. I read a part of the testimony. It is unprintable. Harden's evidence forced the hands of the court of justice in Berlin. When confronted with his vice victims, Prince Eulenburg collapsed. The aged princely pervert admitted the truth. He was charged with perjury.

A royal medical commission reported that to place him on trial would insure his death. He retired to Castle Liebenberg, a broken old man. Twice a year a Government medical commission visits Castle Liebenberg to examine Eulenburg. Each time the commission reports that it would cause his death to place him on trial. And so they will continue to report until he dies.

Some high officers went to prison: some disappeared and never were heard of again. Count Kuno von Moltke, relative of the great Moltke himself, personal mid-de-camp to the Kaiser and influential member of the powerful military party, was among those who disappeared from public view. Harden stated to me that neither the Kaiser nor the crown prince was personally involved.

The German St. George had cleared and purified the atmosphere around the Kaiser. Since that day he has been the most feared man in Germany. It is not known what other "dynamite" he has, may have inherited from Bismarck, or added to since. Often it is believed that he is "bluffing," but none have the courage to call him. With Dr. Henninger, chief of the Kaiser's secret political police, and the late Dr. Hamman, chief of the press department in the Foreign Office for many years, Harden shares the reputation of "knowing more" than any other man in Germany. He has a maze of "underground" informatory connections which often lead into circles little suspected as being in touch with him. He has the reputation of never having violated a confidence or broken a trust reposed in him.

Since the outbreak of the war Harden has kept up his merciless criticism, of which the "If I Were Wilson" is but one example. "By that traitor Harden!" was a familiar selling cry of the news vendors in Berlin. About eight issues of "Die Zukunft" have been seized and confiscated. Last summer it was indirectly suppressed for some weeks when he was drafted for "civilian war service" as a means of choking him off without direct suppression. Foreign Secretary Zimmermann hated him. Of him Harden had said to me: "He will make blunders; worse, he will do foolish things." After Kuehlmann succeeded Zimmermann, Harden's friends succeeded in having him released. He resumed publication.

## A "Parliamentary Democrat"

CONTRARY to a very general impression, Harden is not a socialist. In fact, he is an opponent of socialism. He declares that it has too much that is Utopian and impracticable. He stands for "orderly democracy," but is a bitter opponent of "mobocracy," or the rule of demagogues through the mob. His father was a democrat, and his brother refused office in Prussia, being also a democrat. Harden calls himself a "parliamentary democrat." He is not necessarily an antimonarchist. He is not the leader of a political party; he is the advocate of a cause. That cause is democracy or "constitutional parliamentary government" for Germany, with the Chancellor and Cabinet responsible to the Reichstag and to the people.

Before the war Harden's magazine had a paid circulation of about 25,000. "Die Zukunft" sells for 12 cents, varies in size from twenty-four to forty pages, and, it is estimated, has brought him an income of \$25,000 to \$30,000 a year. He writes it practically all himself, for he accepts only occasional contributions. His peculiar style is almost untranslatable literally. It abounds in ornamentation, metaphors, and figures of speech. Since the war he has developed a marvelous circumlocution with which he gets around the censor, but always gets his meaning to his readers. He has a most extensive knowledge of little known historical correspondence and letters. Harden uses no typewriter. His handwriting is the tiniest and finest I ever knew a man to have. It is like etching.

Harden lives in a modest seven-room cottage in the pines of Grünwald (Green Forest), the beautiful villa suburb of Berlin. There is a stream of daily callers. He can be seen only by appointment. His home abounds with paintings and autographed photographs of Bismarck. His health has been poor in the last years; he eats but one meal a day. He rarely accepts social invitations. He refuses to join clubs on the ground that such obligations might hamper his independence.

Frau Harden is one of the most devoted war nurses in Germany. She is one of the head volunteer nurses in the big Virchow Hospital. She gets up every morning at five and returns late at night.

In the political upheaval which is bound to come in Germany when the armies return home, Harden, if alive, is likely to play a great rôle. Of him Colonel E. M. House, the President's adviser, once remarked to me: "I consider Maximilian Harden one of the most potential forces for good in the world to-day and one of the best friends that Germany has."

## The Terrible Year

**T**HIS, according to the German plan, was to be "The Terrible Year." The German High Command realized the necessity of getting a decision before the full American strength could make itself felt, so their strategy was to keep hammering the Allies until they had pounded their way through to Paris or the English Channel, and forced the Allies to accept a German Peace.

### But the Americans Turned the Tide

Against all the German expectations, America solved her transport problem so speedily, so successfully, that she was able to pour men into the fighting by the hundred thousand right at the crucial moment, and turn German victory into overwhelming disaster.

Not only did Our Boys stop the German rush and hurl the Prussian hordes back over the Marne, but it was their energy and dash that enabled Foch to counterdrive so successfully, capturing thousands of prisoners and literally mountains of munitions.

## *"The Story of the Great War"*

The only connected history of the world war

Gives you in a vivid, pulsing narrative, the full story of the war. It gives you historic perspective, digging out the roots of the war over the past fifty years; vivid description, covering in detail the thrilling events of the war. There is an outline of the plans behind the first German offensives against France and Russia, the Gallipoli affair, Verdun, the Battle of 1917, the entry of the United States into the war, and the great German offensive of 1918.

*All that America has accomplished*, in spite of her handicaps of distance and unpreparedness, is outlined in detail—how it has given unstintingly of its manhood and its wealth; how it has turned its factories into munition plants almost over night; how it is building ships in almost undreamed-of quantities; how its Navy has definitely helped to check the U-boat; how its armies are preparing for the long drive to Berlin.

More Than a Million Every Week

## **Good Tires – Safeguards of Commerce**

This is a critical period for American industry.

Hundreds of important industries have been slowed up by lack of adequate transportation facilities.

Virtually all far-sighted business men are adopting motor transportation to relieve the situation.

Next to the vehicles themselves as safeguards of commerce, come the tires. For a car's effectiveness is wholly dependent upon the tires upon which it travels.

That is why good tires are of such vital importance.

United States Tires are good tires.

The lasting dependability that made them such favorites in times of peace is bringing them more and more into prominence as a war-time necessity.

There is a United States Tire to meet every possible driving condition – light or heavy duty. Five treads for passenger cars and both pneumatic and solid for trucks.

The nearest United States Tires Sales and Service Depot will gladly advise you as to the ones you should use.

## **United States Tires are Good Tires**

*Every electrical engineering and manufacturing facility of this company is being applied "without stint or limit" to the vital business of winning the war*

**"Give us Coal!" And Mule Power gives way to Electric Power**

The arms of victory are forged in the nation's industrial plants. The bridge to France is the line of ships that stretches across the Atlantic. These must have sufficient coal.

Our coal mining industry made a world's record last year, despite many handicaps. In the anthracite mines alone, the labor shortage was 16 per cent., and the Government drafted many of the mules for the army's needs. Yet production increased 14 per cent. over the previous year.

How was it done? By better methods. By electrification. The electric mine locomotive, operated by one man, hauls a half dozen or more cars. Electric hoisting makes deep mining possible. Electrically operated ventilating fans safeguard the health of those toiling beneath ground. Electric coal cutters and drills save time and labor.

The cutting of timber for entrance ways, shoring and pillaring is speeded up by electric power. Additional motor-driven pumps are used to keep new and old workings dry, so that work proceeds without interruption.

Many coal operators looked to the General Electric Company for this assistance. G-E Mining Specialists responded by giving their attention to the problems confronting each mine and the great G-E manufacturing departments did their part by making prompt deliveries.

This year, the demands upon the mines and all industry are greater, and the labor supply scarcer, than ever before. The General Electric Company pledges its entire engineering and manufacturing facilities to every industry and individual manufacturer or operator engaged in essential war work.

Look for this—  
the mark of leadership  
in electrical development  
and manufacture

## Part II—Over the Top and Beyond

BY JAMES HOPPER  
COLLIER'S SPECIAL CORRESPONDENT

ABOVE the tunnelliike entrance of the post of commandment, the hill rose at first in a steep bank planted with small trees. All night men had slept there, using the trees to hold themselves on the slope, feet sprawled across one trunk, shoulders hooked across another. They had continued to sleep in the morning light and through the artillery fire, faces to the sky, without a stir. I had taken them for runners held there at the call of the officers on the posts of command. But now a voice, which came from the trees a little above them, said: "Come on, boys, it's time." And to that voice, which spoke naturally and did not shout, they shook themselves awake, rose, and like people in a station when the train is announced, began to pick up all sorts of objects which had been lying about them. Some were taking up, one in each hand, as though they were valises, boxes of ammunition; others were raising picks and shovels to their shoulders or cumbersome firearms like ancient tromblons. Some bore tripods, others things that looked like rods, others boards nailed crosswise like improvised candlesticks for Gargantuan tapers—these peaceful porters were machine-gun men! I clawed my way up to them, and said to the nearest: "Where are you going?"

"We are going in," he answered, and without another word, as though they were on their way to dig a ditch, they left the wood and started up the hill.

I followed. It was the same path I had taken twice during the night. We kept close to the wood;

the German shells, which had been churning the empty field since dawn, screeched over our heads. Halfway up I stopped, paralyzed by a great spectacle. The infantry was moving out to the attack, up there, on top of the hill. There was a wood, a little to the left; they were coming out of that in masses. They were above me, silhouetted against the sky, and that made them marvelously tall. I could see them forcing their way through the tender green brush, trampling with high steps, tearing themselves loose with vigorous twisting movements, their rifles held high above their heads as though they were wading a stream with water up to their necks. Here and there a French chasseur in horizon blue stood gesturing, pointing out paths which they spurned in their eagerness. As they advanced, in a course at right angles to mine, they were deploying, stretching out along my line of vision, till finally the company which formed left guide was far, far away at the top of the rise, their bayonets caught by the sun while those nearer stayed black. For a second the long line floated a bit, like a banner when the breeze fails, then abruptly it went very taut and swung forward out of my line of vision.

I found myself alone. The machine-gun men had gone. I began running up the hill as if I had lost my best friend, made the sunken road, ran up that, came out panting upon the head of the plateau, and there it was, all before me—the most beautiful sight

### WHAT JIMMIE HOPPER DID

WITH THE AMERICANS IN PICARDY.—An instance of the "buckos" anxiety to surrender in the Cantigny battle was furnished when a group of twenty tried to be captured by an unarmed correspondent.

"Jimmie" Hopper, correspondent of COLLIER'S, went over the top with the Americans. As he was entering Cantigny a crowd of Germans rushed at him, begging earnestly to be taken prisoner. Hopper was nonplussed, but called to an officer:

"Come and get 'em."  
That was the item you read in your newspaper the day after the battle of Cantigny—this is Hopper's own story of how it happened.—THE EDITOR.

ever mine and ever to be mine. The infantry had stepped over the trenches. The men in the trenches had leaped out after them. The machine-gun men had taken their place behind them. Together with the French flame throwers and the twelve tanks, the three waves were going down the field behind the rolling barrage.

I ran to the first trench and threw myself upon the parapet, saying to myself: "I'll watch from here," then ran to the second trench and threw myself upon the parapet, and said: "I'll watch from here," then ran to a big shell hole and threw myself down and said: "I'll watch from here," then got up immediately and said: "To h— with watching; I'm going along!" and ran after the whole mass like a small dog after its master.

I wish I could give with words even one-millionth of the splendor of the spectacle. From where I followed, a little behind, the three waves looked one—a thick mass of men stretching all the way across the plateau, the beautiful plateau, a great open regular rectangle, sloping very gently before us, inviting our charge, a clean and virgin No Man's Land untainted yet of the terrible stench of mortal man, carpeted with flowers, with grass, with wheat, with red poppies, yellow buttercups, and purple thistles—the ideal battle field of an ideal battle. Across it the horizontal column of men was sweeping smoothly, at a walk, keeping a general alignment without stiffness—an alignment within which subsidiary whirls of intelligent maneuverings constantly eddied. For a few minutes, as I followed close, that mass held its human quality to me; sounds, rapid calls, shot back out of it, as the men encouraged each other. "Come on, there!" "Oh, you Yank!" "Step high, Irish!" "Come on, fellow!"—short cries with the same urgent yet coaxing inflection I had heard these boys use toward the dice in a crap game. Then, as I dropped farther behind to get a wider sweep of the scene, it lost a little of its homely realness and sprang suddenly to heroic proportions. Again devoutly I pray for power to give the slightest hint of the extraordinary splendor of it all. First there was the barrage, a rolling wall ahead, reaching from earth to sky; a wall of heavy smoke within which, continuously, burst new geysers of smoke, black or gray or sulphurous yellow, and which the risen sun shot here and there with flamboyant opalescences; a wall ever terribly alive and writhing with cracklings and thunders, as if at the top of the sky a god greater than ever any other god had been pouring out of his lap a cataract of great mountains. Behind it, in its great resonant shadow, moving forward as it moved, came the assaulting mass of our men. They went forward smoothly, not very fast, a host reaching from side to side of the plain, slowing up a little, speeding up a little to keep their line—and oh, so straight of spine, so erect—they looked eight feet tall! A strange light, a filtering of distorted sun rays through the barrage, struck their bayonets. But beside the riflemen there were many that carried machine guns, tripods, shovels, crowbars, rods; and these implements—some of humility and of peace, in the singular light, borne upon the shoulders of these men who, as they left me farther behind, took on more and more an aspect of gigantic unreality—became maces, lances, catapults, and flaming swords. The tanks, distributed evenly among them, charged in a straight rhinoceros line; then, now and then, went waddling off to one side or the other, ridiculously fast, to some strong nest of boche resistance. They flattened these out, really, I suppose, by means of machine-gun fire and seventy-fives, but in a manner which appeared

like the simple act of rolling over them with all the weight of their low-hung and armored bellies—upon which they ran back, awaying to their places and their rigid forward charging.

### "It's Our Battle"

I CAME along behind, all alone, that part of the battle field all mine, my tongue hanging out with admiration. A vestige of my old idea of an observation post still lingered in some recess of my brain, and every once in a while I threw myself down and said: "Now, I'll watch the thing from here," and saying: "Now, I'll watch the thing from here," was up again and on the run. For a time I'd let the assaulting waves get away, so that I could have a sweeping look at the whole, at others I ran up again to obtain some detail—or I ran out toward the left wing, or toward the right wing—but seldom did I ever push to their completion any of these starts; a new impulse would take me, I was running from scenic bauble to scenic bauble like a child. Beneath this puerility of my reflexes, though, a sovereign exaltation dwelled—a piercing, reeling joy such as I had never felt, such as I never shall feel, something a million times more powerful than anything I have ever felt or ever shall feel. An extraordinary lightness was in my feet and in my heart.

I had regained absolutely, for one thing, that certitude of invulnerability which is youth. I had been losing it in the last past years. I had regained it to the point of madness—no shell, no boche bullet could ever touch me. But, besides, as I went down that battle field, in the shadow of that stupendous spectacle, all the large and profound emotions given to man were humming within me in vibrant organ tones while light currents of childish and crazy gaiety eddied above. For instance, I was calling to myself constantly (it may have been aloud): "You skunk," I'd call to myself (I don't know why I chose that word: I very seldom use it, either toward others or myself)—"you skunk," I'd cry, "here you are, right in the middle of battle, here you are! It's the biggest war in history, it's a battle in the biggest war in history, it's our battle, our first battle—and you're in it, right in the center of it, right, right, right in the center of it, you little skunk! Do you hear? Right in the very midst of it, skunk!" Then

tall beneath the crushing splendor of the barrage. I'd feel my heart swell and swell and swell and almost burst.

The barrage for a while had hidden Cantigny. Now it rolled over and past it. It was as if the small lower right-hand corner of the terrible writhing and crackling curtain which reached from earth to sky had been lifted, revealing abruptly the village.

There it stood, minute as the marginal picture in a big etching, the village I had seen at dawn so quiet among the trees. The trees now were leafless and black, dead as if they had been dead a hundred years; they smoked and one was aflame. Behind them the village, under the long torture of the bombardment, had corroded and shrunk and flattened. It had flattened; it had lost all depth and perspective; it was exactly like stage scenery, a cardboard representation of some great catastrophe—the burning of Rome or the last days of Pompeii. It glowed at once and was black; it writhed a bit, yet was dead; smoke rose from it, and the ribs of a skeleton of a roof, the only high thing that remained of it, pulsed alternately red and black as the smoke eddied funereally. The right extremity of our lines entered these ruins and disappeared within them, but the greater width swept on and by, to the left. I saw these go suddenly to the ground like wheat cut at the base; the three waves were now distinct to the eye. They rose with a bound, ran forward, then went down again; they were nearing their objectives. I could see some men digging. A French tank sidled up to the village, and began belching at it out of its flanks. And then—

### Galloping Gnomes

I HAD forgotten all about the enemy. Thought of the enemy, of anything human over there, had vanished entirely in the magnificence, in the vast opulence of the spectacle. But now, as the tank belched, out of the corner of the village, the village which seemed so small in the shadow of the sky-reaching barrage, little bits of dwarfs scurried out upon the plain. They wore little round caps, their clothes were all wrinkled, their trousers the shape of spiral bed springs, and they ran in a queer, fantastic way, one leg doing more work than the other, like children playing the galloping horse. Out of the ruins they came, out on the plain, galloping,

galloping, like gnomes. Their hands were up in the air, and continually, as their hands dropped, either with fatigue or because they forgot, they threw them up again, high as they could, in sudden jerks; and as they ran and jerked their hands up, they turned their heads to one side and the other in search, in desperate search, of some one to go to. The main body of our men had swept on to the left of Cantigny; at that particular moment I was the only figure before Cantigny. The searching eyes of the little dwarfs lit on me—and suddenly they were all loping wildly toward me. I stood there, my hands in my pockets, laughing, and laughing—they were so funny, so incredibly funny. Then, with a start, the sense of reality returned. By Jove, these were not dwarfs, they were men. They were not men, but Germans, German soldiers surrendering, crazy, mad, eager to surrender. I had heard stories of such; I had seen pictures of such—but no, never story or

picture as really ridiculous as this one. They were moved by such a desperate yearning to surrender, they were so desperately insistent upon surrender, they reveled so extremely in the abjectness of surrender. I kept on laughing like a fool; I didn't move. I could do nothing but laugh. Some of our boys, from over the left, having seen, came running up; they

*It was with Aame that the Frenchman was cleaning out the cellar*

suddenly, seeing again before me the thick mass of our boys, of our sacrificial youth, going ahead so calmly, with little steps, so careful of their alignment, so careful of remembering what they had been told, so careful of doing it right, and yet nonchalant with that supple contempt of death which is theirs; looking at them going along so straight, so

were laughing too. An officer came running. Laughing, he raised his automatic and peppered the ground in front of the cavalcade. He must have been a Westerner, judging from the careless precision of his performance, or at least a diligent reader of Bret Harte and Alfred Henry Lewis; his bullets zipped the grass, and the poor boche gamblers became infected with springhalt: some danced like bears, others ran as if on red-hot iron, and their heads pivoted madly as their eyes lit first on one of us, then on the other, searching for the one most kindly inclined to accept the gift of themselves, the utter gift which they offered with all the eloquence there can be in attitude and contortion of body. We surrounded them now, rounded them up (some of us, catching the thing from them, were also galloping like ponies), diverted them the right way, and soon had them all running toward the rear, across the battle field. And still they galloped, their hands up high, and still their eyes turned fearfully now to one of us, now to the other, as we ran after them, in a whirl of childish joy—and oh, they were so rapidly becoming odious, with their dirty little round caps, their dirty, wrinkled uniforms, their unclean servility. I saw the doughboy to my right stop laughing suddenly, then the one next to him, and then saw both leave the mad procession deliberately and start running back toward something cleaner, toward the battle line. And I also stopped, all the fun gone. A new idea had entered my head. I would go into Cantigny. I had been to the edge of it; now I would go into it.

#### At the Bottom of the Crater

I APPROACHED the town once more. Then a new spectacle delayed me, nailing me where I was. The barrage had reached its limit and was no longer rolling on; its great curtain was stationary. Of the mass of men I had followed nothing showed; those to the right were within the town, those to the left had swept on, had reached their objectives, and, lying down or dug in, were no longer visible. The battle field seemed empty, except for one French tank which, her flank against the village, was firing into it. Now, as I walked toward that tank, a German shell hit her square—at least, so it seemed from where I was—square in the flank, a direct hit. I saw the two French chasseurs who had followed behind as agents of liaison streak for a shell hole behind—with perfect judgment, for the second shell struck just where they had been—then everything was still. The two chasseurs had vanished, and the tank was motionless and silent; I could imagine the scene within: the confined hell, the smoke, the churn of machinery and human flesh. A long moment passed. A third shell missed, aimed too high; a fourth, too far to the right, then there were no more shells.

I watched anxiously. I could see the two chasseurs raising themselves the slightest bit over the lip of their shell crater, also to peer. A long moment passed; I thought: "That tank is dead!" Suddenly there was a slight creak, a stir; this was followed by a sputtering. Something clanged, and the tank started to move. Immediately almost she was off at a speed altogether ludicrous for one so fat. She ran along the edge of the village, turned the corner with a slip of her tailless rump—and with another slip, altogether ribald, plunged into the village by a side street, on her way to where there was much good work awaiting and where cannon would not see her.

I went on toward Cantigny, again laughing, a huge delight in my heart (albeit a tenderness: I could have kissed that fat old tank). "This is the morning of the thousand delights," I thought, going through the grass, happy as happy could be, "and in another minute I'll be in Cantigny." Already I

*The wounded boy raised one hand weakly, like a child waving good-bye*

could see into its ruined main street. There was a group of our boys standing there, about a French soldier who held a hose end down into a cellar entrance. The group was very quiet and attentive; you would have sworn they were firemen—not firemen in the action of a big fire, but firemen when the fire is mastered, quietly drenching the hot ruins. Only I knew from the tank the Frenchman carried on his back that he was not using water. It was with flame that he was cleaning out the cellar. One hundred steps more would have brought me inside of Cantigny. But I was doomed never to enter Cantigny; just then I went into a shell hole.

The reasons that made me drop into the shell hole were, I think, two. For one, there was in the crater a wounded boy, a boy shot through the shoulder, together with three hospital-corps men who were starting to dress him, and I went in with some vague idea of offering help. But also something was after me by that time. I had not noticed it at first: that is, when finally I became aware of it, it was with the knowledge that it had been going on for quite a while. Little "zips" were passing by me; small, short whispers, hardly attaining the volume of sound, and gone almost before they were heard—discreet, quick little zips like the lightest of pencil strokes—zip, zip, zip, and zip. Now and then, though just as brief, one reached a higher volume of sound, something like a short cat meow, but more resonant. Pee-a-coo-ow!—thus—a spiteful cry. Some sharpshooter was after me, some ambushed boche who didn't approve of COLLIER'S WEEKLY. That is really why I dropped into the shell hole, I think—not so very much to help the three hospital-corps men.

They were just cutting off the sleeve and shoulder of the wounded boy's blouse when I lit by them. I went right to the bottom of the crater: it was cozy and restful down there. The whole battle field, the great delirious scene, had vanished for me in an instant; there remained of the world only this small bowl in which I lay. I watched the hospital-corps men working above me. Their heads and busts were above the level of the plain; they did not seem to mind at all the little zip, zip, zips which were still going by—perhaps it was not a sniper, but simply some of the machine-gun fire, passing impartially, with no personal preference. They were cutting with scissors; they gave a little pull, and the sleeve came off, clear to the neck, baring a muscular shoulder. It was very white, and the hole in it was bright crimson red. "A Blighty," I thought. "A tough one, but still a Blighty," and from below raised the boy while they passed the bandage around his waist. Then another boy came walking toward

us. He stood on the lip of the crater, and said, in a voice that was just a bit weak but which tried to remain natural as though it were asking for a cigarette: "Will you boys dress my wound?"

The others were still busy, but I said: "Where is your wound?" He went to his knees, on the edge of the shell hole, and raised his belt a little, and then his blouse. Underneath was a dressing, a pathetic first-aid dressing, set hurriedly and askew. He moved that aside, and right in the middle of the abdomen, depressed in the white skin, I saw a little blue puncture. I can't tell what a desolation I felt before this. A vision came

to me of something I had seen years ago, when a cub reporter at the receiving hospital in San Francisco—of a boy just like him who had come in with just such a little blue hole, a curly-headed Irish boy who had come in still glowing and strong and whom I had seen slip off swiftly into suffering and death. This one, kneeling before me, was sandy-haired and freckled; even now one could see he had been impertinent and joyous. He got up, took three steps, and lay down. Then he stretched his arms above his head, assuming the posture of one resting after hard work—he had no idea, no idea at all of what really had happened to him. The hospital-corps men went to him to dress the wound, but I whispered: "Don't waste any time doing that. The only chance is to get him back quick," and they, seeing the nature of the wound, nodded their heads. Then we looked at each other. We were four, with two wounded men and one stretcher. There was nothing else to do. I said: "I'll help carry him; two of you can help the other." One rose with me; together we got the stretcher, laid it by the wounded boy, and placed him on it. We slipped the straps over our necks, took hold of the handles, rose, and were off across the battle field, the hospital-corps man ahead and I behind.

#### Medals—in Heaven

I WANT to say now that if going to Cantigny will I remain always in my mind as the most happy delirium of my life, going back from Cantigny will always remain deeply corroded in my memory as—the opposite. I will also say that, if medals are given in heaven, those given stretcher bearers must be wondrously big (they seldom, seldom got any on earth). I speak from knowledge gained in doing once what each of them will do twenty or thirty times in a battle, and a few hundred times a year.

What amuses me now is the innocence with which I entered the experience. I picked up that stretcher so vigorously, I started out so blithely! But I had not gone far before an awful premonition came to me. I slowed my steps, I relaxed all my muscles. I began working with all possible economy of effort. No good—this was beyond any possible economy of effort; my premonition swiftly became a dazzling and hideous reality. I had never imagined that carrying a man could be so hard, that a man could be so heavy; it was something—incredible. And I had never imagined I could ever have fallen so badly out of condition (I had, in fact, flattered myself I was in very fair condition; not wonderful, but still, as good, let us say, as when eighteen and playing football). This was not only incredible; it was deeply humiliating. Besides my humiliation, I carried a steel helmet, a gas respirator, a trench overcoat, field glasses, and a musette as full of useless trinkets as the pockets of a small boy.

The sun, which had risen above the barrage smoke, beat down on us hard, and under our feet were plowed fields, sudden shell holes, and high grass in which the telephone wires, run quickly behind the attack, lurked like traps. Add to this, if you wish, the fact that the sniper who had been after me was now after us—zip, zip, zip. (Continued on page 34)

# "It Is the Ship Workers Who Are Putting This Thing Through" Says Mr. Schwab

American riveters have raised the record for a day's riveting from four hundred rivets to more than four thousand. In the picture on the right you see the boss riveter at work with his pneumatic hammer while his helper "backs up" the rivet on the other side of the plate. The work has to be done in all sorts of cramped positions, as you can see from the center picture, which shows a riveting crew at work inside a horizontal bulkhead.

All © Paul Thompson

At first glance this lower left-hand picture looks like a scene from "Macbeth," but it's only a crew of masked workers doing electric welding.

Throwing red-hot rivets must be a lot more fun than catching 'em.

# Doing the Impossible

BY CHARLES M. SCHWAB

WE Americans are just beginning to learn what we can do when we put our minds to it and our hearts in it. We have actually been too humble. We are like an adolescent boy—who has yet really to stretch his muscles and discover how strong he is. I doubt if anybody in the wide world knew that we could do what we have done. I have had a certain familiarity with large-scale industrial enterprise in America. But certainly I didn't realize how much we had in us. The industrial feat of the United States in shipbuilding seems to me one of the greatest industrial feats of all time. I may say this because I have only recently joined the shipbuilding workers and I could claim no credit for what it has already done if I would.

Think how desperate the situation was when the Emergency Fleet Corporation was formed a little more than a year ago. The submarine was sinking ships faster than the world was building them. Every month saw a decrease in the number of bottoms afloat. While the supply was growing less, the demand was growing larger. The world supply was already short. Where were the ships to come from that would ship our army to France, and the mountains of munitions that it would need there?

Germany confidently believed that this was the end. The submarine was slowly and inevitably cutting down the capacity of our bridge across the Atlantic. There could be but one end to such a process. Lack of ships would eventually give victory to Germany.

We were not a shipbuilding nation. We were apparently building all we could—private enterprise had seen to that. How were we going to build any more? How were we going to double and redouble our building?

You can't "start right in" building ships—as our ancestors started right in building houses out of the logs at hand. To build ships you have to have, first of all, places to build them; you have to have berths or ways.

When we declared war we had less than forty steel shipyards! Less than forty organizations prepared to turn out steel ships! Less than forty companies equipped with ways! And you can build only one ship at one time on one way. It takes many months to build a ship—at least that was true before we entered the war. It takes a year or so to build a way—or it did before the war. So to build one way and one ship would take the better part of two years.

When you have ways you have to have materials—a steady stream of materials if you are to build fast, without unconscionable delays. When you have ways and materials you have to have an organization—a group of executives who understand the job and shipbuilders who can carry it out. We might easily have spent three or four years in building ways, in arranging for material, in collecting organizations, in training new workers. Meanwhile the submarine would have been going right on.

We had to do the impossible. We had to double and redouble our capacity, not in three years but in one year. And the whole story is: we did the impossible. We have now not forty organizations building ships but one hundred and seventy-two organizations. Some of these new organizations have a larger capacity than any shipbuilding organization the world has ever known before. Think of Hog Island with fifty ways!

Think of our former capacity. It was a good year when the United States built 500,000 tons of ships. Then look, in the next column, at the rising figures for 1918—the launchings and ships actually delivered for use month by month.

Our capacity has risen to the point where in the

Mr. Schwab is a man who worked up from \$4 a week to \$1,000,000 a year. He was for a long time the chief executive of one of the world's largest businesses—a job almost as big as the one he now fills as Director General of the Emergency Fleet Corporation. But everybody knows what Mr. Schwab has done. Few know what manner of man he is. Mr. Schwab just talks in this article. Anybody who hears Mr. Schwab talk will feel that he is not only a man who gets things done, but also a kindly, unaffected, appreciative person.—THE EDITOR.

No wonder the workmen in the shipyards call Mr. Schwab "Charlie"

single month of July we launched more ships than we had ever previously launched in twelve months.

	Deadweight Tons Launched	Deadweight Tons Delivered
January . . . . .	112,500	91,441
February . . . . .	171,850	124,650
March . . . . .	258,916	162,200
April . . . . .	225,230	162,805
May . . . . .	345,255	259,041
June . . . . .	233,550	274,385
July . . . . .	635,011	226,605
Total . . . . .	2,002,312	1,301,127

This increase of capacity has been achieved in less than sixteen months.

In the yards now producing ships we have a capacity of between three and four million tons annu-

ally. In the great fabricating yards—Hog Island, the Submarine Boat Company's plant at Newark Bay, the Bristol plant, and the Federal plant—we shall have a capacity of another three or four million tons annually. It is only a matter of weeks before the United States will have a total capacity of seven million tons a year.

A year ago we were not a shipbuilding nation. To-day we are the greatest shipbuilding nation.

How did we do it? It was men that did it, American men, men who cared. If you want names, it was men like Edward N. Hurley and Charles Piez. It was men like Dave Rodgers of Seattle, Joe Tynan of San Francisco, Balsley of Detroit, Neeland of Camden. These men are among the greatest shipbuilders in the world; they have broken world's records in shipbuilding and then broken their own records. Think of completing, ready to sail, a 5,000-ton ship like the *Tachahoe* in thirty-seven days! Think what it means! Think of building a 12,000-ton ship like the *Invincible* in twenty-four days! Think of building a 8,500-ton ship like the *Crawl Keys* in fourteen days!

As trades go nowadays the trade of driving rivets is an old one. Men with pneumatic riveting hammers have been pinning steel plates together for a generation. A riveter who could average more than sixty rivets an hour was a first-rate riveter. To-day we have riveters who can drive more than 400 rivets an hour. The record for riveting is being broken so often that it takes a set of statisticians to keep track of it. The whole industry is shot through with the spirit of enthusiasm, of competition. These men are out to do what men have never done before. At the same time they are not cutting each other under. They are cooperating. Every man has enough energy left over to cheer for the other fellow.

I tell you it brings tears to my eyes when these fellows call me "Charlie." They are the kind of men you want to hear calling you by your first name.

## Respect This Service Pin

WHEN this job is done—this tremendous job of building ships and more ships—the public must see that the reward goes where it belongs. It isn't the heads of departments, the big officials, the executives that have done this thing. It is ship workers who are putting this thing through. It is men with strong right arms—men in overalls—who have made this thing possible. I regret to say that I sometimes discover a feeling that some of these young fellows in the shipyards are considered a species of slacker, men who are trying to avoid giving themselves to the war.

I tell you the man who is doing his level best for Uncle Sam in this great crisis of the world's history is doing his full duty by his country. He is serving just as truly, just as actively, just as patriotically as the soldiers in the trenches and the sailors on the high seas. His work makes it possible for others to serve on the firing line.

Where would we be without the shipyard workers? Where would we be if the shipyard workers were not working at a pace that shipyard workers have never known before?

I want the shipyard workers to hold their heads high. We don't give the shipyard man a uniform. But we are going to give each man who has been on the job for four months without intermission a service pin. He will get an extra bar for every two months of additional service. The shipyard worker should be as proud to wear this badge as the soldier who displays his service badge. He should have the firm feeling that he has done as much for his country. Without him we should have been lost. With him we are—but I leave you to make the prophecy.

# Boston Limited

BY JOHN RUSSELL

ILLUSTRATED BY F. C. YOUNG

HE lay where he had landed and awaited the worst, resignedly. He was quite sure that he was dead. He expected some one to come along and tell him so presently and advise him to move on—some kind of a cop with a pitchfork instead of a club. When you have just been plunged off a brake beam into a train smash you are likely to develop little illusions like this. Moreover, there was evident in his vicinity a certain fiery glow and heat which tended to confirm the notion. Undoubtedly he was dead. Also, one of his legs was slowly scorching.

After a time the scorching grew painful, and he wriggled. We are not informed that we shall be forbidden to wriggle in the place to which Boston Blackie assigned himself. But Boston felt rather resentful at being shoved so near the furnace immediately on arrival. They ought to give a guy a chance to get acclimated.

He sat up. There was a smoldering patch on the leg of his trousers. He beat at it and burned his hands. A cloud of flame burst about him. In wholly mortal terror then he scrambled away, got to his feet, ran, cracked his shins, and slid on his face in a heap of cinders.

Probably the cinders helped as much as anything to restore him to a mundane sense of things. Boston Blackie had an expert acquaintance with cinders. He could perhaps have navigated by means of cinders as certain pilots are said to thread a blind channel by the taste of sand under their keels. Boston detected an unmistakable flavor of anthracite, with a dash of Worcester County mud. He felt greatly relieved.

"Then," he remarked aloud, "if I'm here, I ain't there—yet!"

A curious delicacy restrained him from more exact particularity until he had made sure of his bearings. Empty rattlers lay piled along the ditch in a jackstraw jumble, heaped with the extravagant ingenuity of a stage effect. Most of the passenger coaches of the limited, that had plowed into an open switch still held their track, one car huddled behind the other like a string of cattle jammed up at a gate. What was left of the mail car burned merrily, after the nature of mail cars, which are built and provided for that purpose. Dull red fires glowed along the edge of the mass like miniature suns prolonging the gray dusk.

Boston recognized these objects and began to test himself all over with probing fingers. It was only a wreck. After the question of life comes the consideration of limb. He had heard of persons who had lost various essential parts of themselves in wrecks and who never even guessed the fact until long afterward. Now wouldn't it be just his rotten luck—?

But somehow luck seemed to have made an error in this case. Boston Blackie had had frequent cause to rail at Fortune during the numerous vicissitudes of his career. He could not complain of her now. He had been riding under that mail car. He had shot through the very vortex of destruction. And as far as he could discover he had come out of it without so much as a scratch. Not a scratch!

Luck? He began to think so.

There is a strange clogging of time in catastrophes. Hours might have passed since the crash. In fact, it was something like five minutes after the collision at Wulliver Junction that a conductor in a torn coat came stumbling by and stopped to stare down at Boston Blackie.

"Much hurt?" he asked.

"I'm done," said Boston, with prompt cunning.

"You're lucky," said the conductor, and went stumbling on blindly beside the track.

Boston watched the tragic figure out of sight and rolled over to hands and knees. Cries and running feet persisted down the line, but for the moment he was alone and unsuspect. He began to trundle himself along, spying here and there like a wolf in a thicket. And suddenly he made a find of the sort he more or less counted on.

Beside the track lay a large-bodied man in a pose of limp abandon, arms outflung and face to the sky. Boston remarked that face, with its big chin and

"Still here?" he yelped. "By God-frog, you've got blamed little time!"

shoe-brush mustache because he watched it anxiously for any quiver of life. But the victim showed no sign. Boston crept on again until he could stretch out one hand and take hold between finger and thumb of the right lapel of the victim's coat. Very delicately he turned it back. And there he paused.

NOW, Mr. Boston Blackie belonged to a class technically denominated the Potential Criminal by gentlemen who eat three meals a day and write little books and sociological dope sheets. In other words, he had never dwelt at public expense in anything more pretentious than a town lockup. (Once he nearly attained a county jail, but the judge detected the social climber and headed him off.) Crime is the most caste-bound of professions, and the most highly specialized. There were levels of lawlessness to which Boston had never even aspired. He knew all there is valuable to know about the following: Chicken coops, clotheslines, refrigerators (on the back porch), gas pipes and gas meters (in empty houses). And drunks! He had robbed them all with equal skill and satisfaction. On the other hand, he had never robbed banks, babies, women, insurance companies, or—dead men! No question of morality is involved in this fact; merely natural limitation, which goes back of any morality and is much harder to break.

Boston squatted on his heels and considered. The victim was clad in a solid blue suiting, prosperous, with something of official neatness. There should be good pickings about such a corpse. And so easy! Right under his hand lay perhaps as much as ten dollars. Maybe fifty. The victim would have no further use for the same himself. Nobody would ever know if Boston should borrow it. And, yes, by cripes, there was a wallet in the inner pocket! He felt the outline quite plainly through the cloth. Then why hesitate?

Simply because—as the sociological gentlemen might or might not say—among the infinite poten-

tialities in the soul of Boston Blackie was lacking the one which would allow him to frisk a stiff. He reached down into his own obscure recesses—a figure somehow suggestive of a rag bag—and sought the potential he needed. And it was not there. He could not do the thing. He couldn't.

With a comment between a snarl and a whimper he dropped the lapel and trundled on farther. Almost immediately he had his reward. He made another find: the article, he perceived, over which he had rapped his shins in his recent flight—a shiny, tan-leather suit case, bulging at the sides and quite hefty.

Luck! Nearly he felt persuaded that he was, that he had been and was going to be, pretty blamed lucky after all. For here, you see, were no limitations. A suit case was fair prize, well within his compass. A suit case is made available to the potentially criminal at owner's risk. And while a suit case may not perhaps contain as much portable and negotiable wealth as a wallet in a dead man's pocket—why, then again it may. It may.

The Wulliver wreck occurred just at the last siding, wholly beyond sight of the little huddle of houses that marks the junction. This is a dairymen's section, where the line runs through miles of rough pasture land still partly wooded and tilled only in rare patches. After the first fence Boston encountered no obstacles to a straightaway course across country. His rush carried him to the trees and, looking back, he could distinguish nothing but the long dim mound of broken cars where fires brightened against the falling night. It followed that he himself had not been followed and that he was safe, with his trove.

He proceeded now with rather remarkable method. Another marauder might have ransacked that suit case on the spot. But Boston had his own pride in conducting such affairs, his syntax for loot. He went on until he had crossed a wide rise among the pines and had dipped into a little sandy hollow that offered privacy. There he delayed further while he collected twigs and built up a discreet blaze against the seasonable chill. And finally he charged a pipe and took care to have it drawing well. These preliminaries are to be noted. They serve somewhat to illumine the subsequent adventures of Mr. Boston Blackie.

All in good order and quite composed to meet the result, he sat himself down at last with the suit case between his knees and drew a pleasurable breath. No man ever quite outgrows the zest of childish games: even such as this Potential Criminal, who was about to indulge himself with a small surprise package. He lingered over the brass hasps and let his imagination savor the ultimate moment of delay.

There might be anything in that suit case. It might be full of picture films, Bologna sausage, fancy vests, pawn tickets, or cigars. It might contain garden seed, folding bathtubs, lingerie, literature, or a file of the Congressional Record. Literally, anything! Though when all was said, he would have been quite satisfied with an outfit of warm clothes and some loose silver in the change pocket. He really counted on that much as he lifted the lid.

Few persons, the philosophers remind us, ever realize one cent on a dollar's worth of dreams. Castles in Spain usually turn out to be shanties in Hoboken or cells in Sing Sing. No warning is more familiar. Consider, then, the notable case of Boston Blackie, to whom was yielded an actual return of something like a hundred thousand per cent on his best expectation. Luck? A man is lucky who finds a nickel!

THE suit case was full of money. Not spare money. Not bonds, nor drafts, nor securities. No paper of the Siamese Royal Bank. Not counterfeit—this is a different kind of a story. Not even those theoretical big bills with monstrously duplicated ciphers impossible to believe. Real, ordinary, palpable, dirty, greasy, manhandled money—so commonplace that almost everybody sees some of it at least once every week, though seldom very much in any one. Just stacks and gobs of money!

Mr. Boston Blackie stared and stared and stared some more. His first emotion was a great fright; his first impulse was to rise and shoot away through space like a rocket with a frantic yell. He saved himself by letting the lid fall to close out that terrific vision. Thereafter he sat perfectly still for a long time.

He noticed that his pipe was out. The mechanical operation of refilling and relighting it put the current of his being in motion again. He eyed the suit case warily. With deliberate effort he broke himself free of a cramp, poked up the fire and got to his feet; played at incredulity and tried to whistle; played at indifference and peered furtively into the shadows outside his little hollow; then walked around the suit case, still eying it. Then turned his back on it and crept away to a fringe of bushes toward the railroad. Spinning suddenly, he charged across the sand like a warrior at a trench, flung himself at the lid, and wrenched it back once more. "Oh, Gawd!" he breathed.

The money was still apparent, still present in gross and in detail—taped up in tight bundles according to value, green and yellow after its kind—prideful \$20's and luxurious \$10's, splendid \$5's, jovial \$2's: down to a friendly Michigan roll of \$1's that would have choked a circus elephant. He took it all to his bosom. He plunged both arms in it as if to bathe himself, as if by some obscure electrolysis he might take on a golden plating from the mere contact with so much wealth.

Presently, however, the reality sobered him. Presently, with a white face and shaking fingers, he began to count.

"Is it all there?"

Boston's lids popped up and his jaw dropped down as stiffly as the mechanism of a china mandarin. For the rest he remained petrified in an attitude highly absurd and helpless, sprawled forward on the sand with the firelight flooding him beyond any concealment and hedged round by piles and piles of currency like a babe surprised at the building blocks. From just across his hollow appeared a young man in short, belted overcoat and plaid cap—an excessively tailored young man who might have stepped from a billboard masterpiece of the season's fashions and who met Boston's stricken gaze and nodded, unsmiling.

"Do you make it right?"

Now obviously there are ways and ways of chal-

lenging the illegal possessor of a fortune. Even in the appalling moment, even then when his dratted luck had apparently turned on him and caught him flat-footed, Mr. Boston Blackie fathomed all kinds of subtle oddities. The young man himself was a very young man with square, pink features and an air of concentrated sophistication. He seemed in no wise troubled at sight of Boston Blackie and the strewn treasure: one would have said nothing on earth could trouble him so long as he retained that manner, which was pictorial as the flare of his collar.

But he fitted no type known to Boston or appropriate to the business at hand: neither detective nor envious outlaw nor outraged citizen. Moreover, he had chosen a most peculiar and suggestive form of address.

"Which wrist shall I fasten the cuffs on first?" or "How many years do you expect to get for this?" or "What bank did you cashier from?"—any of these caustic queries would have suited the situation quite simply and directly. But "Is it all there?" left a lot of slack. "Do you make it right?" opened up mysterious vistas, implied a certain complicity: in a word—meaning anything or nothing—offered a break to spar for wind. And Boston, with desperate instinct, took the cue.

"Yes," he quavered; even achieved something like a grin. "Oh, yes—it's right enough. In fact—quite correct." But the stranger's next casual phrase knocked him cold again.

"Ninety-two thousand?"

Boston could only gasp, for ninety-two thousand was the exact sum he had just estimated!

"Not that I blame you for making sure," continued this amazing young man, abstractedly.

"No," said Boston. "Oh, no-o-o."

"Because you'd naturally get the hide skinned off you to make up any shortage."

"Oh, naturally—naturally," said Boston.

"But you'd get skinned anyway if I told on you for stopping to light this fire."

"Would I, though?"

"Why, it might have been spotted by anybody, you idiot!" explained the stranger from his condescension.

"So it might," agreed Boston.

"Besides, you've kept us all waiting."

"Oh, I have!"

"And his Nobs is in an awful stew. Awful. I've

been back twice to report because you didn't show up. Never mind. Only you'd better get a hop on you now."

To Boston, schooled by the imperious tyranny of events, came no thought of resistance. This talk of "us" and "his Nobs" and shadowy portents that seemed to dominate the mystery from offstage was paralyzing. In his bewilderment he discovered only one blind motive: the will to hang on to that suit case and to keep on hanging on to it to the last permitted moment.

Obediently he began to get a hop by stuffing the money back where it belonged: a king's salary to every fatful.

"Watch out for that barb wire!" warned his guide.

They had been climbing through the dark of an upland pine grove for some minutes. In a clearing at the top of the rise, dim against the evening sky, bulked a house. Boston was well aware that rustic homesteads of logs and field stone are never constructed by the simple countryman, who prefers his Renaissance villa. He needed no one to tell him that the pile they approached was the rude summer camp of a millionaire, with twenty-two bedrooms, and a cold-storage plant in the cellar. It seemed deserted enough now. Doors and windows had been boarded up: the wind piped thin in its chimneys. But when they turned a sudden corner they almost stumbled over a pea-green racing auto with shaded lamps, purring quietly there on the drive.

BOSTON would have hung back. Too late. The able young man merely took his elbow, thrust him up a side porch, whisked him through some invisible sally port and—all with the gesture of conjuring—landed him, confused, breathless, and bedazzled, inside: in the main hall.

"On deck, chief."

Three or four high-powered portable electrics in the shape of hand lanterns were ranged to strike out details of the room with sharp shafts; its polished floor, its rugs of improbable savage beasts, its glaring antlered heads up among the ceiling beams and the group of more curious human faces below.

By the telephone box stood a man fat and silken whose opened overcoat displayed impeccable evening dress. On a divan spread with the skin of a Polar bear—so that she seemed to ride that animal at ease—sat a girl in the snappiest of leathern automobile togs, yellow-haired, dewy-eyed, appetizing: a perfect pip. But neither of these figures filled the picture. Perched behind a table was an (Continued on page 22)

"I know it, mister. We've all got a limit, I guess, and yours is any such rough stuff as you're up against now"

# Letters from the Air

## No. 1: The Flying School

BY LIEUT. J. ALEXANDER BAYNE

PAU, FRANCE.

DEAR DAD:

ARRIVED here this noon and take the train to school in the morning; our permissions are not up until then. In order to reach here on time, though, we had to leave Paris early, so are spending remainder of our time—and money—here. And it's worth it.

This is a wonderful place and the most beautiful that I have seen in France. The town is old, fourteenth-century architecture mostly, and is perched upon a steep hill. In fact, a good part of the town adjacent to the old castle and cathedral is inclosed on two sides by a high arched stone retaining wall. In places this is broken by stairways and terraced gardens. From the castle grounds one looks across the town to the valley, where the commercial and minor resident houses are. A two-branched river winds through it, stone-walled and bridged in places and with an old canal flowing alongside, all ancient and mossy.

I understand the school here is great—fine from the flying end and also as regards living conditions; food and bed are both good, the boys say. So tomorrow, my birthday, I'll begin looping the loop. From here, after about fifteen days, we go to Plessis-Belleville, right near Paris, and wait there until we receive our machine. Then we fly it to the part of the front to which we are assigned. It will be my last leisure—after that we fight.

Finished my transfer papers while in Paris. I'm to sign my demand for release from the French army to-morrow through the commandant of the school here. Hope they hurry; I want the money—also the commission.

If I am exceptionally good here, I'll be recommended for a single-place machine instead of the two-man plane. In that case one is sent to a special machine-gun school, and it takes about two weeks, or maybe a month, to go through that. Hope to get it. I've broken no planes as yet, nor have I gotten in jail. My notes are all good, and my notes on machine-gun construction are very good. I know all about how the Lewis and Vickers guns are built and how they operate. That may help and will if I can get away with the acrobatics here in good form. We also make trips about the country here and fly in "groups" like a bunch of ducks, going through loops, etc., as the chief pilot directs, for all the world like kids playing "follow the leader." Only it's a bit more of a trick. We also make a real altitude test here—go up over 5,000 meters to see if our hearts, etc., will stand the high altitude and sudden changes caused by a vrille or steep dive of 1,000 meters or so. It's quite a strain if the system isn't just right.

This is a fine hotel; we have a bath and single beds and pay but six francs each, a bit over a dollar; also an elevator that only carries the guest upstairs—he walks down. Elevators are rare here, and those they do have are all like that. They are funny little cages that have no attendants and work automatically; you press a button. The town is so near the Spanish border that the people are mixed. Half speak a language the other half can't understand, Spanish, French, Basque, and a mixture of all three. You choose your language and you take your choice.

Well, the boys are waiting for me and asking me what "her" name is and if I'll send their love as well as my own. The Frenchman is sure I'd never write so much to anyone but the girl and absolutely refused to believe I'm not engaged to at least one.

Don't know how much time I'll have here, but I'll do my best to write you whenever possible. Ought to be a lot happening here to write about, the flying stunts, etc. One pupil killed here this morning, they tell us, but some stick is always getting it—once in a while a good man too. Accidents happen, but rarely with a good pilot.

ALEX.

The second of Lieutenant Bayne's letters will be published in next week's COLLIER'S.—THE EDITOR.

# Work or Fight

## What the New Draft Must Accomplish

BY MARK SULLIVAN

WASHINGTON, D. C.—The number of American men between the ages of eighteen and forty-five is 23,498,049. That is the closest available computation of the number registered under the original draft act or subject to the new registration.

Out of this number, just what ones will be selected for the business of fighting, in what order shall they be taken, and how many?

The answer to these questions represents a compromise between the best thing to do and the practicable thing to do. By the best thing to do is meant the thing that the professional military men would like to do, the thing that would put the maximum of physical vitality on the fighting front; by the practicable thing is meant the thing that can be done, having regard for the sentiments of Congress, for the economic life of the country, and for human nature generally.

### Face the Facts

THE best thing to do, from the point of view of fighting the war most vigorously and ending it most quickly, would be to take all the men for the fighting front out of the early ages, say, from eighteen to twenty-six. The military point of view takes account of one thing and one only: that one thing is physical vitality. The professional military man reckons physical vitality as merely one element in war, like powder, cannons, or rifles. He wants the one precisely as he wants the others—the best quality in the greatest quantity. And the place where you get the best quality of physical strength in the greatest quantity is in a young man. Of course the military point of view is the ideal point of view for the business in hand. It is the military man's counsel of perfection. We may not be able to adopt precisely this point of view, but we cannot help recognizing it. If we looked the facts in the face and addressed ourselves directly and exclusively to the business in hand, we would take all our soldiers out of the ages from eighteen to twenty-six. When we do otherwise we are acting upon other considerations—considerations of humanity, sentiment, business, expediency. The question comes squarely up when we attempt to decide whether we shall take a married man of twenty-two or an unmarried man of thirty-six.

There need be no doubt what the military answer

"The country and Congress have realized in a vague way," says Mr. Sullivan, "that ultimately all the man power of the country must be mobilized for war. In the proportion of about one man in the trenches to four men in the factories." Nearly every home in America will be affected in some way by the new draft law. Mr. Sullivan points out some of the considerations which will influence Congress and the Administration.—THE EDITOR.

to that question would be. The military answer takes no account of wives, children, dependents, or other human elements. The military profession is a cold and exact science. Exactness says that the man of twenty-two has the greater strength and endurance; coldness says to admit no other considerations.

But in adopting our selective draft law and putting it into effect, we have admitted the other considerations. It is proper that we should, but it is equally proper we should all know we are doing it, and why. The original form of the law, as it came from the War Department in April a year ago, was based on the military idea. In it the age limits were nineteen and twenty-five. But Congress was shocked at the idea of taking boys under twenty-one. The House at that time changed the ages from twenty-one to forty. The serious reason for this change was a wish to spread the ages out then so as to allow room for generous exemptions to men with dependents, and also to men engaged in farming or other essential occupations. Another reason which actuated the House in raising the limit to forty was a rough sense of justice which made it seem, according to the House point of view, unfair for older men to urge the country into war and then let the boys do the fighting. And there was not lacking a certain amount of malice and indirection on the part of congressmen bitterly opposed to our entrance into the war, or to conscription, or both. Speaker Champ Clark wanted to get all the prowar newspaper men and other agitators into the front trenches.

But aside from politics, there was and is a strong sentiment in Congress against putting men of less than twenty-one actually into the army. When the original draft bill was being considered in the House Committee on Military Affairs, the motion to change the lower limit from nineteen (which the War Depart-

ment wanted) to twenty-one, was carried by a vote of twenty to one in favor of the higher age. That vote was fairly representative of the sentiment in Congress. When, after a year of war, the matter of lowering the age to eighteen came up in the Senate, only nine Senators favored it, while sixty-four voted against it. In the discussion that hung about this issue, many of the opponents of the lower age were vehement. Speaker Champ Clark said: "Why single out boys who are too young to vote for President and representative? They had nothing to do with bringing on the war, and why should they not be of the exempted classes . . . so they may finish their education, thereby fitting themselves for the duties of citizenship?" And Speaker Clark's namesake, Congressman Frank Clark of Florida, was even more emotional. "Some men," he said, "have even stood on this floor advocating the drafting of boys of the age of nineteen and twenty to fight the battles of America, boys who had nothing to do with the declaration of war, who did not bring it about and had no part in it. And yet we will stand here in the Congress of the United States and tear from the families of America young boys to go out and fight the battles of the country. Shame upon a Congress who would do that! It is a disgrace to our American manhood."

### Reason and Sentiment

THIS speech of Congressman Clark is typical of the motives which sway men against taking youths below twenty-one. They are wholly motives of feeling. A congressman who may always be relied upon to go to the bottom of the logic of the matter concerned, and to act upon reason rather than emotion, is Mr. Sherley of Kentucky. He said: "Much has been said about proposing that boys shall do the fighting. . . . If men are to be chosen because of a given age, it is not because you want to make that age bear the burden, but it is because the efficiency of men of that age makes it requisite that they make the first sacrifice."

That is the sound point of view. Having looked upon it, we may decide, for one reason or another, not to act upon it.

It was curious to observe that the senators who favored the lower age were almost wholly men who have themselves been fighting men, either in the

army or in the navy. Senator Weeks, who is a graduate of Annapolis and spent some years in the navy, spoke and voted in favor of the lower age. He made the point that there were five senators in the room when he was speaking, all of whom are veterans of the Civil War, and that their average age when they enlisted was eighteen. Senator Nelson, who is one of the most conspicuous of the old soldiers, was strongly in favor of the lower age. He said that "everybody who has had experience in war knows that a boy from eighteen to twenty-one years of age can render better service, will be a better soldier, and can stand more hardships than one above that age, especially one above the age of thirty." Senator Warren, another old soldier, also took the military point of view. "If we are going to bring this war to a close as fast as we can," he said, "we want the best army we can get; and the best army we can get is an army made up of men starting at eighteen years of age up to thirty-five. . . . Everybody knows that in every army the boys from eighteen up to twenty and twenty-two and twenty-five make the bravest and best soldiers."

But these senators were the exception. The prevailing opinion was overwhelmingly against drafting men below twenty-one. However senators or congressmen might admit that the younger men are the better material for soldiers, they were more strongly influenced by the sentimental consideration. Senator Lodge made the point that to adopt the lower age would empty the colleges, deprive the younger men of an education, and put them under a lifelong handicap. Senator Pomeroy said: "We are not only interested in this war, but we are interested in the things that are going to occur after the war, and we are particularly interested in having these young men given the opportunity to learn their trades and to get their education."

Right there, on the point of giving the youths under twenty-one an education, is where the military point of view and the sentimental point of view, the War Department and Congress, may be expected to come to a compromise. And out of that compromise there is, under the new draft, likely to come a new but related institution, namely, a system of universal military training. (I have used the commonly accepted phrase; the thing that will come, while it will approximate that, may not turn out to be identically the thing that most people mean when they use the phrase.)

Reason, in the shape of military expediency, says: "We want these young men because they make the best soldiers." Sentiment says: "But we are unwilling to deprive them of education and training for trades." Then reason says: "We expect to give them training for a year or so; they will be nineteen, or twenty, or even twenty-one before we actually put them in the trenches." And sentiment replies: "Yes, but you mean military training; we mean training for trades."

#### "Conscription of Labor"

AND out of that, if the war goes on, is pretty sure to come a system which will be either military training as an incident of vocational training, or vocational training as an incident of military training, as you choose to put it. There is throughout the country an earnest body of organized public opinion in favor of universal military training. On several occasions it has been pressed forward in Congress, and on each occasion it has been resisted by the Administration as expressed either through President Wilson or Secretary Baker. But there is good reason for thinking that the Administration has come to a different point of view. Indeed, there has already been set up in the War Department a machinery which looks to taking the new

drafts of men of eighteen, nineteen, and twenty, and putting them, not directly in the cantonments, but in the colleges, where they will be given not only the military training which the cantonments would provide, but, in addition, the usual education provided by the colleges. This provision is for the immediate future. In addition to this, it is under-

Which Tree for War Timber?

stood in Washington that a number of persons who represent the President's ideas are working on a plan for permanent universal training, military and vocational, from the age of eighteen to twenty-five.

So much for the lower ages. As to the upper ages, when the professional soldiers of the War Department framed a bill extending the upper age limit to forty-five, they weren't fooling themselves. They didn't have any idea that men from forty to forty-five would be of much use to them in their ultimate business of meeting German shock troops on the fighting front. Barring the occasional one who has kept himself in exceptional physical condition, men of forty-five have not the snap and resiliency to make acceptable soldiers. The War Department didn't name forty-five for the purpose of any direct effect on the man of that age; they wanted the indirect effect. They didn't want to make him fight; they merely wanted to make him work. They wanted to put him in a position where they could hold the "work or fight" rule over him. They wanted to catch the idlers and those engaged in nonessential industries. They wanted to make them get into industries that would help win the war. They wanted control over all males between eighteen and forty-five, the young and fit ones to go into the trenches, and the older and unfit, or semifit, to go into war industries. That "work or fight" rule of General Crowder's has proved to be very popular—that is, popular among the neighbors of the men caught in it—and extremely effective within the ages where it is already in operation, from twenty-one to thirty-one. It is really an admirable device for mobilizing the man power of the country into essential war industries. There were elements of statesmanship in the conception of it. The chief business of states-

manship, as a French philosopher said, is the invention of new names for institutions which have become odious under the old names. "Conscription of labor" is an odious phrase. "Work or fight" is a popular one. But isn't "work or fight" a mere euphemism for "conscription of labor"? In practice they mean about the same. The country and Congress have realized

in a vague way that ultimately all the man power of the country must be mobilized for war, in the proportion of about one man in the trenches to four men in the factories. Seeing this necessity, there have been various proposals to draft everybody and then let the army officials formally assign the less fit to shipbuilding, munition making, and the like. Senator McCumber, Senator Cummins, Senator France, Congressman Ramseyer, and others introduced various bills for registering everybody from as low as sixteen to as high as sixty-two or sixty-five, the fit ones to be sent to the army, the less fit to be sent to the factories. These proposals were seriously debated, and there cannot be any question that ultimately we should have come to that if a less drastic way had not been found. Doubtless General Crowder and his associates realized that such direct and drastic conscription of labor would have been unpopular, for America is not even yet deep enough into the spirit of the war to realize that these things must be; doubtless also General Crowder and his associates didn't care to take on the appalling amount of routine it would have added to their already burdened shoulders. The "work or fight" rule is a satisfactory substitute. That rule merely says to the individual: "You must find an essential industry and get busy in it." That is certainly more practicable, and probably better in every way than to try to say to a specific man: "You, Jones, must go to work in Smith's factory at seven a. m. next Monday morning." To be sure, the "work or fight" rule will operate only up to the age of forty-five; but the end is not yet. Moreover, this rule is supplemented by the Government's very complete control of labor, through the United

States Employment Service. In any event, we may be sure that when the War Department named forty-five, it was merely for the indirect purpose of making the men of the older ages go into essential industries, and not with any optimistic idea of making soldiers of them. To be sure, Congress may, now or hereafter, surround the draft law with such detailed restrictions as will compel General Crowder to take an unmarried man of forty-five before he takes a married man of twenty-two. If this is done, we may see the bachelors of forty-five wearing uniforms in the fifth or sixth million of our soldiers. But let us not fool ourselves; we shall be doing it not because that is the best way to win the war quickly, but because of humanitarian and social considerations which have nothing to do with killing Germans. Of course these older men will all have to register. If the present plans are carried out, and after they are registered some of them will be drafted, and of those that are drafted some may find themselves, in the course of time, in the trenches. But the underlying idea is not to take these older men as soldiers, but merely to get them into essential industries by enforcing the "work or fight" rule against them. As General Crowder expressed it, rather naïvely, "I think the effect of additional registration will be to recruit industry up to the point where there would be no shortage of industrial man power."

Of course, from thirty-two to forty-five is a wide range, and what may be applicable to forty-five may not be applicable to thirty-two or even thirty-three. We must have more soldiers. We must have them right away. Right now, in this present month of September, we are at the bottom of the bin. We have exhausted what is called Class 1, that is, men of twenty-one to thirty-one. (Continued on page 21)

# The Loan of a Lady

BY WILLIAM ALMON WOLFF

ILLUSTRATED BY ARTHUR WILLIAM BROWN

TO say that Carthew did not notice the young woman who occupied the opposite chair would be misleading. It would be, moreover, an entirely unwarranted reflection upon his good taste, his judgment. She was, emphatically, the sort of young woman one notices. And Carthew, at discreet intervals, had taken note of her, had been taking note of her, indeed, ever since the train had drawn out of Washington. He had hoped that she might want her window opened; had rather feared she might, too. He remembered a time when a young woman, also not without some pretensions to good looks, had wanted a window opened, and he had sprung to serve her, and then hadn't been able to open the window. . . .

In this instance, however, the ventilation, obviously, was satisfactory. And the lady dropped neither handkerchief nor glove; there was about her nothing to indicate that she would welcome the proffer of a magazine or a newspaper. She was absorbed, indeed, in her book; if she, in her turn, had noticed Carthew at all, it was plain that her interest was not overpowering. Something about her shoulder, about the tilt of her head, made that plain to Carthew, to his regret.

But his regret was not so keen as it might have been. He wished he knew this young woman, to be sure; there was something about her pleasantly suggestive of a pretty wit. And he was disposed to talk. But that was all. The books, the magazines, he had with him were failures for his purpose; they bored him. There might be people he knew on the train; there were reasons why he should not seek them out. But he was restless; he wanted to move about.

The young woman moved her hand—her left hand. A diamond flashed upon a significant finger.

"Oh, of course!" said Carthew to himself with a certain bitterness, and went off to smoke a cigarette.

HE reflected, morosely, upon the folly and stupidity of the conventions by which the world is bound. Take this girl now. She was engaged. All right. What was that to him? Why should the fact that she had promised to marry some chap, some time, if she didn't change her mind, make her so infernally stiff now? He knew, really, that this was both unfair and unjust. This was not the sort of young woman to want her window opened, whether she was engaged or not. But, then, he had no designs upon her engagement. He had no desire to cut out the other chap. He just wanted to talk to some one—specifically to this engaged young woman—for part of the slow trip between Washington and New York.

"Oh, damn it!" he said to himself, at last, and went forward to the dining car, and stood for an hour in the narrow passage next to the kitchen and a gentleman who hadn't obtained the contract for which he had traveled to Washington and was convinced that the Administration was corrupt and that the war was as good as lost. This person talked at great length to a sympathetic friend. But just before it was Carthew's turn to pass into the car the contract man said something so outrageous that Carthew turned to him

and said, very pleasantly: "That is a lie, and you knew it was a lie when you said it. Please don't repeat it."

The other man gasped, and so did all who heard Carthew, because, of course, that sort of thing is not done; people only think such things; they never say them. The little episode raised Carthew's spirits somewhat; he did better for dinner than he had thought at all probable. And he smiled a smile that was almost paternal when he saw the young woman, alighting, greeted by a first lieutenant of infantry, who kissed her so awkwardly that it was plain that the privilege had not long been his.

"Lucky chap!" Carthew thought, and began to wax sentimental over his own estate. "Good-looking girl, that! Wonder who she is?"

HE wasn't likely to find out. But her looks deserved his tribute. A tallish girl, she had hair distinctly red, cheeks sanely tanned, eyes that, when they chose, could sparkle. Her nose was straight; her mouth a curious thing, designed for smiles and laughter. There was something intriguing about

had happened to present him to this young woman, had he chatted with her at intervals all the way from Washington, he would probably regard with complete equanimity her departure, in company with her first lieutenant, for Jericho and points east thereof! His present not unpleasant state of mind would have been diagnosed easily enough by Mrs. Rousome, his sister.

"He'll sigh like a furnace over an engaged girl!" she had been heard to say angrily. "But he won't let her know it! There might be some hope if he would. Engagements are broken, you know. But he isn't interested unless a girl's reserved. I suppose he'll fall in love with some married woman before he's done!"

She admitted, really, that that was unlikely. But her annoyance was quite genuine. She felt that Carthew's continued and reasonably happy life as a bachelor was in some measure a reflection upon herself. Carthew refused to see this, and continued, more or less by design, to avoid the society of eligible young women without encumbrances.

He didn't expect to remember the young woman of the train when he woke up next morning. But he did; he thought of her, indeed, as he awoke, and found no difficulty at all in reconstructing her image as he lay and stared up at the ceiling of his hotel room. He frowned, sprang up, and took a shower.

"This won't do!" he said as he rubbed himself dry.

For he was still thinking about her, still regretting that things were as they were, and that he was so very unlikely ever to see her again. That was just before eight o'clock. And he saw the young woman, as a matter of fact, just before half past two that afternoon; saw her, and recognized her at once, although she had changed her attire from head to foot since the night before—a fact which he resented, illogically. He recognized her and her first lieutenant—oh, yes, he was with her!—and he stopped, and stared, and he was sure that the young woman's eyes flickered as they fell upon him.

HE stared no more than a moment. He was favored by chance, for this encounter took place upon the pavement of Fifth Avenue, before the New York Public Library. Beautiful ladies were selling Thrift Stamps and begging shamelessly for the Red Cross, and doing other seemly things, patriotic things, in a manner to justify any young man in stopping, as Carthew had stopped, and in removing his hat, as Carthew had done, and touching his forehead with his handkerchief, as he was doing. Even a newly betrothed first lieutenant of infantry could have had no excuse for resenting Carthew's conduct or his manner or the movements of his eyes.

The truth was that Carthew wanted to think. Rather unusual things—things, indeed, quite extraordinary—had been happening to him, in a manner precipitate and bewildering, since he had sat down at breakfast in his hotel.

He was walking down Fifth Avenue when his encounter with the young woman of the train made him pause—but he was walking, not upon the hot pavement that served the rest of his fellow strollers, but upon mined ground. (Continued on page 24)

"You are probably the one lady in this city who can help me"

this lady; he could not deny it, or the faint regrets with which his envisaging of the diamond upon her finger, the first lieutenant of infantry at her side, were tinged.

And at the same time he knew that if some one

## THE NATIONAL WEEKLY

SEPTEMBER 7, 1918  
VOLUME 43 NUMBER 36

### Smashing a German Delusion

A WRITER in a famous German newspaper, the "Vossische Zeitung," tries to comfort his readers by saying that this war "for the Fatherland, freedom, honor, and independence" can be won only if dark days strengthen the German determination to hold out—but also expresses some fears of "the fresh Americans with their unbroken nerve." The correspondent of the Berlin socialist newspaper "Vorwärts" reports that even the most "superficially trained" of the American recruits now boast an equipment "excellent throughout"—and that it is the "consensus of opinion" of German troops at the front that "the fighting value of the American soldiers should in no wise be underrated." The German thus confesses the failure of the "Kaiser's Battle." So far it is not in our numbers in the field that we have most assisted—let us be proud of the quality rather than of the numbers of our men. To quote a private letter from a second lieutenant on the firing line: "We all believe the Allies are holding the line awaiting America's storm troops for the final wind-up. It seems to be conceded that the boche can only be whipped by aggressive sweeping drives, and to-day only America is capable of such spirit and power." But in 1792 there was fought at Valmy, within the present war zone, a battle on the date when France first called herself a republic: a battle won by KELLERMANN against the Prussians and Austrians with levies of new troops who "found that they could face cannon balls, pull triggers, and cross bayonets without having been drilled into military machines and without being officered by scions of noble houses." They had the spirit we like to think animates our army to-day, awaking "to the consciousness of their own instinctive soldiership." Compare with these words, spoken many years ago, the words of FOCH: "The new kind of war has begun—the hearts of soldiers have become a new weapon!" GOETHE said of the defeat of his fellow Germans at Valmy that "from this place and day commences a new era in the world's history." That battle made possible the development of democracy in France, and its spread; the new Valmy is another world birthday, for it makes possible the survival and perfection of the democracy for which KELLERMANN fought with his half-trained recruits.

### Soldiers at School

SENATOR REED'S proposal to amend the Man Power (i. e., Draft) Bill, and provide for two years' full schooling for soldiers under twenty-one, is one more sign that even the politicians realize duties and deserts are not wholly independent of one another. The War Department's program has called for the instruction of tens of thousands of soldiers in United States army training detachments before the end of next June; the department counts on graduating 50,000 soldiers monthly from its two months' courses in essential trades. These courses, in subjects of military value, will be given in 110 institutions. Last month about 50,000 men were under instruction for overseas service; nearly 20,000 of them being taught automobile mechanics, 15,000 of them automobile driving, more than 2,000 blacksmithing, 4,500 carpentry, 3,000 electrical trades, and the rest engineering and mechanics, radio operation, cobbling, etc., etc. The war is taking thousands of boys away from school—also, it is schooling thousands.

### Historical Footnote

THE question became sufficiently acute last month to receive the official cognizance of the chief of staff at Washington. "If there is one thing that the American soldier dislikes in France," said General MARCH to the newspaper men, "it is to be called a 'Sammy.' Nobody seems to know just how the term started, but on seeing the strong, virile men from here over there, the British rejected it at once, and they call the American troops 'Yanks.'"

Of course it should have been Yanks from the very beginning. Yanks from South Norwalk, Conn.; Yanks from Birmingham, Ala.;

Yanks from Milwaukee, Wis. "Yanks" has the sound and the fitness of things, and "Sammies" is an incubated monstrosity. But it is precisely at the beginning of our experiences over there that this artificial, lisping cognomen was out of place. After the Ourcq and the Somme it no longer matters. The men who broke the Prussian Guard could very well afford to be called Sammies, or Percys, or Goldielocks, or anything similarly and exquisitely tender in the style of FLORENCE BARCLAY.

### The War and German Trade

THE economic condition of kaiserdom ten years hence is anybody's guess, but, meanwhile, a few facts can profitably be noted. Germany's prewar trade no longer exists. She has lost her best customers—Great Britain, France, and the United States; she has lost also the means of reaching them, for not a German merchant ship is now on the seas, and the French frontier is littered with German dead and closed to the living. The furs of Alaska and Canada no longer go to Leipzig to be manufactured. Australian zinc and other metals are freed absolutely from the control of Hamburg and Frankfurt. Dyes are now made in huge quantities in this country and in Great Britain. Alien enemy property is now being rounded up throughout the entire United States. What German interests have already encountered and now suffer most heavily under is not economic discrimination, but economic destruction and exile. The tremendous commercial apparatus by which the Kaiser's group were conquering the world in time of peace now exists only in shreds and patches in a few of the countries not yet at war. No peace treaty imaginable can put the Teutonic powers under so blasting an economic curse as that now imposed. Will it continue? We do not know, for history shows that, in the long run, men will trade if the prices are right; but we do know who will have the final say. It will not be the politicians or the publicists, but the successful business men of ten and twenty years hence, most of them now enlisted under one or another of our Allied flags.

### Foch

IT is "Marshal FOCH" now. So be it. FOCH has earned that title, even as JOFFRE earned it. And as JOFFRE was the supreme defender, so may FOCH prove master of the decisive blow. In every Allied nation, and, increasingly, in neutral and enemy countries, men are conscious of the power in FOCH, and behind him. Not many weeks ago the German press was conducting a campaign directed against FOCH—a campaign so pervasive and organized that, obviously, it was inspired by the German General Staff itself. General VON ARDENNE published three columns in the Berlin "Tageblatt" headed: "General Foch in the Judgment of His Countrymen and Contemporaries." The Berlin "Lokal-Anzeiger" entitled its article on FOCH: "More Blood-Letting." VON ARDENNE went to the length of asserting that "English critics" had dubbed FOCH "the commander without initiative." The reply to such articles was—the larger counteroffensive of August: thus far the greatest Allied victory of the war.

But there is something to be learned even from German press campaigning against the French generalissimo. It is that we must be forewarned against the next German trick, which, very possibly, will be a campaign against FOCH as a waster of American lives. As our troops in France attain larger numbers, and as they reach readiness for the trenches or open battle, we must expect them increasingly to bear the sufferings and losses along a line where France and Britain were bleeding long before the United States knew this war at first hand. German intriguers will seize upon the new phase, and will try to persuade Americans that their sons are being ruthlessly "sacrificed" by FOCH. We shall read of gains made against Germany at a fearsome cost in American casualties, and the marshal of France will be portrayed by our tender enemies as contemptuous of those casualties, since they are not French.

But no such cabal can impose on us, or develop between America

and France jealousy and suspicion. It will be as stupid as the lie of German General VON ARDENNE that "English critics" named FOCH "the commander without initiative"; a lie intended to create friction and jealousy between Britain and France. Words will not win the victory for us—but neither can they be permitted to defer the victory or to make it more difficult. And nothing must tempt us to sacrifice that unity of command which is one of the basal conditions of victory. "Foch is the Grant of the Allied armies!" declares one of our friends. However that may be, he is commander in chief of a united army.

### John Bull's Way

WE Americans take unbounded interest in our air plans and unbounded pride in the deeds of those of our airmen who are already flying in France. Neither our zeal nor our pride can, however, blind us to the achievements of our allies in this element. We know it when D'ANNUNZIO leads an air squadron to Vienna and bombs that capital with pamphlets; we know the prowess of the French airmen; but anonymity veils the British pilots even as a blue mist. It is a policy of this ally to avoid publishing the names of her air champions; thus a London newspaper tells of one airman "who has shot down twenty-five German machines in the course of a single month, bringing his total victories up to seventy-five"—all without naming this ace of aces. Other Britons have over fifty machines to their individual credit—and don't even call themselves "heroes."

### A Literary Note

THE last time KARL ROSNER, the Kaiser's prose laureate, was heard from he was telling in the Berlin "Lokal-Anzeiger" how WILHELM "watched the opening of the latest German offensive from a post north-west of Rheims." KARL ran on:

The Emperor listened to the terrible orchestra of our surprise fire attack and looked upon the unparalleled picture of the projectiles raging toward the enemy positions.

The Emperor, who desired to participate in the battle from its very beginning amid his fighting troops, went during the night of July 14 to the region of the impending battle and spent the night in an advanced observation post.

A few minutes after our attack, which burst forth at 4.50 o'clock, he had in his hands the first reports of good progress. Until nightfall, denying himself a minute's rest, he stayed with the troops and remained on the battle field, facing the contested ground, all day—a day which brought new and fine successes on the Marne and southwest of Rheims.

We have had samples enough of the Karl-Wilhelm-Victory Style. What is wanted now is an account by KARL ROSNER, in his habitually restrained style, of how the Kaiser acts during avowed defeat. Does he, like BONAPARTE at Moscow, issue a bulletin saying "The Emperor's health was never better"? Does he play pinochle with his sons somewhere in the rear, or does he pick Black-eyed Susans and weep at the thought of heavy German casualties, as when he mourned over the "fate" of poor, proud, willful France—exploited by JOHN BULL and now by UNCLE SAM?

### Most Alarming

AT the risk of starting international complications, we feel it our duty to announce that a man with an unmistakably German-sounding name (to wit, E. SCHNEIDER) is not only now intrusted with duties of vital importance to the Allied cause, but is being even further honored abroad. Our jazz patriots will be horrified to learn that this EUGENE SCHNEIDER runs the great French gun factories at Le Creusot and is also president of the Iron and Steel Institute of Great Britain. What does this mean? Well, among other things, it means that a man's name is not the whole story. Gossips ought to sit up and notice the case of E. SCHNEIDER.

## A LETTER FROM FRANCE

(From a six months' veteran of the U. S. field artillery)

DEAREST MOTHER: A bunch of mail came in yesterday. And your letters are magnificent! Wonderfully cheerful and encouraging and full of your love! It's great, when a fellow's all in and cranky, living on his nerve, to get them.

I must spring the news on you: I am a wheel driver, which is a responsible job on account of your being responsible for the turning of the caisson or the stopping of it at the right moment. I have my two horses, Lizzie and Teddie, to take care of, and it is by far a better life and more exciting than being a cannoner. I love the horses and the work. We take it pretty easy all day and snake the ammunition up at night. Fritz was hopping a few over last night, but they all landed at some distance. But maybe our artillery wasn't making the woods roar! As far as you could see the sky and woods were lit up by flashes. My horses didn't need any spurring on!

Pulling out of our last place, we heard the rumor: "Rest billets near Paris." Our train even stopped in a big town only three miles away. We nearly went into hysterics at the sight of civilization; everybody cheering and the girls throwing kisses at us. Then the train backed up.

"Well, boys," I said, "it's a switch-off and another trick at the front." Sure enough! Did our spirits fall? Only for a second. That isn't the Yank spirit. Proud! That's our middle name; proud of our battery, of our regiment, of our division.

We live in the woods, and sleep under a 'paulin stretched between trees, with faggots and straw for a bed. In our last sector there were some Italian troops, and nearly every evening when I was at the echelon I went over to their quarters. They are certainly a wonderful bunch, and sing! Gee, maybe they can't sing! I sat there after dark and sang with them. The tears ran down my cheeks, I was so dog-gone happy. Some day, mother, after I get home, I'll cross the water to Italy, not to fight, but to enjoy the beauty of the place, and you will be with me, as you always will be after this war.

JOHN.

P. S.—Boost the Salvation Army!

### Our Metropolis

ON December 30, 1917, the official temperature recorded by the New York Weather Bureau was 13 degrees below zero, while on August 7, 1918, it was 102 above—a variation in eight months of 115 degrees. Duluth may have a colder climate than that, Brownsville may have a hotter, and Los Angeles an even one; but its sons will back New York to produce more assorted varieties of climate in a given period than any other city in the world.

### Not Propaganda

SOMETIMES we wonder if perhaps it wouldn't be a safe rule to read new books only several years after they come out. Possibly this idea is one more sign of middle age. We applied it, anyway, to MAX BEERBOHM's burlesque romance of Oxford: "Zuleika Dobson." It is seven years since "Zuleika" appeared. It serves no purpose except to lash a few absurdities, and have fun in and out of school. We love the page where, when the Duke of Dorset asks the girl some question about the love thoughts of the Greek pastoral poets and the Elizabethan sonneteers, she replies that she has never read them: "You will think me lamentably crude: my experience of life has been drawn from life itself." "You cannot make a man by standing a sheep on its hind legs," runs another passage; "but by standing a flock of sheep in that position you can make a crowd of men"—a generalization worthy of GUSTAVE LE BON. We like the passage where, in mockery, the author compares the moon to "a gardenia in the night's button-hole"—and then protests against himself, and asks: "Why should a writer never be able to mention the moon without likening her to something else?" It is a sage remark on MAX's part (or did MICHELET really say it first?) that "it is easier for a woman to change her opinion of a man than for him to change his opinion of himself."

### Who'll Censure the Censor?

THE censor's job may not be so wearisome, physically, as the infantryman's in the trenches, nor has it so high a mortality rate as the machine gunner's, but even cen-

sors grow tired. Our censor in Paris, or perhaps the French one, cut out a place name (three out of four times, that is) in the following item clipped from the "New York Herald" (Paris edition):

POOR GET 8,000fr.

FROM ADMIRAL WILSON

Sunday.—Admiral Wilson of the American fleet has sent the mayor of a sum of 8,000fr. for the poor of the town. This is the second gift made by Admiral Wilson to Brest charities.—Petit Parisien.

Of course, part of the point here is that everyone at all interested has known for many months that the American naval officer is not an unfamiliar sight to Brest! But the most amusing example we've seen of the censor letting it slip by in one line but ruthlessly cutting it out of the other occurred in the periodical "L'Automobile aux Armées," where an article from "Motor Age" was reproduced in the English and, in a parallel column, in French translation:

LES ETATS-UNIS ONT AVIA-  
TEURS DISPONIBLES

U. S. HAS 80,000 AVIATORS  
AVAILABLE

WASHINGTON, 2 février.—avia-  
teurs entraînés ou presque entraînés  
sont disponibles à présent pour la  
flotte aérienne américaine.

WASHINGTON, Feb. 2.—Eighty thou-  
sand aviators, trained and nearly  
trained, are available now for the  
American aviation fleet.

"And so," comments a Paris newspaper ("L'Œuvre"), "only French readers won't know the numbers of available American aviators—that is, unless French readers know the mathematical value of the figure 8 followed by four zeros. . . ."

# The Flying Fish

BY ARTHUR SOMERS ROCHE

## Chapter Nineteen: Wrightson Talks

ILLUSTRATED BY F. R. GRUGER

WRIGHTSON twisted uneasily in his bed. His wound was not dangerous, hardly serious, but it was extremely painful, and, in addition, the man was suffering mental agony.

"It isn't, Mr. Morley," he said, "a personal matter at all. I wanted to do my bit. I'm not physically able to fight, and—to be unable to fight and yet help my country—it isn't the sort of thing a man can talk about."

"Buck up, Wrightson," advised the newspaper man. "It isn't as bad as all that, you know. The machine can be rebuilt."

"After months," groaned Wrightson. "I was so careful—too careful! For I kept only one copy of the plans, and those always on my person. Had I had others, in some vault— But, you see, I must do my calculating all over again. And one can't carry intricate formulae in one's head. If Munoz—"

"Tell me about him," said Morley.

"Almost a foster brother," answered the inventor. "He was a year or so older than myself. Went to school with me until it came time to go to college. Then he rebelled at school. My father had taken a fancy to him, and I had always been fond of him. He had no parents, was starving on the beach in the Azores when father picked him up on one of his voyages. A bright chap, and we wanted to do well by him. But there was no use in forcing an education upon him that he didn't want."

"He shipped as coal passer on a tramp. We lived in Maine, on the shore of Penobscot Bay, and the sea, of course, was in his blood from his island birth. He was gone five years. Then, one day, about a year ago, he turned up at home. Father was dead, and I was 'haching it' down at Seaport."

"I had a little money; very little—enough to support me and enable me to buy supplies for the various minor inventions on which I worked. I really had not enough to support Munoz, but to my surprise he seemed to have developed in the years he had been away into a different man from the harum-scarum youth I had known and loved. To my sur-

prise, instead of being extravagant (in boyhood when he earned a dollar he squandered it ten minutes after receiving it), he seemed to have been saving during the years he had been away. He decided, hardly consulting me in the matter at all—despite his physical and mental agony, the inventor smiled faintly—"to settle down with me and be my assistant. To my great surprise, he had managed to apply himself considerably in the five years that had passed. He had an extensive knowledge of mechanics. I could hardly have asked for a more ideal assistant. He demanded no salary, it being understood that, if any of the things on which I worked were successful, I would pay him then."

"Had he become a chief engineer?" asked Morley, more for the sake of filling in a pause while the wounded man writhed in his bed than for the information he hoped to gain.

"That's the surprising thing about it. He lacked book knowledge. He was a practical man, knew machinery, but knew little of the theories of mechanics. That was why, knowing that he held no engineer's certificate, I wondered at his savings. His wages could not have been very great."

"How much were his savings?" asked Morley.

"That I never knew definitely. But once, when some dividends due me were delayed, he advanced me fifteen hundred dollars."

Morley smiled. "To have saved that much in five years—"

"But he had much more than that. I know, because when I demurred at taking all his savings, he laughed at me, and said that there was lots more behind the fifteen hundred."

"And you never thought anything of that? Didn't think it odd?"

Wrightson colored. "I—I've been a dreamer, Mr. Morley. Unpractical. I should have known, of course, that Munoz's wealth was unreasonable, but I've been always thinking invention, invention, and—it's clear enough now what I should have done. But it's too late. He's dead, and the plans—"

"Wait a bit," advised Morley. "You mustn't get excited now, Mr. Wrightson. We may get those plans back. When do you think Munoz took them?"

"We may be doing him an injustice," said Wrightson. "But"—and he shook his head—"no one else could possibly. I had them day before yesterday. I know that because Munoz came to my room while I was putting them away in my breast pocket. I was transferring them from one suit to another. I left the room for a few minutes to shave. When I came back Munoz was still there. I trusted him. Why, he was almost my brother; he had loaned me money."

"Easy," said Morley gently. "Don't think about Munoz as some one you knew. Just think of him as a person. Your plans might have been stolen then?"

"Only then," declared Wrightson. "I remember patting the pocket in which they were. They were there. At least," he said bitterly, "the substituted plans were there. But there was no suspicion in my mind; I never examined them again. But the coat containing them had been in the room with Munoz."

"They weren't the substitute papers, you're certain?"

"I'd been going over them. They were the real ones."

"And since then?"

"I slept that night in a room by myself. The wallet containing the plans was under my pillow. No one could have picked my pocket the next day and substituted false papers. Munoz took them, Mr. Morley."

Morley nodded. "His absence? Did that surprise you?"

Wrightson looked sheepish. "Mr. Morley, on the eve of a great event a man thinks only of himself. My moment of success was at hand. I'm naturally extremely nervous, and I like to be alone a great deal. Munoz had asked permission to go into town to fill a prescription. I gave him permission. Then I dismissed him from my thoughts. I was tremen-

dously excited that night and the next day. There was no reason for Munoz to see me, no reason for me to see him. I did not examine the *Flying Fish* all that day. I knew that it was all right, and I wanted to compose my mind. It meant more than triumph, Mr. Morley. It meant triumph for my country, and—"

"That will come, Mr. Wrightson," Morley assured him. "You mustn't worry. You must get well, start in again. Tell me, can you recall anything else that Munoz did that was suspicious—that might seem suspicious, now, in the light of what has happened? Any friends of his that you know of?"

Wrightson slowly shook his head. "When I came to New York to meet Mr. Penlow I took Munoz along. The day that Mr. Penlow agreed to finance me, I told Munoz. Two days later he disappeared for forty-eight hours, and when I questioned him he said that he'd been visiting some old friends. I was not his keeper. There was nothing in that to arouse suspicion. I thought that he had been on a bit of a tear perhaps, but that didn't prevent him from being my good friend and faithful assistant. I asked him no questions. I never met his friends, never met anyone who knew him save those people at Seaport who had known him during boyhood."

The inventor leaned back on his pillows. "I'm afraid I've been an ass, Mr. Morley, but I can't help it now."

"Just a bit more," said Morley. "The substituted plans: have you examined them?"

Wrightson nodded. "That's another surprise. I thought at first that, although they were not the plans drafted by me, they were exact copies. At a glance that seemed to be the fact. But an examination proved otherwise. The copies were meant to deceive me, and unimportant details were copied exactly. Except for the attack, I might not have examined them for weeks. Now, Munoz had not enough scientific knowledge to have varied the plans so cleverly that nothing short of a careful study of them would have shown me that they were false. Another thing, my handwriting was imitated so exactly. Munoz could hardly have been a forger too."

"But some one else could have been," suggested Morley.

"But not of my workmen. I know their limitations too well."

"Couldn't Munoz have sent the plans to be copied?"

"He'd hardly have dared risk my examining them. If he'd done that, he'd have done it a little at a time."

"Well, why not?" asked Morley. "Why couldn't he steal a page at a time? Day before yesterday was not the only time he had access to them, was it?"

"I suppose there have been a dozen occasions—more—when he's been alone with them," admitted Wrightson.

"And he could have taken a page, had it copied exactly, also had it copied with variations, and yesterday, when the time was ripe, substitute for the whole mass the bunch of near copies. That's what he did," announced Morley.

Wrightson smiled wanly. "Except for one thing, your reasoning is correct, and that is this: Not one person, not even Munoz, not even myself, has left this estate since work began, until day before yesterday when, work completed, I let Munoz go to town. Further, Mr. Morley, not one of the workmen, Munoz included, had sent or received a bit of mail that hasn't been carefully scrutinized. They've been under strictest guard. How could Munoz have sent out the stolen sheets?"

MORLEY smiled this time, but wryly. "That's for me to find out, Mr. Wrightson. But that's the way it happened, I'm sure. They got the plans little by little. They bribed or threatened Munoz into committing treachery. When the machine was ready for demonstration, and you were without plans—then they struck. They destroyed it. And, Mr. Wrightson, you didn't have time to attack the invaders, did you? And yet you were singled out and shot. You and Penlow—the brains and the money. So that you couldn't build another. Well, you will build another. And in the meantime"—he rose and smiled at the wounded man—"you leave the matter to us, and get well and to work."

He left the room, the room at the end of

a wing of the great mansion. He stood a moment in the corridor outside, staring at lawns that sloped away to woods, and beyond the woods at the rolling Westchester hills. He turned away, but as he did so his eye fell upon one of the great barns that housed the blooded Penlow cattle.

Cattle; they meant milk. And beyond were huge hen houses. They meant eggs. And last night he had been closeted with Colroy and Flynn until almost dawn. And they had sweated the clerks of the Birmingham—not that they suspected them, but that their memories might be jogged.

One little thing, that had seemed meaningless, now became important. They had told of McCord's mania for fresh eggs. And the girl, Leila Kildare, had telephoned, after she and her uncle had left, asking what express company had delivered those eggs. Flynn had promised to look into that angle of the affair. Meaningless as it had seemed at the time, nevertheless Colroy and Flynn and Morley had realized that the most inane "leads" sometimes furnished the most important results.

But to Morley, now, as he looked at the Penlow farm buildings, the matter of the eggs took on tremendous meaning. II— But he would dispense with ifs until he talked with Flynn.

IT was an excited lieutenant of police with whom he talked. For Flynn's men had already been to the express office and learned that McCord's eggs had come from the Penlow farm.

"On-the-level stuff too," asserted Flynn. "I know Penlow ain't been sellin' anythin', but—those eggs came from there."

It was one hour later that Morley left the Penlow estate, after visiting the wounded multimillionaire and assuring him that every effort was being made to trace the marauders of last night. And he had come into information that seemed the more important because it was so tantalizing. For an employee of the Penlow farm, confronted by an agent of the express company, had admitted that Munoz had bribed him to express packages to New York. And those packages had ostensibly contained eggs from the Penlow farm, and they had been addressed to Curzon McCord at the Hotel Birmingham!

It was clear now how Munoz had managed to send bits of the plans. Those packages—perhaps one of the eggs in the packages—had contained the bits of paper so vital to America. But this

much remained unsolved: if Munoz was an ally of Harmon Rayde, why had he been killed? That, however, was but another link in a seemingly endless chain of entanglement. It was not a time in which to ask why. Reasons did not matter; results were what counted. Munoz was dead. He no longer counted. That untold millions of other dead might not litter the battle fields of the world was Morley's hope now. To realize that hope, he must find Harmon Rayde.

## Chapter XX: On an Island

"LEILA, leave us," commanded Curzon McCord. Endicott's muscles stiffened, but the girl threw him a cautioning glance. He relaxed. After all, there was nothing that he could do. The house swarmed with McCord's henchmen; Endicott was unarmed; McCord carried a revolver. Not that Endicott feared either the revolver or the henchmen, but, alive, there was always the possibility that he could aid Leila. Dead, there was the certainty that Leila had not a soul on earth to protect her from McCord. Except Sam Whitney, of course, but if Endicott were slain Whitney's death would follow as a matter of course. So Endicott believed, at any rate.

He watched the girl's graceful form as she left the room. She was a tramp! Most women, reared as she had been, would be hysterical. That is—he corrected himself—women would have been expected to be hysterical a few years ago. But times had changed. Not their advance in political power, not their education, but the war had changed them. The war, with its demands upon them, had made a different breed of women, had brought out in them the capacities that a modern civilization had permitted to lie dormant.

But the war had done many things; it had brought out in mankind an evil that had lain dormant. Whole nations had become infected with the poison of power, had struck in the night at unsuspecting friends.

He could feel impersonally toward McCord now, though he knew him to be not only a murderer, but a man who planned the destruction of his country. For McCord symbolized an attitude of mind, the attitude of the will-to-power. Endicott could almost feel a pity for the nations and individuals who had caught the infection. (Continued on page 35)

"Leila, leave us," commanded Curzon McCord. Endicott's muscles stiffened

# Business in War Time

## No. 10: Getting Into Step with Your Uncle

ON May 28 the Americans went over the top at Cantigny to achieve their first victory of the war.

And with the coming of that electric news to us on this side of the water, a new spirit awoke in us. We felt—perhaps some of us for the first time—that we were actually in the war—knee-deep, waist-deep, irrevocably in, irrevocably committed to victory for American ideals of fair play and freedom of life, no matter what the penalty or the sacrifice.

At that news, the epicure who petulantly and with distaste broke the gray war bread at the restaurant table ceased grumbling, was a little ashamed of his grumbling; at that news, the young lady who had fretted because her ice-cream soda was not as sweet as it used to be, smiled with chagrin at her own impatience—and, at that news, the business man who had chafed and protested under the restriction that the War Industries Board placed upon his trade, threw back his shoulders, looked the world square in the eye, and decided to get into step with Uncle Sam.

But as we look back upon the stormy business year that has just passed we see that the business man who chafed and protested was the exception and not the rule.

Nearly all businesses, big and little, were ready enough to get into step. At first there was a little awkwardness, a little stumbling, because it was not always clear just how and why one had to get into step. But that period has passed.

And from the very beginning not only did most businesses fall into line but they met the situation—they rose superior to the obstacles—they not only met Government requirements but they met them and readjusted their business to them so that they could sail along on a more prosperous course than ever.

Take as an illustration the paint and varnish industry. Particularly in relation to the automobile industry. Automobile production was curtailed and some of these paint and varnish manufacturers found one of their most profitable markets shrinking—that of supplying paint and varnish for auto-

mobile bodies. Furthermore, even second-hand painting—the painting of the used car—showed a falling off because of the shortage of men to do the painting.

In this emergency, what did the paint and varnish manufacturers do? Chafe and grumble and protest? Not a bit of it!

Here is an account of what one of them did. He started an advertising campaign to get owners of automobiles to do their own painting. And at the masthead of this campaign he flew the

slogan: "Your car needs paint, but the Government needs the painter."

Of course, the painting was not as good as the professional painter could do it. There was no attempt to suggest it. As the advertising manager of the concern told us, "It was just like brushing up a suit of clothes instead of buying a new suit." The whole idea, as the slogan tells you, was to get the car owner to do his own painting, thus releasing the professional painter for Government service.

This campaign was a splendid success. Owners of some one hundred thousand cars were persuaded to repaint their own cars. Thus the paint manufacturer created, through his own initiative and ingenuity, a legitimate, war-time market for his product and, in doing so, induced car owners to use their own spare time for repainting their cars instead of calling upon the labor of professional painters. Two-and-a-half million hours of productive time were thus saved.

And the way this representative paint manufacturer got into step with Uncle Sam's requirements is typical of the way the industry as a whole got into step.

The Government has every desire to encourage business. But we all of us have one supreme business just now: the winning of the war. That business has certain

requirements which must have primary consideration. But after they are met, the Government wants you to carry on your own business, wants you to prosper, wants you to devote the very last iota of your energy to going ahead under full steam. Call upon your courage! Muster up your ingenuity! Despite restrictions, despite handicaps that are necessary, there is a way out for you—just as there was for the paint manufacturers. Make your business fit into the Government requirements—and then push the lever on to high. That's the best way, just now, to get into step with your uncle.

# The National Weekly Work or Fight

Continued from page 16

who are without dependents and not necessary to essential industries. Having exhausted that classification, we must answer at once the question of what next? Shall we begin to invade the deferred classes between twenty-one and thirty-one, or shall we begin on the ages above thirty-one? To put it concretely, although roughly: After we have taken all the unmarried men between twenty-one and thirty-one, shall we then begin to take the married men between twenty-one and thirty-one, or shall we take the unmarried over thirty-one? (The words "married" and "unmarried" are here used colloquially, for the sake of simplicity; the selective-draft law takes no account of marriage, merely as marriage. To it a man is married only when his wife is dependent upon him for support, which, of course, covers the bulk of the cases. But the selective-draft law does not contain the word "married." Its somewhat clumsy language is: "Those in a status with respect to persons dependent upon them for support which renders their exclusion or discharge advisable.")

As between a married man between twenty-one and thirty-one, and an unmarried man over thirty-one, there need be little doubt of the answer. However much the military men would rather have the younger men, regardless of their being married; however freely we may admit that the younger men would make the better soldiers, the sentiment of Congress and the country is such that we shall have to leave the married men exempt and begin to take the unmarried men over thirty-one. And while this is still a somewhat distant detail, we shall probably take them by years, first the unmarried men of thirty-two, then those of thirty-three, then those of thirty-four, and so on. Possibly it may be decided to take those from thirty-two to thirty-five in one installment. All this must be for some time a matter of surmise. It will depend partly on the wish of the War Department, partly on public sentiment, partly on the urgency of the need for more men. But it may be taken as a foregone conclusion that the President will call the new draft out by ages. The text of the new draft law, as phrased by the War Department, forecasts this purpose. The new law is almost exactly the same as the old law, except for the change of age limits, and this significant additional phrase:

"The President may draft such persons liable to military service in such sequence of ages . . . as he may determine."

Just how high in the thirties the President would go before turning back to the married men in the twenties cannot be predicted. It will depend chiefly upon events in France and elsewhere, upon the num-

ber of men required. It isn't possible to be definite now. Men over forty or forty-one may rely pretty surely on not being called upon to fight, but they can rely with equal assurance on being compelled to go to work at something which the War Department regards as an essential war industry. Men

Sentiment in official Washington has crystallized strongly against persons who try to beat the devil around the bush. Certain farseeing and forehanded young men who anticipated the raising of the draft age have been trying to provide themselves with safe berths, trying to find something highly indispensable, but not in close proximity to armed subjects of Wilhelm II.

The general feeling in Washington about these efforts was expressed by Senator Nelson. He said he was beset by men claiming to be anxious to do their bit, but really anxious to avoid the fighting line: "Sometimes I write to some of these men and say to them: 'You can get into the army the way I got in. Go and volunteer as an enlisted man.' And once in a while I tell these men who come begging for a commission that I will recommend them for privates."

These sentiments from Senator Nelson may safely be taken as indicating an attitude which is going to make slacking impossible. The other day Congress called on the Secretary of War for a list of all army officers who "have never had command of troops." Nothing explicit was said as to why the names were wanted, but the implications must have been pretty plain to the persons most concerned. Another resolution of Congress called on Mr. Baker for a list of "all men within the draft ages, enlisted or commissioned and assigned to clerical work." And another group of seventeen resolutions, addressed to Cabinet members and heads of commissions, called for information concerning "men within the draft ages appointed since June 5, 1917, for whom deferred classification has been secured by such boards or commissions."

General Crowder recognizes this sentiment against able-bodied young men remaining in clerical office in Washington. He has a

plan for meeting this situation. Out of the results of the physical examination of drafted men he has compiled a list of what he calls "limited-service men." "These men," he says, "are those whose physical qualifications are not up to the requirements of general military service, but who are qualified for the performance of less arduous duties connected with certain noncombatant work, including military administration. . . . I am assured that plans are well under way which will enable us to furnish men of this class for all limited service in connection with the administration of the Military Establishment, and thus relieve many able-bodied fighting men who are now detached for such service." Of this "limited service" class General Crowder, at the time of writing, has 215,639. As the new drafts are made he will have more. They will be enough to meet the needs for clerical work. Men who *can* fight must.

EVERYTHING CONFISCATED!  
*The joys of a Sunday-afternoon stroll in Berlin*

between thirty and thirty-five or thirty-six, who are not in any of the exempted classes, may rely pretty surely on being called upon to fight. It isn't possible to define the exact boundary where, physically, a man ceases to be what the professional soldier regards as an effective fighter. The Swiss "Auszug" includes all men from twenty to thirty-two; the "Landwehr" from thirty-three to forty; the "Landsturm" from forty-one to forty-eight. Where our War Department, or our President, will draw the line is not yet determined. Something may be guessed from the fact that General Crowder in making estimates for Congress of the number of available men in the new registration, has made two estimates, one of men between thirty-two and forty, and another of men between forty and forty-five. Somewhere in the neighborhood of the late thirties, or possibly forty, is a No Man's Land, with indefinite boundaries.

# Boston Limited

Continued from page 11

ngly little chap whom Boston distasted at first sight as you distaste something noxious; fragile and colorless and precise, with no hair at all. He looked like a kind of intellectual loadstool. But he presided. A virtue went out from him—or a lack of it—and when he held up a white finger the others attended as at a ritual.

"Eh? You've got it! And time two—I should say. Here—come along with that." If he was in a stew, it was a chilly one, very dry and biting. He scarcely glanced at the new arrivals. "Look alive, my man! Let's see what you've brought."

POOR Boston stood blinking and hesitant while there descended on him the compulsion that held the whole room. What could he do? Everybody seemed to know all about his wonderful suit case. It was no miracle here. These people assumed all the rights; and they were such fearfully superior people. Their calm way of taking him and his prize for granted had the impact of a steam roller. With a sigh that came from his heart roots he yielded, tabled his treasure, turned back the lid, and once more exposed to common view that incredible and ecstatic spectacle.

Promptly, noiselessly, the others closed up about their chief. The girl produced pad and pencil; the fat man came forward to do the accounting; the young fellow who had guided Boston stood by for orders. All with the click and composure of a well-drilled guard, without the least flurry.

"Ninety-two thousand exactly, sir. Corresponding with Number Seven's latest report."

"This should clear up the Springfield total."

"To a dollar, I should say, sir."

"Number Seven carried the odd sum with him

the day we were raided," contributed the girl from her notes. "He was unable to reach the safe, you remember, sir. But he had receipts by the morning mail in his pocket—three hundred and forty dollars. You afterward allowed him that amount for petty cash and expenses."

"Did he forward a voucher?"

"Yes, sir—he did," said the fat man unctuously. "And we are now enabled to strike a balance to the very minute of your order closing all offices, dated 9.10 a. m., October 29."

"Very well. Richard!"

"Yessir," responded the guide.

"You will take temporary charge of this suit case."

"Right, chief."

"Mr. Hendry, have you raised that telephone connection yet?"

"No, sir," returned the accountant. "There seems to be some trifling delay at central. It's a very small office. I have an idea she may be frying herself an egg, or something."

"An egg, Mr. Hendry?" The chief considered him severely. "An egg! Is this a jest?"

"Oh, no, sir," said Mr. Hendry, deeply shocked. "I merely meant, sir—explaining the delay—that the local central at West Wulliver is also the telegraph operator and a few other things. I found her making tea on the kitchen stove."

"You are sure of your arrangements with this—ah—person?"

"Quite sure, sir. I filed our dispatches two hours ago and paid for them. On receiving word to release, she starts them severally over the Boston wire."

"She might find them strange reading."

"Not she, sir. A very rural young woman, sir. So many words at so much a word is all she knows of the business."

"A judge of character, Mr. Hendry?" Inquired the chief with lifted eyebrows. "How will she account for your phone call from this vacant house?"

"Oh, I prepared for that, sir. We were friends of Mr. Jackson Strombol."

"Ah?"

"Yes, sir. I told her we expected to drop in here at his lodge—motor-ing by—and look it over a bit."

The chief nodded and leaned back while Mr. Hendry furtively wiped his brow like one who has come through an ordeal.

"Now, Miss Marvel—would you mind checking up those messages again?"

The girl rippled

her pad of notes. "First, sir, you ordered one-word cipher messages to Numbers Ten at York, Eight at Cleveland, and Six, Hartford."

"Cipher—yes," murmured the chief. "The signal of final success, whereupon they decamp and meet me South. All trails are broken by to-morrow, you understand." He waved a white hand. "Proceed."

Chief Inspector, P. O. Department,  
Washington, D. C.:

I take pleasure in informing you that the projected case U. S. vs. Victor Cavorces and Others for violation of the postal laws will give you no further trouble. I have just wound up my affairs by re-suming possession of the moneys seized at my Springfield office during the recent raids. As this was my one overnight and is now corrected, I can gracefully retire. Should you desire a receipt, it will be found, together with a literary exposition of my remarkable methods which may be of interest to the press, at the lodge of my dear friend, Mr. Jackson Strombol, near here.

(Signed) V. C.

"Go on, please."

"The same message is then repeated to the United States district attorney at Boston."

"Yes, yes—and then?"

United States Marshal,  
Boston, Mass.:

This will serve to exonerate your deputy who left Springfield to-day in charge of a certain suit case and who lost the same en route. It is only fair to say that he knew nothing of the substitution and will probably know nothing until your receipt of this. Should you desire the original suit case as a souvenir in re U. S. vs. Victor Cavorces and Others, it will be found at the summer home of my dear friend, Mr. Jackson Strombol, near here.

(Signed) V. C.

The chief's eye glittered in his head like a jewel. "And the last?" he said.

Mr. Jackson Strombol,

22 Mahanet Place, Boston, Mass.:

I could have warned you it was impossible. As a stool pigeon you were out of your depth. It takes a special type to turn State's evidence successfully, and you are only a dilettante. Meanwhile myself and staff remove to a new scene of labor, and if any arrest is made in U. S. vs. Victor Cavorces and Others it will have to be your own. By completing the Springfield coup to-night I cash all winnings. It may soothe you to know that I was a guest at your charming countryside while engineering this final triumph. Adieu, dear friend. (Signed) V. C.

THERE was a reverential pause when she had finished. The chief placed the tips of his fingers together and smiled around ever so lightly: a down-stage smile. And his people did him homage.

"It's perfect, chief!"

"By Jove, sir, you certainly made a great finish of it! Won't they come frothing here to-morrow to pick up a clue? And imagine the papers! And Jackson Strombol!"

"Oh, Mr. Cavorces"—not that Miss Marvel gushed, exactly, for that would have been vulgar, but she gurgled—

"oh, Mr. Cavorces, it's the best thing you've ever done. I simply adore cleverness!" added Miss Marvel.

(C'd on page 30)

"Is it all there?" Boston's lid popped up and his jaw dropped down as stiffly as the mechanism of a china mandarin

# Two Great Features of The Brunswick Method of Reproduction

THE Brunswick Method of Reproduction has opened a new era in phonographic art—bringing inevitable refinements. Heretofore phonographs in themselves were wonderful enough. But now their novelty is past. Music lovers are more critical. Old standards do not satisfy.

Henceforth, we believe, these new ideals must prevail:

First, you want a phonograph which plays *all* records exactly as they are designed to be played.

Records are not yet standard. Different artists sing or play for different concerns. So there is no universal reproducer, no universal needle.

Until The Brunswick Method of Reproduction brought The Ultona, one had to be satisfied with a one-record instrument or else resort to makeshift attachments.

The Ultona makes The Brunswick a universal player—each record is played precisely as the maker specifies. The Ultona presents to each type of record the proper diaphragm and needle.

Yet please understand that The Ultona is not an attachment, but an altogether new and exclusive conception.

At the turn of the wrist it adjusts itself. It is always ready.

You can play one record after another, of different make, without the slightest hesitancy. There is nothing to take on or off.

Second, you want a phonograph like

The **Brunswick**  
ALL PHONOGRAPHS IN ONE

2

because of its superior tone. The Brunswick attains the utmost in reproduction. It regains all the tones hitherto lost, for it embodies a new amplifier, built entirely of wood.

Metal construction, we ascertained by test, cannot release and expand sound waves with the rare fluency of wood.

So the "throat" and the "mouth" of The new Brunswick are of rare holly wood, moulded to meet acoustic requirements. We use no metal castings here, no tin.

The result, as you will note instantly, is more faithful reproduction, with complete avoidance of the metallic, rasping noises.

We do not ask you to accept these statements as evidences of our own enthusiasm nor that of the thousands of satisfied Brunswick owners.

Prove to yourself that The Brunswick is your personal choice. A comparison is simple. Your ear can decide. And we gladly urge you to make these tests before you buy. Brunswick Dealers everywhere join us in inviting you to hear The Brunswick.

# The Loan of a Lady

Continued from page 15

Others might be hurrying or making their leisurely way toward shop or office, hotel or palace of the cinema; reluctant feet were bearing him to the most critical adventure of his life, and, he had grave reason to fear, to a failure humiliating, grotesque even.

He looked behind him carelessly; he managed to give a certain jauntiness to the act. What he saw made him scowl ferociously. The merest glance had been enough. The sinister figure of the man who had shadowed him since early morning was still in evidence. The creature wore a derby—in July! Almost in August!

Carthew was in a mood to do desperate things. The young woman of the train and her first lieutenant had paused; some bit of patriotic oratory had interested them. Carthew looked at the young woman morosely. If he could go off somewhere with such a lady, forgetting men in derbies who wore—he was sure of this, without having a scintilla of real evidence—rubber heels as well. . . .

**T**HERE was something uncanny about the way he had encountered this particular red-headed girl. Why should she, of all the young women who had traveled from Washington to New York on the Congressional Limited the day before, have attracted his attention? Why should he meet her thus now? She ought to be somewhere where you went in swimming and played golf and tennis, and did things like that—not in front of the library lions, on a day that bade fair to break the world's record for sticky heat. And then why should he, who never remembered anything about people's faces, have been able to recall every detail of this young woman's appearance—even to the color of her eyes? He didn't know the color even of his own sister's eyes; that was something he never noticed.

He didn't really plan what followed. Even when the young woman and her first lieutenant began to move toward him again, and when he stepped deliberately into their path and took off his hat he was so horrified, in his conscious being, that he only dimly apprehended what it was that he was doing. That was why, perhaps, he was so extremely cool; why he was able to say outrageous things, impossible things, in the manner of one ordering a dinner when one has little appetite.

"I beg your pardon," he said as a beginning. He smiled deprecatingly, almost apologetically, at the young woman, but it was her first lieutenant whom he addressed. "I am about to make a most unusual request—to ask the greatest of favors."

**T**HE soldier stiffened. The young woman looked interested.

"I am, in a sense, a stranger in a strange land," Carthew went on to say. "It appears—and it is not unnatural—that not a soul of my acquaintance is in town. And so I am obliged, I am constrained, to appeal to a stranger for a loan—"

The lieutenant frowned. The young woman looked puzzled.

"To be plain"—Carthew ignored the emotions of his hearers—"it is the loan of the lady in your company that I need, sir! Her appearance—"

The lieutenant's comments were inarticulate, but

they were not at all obscure. He took the young woman's arm.

"Man's drunk!"

His remarks were beginning to take form.

"Please, Ted." That was the young woman. She looked at Carthew. Her eyes were flickering again. Her expression was one of the liveliest interest. "I should like to hear the explanation of this—rather unusual—request."

**C**ARTHEW bowed to her. "You confirm the judgment I had already reached," he said to her, "that you are probably the one lady in this city who can help me. Your appearance—as I was about to say—

and intentional discourtesy, to talk to me, as man to man. The lady expresses a desire for further enlightenment. It behooves you, as well as me, to gratify that desire."

The young woman laughed. She laughed as if she could do nothing else. The lieutenant looked somewhat dazed. A hansom was passing slowly. Carthew held up his hand and stopped it. He turned to the young woman.

"I have never outgrown an early fondness for the hansom," he said. "May I suggest that no vehicle offers a better opportunity for private talk?"

The young woman hesitated. Her eyes flickered from soldier to civilian. The corners of her mouth twitched; dimples appeared above them. She bowed suddenly, and with a mocking grace, to Carthew.

"I think you may have the loan you ask," she said. "The terms we will discuss—" She let her eyes rest on the hansom for a moment. "Ted"—she stifled his sudden clamor—"don't be absurd! You have to report in half an hour, at any rate. Dinner's at seven."

**C**ARTHEW bowed to a still bewildered first lieutenant of infantry. Rather gracefully he handed the young woman into the cab.

"If we drove through the park for a little while?" he suggested. She smiled in assent. "Through the park," he said, looking up to the red face of the cabman, framed in the door in the roof.

He found himself suddenly bereft of words. You might suppose that, having accomplished so much, having, by sheer, shameless effrontery, achieved the utterly impossible, he would have been beyond, far beyond, embarrassment. It was not so.

"We were to talk, you know, Mr. Carthew," the young woman suggested.

That brought him to life.

"We were to discuss the terms of this loan—"

"I never told you my name!" he said, amazed and shocked. "It's not Carthew, anyway—not to-day. I'm registered at the Santa Clara as"—he glanced at a note-book—"as Thomas Chandler!" He ended triumphantly: "Same initials—but—how do you know my name?"

She smiled. "I'm going to be rather cruel, I'm afraid,

Mr. Carthew," she said. "I'm going to shatter your idea that you are having a marvelous adventure of some sort. I'm Barbara Thorne, and I know your sister very well indeed. Otherwise—"

She didn't really shrug her shoulders. The gesture was far too subtle for the term. For a moment Carthew's spirits were dashed; then, perversely, they rose.

After all, so far as the element of adventure, of outrageous conduct, was concerned, he hadn't known she was Barbara Thorne and his sister's friend, had he? He made rather a point of not knowing his sister's friends, if he could honorably avoid them. They were so infernally eligible, as a rule. Of course this girl who sat, lips parted, eyes flickering, laughter trembling just behind both lips and eyes. . . .

But, then, she was engaged. He had to be honest and admit that a part of his delight in being where he was came from his memory of Lieutenant Ted, U. S. A., and the amazed indignation that had been manifest in that gallant soldier's countenance.

He looked around, and tried to raise his head, and didn't, because it hurt too much

coincides with a description given by me of a wholly imaginary young woman. My appearance, in company with a lady answering that description, would deceive certain persons—would tend to fill them with a certain credulity now wholly absent in their dealings with me. More, I am sorry to say, I cannot tell you—"

Had he heeded the attempts of the first lieutenant of infantry to interrupt him, Carthew would never have got so far. Now, however, these became so insistent that he was forced to notice them. He noticed also a certain quality about the tapping of the lady's heel upon the pavement. It lent him courage—if he needed it!

"Sir," he said, "may I ask you to permit me to speak without interruption? I sought to consider the proprieties, to conduct a somewhat delicate negotiation with a regard for the conventions. Seeing, in you, this lady's natural protector, I addressed my request for the temporary loan of her person to you. You chose to bluster, to accuse me of drunkenness, to refuse, with what I cannot but regard as marked

A patchy pattern often means a miss, many times a cripple, and sometimes badly mutilated game.

The hard-hitting Winchester pattern is evenly distributed. No game gets through, and no game is mutilated.

# Is your game getting away because of faulty pattern?

**I**F there's one thing that spoils a day's hunting, it is a gun that shoots a patchy pattern.

Patchy patterns lead to the mutilating of one bird, and the missing or crippling of the next, at a like distance. Many a hunter "cusses his luck", when he ought to be getting better acquainted with his fowling piece and ammunition.

## Why uniform pattern is essential

Hunters concede that at least *three shots* are necessary to a *kill*. When three pellets land in the body of a bird, the chances are that one of them will reach a vital spot. Less than this number may mean a *cripple*, no matter what the size of the shot or its velocity.

In taking wing-shots at ducks or upland birds, therefore, an even spread of the pellets is essential—not for one shot, or two shots, but for *every shot*. For a successful day's hunting, your gun must shoot a uniform pattern, *that does not vary*.

## Try the Winchester Model 12

Shooting its own ammunition the Winchester Model 12 delivers an even, hard-hitting shot pattern at the range for which its muzzle is con-

stricted. With any kind of skill at pointing, you are bound to get a good bag of unmutilated birds.

The Winchester Model is a light, superbly-balanced shotgun, of graceful design. Pointing it is as easy as pointing your arm. It is simple and sure in operation, and it works smoothly in whatever position it is held.

For those who prefer a hammer-action gun, we have designed the Model 97. It is built on lines similar to the Model 12, but has hammer action. As a fowling piece it is exceedingly effective.

## An axiom of gun making

Men who know guns realize that the accuracy and durability of a gun depend primarily upon the barrel. To them the quality of the barrel measures the quality of the gun. With Winchester, the barrel *is* the gun. For years this has been an axiom of gun building in the Winchester shops. Through the most unremitting attention to boring, finishing and testing, Winchester has developed a single standard of barrel quality which prevails in the highest and lowest priced Winchester models.

## How the barrel is bored

The barrel of the Winchester Model 12 is bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to the Winchester standard, no gun can leave the factory. The nickel steel construction preserves the original accuracy forever.

The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

## What means

Look for this mark on the barrel of a Winchester gun. It means that the gun has been subjected to the *Winchester Definitive Proof* test. It stamps the gun with Winchester's guarantee of quality, which has 50 years of the best gun-making reputation behind it.

Every gun that bears the name Winchester, and that is marked with the *Definitive Proof* stamp, has been fired many times for smooth action and accuracy. It has also been fired with excess loads as a test of strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. *Every Winchester gun is perfected by the test and adjustment process.*

It is this care in manufacturing that has produced, in the Model 12 and Model 97, guns of unsurpassed game-getting qualities—guns which have won the name of "The Perfect Repeaters" among wild-fowl hunters.

## Write for details of Winchester shotguns and shells

Write for detailed specifications of the Model 12 and Model 97 and also for our new booklet on shells.

**Winchester Repeating Arms Company**  
Dept. 271 New Haven, Conn.

MODEL 12. Hammerless Take-down Repeating Shotgun. Made in 12 gauge, weighs about 7½ lbs. in 10 gauge, weighs about 5 lbs. in 20 gauge, weighs about 6 lbs. more popular with women and new shooters because of its lightness and very slight recoil.

MODEL 97. Take-down Repeating Shotgun. Made in 12 gauge, weighs about 7½ lbs. in 10 gauge, weighs about 7½ lbs. The favorite with shooters who prefer a 10-gauge hammer repeating shotgun with a hammer.

Makers of the famous Lewis Machine Gun, 30-06  
Automatic Pistol and High Power Sporting Rifle.

His "Oh, I see" was flat enough to satisfy the lady, to release the waiting peal of laughter. She couldn't follow the mental processes that immediately tempered his momentary disappointment.

"Exactly, Mr. Carthew!" she said. "Intriguing as the prospect might be, I couldn't let a total stranger borrow me! Now could I?"

"Certainly not!" he told her. "But, please—won't you forget, just for this afternoon, that my name is Carthew! And call me—er—Tom?"

"But why?"

"Tommy would be all right," he conceded, "if you prefer it. You see, you're engaged to me—"

"Oh!"

"That's just the point, you see! It's what I was trying to explain when that—when I was interrupted. I told some men I had come over to New York to meet my fiancée. They didn't altogether believe me. You see, they thought I was Thornton Carthew—which I was. And it was ever so important for them to believe I was Thomas Chandler. And they asked me a lot of questions about you—I mean about my fiancée. And I didn't have any fiancée, and they stumped me frightfully when they asked me to describe her. So I—well, I described you!"

"But—but why—why me, Mr. Carthew? Why a girl you didn't know?"

"Well, one reason was that you were the only girl. I couldn't remember the color of the eyes of a single other girl I knew—had ever seen. And I did remember yours! I remembered lots of things about you—from yesterday, on the train."

"Oh! You came over on the Congressional yesterday?"

He looked reproachful and faintly dubious, and her eyes flickered once more. "I woke up thinking about you this morning!" he said, determined, suddenly, to plunge, even though he went far beyond his depth. "I'm the limit, as a rule, about remembering how people look. But it was different about you. And so—well, you'll be helping me tremendously if you'll play up. Take my arm once in a while, and call me Tom, and look at me soulfully, you know—and—oh, act with me the way you do with—er—Ted—"

"Ted!" she said. "Oh well—" She grew severe all at once. "You know, of course, how absolutely absurd and inexcusable and outrageous your conduct is!"

He nodded dimly. "And you haven't the least suspicion that it is also most diverting—and calculated to make any girl all fluttery and excited and simply unable to do a thing but see it through?"

HE nodded again, and then shook his head violently, and then grinned rather shamefacedly.

"It really is important," he pleaded. "You see, there's a taxicab following us this minute. It wouldn't be going so slowly unless it were. And the man inside is a detective, and he's tried to arrest me once to-day already for being Thornton Carthew, and you're my one chance to stay out of jail until I've done what I came over for."

"All right, my dear!" she said. She sat back in the cab and laughed at his amazement. "You've got to practice too! And now—you have your loan. And I'll play that we're engaged! But we were to discuss terms. When am I to be returned to my rightful owner?"

"Well," he said, "we ought to be seen together quite a lot. Tea, of course. And then dinner, later, and a roof show, and supper somewhere. A chap wouldn't do any less than that the first day he saw his fiancée after a long separation, do you think?"

"But—Ted?" she said. "After all, you know! He didn't play up awfully well, and it was stupid of him to think you had been drinking, but—after all—"

"I wouldn't mind his being along for dinner," Carthew said with a fine generosity. "Do you think you could make him feel more tolerant? But you mustn't tell him anything—anything I've told you, or that you suspect—"

"Such as that all this has something to do with your not being in uniform?"

Her eyes were alight with mischief as she said that. She was rewarded by his start.

"Oh, Lord!" he said. "Please—Miss Thorne—"

"Barbara—at least!" she corrected. "Ted calls me Baba."

"And I'm supposed to be in the Intelligence Department!" he said bitterly. "Shows what there is in a name! Me—and intelligence—in the same breath!"

"It's tremendously mysterious, of course," she said. "And I'm sure it really is important. I wasn't at first, but I am now. Till midnight then! I suppose"—she grew pensive—"I suppose you will tell me what it's all about—some day?"

"To-morrow, I hope!" he said. "Or even to-night. But now—I think by the time he drove us to Claremont it would be time for tea, wouldn't it?"

She thought so.

"When one is engaged to a girl—and riding with her in a hansom, in the park—one ought to hold her hand, oughtn't one?" he suggested a little later. "Just to lend verisimilitude—?"

"But there are so many things one ought to do that one doesn't!" she said with a sigh. "So one more—"

"I thought that was important," he said rather sulkily.

TEA was pleasant. It was cool at Claremont; a faint breeze came to them from the river. For a man without any practice in being engaged Carthew got along extremely well. He threw himself into the playing of his part with an enthusiasm both pleasant to behold and inspiring. The gentleman with the derby—which he had surrendered with marked reluctance to a determined boy—and the rubber heels must have been edified. But he was like a fish out of water. It was apparent that the place oppressed him. And he looked unhappy when the waiter presented him with the reckoning for the beverage he had consumed. He had the appearance of a gentleman somewhat in doubt as to whether his expense account would be accepted without challenge.

"My stout friend annoys me," said Carthew suddenly. "I have an idea. If you will excuse me while I telephone—"

"Don't be long, dear," she said, raising her voice just enough. "I hate to be left alone."

He grinned and, emboldened, touched her shoulder as he passed her. "You can do many things when you don't have to face flickering eyes."

He wasn't long, and he came back smiling and very well pleased indeed.

"Now," he said, "if he noticed the carriages outside, and fired his taxi—"

A little later they departed—still in their hansom. But their shadow did indeed, as Carthew had hoped he might, follow, this time in an open carriage, horse-drawn, and cheaper than even the cheapest taxi. He followed, however, for a certain distance only. At a corner Carthew bade his driver stop, pushed up, through the trapdoor, a bank note, and leaped out.

"Come, darling!" he cried. "Here is the car!"

A car was waiting, indeed. Its chauffeur touched his cap. The door of the tonneau sprang open. Carthew almost lifted the lady in, and they were off. And in an ancient hack their baffled pursuer danced upon his rubber heels.

"We'll just have time, won't we?" said Carthew, flushed with pleasure. "You'll want to change, dear? And I'll come back for you after I've been to the hotel, and we'll go out for dinner, and I'll have tickets for that roof, and—"

She glanced back at the diminishing figure of the gentleman with the rubber heels.

"But now that you're rid of him, you won't need me—"

"Oh, he's only one! And I'm going back to the hotel. He's just juggling enough to go straight there. I only wanted to annoy him. Need you! My dear, I need you more every minute! Algernon will be angry with me after that, you know!"

"Very well," she sighed. "But it's going to be awfully hard to explain things to Ted—poor dear! And, after all, he has some rights."

*From H.B. Furber*

*"Cravenette"  
Finish*

# Mallory Hats

*"Molesheen"  
Finish*

*A Quality Reputation Since 1823*

WHEN you buy your Fall hat, see that it bears the maker's name. As an added precaution, see that it bears the Mallory name. Now, more than ever, the stability, skill and experience of the organization back of the Mallory hat can save you from disappointment.

The situation in hatters' fur is serious. Good fur is scarce. Nobody can make the kind of fur felt hat we think you ought to wear for less than the Mallory price.

You also want Style, the kind of Style having behind it that wearing quality which makes a Mallory hat a true war-time economy.

Cravenette Finish is an exclusive Mallory feature. It affords protection against the weather. No hat except a Mallory has it.

Dealers—identified by the Mallory sign—are showing the new Mallory Fall Styles. Prices: \$4.50, \$5 and \$6; Velours, \$8 and \$12. Made in America since 1823.

234 Fifth Avenue, New York

## They Outsell Any Other Tube

Goodyear Tubes are built to be a fit team-mate for the famous Goodyear casing. They have behind them the resources, experience and reputation of the world's largest maker of automobile tires. More motorists use Goodyear Tubes than use any other kind. Quality is increasing this margin of leadership every day.

Be sure YOU say, "GOODYEAR Tubes."

# GOOD YEAR AKRON TUBES

### Off Came the Collar and the Button!

"I don't see why you want to do that! I've had the same collar button for over fifteen years and it has never discolored my neck."

"Then I'll wager it's a Krementz!"

"Well, I don't know, but I'm curious enough to find out."

Off came the collar and the button, and here was the inscription on the back which is on every article of

## Krementz

14 KT. ROLLED GOLD PLATE

If you have had a plate gold collar button for as long as a year and it has not discolored your skin, then it is a thousand-to-one that it is a Krementz. Look at yours tonight. If it isn't a Krementz and there is a blue-green mark where it comes in contact with your neck, drop into a dealer's tomorrow and get collar button insurance for life. Every piece of Krementz Plate is sold under this perpetual guarantee:

"If this should prove unsatisfactory in any case at any time, my dealer or we will replace it free."

Ask your dealer to show you Krementz jewelry or send us his name and we will mail you our new catalog.

Krementz & Co., Newark, N. J.

"I know it," said Carthew morosely. "You needn't rub it in, darling!"

"You've no idea how fond I am of Ted!" she said.

He made menacing noises in his throat. And just then the chauffeur turned around inquiringly.

"Where to, sir?" he asked. "They didn't tell me at the garage—just told me to hurry to meet you."

Carthew realized, in a sudden panic, that he didn't know where his fiancée lived! And he felt that even the chauffeur—even if he was a chauffeur, and not a Secret Service man—would feel that one of the things one knew about one's fiancée was where she lived. Barbara saved him.

"I'm staying with Aunt Cora this time, you know, dear," she said. "At the Ellingham. She's waiting for Jim to sail."

"The Ellingham first," said Carthew. And he did squeeze her hand gratefully, and she let him do it. After all. . .

SO he drove her to the Ellingham, the staidest, most respectable of New York hotels, and was rather glad, not to put too fine a point upon it, that Ted wasn't waiting around the entrance. He was beginning to think that if he had been in Ted's shoes he would have behaved very differently. He had serious doubts about this chap Ted; whether he was worthy of Barbara, and all that sort of thing—very serious doubts indeed. . .

They persisted while he bathed and changed into evening things. This girl, Barbara Thorne—he didn't see why the deuce his sister couldn't have trotted her out, instead of some of the girls who had led him to eschew the society of all of his sister's girl friends, on general principles. It was all very well for Anne to say that he wouldn't take any interest in a girl unless she was engaged. Hadn't he been interested enough in this girl, before he ever saw this infernal Ted, to remember the color of her eyes? What more could you want? Her engagement hadn't affected his interest or sharpened his memory.

And this Ted. A bad-tempered, hot-headed chap—anyone could see that. He'd probably beat her, and there'd be one of those beastly divorce scandals. Not that he objected to divorce, of course; good thing, at times; only cure. But he believed in prevention rather than cure. Now, if she broke her engagement, didn't marry the fellow at all. . .

"Oh, the devil!" he said, and went downstairs. He meant to walk the few blocks down to the Ellingham. But in the lobby the person with the derby and the rubber heels was waiting for him.

"That was a fine trick you played on me!" he said plaintively.

"Oh, good Lord!" said Carthew. And he had no need to feign annoyance. "Are you still blenting around me? What's in your silly head now?"

"It's mighty queer, that's all I gotta say," said the man. "You ain't in uniform, and you ain't got a mustache. Except for that, you're a ringer for Captain Carthew. And if you're him, you ain't got no license not to be in uniform, and you're either doing it so's you can get a drink or you're a deserter and there's a reward in it for me, either way."

"Look here, my man, you're getting tiresome!" said Carthew. "My name is Thomas Chandler, and I was turned down for the army because I've got flat feet, and the examining board didn't like the color of my necktie. I'm in New York to see my fiancée, and if you make me late for dinner with her you'll be one of the sorriest men in New York. I told you and your little friend all this this morning."

"Well, it's mighty funny—you look like Captain Carthew to me."

A sort of wall pursued Carthew as he hurried through the door. But he reached the Ellingham alone, and only had to wait twenty minutes. And the vision of his temporary fiancée, dressed for a summer evening, was worth the wait. She was a lovely creature, he decided—even lovelier than he had believed her. And Ted, the soulless, spineless maverick, wasn't even around the

hotel! Off sulking somewhere, probably. Which was no reason why he, Carthew, shouldn't have a good time!

THE dinner was really good; Carthew, at least, thought the show at the roof was bully. But as he never looked at anything that was done on the stage, and listened only to what Barbara said to him, his judgment should not be taken at face value. People looked at them oddly sometimes. "I say!" He was rather appalled suddenly. "Of course no one's in town, but I suppose there are people who know about you and Ted, and might think I was—sort of—well—superfluous?"

She smiled inscrutably. "Oh, well!" she said. Her shoulders did move faintly. "They say—let them say!" she quoted—in part.

They went on somewhere for a dance; it had grown a little cooler.

"I knew you would dance just like that!" he said. "You—you're the most nearly perfect thing I've ever seen—"

She stirred in his arms. Her eyes mocked him.

"No one could hear that!" she said. "And remember—your loan is called at midnight!"

"Oh, I remember," he said with half a groan.

"I'm tired of all this," he said ten minutes later, abruptly. "I think—I think I'd better pay my loan now. Do you mind if I take you home?"

"It will be midnight soon," she said. "No—I'm ready to go home! But—why—?"

"I don't know," he said. "All this—I don't know—something's gone wrong with me, I think. It was good fun until just now—and now it isn't."

He broke out suddenly: "You—do you know what a wonder you are? Do you think I don't know there isn't another girl who'd have taken me up and played up to me the way you've done? You won't be sorry, I think, when I can tell you what it's all about. But to take the jump blindfold, the way you did—"

"Oh, who wouldn't have done it!" she said. "I knew all about you—I took no risk! Plenty of girls—"

"Nonsense—my dear!" he said.

And at the way he said those two words she caught her breath, and the color came into her cheeks suddenly.

"I do think we'd better go," she said.

They were very silent, both of them, in the cab that bore them to the Ellingham. There he dismissed the cab.

"I'm walking back," he explained to her, and glanced at his watch. Five minutes remained before midnight. He went inside with her. Ted sat there and glared at him. An hour ago, confronted so, he would have had words to say to Ted. Now he lacked spirit. He paused. The girl turned toward him, held out her hand. Ted or no Ted, he bent low and kissed it.

"Good night!" he said. "And good-by, I suppose—God love you. I have more to thank you for than you'll ever know!"

HE went out very quickly, never waiting for an answer. But he did not go far. He had not reached the corner of Fifth Avenue when a man stopped him. "Could you tell me the time, my friend?"

The man's appearance belied the ancient trick. But his voice—his accent—sent the blood pounding through Carthew's veins, quickened his pulse. That unmistakable thickening of consonants—the t that was at the end of the word friend and had no business to be there! But it was only for a moment that Carthew could think about that. Then something descended upon his head, and he went down like a pole-axed steer, to lie, in a crumpled heap, upon the sidewalk.

He didn't know—he couldn't know, of course—what happened next. The next thing that he did know was that some one was putting a cold, wet cloth about his head. He looked around, and tried to raise his head, and didn't, because it hurt too much. But he could use his eyes. He recognized, vaguely, the lobby of the Ellingham. And then he saw Barbara Thorne bending over

him. He made another effort to lift his head, and this time succeeded.

"Here are your papers, captain!"

That was Ted—his manner greatly changed.

"I took charge of them for you when they brought the damned spy in!" Still Ted! "You see, a chap in a flivver saw them drop you and chased them. Darned good work, I call it! Got 'em both—they're waiting for you to make a complaint!"

"Oh—see!"

Carthew's delight was tonic. He got up on his feet, moved his head about gingerly. "I'm getting better," he said. "Efficient dears, these Germans! Don't hit a man harder than they need to get his valuable papers—his valuable, ever so secret plans that would be so useful to the Great General Staff! Yes, they would—not!"

He smiled at Ted. "We only needed circumstantial evidence—this is just velvet, catching these two! You see, only one person, besides my chief, knew I was coming over, in citizen's clothes, with those papers, and only the chief and I knew what the papers really were. The ones the other person thought I was carrying—well, if I'd had those, this wouldn't have been such a dime-novel burlesque for our German friends here!"

He grew serious; his eyes came together in a frown. He drew Barbara Thorne and Ted aside.

"It's funny, you know—if I don't talk quite straight it's because I'm still a bit light-headed from the crack they gave me. But it's pretty serious too. You see, this settles things for a man in Washington. He must have told these two about me and the papers he thought I had. The chief was pre-

## Continued from page 22

Then the great little man rose to his full five feet three in the glare of the electric lights that centered on him.

"Yes," he admitted modestly. "I think it's not so bad, myself. Indeed, I believe, I may say—that I regard this as possibly—possibly the crowning moment of my career."

**STAMPING** feet like a rumble of applause, a hand at the knob; the door crashed open, and before any in the tableau could stir an intruder bailed through among them.

He might once have been chipper and proper enough himself, but just now he came as a rude apparition to that exalted circle; smeared with mud, his clothes in rips and shreds, his face pulped beyond recognition. In one flat he carried a suit case: the exact duplicate—had an observer been capable of noting—of Boston Blackie's late stupendous trave.

"Still here?" he yelled. "By God-frey—you've got blamed little time!"

In the interests of superiority, Mr. Hendry nobly interposed.

"Who the deuce are you?"  
 "Me? I'm from Springfield—!"  
 They gasped.  
 "Seven—!"

"Of course. Came myself—had no messenger I could trust. And didn't I run into a sweet jam, though! There's your dummy!" He dropped his burden with a vehemence that burst the catch and scattered the contents of waste paper. "Chief, your whole scheme's gone bust. I got behind that deputy in the smoker O. K., ready to swap suit cases and drop off when the train slowed at Walliver, as you said. You said she would blow. And she did. She did! By Godfrey, whoever threw that switch gets a medal from me!"

"Why, I threw it myself," stammered the pictorial Richard. "Just as I was told. It was only a semaphore."

"Was it?" Seven whirled round on him. "Go down to the track and see. D'y'know what? You shot the Boston Limited into a string of empties, and the whole caboodle is in the ditch this minute! Wrecked!"

With the one reeling impulse they turned to their leader.

pared to accept any attempt to rob me as proof enough to justify action, and after this, of course—"

Ted nodded crisply. Barbara's eyes grew wide.

"Well, you can see what a hole I was in when that ass of a detective recognized me!" Carthew went on. "I couldn't tell him the truth, you see—the whole scheme depended upon no one's knowing what I was doing except the chief and this one man we suspected. You can't make charges like that until you're sure of your ground."

HE smiled at Ted. He liked Ted better since he had seen him in action.

"Of course that was a wild line of talk I handed you this afternoon," he said. "You must have thought I was the limit! But I couldn't explain—and Miss Thorne did help me to put the detective off the track. I'm a thousand times obliged to you for taking it the way you did, old chap—I don't know your name, by the way—"

"Why, Thorne, of course! Didn't my sister—?"

"Oh, of course—I told you I was still a bit light-headed! I say—would it be too much trouble—a glass of water?"

Barbara spoke hurriedly: "I never said he wasn't my brother—you leaped to conclusions. And you mustn't talk. Blows like that make you have a fever; and the doctor will tell you not to talk when he comes—"

"He hasn't come yet! Time enough when he does. I"—his voice grew stern—"I want to know about that ring!"

She glanced down at the third finger of her left hand.

"It's—my mother's," she said. "Oh, here's the doctor!"

**Much he needed a doctor!**

That remarkable individual had gone, if possible, a whole shade paler. He gazed at the suit case on the floor, at the suit case on the table, and he took his intellectual head in both hands.

"You sent nobody?"  
"No, sir."

"No number off your own staff?"

"And I'll tell you more, chief," he broke out recklessly. "You want to show quick action for a clean get-away. I don't know quite what happened or what's the damage, but train wrecking isn't much in our line. We're just about all due to land in the electric chair, and that's the fact!"

The chief did not rebuke him, but waved him off and, clinging to the table, took up one of the hand lanterns. He flashed it full on the spectator who had remained there throughout unconsidered and unquestioned—Mr. Boston Blackie.

"Then whose number is this?" he persisted hoarsely.

The discovery had been inevitable, of course, but it was painful all around.

"You never had a number," said Cu-vortez, from a stricken silence. "You! Who let you in? You don't belong! Why, you're only a common tramp!"

They were regarding Boston as if he had been a specimen under glass, and Boston blinked back at them dumb and resentful. He knew where he ought to stand in such company. He understood now the meaning of that pictured sufficiency, that wise-guy stuff with which they crushed him. These were the elite, the aristocrats, the lofty top-notchers—in the lexicon of the sociologist, the Kid Glove Criminals. Whereas he, you see—he was only a Potential!

"Are you a tramp?" inquired the girl, eying him up and down.

"Yes, lady," said Boston sullenly.  
"How annoying!" she murmured.

But the chief had a grim addition.  
"Worse than that: he is also a witness!"

IT was a singular tribunal that sat on the case of Boston Blackie in the summer lodge above Wulliver Junction that November night. On the table where all might see lay Exhibit A: a compact little fortune in eloquent cash. At

## Don't Let That Tread-Cut Ruin Your Tire

Fill it with Goodyear Tire Putty now, and save yourself money and mileage

THE neglected tread-cut is one of the most frequent sources of tire ruin. Small at the start, it grows swiftly if left uncared for, allows dirt and water to reach the carcass, greatly shortening the tire's life. Goodyear Tire Putty is a soft, pliable gum especially designed for the effective repair of tread-cuts and similar tire injuries. It dries quickly when applied, it is extremely resilient and elastic; it keeps foreign matter out of the tire and mileage in. Always have a can of Goodyear Tire Putty handy to use when your tires need it. It costs little and saves much. Remember the last thousand miles are the cheapest.

The Goodyear Tire-Saver Kit is an assortment of the most needed tire accessories handily arranged in a compact package. Your car should carry one.

**GOOD YEAR**  
TIRE SAVERS

one side, the jury; in a high-backed chair, the most high judge. Hendry had been acting as general clerk of the telephone, and every time he cranked without result the faces of the court grew grayer and more strained.

Apparently Central was still frying that egg.

For a time the only sound had been the nervous buzz and click of Hendry's efforts, the doleful whining of the wind outside the shutters, and now and then a far-drawn howl from a locomotive on the tracks below at which everyone winced. Some of the lanterns were running low. Richard had been fidgeting about to try the gas jets. But the gas was as dead as the phone, and they waited in a deepening twilight of suspense.

Meanwhile amid these ominous preparations, bound hand and foot with unnecessary ropes, bundled into a sort of cocoon on a rustic bench whence he kept watch on them all with beady black eyes—the prisoner waited too.

Cavorces himself was the one to begin. "The point is," he said fatefully, at last: "How much does he know?"

The court looked troubled.

"He knows a lot," suggested Hendry. "He knows too much," Richard opined.

"He knows enough to send us all up for life, at the very least," continued Seven.

"He knows everything," said Cavorces. "He's learned who I am, hasn't he? That does us."

And in the premises it did, and they were quite aware of it. Cavorces? Everybody had heard of "Six Hundred Per Cent" Cavorces, the swindler whose bogus offices in half a dozen cities had taken such fabulous toll of small investors; for whom the police of a continent were yammering like hounds. In amazement, in wrath, in cynic admiration—one way or another the whole country had followed the exploits of that Dick Turpin of high finance who tricked the sharpest detectives, who slipped as by magic from the very fingers of justice, who made his killing and brought away his spoil and left not a trace behind! Cavorces! The press had been flaring with the name these two weeks. Impossible to believe that even a common vagabond could have misused its significance. In fact, the vagabond attempted no denial.

"You see!" said Cavorces. "And now—what are we going to do with him?"

THE court labored. "Mightn't we intimidate him thoroughly?"

"Show him what he gets if he ever squeals," interpreted Seven, more rudely.

"Or kidnap him far South."

"Or shanghai him aboard a ship somewhere."

"Goodness, there must be some way of dealing with such creatures!" Miss Marvel put in. "He doesn't look clever enough to be really dangerous."

"After all," said Hendry weakly, "he's only an extra hazard, isn't he? I vote we let him go with a warning. We can always say he wrecked the train himself."

But the chief wagged his head at them.

"Are those your best suggestions? What becomes of our future?" His voice trembled.

"You know how careful we've always been to keep our record worthy. No man could say we ever violated anything less than a Federal statute. At the worst we were always assured of a highly technical and expert defense and the respect due to financial operators. But now! Our achievement, our hopes of further success—the rewards of our foresight and industry—worthless!"

"Look at him! A fellow of no caste or standing—who never even raised a check or tapped a wire—without the brains of a pickpocket! But he ruins us. There he is, and we can never be safe from him. Wherever we go, however we cover our trail hereafter, he connects us fatally with our one error. He knows!"

"Then, by Godfrey, what are we going to do?" chattered Seven.

That was the bare bodkin.

THIS little house, where Heinz began nearly fifty years ago, is now surrounded by huge Heinz buildings, speaking eloquently of the American housewife's appreciation of right principles in preparing foods, relishes and condiments for her table.

# HEINZ

## OVEN BAKED BEANS

Foods are high in price.

A dollar doesn't go as far as it used to, but the family must have food that satisfies the appetite and nourishes the body.

Everybody likes Heinz Baked Beans—one of the most popular of the 57 Varieties—because they look good, taste good and *are* good. It was the "baking" that made baked beans a national dish. Heinz Beans are baked—baked in ovens—baked through and through.

That accounts for part of their superior flavor. They are baked in four ways to suit every taste, to please every whim or fancy.

Heinz Baked Beans with Pork and Tomato Sauce

Heinz Baked Pork and Beans (without Tomato Sauce) Boston Style

Heinz Baked Beans in Tomato Sauce without Meat (Vegetarian)

Heinz Baked Red Kidney Beans

All Heinz goods sold in Canada are packed in Canada

## Organize Your Leisure!

Everything has been done to organize *work*. Efficiency engineers and scientific managers have cudgelled their brains to make productive every ounce of effort in factory and office—to eliminate waste, to multiply output.

But what about *leisure*? Those precious hours which offer so delightful an opportunity for intellectual recreation and the broadening of mental outlook—shall they be frittered away?

Shall they be wasted on merely "popular" books? Shall their energy be dissipated in searching for something "worth while"? No, they need not be. Dr. Eliot, President Emeritus of Harvard and probably America's greatest expert on reading and education, has given you the

## HARVARD CLASSICS

### Dr. Eliot's Five-Foot Shelf

Here is the great literature of the world *organized* for efficient reading.

These 400 complete masterpieces of biography, politics, drama, history, romance, and science are those which have met the acid test of time. They have been selected with expert care (the non-essential eliminated) to give a complete picture of civilization from the beginning as reflected in the mirror of literature. Yet each is of intense human value with a bearing on our lives to-day, our own problems, hopes, fears, and ambitions.

The set is provided with a system of

reading courses, prefaces by Harvard professors, and an index which is probably the most complete and unique instrument in existence for making your intermittent reading effective.

Thus, when one is reading for any particular purpose, "The Harvard Classics" make every leisure moment count. They bring one direct to the delights and inspirations of great literature without waste of time, effort, or money.

They have *organized the leisure* of thousands of busy men and women. Why not let them do it for you?

## Send for the Booklet

It contains 60 pages, illustrated, tells all about "The Harvard Classics," includes a valuable Guide to Reading, and Dr. Eliot's article on *A Liberal Education*.

CLIP  
THIS COUPON

"Why don't you ask me, mister?" inquired a new voice, a coarse and tuneless and untutored voice. "Don't I get a vote too?"

The prisoner was addressing the court. Mr. Boston Blackie had been holding a consultation with himself as private counsel this last half hour. Mr. Blackie—a person of some penetration, by his lights—had been observing his judges, one by one: frightened at first, and humble, but afterward puzzled. For he found them sadly changed.

LITTLE superiority about them now, little snap or precision or confidence. The great Cavorces sat biting his knuckles, the image of senile anxiety. Hendry was just a fussy fat man in a limp shirt. His decorative friend Richard would have been worth about ninety-eight as he stood, with the tip of his pectoral nose for a price tag, white and square. Number Seven was all of a sop. Even the girl appeared haggard, faded, a poor model of an adventuress. And as Boston watched them and their proceedings, of a sudden a singular perception flashed to his mind. These people were scared! These lofty crooks, who scorned him and robbed him, so swift and subtle at their special game, had gone nerveless as a bunch of amateurs in the grip of a strange emergency. Why, they were twice as frightened as he was himself! And when he looked at the table and his rightful graft lying there—the monumental suit case he had surrendered so readily—he began to come back.

"I feel sorry for you guys. I certainly do feel sorry. But I got a vote to set you right, Lissen!"

It was their turn to blink at him. "You better go back to taking easy money from suckers," quoth Mr. Blackie softly. "You don't seem to be a hell of a success at this."

The chief rose in an oppressive hush. "What do you mean?" he demanded.

"Me? I'll tell you. I want my suit case you snaffled away so smooth. That's my price. After which you can all beat it South where the lulu birds are calling."

"Bribe you to keep quiet!"

"Well, you can't do less, can you? I've got the information. Chief, you go sneak where you belong and find a lot of poor folks you can razzle out of their savings and skin the widow and the orphan. That's your style. Take it on the swell financial till your time comes. I won't hurry it. And I won't grudge you your pieces in the paper, either, that you're so proud of. But light out of this, and light out quick. It's no place for Six Hundred Per Cent Cavorces. You've let yourself in for a yeggman's game that you haven't a chance to buck."

"You think so?"

Boston laughed. "I know it, mister. We've all got a limit, I guess, and yours is any such rough stuff as you're up against now. A smart enough outfit in your own line you may be, but you've stopped in over your heads. You ain't there, that's all!"

Cavorces stood frowning. "No?" he said. "No? And what would we be doing if we were? Can you tell us that?"

"Well, I'm only a common tramp myself," said Boston, rolling the phrase. "Only a common tramp. But if I was a train wrecker, why, I'd be a train wrecker, you see. And if I was a yegg, I'd be a yegg. And such being so, if any guy interfered, why, I suppose I'd naturally get rid of that guy and be on my way."

"How?"

"Croak him, of course!"

The chief's face was a twitching mask.

"You think we wouldn't dare?"

"Maybe you would," said Boston, carried away by a flush of conviction and assured triumph. "Only you couldn't. As you told your old pal Strombol—you need a specialist. For one thing, the job's too difficult. And then it's so blamed messy. You're only a la-di-da operator. You couldn't!"

He spoke with bitter humor; but the result was not quite what he expected. "Thanks," said the chief, curtly.

He stepped back; drawn and chalky in the failing lights he began to snap orders about him like cuts with a whip. And like creatures under the whip his people jumped to do his will.

"Hendry! You raise that connection now if it takes all night. Countermand those telegrams. All except the one-word cipher messages. You follow me?"

"Yes, chief."

"Make Central destroy the others. I can't think of the precise lie to tell her, but you can. Understand? No alarm goes out. We forego our publicity. Nobody must even know we've been here."

"Miss Marvel, see that the car is ready and study your map. We leave by the North Road, to avoid being seen again in West Wulliver. And—close the door behind you, please."

He waited until the girl had gone.

"Richard! And you—Seven!"

"Here, sir."

"Gag this man!"

They accomplished it.

"I noticed some kind of shed out back."

"Yessir."

"A caretaker might perhaps visit this house, but he wouldn't bother about a shed."

"No, sir."

"That shed will probably not be inspected again before next summer."

"No, sir."

"Carry this fellow out the rear way, put him in that shed—and leave him there!"

The two retainers breathed hard.

"Leave him there!" repeated Cavorces implacably. He stooped and peered into the eyes of the prisoner, who glared and strained impotently at him from the bench. "Now, I don't find that difficult at all, do you notice? And not a bit messy, either—eh? I must say we're much obliged for the advice!"

WHEN Boston came to himself again from a choking swoon of rage he was lying alone in darkness. He was quite sure that he was done for this time. He need never expect anyone to come to his aid. In a lonely outhouse on a deserted estate he had no chance of being rescued—not while there was enough of him left to make a respectable relic. His wretched luck had served him out at last. Undoubtedly, and once for all, he was dead. Also, the rope was slowly cutting him into cross sections.

But after a while he wriggled. He was still able to wriggle, and there was virtue in it, for his bonds gave a trifle somewhere. He worked one hand under a loop and tested it. The stuff was ordinary line. Just the sort that intelligent chore ladies use to hang the wash on, just the sort he had often encountered in his professional adventures. Quarter-inch line, cotton line, frayed and stretchable and well-rotted line—clothesline!

Inside of three minutes he was free.

He stood up and groped about him, stumbling and blundering as he gauged the confines of his prison. There was something about the place that seemed curiously familiar. Perhaps it was a certain stuffiness, a certain drooping memory of whitewash and bone-meal and downy, feathered presences that somehow titillated the sense with promise. He found a tilted ladder in one corner; a box and nets and troughs such as furnish forth a coop—the kind that summering cottages stock up each season, the kind he had so often broken into in the course of his career and might therefore reasonably expect to break out of with the same ease, a backyard coop, a slatted coop—in short, a chicken coop.

Once more in the open, the whole wide night invited him. He had only to go large and give thanks for his escape. Desiring vengeance, he had only to drop a line or a whisper to the proper authorities and leave the law to track down a pea-green automobile. But Boston Blackie was no such craven. He remembered the suit case and the emotions it had imparted and the score that remained to settle on his own. And he crept back toward the house.

The automobile was still humming on

the drive. He caught an instant's silhouette of Miss Marvel, but the rest of the crew were not in sight, and when he entered by the rear door he heard the faithful Hendry at his weary task.

Evidently that fried egg at West Wulliver was still holding up the business of conspiracy. Pausing only long enough to prepare his trusty match-box, Boston Blackie turned off from the kitchen and found his way down the cellar stairs.

He had a very definite notion of what he meant to attempt and how to go about it. But he was hardly prepared for the gratuitous eligibility of his next discovery.

Where the flame of his match twinkled before him there he saw a massive device that barred one whole wing of the cellar. It was built of wood a foot thick, and it had a ponderous door with brass hinges and a huge brass lock. It closed off a vaulted, well-ventilated chamber that could have held a small army in perfect condition.

It had been used for storage. It might again be used for storage. Boston had often had experience with such structures, though none quite so magnificent as this, and the good things they sometimes kept in storage—in a word: a refrigerator.

BOSTON chuckled and passed on. At the end near the furnace he came finally upon the thing he sought—a flat cabinet built against the wall. By the spark of another lucifer he studied long enough to identify the two big iron cylinders it contained. The cylinders were attached to tubes, and the tubes ran up aloft and branched like tentacles. There were turncocks at the top where a couple of staring labels announced Somebody's Deodorized Compressed Unit System. His match went out while he was reaching after those turncocks, but he smiled to himself in the dark. For this was perhaps the most recondite and artistic of Mr. Blackie's personal specialties. Gas pipes and gas meters!

Ten minutes later he stole along the corridor to the main hall and listened. No sound. He tried the latch cautiously. All quiet. A faint scent made his head swim.

Thereupon he threw wide the door, dashed in, closed off the open jets in all directions, and flung wide the windows. Then he turned his kindly attention to the four gentlemen who decorated the room in varying postures of collapse.

It was hard work removing them to the refrigerator. But Boston had had training. Not perhaps in handling the victims of temporary asphyxiation, yet quite frequently in cases of chronic absorption—in vulgar speech: drunks!

Returning from his last laden journey, the odd fancy took him to try the telephone crank himself; and lo, that egg was done to the minute!

"Have you been ringing?" Boston grinned at the eternal nee-ture.

"No, angel," he said. "But now—do you remember those telegraph messages that were left with you this evening?"

Central did.  
"Put them all on the wire, please, except the one-word messages. Get that? Yes. The one-word messages. Kindly file them for reference. They'll be wanted. Instead of them kindly take two others. Yes. Ready? As follows: 'To the Chiefs of Police at Springfield and Boston'—"

WHEN he hung up the receiver, there stood Miss Marvel.

"A detective!" she breathed. "A detective after all! Are they under arrest?"

"Yes, lady," said Boston. "They are under arrest—and to-morrow they'll be arrested."

She gazed at him wide-eyed, dewy-eyed. "And what are you going to do with me?"

Men get these notions: even such as Boston Blackie. In the intoxication of

# Your Tooth Brush Can be Ten-Fold More Effective

All Statements Approved by High Dental Authorities

## You Omit the Film

Ordinary brushing, as millions know, fails to save the teeth.

Teeth still discolor, still decay. Tartar forms and pyorrhea starts. From time to time, accumulations must be removed by a dentist.

The trouble lies in a clinging film which is constantly formed on the teeth. That is the cause of most tooth troubles. And that is what you largely fail to reach.

This film is what discolors, not your teeth. It hardens into tartar. It holds food which ferments and

forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So that film is the teeth's great enemy—the one which you must combat.

Dental science had for years sought a way to fight it. Now that way is found. Clinical tests have proved this beyond question.

It is now embodied in a dentifrice called Pepsodent, and we urge you to see what it does.

## Try This Way Once

That film is albuminous, so we now apply pepsin to it—the digestant of albumin. The object is to dissolve the film, in crevices and elsewhere. Then to constantly prevent its accumulation.

Pepsin must be activated, and the usual agent is an acid harmful to the teeth.

A harmless method has been found to activate the pepsin. Five governments have already granted patents. That method is employed in Pepsodent alone. And many tests have proved its efficiency on film. It is endorsed by many able authorities.

You can quickly see that Pepsodent does what nothing else has done. One week will give you a new idea of what teeth cleaning means.

Send the coupon for a One-Week tube. Use it like any tooth paste and watch

the results. Note how clean your teeth feel after using. Mark the absence of the slimy film. See how teeth whiten as the fixed film disappears.

Do this for your teeth's sake. Compare the results with the old ways. You can judge for yourself. After that week you will never return to old methods, we believe. Cut out the coupon now.

could see ahead what seemed a barrage; shells dropping in a curtain; explosions and great geysers of earth and smoke which seemed to be between us and our objective. And still besides—it is singular how comedy will pursue one in the most serious places—my faithful brother brancardier and I became involved in a dispute as to the direction we should take. There were two woods before us; he said the one to the left and I said the one to the right. As he was ahead, he had a certain advantage over me; but being behind, I could nullify this advantage by acting like a rudder. We zigzagged thus for a while. I was almost certain that it was the wood to the right—but, of course, this was a case for being more than almost certain. At length I took the risk. "We're going to take the one to the right," I said with authority, and as I was the only one of the two who wore a Sam Browne belt, he agreed. We went on, toward the wood to the right, and my heart was in my mouth for fear of being mistaken. We came to a trench. A panic seized hold of me at the idea of crossing that trench. I felt sure I should drop the stretcher if I tried it. I cried quits. We laid the stretcher down, and I asked, as though it were a question of passing Niagara: "How are we going to cross that trench?" "Walk across it," he answered tranquilly. He was a big, sturdy, calm boy, with big wrists—how I did envy those wrists! We picked the stretcher up again, he stepped over the trench, and then I stepped over it—it was no trick at all. Everything was beginning to come out right now. It seemed to me I recognized the trench. It was the trench I had seen at dawn, full of men. In a minute we came to another trench—the one where the machine-gun men had been. And then came the sunken way—blessed sunken way! I knew where we were now. And the boche barrage which had looked as though it were between us and where we were being proved to be in fact beyond; it wasn't really a barrage, but only a field being shelled—the same poor, innocent, empty meadow which the boche already had been shelling for two hours when I started, and which, with persistence and thoroughness, he was still shell-

ing as I returned. We swung to the left before coming to it, and skirted the wood, going down the hill. We passed the big shell holes which had so frightened me when I came upon them in the moonlight—I had had some education since then! We came to the edge of the wood and to the steep bank, with the valley before us. I let the stretcher down to the ground; I knew very well I could never carry it down that bank; I would let it fall.

### "Rest Up a Bit"

HAPPILY, after a moment, some infantrymen came along the draw. We called them up to us; they came, hesitating at first, then cheerfully; working all together, we slipped the wounded boy down without a jar. We were now close to the P. C.'s. I ran into mine and started to divest myself of all unnecessary equipment. The colonel and young Lieutenant C. were there. They must have thought me mad, for I was forgetting that I had slipped away without telling them anything, that I had been gone for two hours; still saying nothing as to where I had been, here I was (probably very red of face and disheveled), slinging off my things silently, in an immense hurry. "Come in, stay a while, rest up a bit," they were shouting, while I, without answering, threw off, for them to catch, my musette, my gas mask, my field glasses, my overcoat, my Sam Browne belt. Instinctively they'd catch each object as it came, saying the while "come in" and "stay a while" and "rest up a bit"—but I didn't stay a while nor rest up a bit. I had developed a tremendous sense of responsibility by that time. The first-aid station was still a kilometer away; I ran out again to the wounded boy.

And then I found I had lost my job. Three big huskies were now carrying the stretcher. I trotted along for a while, attempting or pretending to help. But a fourth big husky, taking hold of the fourth handle, robbed me of the last vestige of make-believe. I suppose they all knew what I was by this time—just a poor, useless newspaper man. I dropped behind, then I waved good-by, then I turned and went back to the P. C.

(To be continued)

## The Flying Fish

Continued from page 19

He felt toward McCord as his country felt toward the government with which it was at war: the same cold purposefulness that one feels toward a rattlesnake. McCord were better dead, if one could almost pity the fatuity of the man—or nation—that pitted itself, no matter how proudly conscious of power, against eternal right.

"YOU have read the newspapers that I gave you, Mr. Endicott?" asked McCord.

"My obituaries are quite satisfactory," said Endicott. "I wonder, though, that you did not have Whitney included among your list of casualties. It doesn't seem playing quite fair with him. He is entitled to as much space as I am."

McCord threw out his hands impatiently. "There is a time for levity, Mr. Endicott. There is also a time for seriousness."

"That's odd," smiled Endicott. "I can hardly imagine you having any moments of levity at all, Mr. McCord."

"I relax, though," said the old man. "I have my moments. I have my moments when the softer, pleasanter things appeal to me. I had one now."

"Yes?" questioned Endicott.

"As I looked upon Leila," said McCord. He stared at the younger man. The color that rose in Endicott's cheek seemed to satisfy him. He nodded thoughtfully.

"Leila," he said, "fills my life. Mr. Endicott—rather, fills one side of my life, the inner side. The outer is devoted to matters of whose great magnitude you are beginning to have an idea."

"Here than an inkling, Mr. McCord—should I say, Mr. Harmon Rayde?"

"It is my real name. I prefer it," said the old man.

"Though it is a name that reeks with infamy?"

McCord laughed. "You are amusing, my dear Endicott. You are not of the times. Infamy is for failures. For successes, even partial successes—one hardly considers Napoleon infamous. At least the world, en masse, has no such conception of him. And yet he failed in the end. But had he succeeded, his would have been the brightest name in history. And so, judging what I do by petty standards and with small minds—But your standards are not petty and your mind is not small. Your friend, Mr. Whitney, a charming young man, I have no doubt—But had he not been your friend, had I not felt that my treatment of him would affect your attitude toward me, Mr. Whitney's death might have been reported in the papers at length, and not prematurely, Mr. Endicott."

"Go on," said Endicott as the old man paused. "You are not trying to convince me of your utter lack of humanity, are you?"

"Let us be frank, Mr. Endicott," replied McCord. "Whitney—that sort of speech would sound natural, coming from him. He is, after all, a boy. But you—you are a cosmopolitan, a citizen of the world."

"Who owes allegiance to the United States, and has fought for France," Endicott said gently.

"Of course. Youth craves action. But action means experience, and, in some cases, experience brings wisdom. You are convinced of the utter futility of opposing me, are you not?"

"What is futility?" asked Endicott.

**EARN A SUBMARINE**

2027 Oak St., Kansas City, Mo.

Write today for your free book and auto and tractor school. 2027 Oak St., Kansas City, Mo.

"In this case," said McCord softly, "futility is death."

"I have heard the word before," said Endicott. "It is a word of which you are fond, Mr.—er—Rayde."

"And a condition which I do not shrink from inflicting, as you know, Mr. Endicott. But let us not fence. You know my power?"

"One hardly considers a criminal powerful," smiled Endicott. "He is dangerous, perhaps, but not powerful—a policeman frightens him."

"And if I could convince you that a thousand policemen, that a hundred thousand soldiers, that the combined armies and fleets of Europe have no terrors for me—what then, Mr. Endicott?"

"Why, then," said Endicott, "I should consider you not insane, Mr. Rayde, but feeble-minded."

"Honesty and fearlessness—one grants much to the possessor of those qualities, Mr. Endicott," said the old man. There was, Endicott reluctantly admitted, an element of bigness about McCord—or Rayde—for he waved aside Endicott's estimate of him. Or perhaps it was the colossal vanity of the man that disdained contemptuous criticism.

"You have those qualities," went on Rayde. "Those alone would not make you valuable to me—and I let no sentiment guide me, Mr. Endicott. But you have education and brains. There are few enough of your sort, and fewer still to be obtained for my service. The cattle who serve me—hope of reward or fear of punishment: those are their guiding stars. But with you it would be different. There would be the glory of achievement."

HE sat down; the dressing gown that was habitual with him now was drawn tightly about him. His sunken eyes burned with the fervor of the zealot.

"Men fight for countries, for ideals. Those men, my dear young Endicott, are fools. The wise man, the sane man, fights for himself. We are here, in this world. We say that God created us, but what proof have we of God? What does He say to us, show us, to convince us that we are answerable to anyone, or anything, save that which is more powerful than ourselves? If the God that most men believe in rules this world, why does He allow the guilty to go unpunished, the innocent to suffer?"

"There is such a thing as a hereafter," Endicott said mildly.

"And strong men concern themselves with this world only, leaving hereafter for the weak of intellect and of heart," scoffed Rayde. "Listen: power is the end-all and be-all of life. With power one may defy everything except the grave, and the grave holds terrors only for the coward."

"To have power! To rule! To intrench oneself so strongly that the petty people of this world, with their puny hatreds, cannot overturn one—that is my ambition, an ambition to be realized, an ambition whose fruits I offer to you. For you, my dear young Endicott, are the one man I would have chosen as my ally, as my right hand."

"Funny, how likings grow upon one," said Endicott.

"Don't jest. It doesn't become the man you are, Endicott. Further, do not imagine that liking has anything to do with my offer to you. You are strong; you are courageous; you have brains. I need you."

"And the terms?" queried Endicott. "Suppose you hear my plans first. A man wearing your clothing was found dead, Endicott."

"So the papers you gave me have told me. Who was he?"

"His name was Munoz. A steamer carried arms to revolutionists in Mexico five years ago. Munoz was a fireman on that boat. He sought adventure. He landed with the munition. I met him. The arms were for me. I found him bright, intelligent. I used him then and on other occasions. Some months ago I saw him in New York. I knew that he was to be trusted; certainly as long as he was well paid. I summoned him to me. He told me of a young inventor to whom he was foster brother. He told me of an invention.

That invention you will see in action soon, my dear young Endicott. I gave Munoz money. He procured the plans of the invention for me, and then—Munoz asked too much. And Munoz uttered threats. He was killed, and killed at a time when you had disappeared from the sight of your friends. An accident was contrived; your clothes were taken from you and placed on the body of Munoz, who was about your size. And, as the body was mutilated, unfortunately, no one suspected save Leila, and she—I discounted her suspicions, captured her. And now we come to her, my dear young Endicott."

Endicott stiffened. He waited.

"In New York we had a conversation, as you will remember, my dear young friend," went on Rayde. "It had to do with Leila, as you also will recall. I told you that she was mine. She is mine! This is an island. There is no communication with the mainland save by my boats. And they are guarded. So I have placed few restrictions on your liberty here. It was unfortunate that you were recalcitrant—that it was necessary, on the journey down here, for me to pretend that you and Mr. Whitney were invalids, so to guard and confine you that an otherwise pleasant journey must have been rendered irksome. But here—it has been different."

Endicott bowed.

"As regards Leila," Rayde resumed, "my attitude has been one of—patience. What I have to offer her is too great for any woman to refuse. She will come to me. But youth is ever foolish. You endeavored to aid her. She regards you with gratitude. Also, because she fears for your safety, there is pity in her regard for you, and pity is akin to love, as the poet has truly said."

"Now, then, my dear young Endicott, I have let you see Leila, let you be alone with her, because a woman craves that which is denied her. Men also. But what is not denied sometimes becomes less desirable. I do not wish Leila to come to me merely because of the greatness of the place that will be hers, or because of admiration for the man who offers her that place. I want her love. She is a sensible girl. There has been not much of love-making between you two. What little there has been can be forgotten. Endicott, she is not for you. You are not for her. Your word of honor will suffice me. As for her, no one will take from me that which is mine, and she belongs to me."

HE paused. If there were only himself to consider, Endicott would have risked the revolver in the old man's pocket. But there was Leila. To leave her at the mercy of the men on this island! He held back his anger.

"You spoke of a great place; you offered me some position. What does it all mean?"

Rayde walked to the window. "I spoke of an invention. Little by little I got the plans. They were sent down here. I have owned this island for some time. There is an abandoned copper mine here. The natives on the mainland think that I have reopened the shaft. What I have been doing is—build from those plans. I have the only set of those plans in the world. The inventor is dead, shot by my men. His one model was wrecked. Mr. Endicott, I like being dramatic, but—will you come to this window?"

Surprised, expectant, yet not knowing why, Endicott walked to the window. He stared out upon a narrow cove, flanked on either side by rocky promontories. Above the rippling surface of the cove a flying machine hovered. It was different in shape from any that he had ever seen. It resembled a fish. And it hovered!

That, he thought, was the most important thing about it. It stood, almost stationary, in midair. And then, as he looked, its nose slanted downward. It dived; it reached the water; without a pause, like some great flying fish, it disappeared beneath the surface.

Though he had never dreamed of such an invention, though it almost seemed that his eyes deceived him, he knew, at once, that no accident had

# MOSLER VESUVIUS PLUG

"The Vesuvius is a Plug of exclusive features."—A. R. MOSLER  
The only Plug with double-step "Vitite" insulator—and hand assembled.

It's the Plug for power—its spark is a ribbon of flame.

It's the Plug for service, it withstands the exactions of the modern motor.

Electrodes will not pit or corrode, insulator absolutely heat proof. Electrically tested—leak proof.

## The Interpreter

In relations between peoples speaking different languages, especially when such peoples are joined as allies, competent interpreters are requisite for intelligent co-operation.

Qualifications for an interpreter consist largely in a correct knowledge of the language, the different points of view, and the mental habits of each people to whom he acts as interpreter.

With its news bureau, its advertising offices, and its circulation all over the world, The Christian Science Monitor is able to gather and express correct knowledge of all peoples, and all viewpoints, and, speaking the language of Principle understandable to all peoples—it is the interpreter of three ideals toward which the world is being so rapidly impelled today.

Intelligent co-operation in the expediting and solution of the world's pressing problems can be extended by encouraging the reading and circulation of this daily interpreter.

The Christian Science Monitor, 3c copy, is on general sale throughout the world at news stands, hotels and Christian Science reading rooms. Yearly subscription by mail anywhere in the world, \$9.00, or one month trial subscription for 75c. Single copy sent on receipt of a 3c stamp.

occurred, that the great airship had not fallen, but had deliberately dived. He strained his eyes until, glistening in the sun, the water streaming from its sides, it emerged, floated, rose in the air, and disappeared over one of the headlands. He turned to the exultant Rayde. The old man shook with excitement.

"Another day or so," cried Rayde, "and it will be equipped with torpedoes! What submarine, what battleship, what fleet of all the navies of the world, can withstand me, Endicott?"

He seized the young man by the arm; he shook him with a strength unbelievable in one apparently so frail.

"You think me mad now, Endicott? You believe that Germany is my ally? To one government of Mexico she offered two lost provinces, but to me, to Harmon Rayde, Endicott, she offers—bah! Germany offers? I take. Because it is to my convenience to make terms with her, I make those terms.

But it is not Germany that makes Harmon Rayde; it is Harmon Rayde that makes Germany.

"Endicott, do you believe me, and, believing, do you lay aside the foolish scruples born of an outdated patriotism? Do you join the strong or do you die with the weak?"

"I'm not an absolute jackass, Mr. Rayde," said Endicott. "I'm with you."

"And Leila?"

Endicott shrugged his shoulders.

"A woman," he smiled, "is, after all, a woman. She is lovely, charming, but—" He shrugged again.

The old man eyed him; his features twisted into a smile. He reached forward his right hand to grasp that of Endicott. His revolver was in his right-hand pocket. Endicott stifled Rayde's cry with one hand. With the other he possessed himself of the revolver.

(To be continued next week)

## France Invents—America Organizes

BY MAJOR RICHARD C. CABOT

THE French invent things and then lose interest in or forget them. Some of these new ideas (I will mention three in a moment) the Americans pick up, work out, and put into execution for the good of the world. Germans have also taken neglected French ideas and made much of them. But Germans are not eager to give France credit for these discoveries, still less to give back to France the benefits of German efficiency.

So the Americans, who are also efficient—in spots—are now trying to show France that she may as well appreciate her own great discoveries by putting their ideas into effect. Americans are now hoping to transplant into France some neglected French seeds nourished in American soil into full-grown plants.

Although I have been in France less than a year, I have come across three cases where Americans are helping to aid France by giving her back some of her own ideas in a more finished form.

FIRST—France invented the dispensary follow-up work in tuberculosis. It was Pasteur's pupil Calmette who first began, at Lille, to demonstrate how dispensaries, scattered wherever tuber-

culosis is most thickly sown, can act as centers of effort for nurses, who ply back and forth between the dispensary and the patient's home, giving the whole family what they need to know in order to prevent contagion, what they need in financial assistance, food, and clothes.

This was Calmette's idea, and he demonstrated its life-saving importance. But France as a whole has done very little about it. The number of French dispensaries and nurses managed on Calmette's principles is insignificant compared to the bulk of tuberculosis in France. Americans have carried out the Calmette plan far more fully.

Now, since the Red Cross came to France in June, 1917, its doctors and its nurses are establishing Calmette dispensaries all over France—carrying the idea a great deal further than Calmette himself did, but still along the lines suggested by him. We call it medical-social service, and the French are agog to know what that means. We tell them that it is only one of their own ideas which they have forgotten.

SECOND—To Binet, the French inventor of simple mental tests for picking out feeble-minded children from a school population, we Americans owe a great debt. His ideas in the hands of Dr. William Healy and other American physicians have been modified, adapted, corrected, and enlarged until in our juvenile courts and in the school sur-

veys of our great cities we could not get along at all to-day without tests for mental capacity and the degree of mental development.

In France, so far as I have seen, Binet's ideas have been neglected; no practical good has been developed out of them, and I have heard him spoken of chiefly with amusement. Yet in the campaign for the health and welfare of French children now being carried on in various parts of France by the Children's Bureau of the American Red Cross, the need for mental examination of possibly defective children is sure to receive attention from Dr. W. P. Lucas, head of the Children's Bureau. For the mind as well as the body of the child whom he takes care of has always been one of Dr. Lucas's keen interests.

THIRD—It was in France, at the Pasteur Institute, that the prophylactic treatment of venereal disease was first suggested by the researches of Metchnikov. America has taken up these ideas, and in her army and navy has proved that venereal disease can be abolished by the prompt and thorough application of prophylactic methods.

Some units of the American army now in France have thus been kept absolutely free from venereal disease. In all units these diseases can be largely, if not entirely, eliminated when over Metchnikov's rules are rigidly enforced. France made no attempt to utilize this great discovery, despite the fact that it was worked out at the Pasteur Institute and by an adopted son of France. What we have proved efficient they declared absurd or impossible. But since the French physicians have seen what our army has already accomplished for its men by the use of this French discovery, they are beginning to be interested in it, and before long I believe will adopt it, as they have finally adopted typhoid prophylaxis after losing 12,000 men in 1915 through neglect of it.

Here, then, are three examples of how France and America, brought in contact by the war, have begun already to benefit each other. French inventiveness and American organizing ability have already made a strong combination during the few months that the people of the two countries have begun to know each other and to find each other under the stimulus of a great common cause. Each gives; each takes. Each is beginning to realize the other's strong qualities. Liking and respect are growing, and with our army here in time to do its full part, the two countries are being cemented by the bonds of mutual service.

### In Next Week's Issue

#### BOOTH TARKINGTON

"The Three Ecological Wishes" is the fourth story in the new series, in which Florence Atwater discovers a strange way to help Noble Hill in his courtship of Aunt Julia.

#### ARTHUR RUHL

"American Inroads in France" is the first article from Mr. Ruhl, Pulitzer's special correspondent in the war zone.

## "Good Sense" Is Still Good Sense

It's been over a half-century since the first Coward "Good Sense" Shoe was made. Human feet haven't changed in shape during that time. So "Good Sense" then is "Good Sense" now with the added refinements that modern shoemaking has brought.

It is a shoe of dignity and comfort—foot-shaped, friendly, conforming. It clasps the heel and instep gently, giving each toe its needed space. Made in most agreeable leather for men, women and children. Address Dept. H, for descriptions.

## Salt Mackerel CODFISH, FRESH LOBSTER

RIGHT FROM THE FISHING BOATS TO YOU

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS., by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, cheaper than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT, sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT-LINED CANS. They come to you in the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. \$5.00 for it. Our list tells how each kind of fish is put up, with the delivered price, so you can choose just what you will enjoy most. Send the coupon for it now.

# Keep Your Liberty Bonds

**H**OLD to that bond. You invested to help send the boys across. They are over now, at grips with the German monster. You expect them to hold on—hold on till the last vestige of autocracy is crushed out of him. Then you, too, must hold on—must keep your enlisted dollars invested on the fighting line.

It isn't the hooray of a campaign that wins a war. It's the will to hang on, to make sacrifice today, that tomorrow may bring victory.

And your investment. Those bonds are the safest investment you ever made. Don't be lured into exchanging them for the "securities" of some suave get-rich-quick operator. Big returns may be promised, but the bigger the promised returns the bigger the risk.

If you have to have money, take your bond to any bank and use it as collateral for a loan. There is no security the banker would rather have—nothing on which he will lend more willingly.

Don't use bonds to buy merchandise.

The average merchant, accepting your bonds in trade, sells them immediately, thus tending to lower their market price and taking away from the buyer of your bonds the ability to lend a corresponding amount of money to his Government. Liberty Bonds are meant to help your country at War; are meant for investment and to provide an incentive for saving and a provision for the rainy day.

Hold fast to your Liberty Bonds. Hold fast for the sake of the boys "Over There". Hold fast because it is good business.

## Photography Goes "Over the Top"

**T**RUNDLING his horse-drawn darkroom from battlefield to battlefield, Matthew Brady made upon collodion wet-plates his great picture history of our Civil War. Brady had no modern lens, no light and compact films, no means of registering objects in motion. His work was done before ever the instantaneous photograph was known.

The hand camera of today, equipped with lens and shutter of incredible speed, makes scores of snap-shots in the time Brady needed to obtain a single "view." Moreover, the motion picture has been achieved through the application of the instantaneous or stop-

motion principle. And so are now recorded, in both still and moving pictures, the rush of men, the sweep of airplanes, the sudden, tremendous upheaval of shell explosions, all with the detailed accuracy of truth itself. Thus do current war pictures form a chapter of history as yet in the writing. Long after we have won the war, other generations may still see today's battles re-fought across the screen; and in the march of the science which makes such wonders possible, we trust it will be vouchsafed the Eastman Kodak Company to maintain, as in the past, its high traditions of service and leadership.

# 'Ever-Ready' Army Razor

THE Ever-Ready dollar khaki kit is an achievement. It's the favorite razor "over there" and "over here." Give it the "once over." Compact, waterproof case—10-year guaranteed frame and marvelous Radio Blades. The joy shave of millions.

Extra 'Ever-Ready' Blades 6 for 40c.
